FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 2, 1897.

VOL. XLVIII.—No. 1. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

In still-hunting swear yourself black in the face never to shoot at a dim, moving object in the woods for a deer, unless you have seen that it is a deer. In these days there are quite as many hunters as deer in the woods; and it is a heavy, wearisome job to pack a dead or wounded man ten or twelve miles out to a clearing. NESSMUK.

YELLOWSTONE PARK AFFAIRS.

AT the close of the summer of 1894, a War Department order placed the work of improvement in the Yellowstone National Park in the hands of the Superintendent. Up to that time the care of the roads and bridges had been in charge of an engineer officer, stationed here for this purpose.

During the summer of 1895 a road was surveyed from the Gibbon Falls to the Fountain Hotel, one down Snake River to the southern boundary of the Park, and one from the Grand Cañon to Yancey's over Mount Washburn. On the first of these, eight miles of road was built in 1895 and a connection made with the proposed road down the Madison Cañon, and eight miles of road down Snake River was made passable for wagons, but was not completed. Much work was done also on the road from the Grand Cañon to Yancey's, as well as other minor work of improvement and repair.

The construction and improvement of the approaches to the Park from the east—Cooke City—from the south—through the timber reserve—and from the west—up the Madison Cañon—have occupied Capt. Anderson's attention during the past season. These roads have been located and graded, and a number of bridges have been built on them. Measurements have been made and plans drawn for an iron bridge over the Yellowstone River above the Upper Falls, and a short road is proposed on the east side of the cañon as far as a point opposite Inspiration Point.

Steps have been taken for properly surveying the boundaries of the Park and marking them with suitable monuments. The most easterly and most southerly point of the Yellowstone Lake have been established and marked by cut stone monuments, and this has been done also for the most westerly boundary of Shoshone Lake. Points on the eastern, southern and western boundary lines have been determined and marked. This work has been done by Lieut. Charles S. Bromwell, Corps of Engineers, who reported for this purpose to Capt. Anderson last summer.

While much has thus been accomplished since the care of the roads and bridges was turned over to Capt. Anderson, much more remains to be done The appropriations for this work are small, and their insufficiency adds to the expense of the work and delays its completion. Capt. Anderson has asked for an appropriation for the next year of $100,000, with which he believes a long stride can be made toward completing the roads in the Park. This sum ought to be provided, if these improvements are to be pushed on, so that the public can get about the Park with the greatest ease and comfort.

The early advent of an unusually cold and stormy winter has been severely felt in the Park. November was the worst known there for a long time. Early in the month snow fell to the depth of about two feet, and as there was no wind during this storm, the snow completely covered the ground, leaving no bare places. Two or three days of warm weather, with rain, put this snow in a state of complete saturation. It then turned cold, and left the ground entirely covered with a deep, hard crust of snow. Since that time it has continued cold and stormy.

The large herd of antelope that has always wintered on the flat near Gardiner was driven out during the first severe storm after the crust formed. They passed on down beyond Gardiner and Cinnabar, and many of them have been killed. Some, however, have returned, and a large bunch, numbering about 200, was on the flat in the middle of December.

Elk have also been driven out of the Park in large numbers, and cover the slopes of Bear Gulch and Crevasse, where they also are being slaughtered. Besides the heavy loss which they must suffer from this killing, they are confronted with the danger of starvation during the long winter, and the chance of their survival over the spring does not seem bright. About a month ago there were three or four thousand elk in the Hayden Valley, where they can probably get along very well on the warm ground there. The country between Yancey's and Soda Butte is believed to have its usual herd, which will probably remain there, and be better off than any other bunch in the Park.

The news concerning the buffalo is not at all encouraging. They are seen in small bunches in widely separated districts, and some are reported to have gone into the mountains in several different parts of the Park. Since the slaughter of 1894 they have never gone into the Hayden Valley.

About the middle of November, four men were arrested on Hellroaring Creek, caught red-handed killing elk in the Park. They were tried and fined $25 each. Two of them paid their fines, the others at last accounts were still held in custody in the guard house, A week before Christmas two more were brought in, and now await trial. It is to be hoped that they will not get off so easily.

SNAP SHOTS.

Miss Merriam's notes on the coyote as he appears in California are interesting and are graphically told. They are also timely, as following up the article on this species which appeared last week, and which has brought out other notes on wolves and coyotes, to be published before long. As was remarked by the writer of the article on this subject in FOREST AND STREAM of a week ago, there must be in the memory of our readers a great mass of unrecorded observations on these animals, all of which would be interesting and some no doubt new. The ways in which wolves capture their food, and in which they act in concert when hunting, are of especial interest. In a general way, we know that they used to kill buffalo and to run down deer, caribou, antelope and moose; but the detail of all this, related by eyewitnesses, is lacking. Yet among our readers there must be men who have seen all these things, and who, if they would take the trouble, could tell their fellow sportsmen what they have seen.

Commissioner Carleton, of Maine, made a tour through the Maine woods last summer and found out for himself that moose were killed before the open season. We are not advised as to any figures he has given out to indicate the relative numbers of moose killed in close time and in the open season; but from such facts as we have information of we should say that five out of ten moose killed in Maine were killed illegally.

It is passing strange that so many men who are respectable and law-abiding members of society at home go down to Maine and there both violate the game laws and induce the natives to join them or to anticipate them. For it is a common expedient to engage one's "guide" to kill the game in close season that it may be in readiness for the sportsman to bring out after the law is off. What travesty is this on sportsmanship, or on simple manship; heaven save the sport part of it. And what an empty braggart, imposter and charlatan does he know himself to be who spins his yarns and amplifies his lies about his close season guide-slain trophy.

Commissioner Carleton has come to the conclusion which we have expressed, that imprisonment must be made the penalty for such offenses if the law is to have any restricting influence upon the class which now swaggers defiance, secure in their confidence that if they do not escape with their booty scot free, they can at most get off with the payment of a paltry fine. Even this harsher statute will have little restrictive influence if the laxity of law enforcement shall continue to prevail in Maine. Whether the penalty be fine or imprisonment, it will have no terrors for those who are beyond the reach of the wardens, or who are in collusion with the wardens; and as for the extension of the close time to November, that will mean only a prolonging of the hanging-up season, during which the guide's slain moose head will be kept in readiness against the coming of the man who is going to kill it. He little recks of game seasons who does his hunting thus without a gun; a new law would not affect him in any degree, save that his visit for the purpose of bringing out his purchased trophy would be deferred for a few weeks.

This notion that better game protection may be secured by changing off one set of unenforced statutes for a new dead-letter code is a delusion which has been indulged so long that it has become intrenched as firmly as tradition. It knows neither longitude nor latitude, but holds sway from Maine to Florida. Here is the Jacksonville *Times-Union*, one of the most consistent advocates of game protection among all our exchanges, suggesting that "a strict enactment providing for restricted seasons and limited killing by one sportsman or party upon one occasion would meet with the approbation and indorsement of a large majority of the citizens of the State." The fact is that there is already a Florida statute precisely of that very nature; it restricts the season and limits the amount which an individual may take, and the sportsmen approve and indorse it. And there is the end. No one pretends to observe the law; it is of so little account that the leading journal of the State evidently knows nothing of its existence. What Florida needs is not a new law, but some little enforcement of the law already on the books. The change essential to improvement is not in the statute, but in public sentiment. To awaken the citizens of Florida out of the fatuous complacency with which they are permitting the wanton ruin of their game supply is a mission to which we trust the *Times-Union* may devote itself. The protection of game resources is one of the public interests with which a progressive newspaper legitimately may concern itself.

There are in this country 600,000,000 acres of vacant public lands, exclusive of Alaska, and yet we are complaining that there is not enough unposted shooting country to go around, and that the game range is narrowing. Moreover, from all this vast area the Government derives not a cent of revenue for shooting and fishing privileges. The single Province of Quebec took in $20,823 from fish and game privileges in 1896.

They have invented in Holland a machine which makes sounds audible at a distance of five miles. The sounds emitted by it are of such a quality that the direction from which they come may be determined to a nicety, and it is practicable to modify them into a signal code. The inventors claim that the device will be of priceless advantage to seamen, who may thus communicate with one another from their ships. It will also be a priceless boon to the duck shooter on the shore, who can call his game in from the horizon.

A German expedition in Africa has discovered a new "sportsmen's paradise." The route was from Mossamedes to Port Alexander, through the Chellu Mountains to Humbe and to Kitere, and down the Kunene to its mouth. They report the country literally swarming with lions, elephants, leopards, giraffes, buffalo, antelope, gnus, hippopotami, crocodiles, pigeons, ducks, flamingoes, parrots and other things lumped in a comprehensive "etc.," which in such cases means whatever one's fondest fancy may paint. It is to be added also that they found gold in the paradise, which means that it will not remain a paradise for long. Gold and game do not exist together after the precious metal has been discovered. A rush to the gold fields follows, a population springs up, and the game is quickly exterminated.

The Sportsman Tourist.

SIMILAR EXPERIENCES.

I HAVE been greatly interested in reading Mr. Mather's articles. Some of the incidents he relates are very similar to some things in my own experience.

I well remember my first eating muskrat with Indians. When I was seventeen years old I went hunting very early in the spring with an old Indian named Polis Stanislaus. I well remember him as being the only Indian whom I ever saw wearing a beard. We had started in our canoe early in the morning to look our traps. Noon found us at the head of some falls in a blinding snowstorm. Polis sent me down stream to look some traps, while he attended to some nearer by. On my return I found him in a sheltered place among some low pines. He had built a fire and made a partial shelter by spreading his oiled jacket on two poles, and was roasting a muskrat on a stick. While it was cooking he ate the liver and lungs, which he had broiled on the coals.

When he thought the muskrat done, he stuck the stick it was on in front of him and with his fingers tore off a hindleg with the black foot attached, and offered it to me, saying, "Here some one good piece." It smelled good, and I was very hungry. It is said, "As it was in the beginning so it has been and ever shall be." The Indian tempted me and I did eat. Having tasted once, I wanted more, and he kept pulling off pieces, eating some and handing me some, with the remark, "Here some 'nother one good piece," till all was eaten except the head and tail, which he reserved for himself, carefully picking every particle from the bones. Although a muskrat roasted on a stick and eaten without salt or anything else would not look very tempting to me now, my greatest trouble then was that we had not more of them.

Some years after I was hunting in the spring with an Indian named Lewie Tomah. The second day out we overtook a party of seven other Indians and camped with them. After we had looked our traps in the morning Lewie volunteered to get breakfast, while I skinned and stretched our catch. At length I heard the usual Indian call *nĕhè kesatben*, pronounced nay-hay-kays-art-been—cooking is ready. Going to the tent, I found that Lewie had made tea by putting some of the hemlock boughs on which we had slept into the kettle, and had made a stew of musquash, putting in the head, legs, feet and tail. It was literally thickened with bits of moss and fir needles, which, singed off by the fire, had fallen into the open kettle. The water for this compound he had dipped from a little nook where we all had been washing our bloody hands, in addition to which I found considerable of black hair much larger than grows on a muskrat. The noted scout, old Jack Long, used to say, "You ain't a pastry cook or a hasty cook, nor a tasty cook, but for a dog-goned nasty cook I'll back yer ag'in the hull Pacific slope," but I would back Lewie against any cook old Jack ever saw. I remember when on an expedition in 1861, where our cook was not over neat, that Prof. A. S. Packard one day said to him: "Cook, cook, you are the nastiest man I ever saw. Tell about a man's eating a peck of dirt, I've just finished my fifth peck." I certainly thought that I had eaten all I needed of my peck at this one meal, and after that I did the cooking myself, till I exchanged Lewie for his nephew, who was a nice, neat fellow.

Although Indians eat the heads, feet and tails, they are neater in dressing musquash for cooking than most white men. In skinning they never take them between their knees, as white men do, but cut a stick as large as one's finger, which has a fork. This they cut so as to leave an inch of each branch at the fork, and sharpen one fork. They cut off this stick 18in. below the fork and sharpen the end. This is called a skinning stick. In skinning a rat they stick this up in the ground between their legs as they sit flat on the ground, and hang the rat on it by the gambrel cord, so that the nose is just clear of the ground, and so keep the meat perfectly clean. When the rat has been skinned and disemboweled, they not only remove all the musk glands, but cut into the thick part of the inside of the thighs and forearms, and take out a small white substance which resembles the treadle of a hen's egg, and which if cooked would impart a strong musky flavor to the meat. They are also careful to remove the eyes and a yellow substance at the inner corner of the eye, which would give a musky flavor. Indians prefer muskrat to almost any other meat except beaver, and will always exchange partridge for muskrat, as they say, "Pa'tlidge too dly." If asked if muskrats were good I should say yes, in the abstract; but having once been obliged to live on them several days, I have not for many years eaten them unless no other meat could be obtained.

Mr. Mather tells of his nearly firing at an Indian which he thought was a bear. I once had a similar experience. I was looking up traps on a dull day late in November. It was cold and spitting snow, although the ground was bare. I was traveling in some quite thick spruce and fir growth where there was no path. Suddenly I thought that I had seen a glimpse of something black disappear behind a low fir windfall, as far in advance as I could see, perhaps 25 or 30yds. I brought up my rifle and waited till tired; and not seeing anything, advanced softly, holding my rifle ready for a quick shot. Again I saw it, and was sure that I saw coal black hair, such as no animal but a bear could have. Again it disappeared, and I advanced. The next time I could see the hair plainly, as I was not ten paces off; but the thing looked as it had done before, smooth and rounded, but showed no trace of ears or the brown nose, which I felt sure I must have seen if it had been a bear. I was now so close that it had very little chance to escape, but I was more than before puzzled as to what it could be. Creeping up carefully, I looked over and was surprised to see a very small old Indian known by the white people as Little Poses, but known among the Indians as Pah-dook-seh, or Very Sleepy. On my saying "Que" (how do you do?), his head flew up as if it went with a spring. He told me that he had come there to dig a particular kind of root for medicine, for an Indian doctor with whom he lived, and did not know of anyone being near him till I spoke.

He was sitting flat on the ground, digging with his fingers, and when he bent forward to his work his head was below the windfall, but whenever he rose to take a rest the top of his bare head could be seen above it. I had first seen him just as he was bending forward. I should certainly have shot him if I had not long before resolved never in any case to fire at anything until I was certain what it was. One never knows where he may meet men who may be sitting or lying down to rest. I have known a number who were shot in this way, and the only safe way is never to fire unless absolutely certain what one is firing at. H.

MAINE.

THE DAYS OF THE MUZZLELOADER.

Reminiscences of an Old Sportsman.

IT is always a pleasure for the veteran to fight his battles o'er again, and the more so when from age or illness the beloved gun becomes a burden and one is no longer able to follow the pleasures of forest and field There also comes a time when the sportsman's recitals begin to tire with repetition among his friends and even in the home circle, and he feels obliged to seek fresh listeners. So I wish to trust my early experiences to those of my fellow sportsmen who are in sympathy with the pleasures of outdoor life, and who look back with the keenest pleasure to the days when no tramp was too hard and no journey too long to take in search of sport. In those days the deadly and destructive breechloader, which is responsible, more than anything else, for the decrease of our game supply, had not yet been invented. In fact, the percussion system had only just replaced the flint lock. Then every bit of cover held its quota of game and it was not necessary to travel hundreds of miles to kill a few birds or a deer. An hour or two's drive into New Jersey or up to Westchester county would land one where fair sport could be enjoyed and the sportsman be enabled to return home the same day. Railroads were in their infancy, and market gunners with their breechloaders had not swept the covers of Rockland, Orange and Sullivan counties bare of game.

My first recollection of sport was way back in the fifties, when, as a lad just out of boarding school, I became the delighted owner of a little 20-gauge German double-barrel muzzleloading gun, with all the delightful accessories of Dixon's pouches, flasks, cardboard wads, etc. This little weapon was sufficiently deadly to kill a chipmunk or red squirrel at 20yds. distance. A few years later I became the proud owner of an old-fashioned rifle carrying 120 balls to the pound, and I began to feel that I was already a mighty hunter, particulurly one day when I accomplished the slaughter of my first ruffed grouse early one morning when just starting out for a squirrel hunt, and with which I promptly returned home, too proud and happy to hunt any more that day. The woods and coverts around Canandaigua, where we then lived, were well stocked with game. Ruffed grouse, quail and woodcock were fairly abundant, and squirrels and wild pigeons could be found everywhere. I remember well an English snipe which I found on the low ground in front of my father's house; day after day I followed that tantalizing bird, which knew the range of my little gun to a foot. I do not know how many pounds of shot I fired at that snipe, but it must have been many. I never hurt him, and, as far as I know, he may be alive yet. From these youthful sports I soon graduated, however, and with my father's 12-gauge muzzleloader began to do some execution.

An old companion of Frank Forester, one Andrew L. Williams, of Newark, then residing in Canandaigua, took pity on my ignorance and began my education as a sportsman. He was an excellent and thoroughly good sportsman himself, and under his tuition I rapidly improved as a wing shot. Our principal game was ruffed grouse and woodcock, though now and then we would run across a bevy of quail or a wisp of snipe, but the quail were to me the hardest bird to kill on the wing of all game, and after an experience of over thirty years I stick to that opinion. At least twice a week during the season Williams and I would drive to all the good cover within a radius of five or ten miles of Canandaigua. In this way we picked up many a good bag of birds. Williams scorned to shoot pigeons, squirrels or hares, but now and then a stray wood duck or mallard would be brought to bag, much to my delight. Those were happy days when, accompanied by our brace of spaniels or setters, we tramped from morning until night through the beautiful autumn-tinted forests and fields of Ontario county, stopping at every promising bit of swamp and cover and generally taking our share of whatever game it contained. Jolly were the lunches we ate under the shade of the trees and lovely were the drives home in the frosty, cool moonlight evenings, enlivened with pipe and story, and the cheerful welcome home and delightful game supper after our hard day's work added greatly to our enjoyment. The scene of my next sporting trips after leaving for New York was Barnegat Bay. How well I remember my first visit to dear old Squan Beach, the home of Bill Chadwick and innumerable wildfowl and bay birds. Visited in those happy days by such famous sportsmen as Uncle Gil. Davis, known as the Governor of Coney Island; Robert Barnwel Roosevelt, Benjamin Lilly, Bob Robinson, Staples, Palmer, Rodman and a host of others, many of whom, alas! have joined the great majority in the happy hunting grounds. Billy's old ranch was built chiefly of wreckage cast up on the beach, which at Chadwick's is only a couple of hundred yards wide, and frequently during the fall storms the ocean makes a clean breach over to the bay, and the house becomes an island. The big flash light at Barnegat can be seen blinking away down the bay, and it was not unusual for visitors to get a shot from the end of Billy's old piazza. Here during the summer and early fall I had glorious sport with the bay birds, and later in the season with the wildfowl. I hope no sportsman will be tempted by these lines to now visit Chadwick's in search of sport. An infernal, screeching railroad now runs past Billy's hotel. Chadwick has sold enough sand lots to cottage builders to become well off, wears a plug hat, and no longer calls the passing broadbill to stool. The old-fashioned, smoky, low ceiling barroom is gone, and the glory of Squan Beach has departed forever, and with it the jolly crowd of sportsmen who used to make it lively there. The ocean still pounds and cracks on the beach, and Barnegat light still flashes out its warning; and now and then some unhappy city sportsman worries down a poor unfortunate sheldrake and imagines he is having sport. Heaven save the mark! About this time I accidentally visited Mansfield Center, the home of my father-in-law. I was agreeably surprised to find an abundance of quail there and a fair sprinkling of ruffed grouse. I immediately sent for my dog and gun, made the acquaintance of the village gunner up at the grocery store for the sake of his knowledge of the grounds and once more managed to enjoy some very good upland shooting.

This local village sportsman was quite a character, and owned the wildest of wild dogs, but he knew just where the birds were located, and between us we managed to make some very good bags. My headquarters were then at my dear old mother-in-law's, and a right comfortable old-fashioned home it was. Right pleasant it was to return to the old house after a long, hard tramp and find it a blaze of light, and to sit down to a New England supper; and everyone knows what that means, especially the pumpkin pies, and hers were unequaled. I shall always look back to those peaceful days among the Connecticut hills as among the happiest of my life. The stock of game about Mansfield Center soon began to diminish. Every man and boy owned a breechloader, and between the shooting and snaring for market I found I had to look for fresh fields. These I found around my own new home in Hackensack, N. J. In the 70s the sport in northern New Jersey was by no means to be despised; of course it was not to be mentioned with that described by Frank Forester in his days, but I know very well we should be mighty glad to have as good now. Hackensack was then small and old-fashioned, and there were not over three or four sportsmen in the place, but it was near New York and growing rapidly, and presently there were ten gunners to every bird, and it was the same old story over again.

My next experience was in the Southern States, particularly Virginia and North Carolina. Here certainly I found game enough, but of course it was far from home and home comforts, and everyone who has visited the South knows that while their hospitality is beyond question, their home comforts and conveniences are not to be compared to ours in the North. Quail and wildfowl are to be killed there in great abundance, also a few woodcock, but no ruffed grouse. Now and then the lucky sportsman will happen on a wild turkey, but quail is the principal game, and as there is no shooting for market allowed the supply of game is likely to last for years to come. WAKEMAN HOLBERTON.

AMONG THE MOONSHINERS.

IN the fall of 1883 I was detailed by the general superintendent of the company to go to an isolated little settlement in the wilds of Somerset county, Pa., to look up a former employee, whose knowledge of certain facts in a case then pending in court was considered of great importance.

It was not certain that his testimony would be favorable to the company, and I was instructed to sound him and act upon my best judgment as to his value as a witness; nor was it certain that I would find the man, but my instructions were to exhaust every effort to do so, and to go to other places where he might be if necessary. Thus it was that I came to be landed at a lonely watchman's shanty at the intersection of a still more lonely mountain road about 4 o'clock one afternoon in September. From the one-legged watchman, whose simple duty it was to flag trains in the event of a landslide where the bank was cut away, I learned that the settlement was five miles away, and the only way for me get there was to walk, which fact was not less cheerful than the thought that I was in a moonshine district, where strangers were cautiously watched, and sometimes murdered on suspicion of being Government spies. But there was no remedy, and after lighting my pipe I proceeded. The day was beautiful and the road quite romantic, which to some extent served to dispel disagreeable thoughts; and before my journey was half over without meeting any one I began to enjoy it, and was almost sorry when a little before sundown I arrived at the summit, and beheld the little settlement but a short distance below.

It was a typical backwoods settlement of not more than a dozen scattered houses and a small tavern beside the road. Here I arranged for food and lodging, which I found both clean and comfortable. Upon inquiry I learned that my man still resided in the place, but was away from home, and the time of his return was uncertain, although he might turn up at any moment.

I retired early that night; the exercise of the walk and a good bed combined to bring peaceful and dreamless slumber.

I waited patiently all the following day, passing the time in getting acquainted with the natives, who, though rude in manner and appearance, seemed mostly hospitable and good-natured.

The front room of the tavern contained a small bar over which was served to occasional customers a light-colored liquor, which I rightly guessed was moonshine whisky. The price was five cents a drink, the glasses large, and I saw nothing else sold. In the evening I loafed in the barroom, hoping my man would turn up, as that was said to be his customary resort, but he did not. I amused myself by watching and studying the various characters and listening to their desultory gossip, which interested me, and the presence of a stranger seemed also to interest them; for I frequently detected sly glances cast in my direction, and once two men who stood apart appeared to notice me more particularly, for one said something to the other which caused him to look quickly at me, and after a few earnest words they departed in company. One old man whom I had treated with a drink at the bar during the day in return for his sociability, probably in expectation of further favors gave me his attention, and from him I learned that game, especially ruffed grouse and wild turkey, was quite abundant in the neighborhood, and I wished for my gun.

The next morning my men had not returned, and the thought of spending another idle day in that monotonous place made me cast about for some means to while away the time. I had noticed a good-looking double muzzleloading gun behind the bar, one barrel over the other, the top barrel a rifle and the under one for shot, which, after a good deal of persuasion, I induced the landlord to loan me for the day, and, when fully accoutred with powder horn and pouch slung over my shoulder, I sallied forth, feeling much of the delight of the days when as a boy I went into the woods similarly equipped, but not until I had received the mysterious caution to keep on the right side of the road and by no means go into the woods on the left. I thought nothing of the words at the time,

and left word for my man to wait for me should he return while I was away.

Following directions, my course took me up the road a little more than a mile to the top of the mountain, where I discovered a thickly wooded and comparatively level country. There I turned in to the right as directed and began my hunt. I had not gone far when I flushed a large covey of grouse, but, unaccustomed to the heavy muzzled gun and the under hammer of the shot barrel, they were out of sight before I could shoot. Marking the direction of their flight as well as I could, I followed stealthily, prepared to shoot if any arose. I soon raised three or four more, which flew back in the direction of the road, and as the woods and undergrowth seemed to be getting thicker the further I penetrated the woods, I turned back, but without finding anything until I reached the road again. Believing they had crossed to the other side, I went over and within 50yds. flushed another covey larger than the first, but again did not shoot because the undergrowth was so dense I could not have raised my own lighter gun before they were out of sight. I followed them, however, deeper into the woods, hearing one get up now and then without seeing it until I began to despair of getting a shot at all. Then, recollecting that I was in a strange country, I bethought me to get back to the road, for I did not want to take chances of getting lost; but, after going twice as far as I thought I had come, I could not find the road, and soon realized that I was lost indeed. I knew that the road ran nearly north and south, but the day was cloudy and I could not tell which way that was. I brought all my limited knowledge of woodcraft to bear, but without satisfactory conclusion. I could not see far enough in the dense woods to tell which way the mountain sloped, for here it was entirely level, and I tried to make out the north side of the trees by the bark, but could see no difference; and I finally decided to take a straight course, in the hope that it would bring me to some sign of habitation. I found by my watch that it was past noon and I hurried on, worrying over the prospect of spending the whole day and possibly the night in the woods.

After I had walked a mile or more I thought I heard the snapping of a dry stick on my left and stopped to listen, but heard nothing more.

At first I was inclined to go toward the sound, but concluded to follow my plan to keep a straight course and try to find my way out of the woods. In a little while I heard the sound again, only a little nearer, but could see nothing, and I determined to investigate. The thought of finding game made me forget my situation, and, marking my position, I crept stealthily in the direction of the sound, but could find nothing, and turned to go back, when I was startled by a gruff voice from behind a large tree which I had just passed, demanding: "Say, mister, what you want yere, anyway?"

Quickly looking up, I beheld one of the two men who had noticed me so particularly the night before, and at first I was glad, but his attitude was menacing, and an ugly look in his eye alarmed me. I almost stammered that I was lost and was trying to find the road.

"Well," incredulously, "what 'd ye come yere fur?" he demanded.

A little nettled at his impertinence, I replied that I thought I had as much right to be there as any one, and did not consider myself bound to account for my presence to him, but if he would direct me to the road I would thank him for the favor.

Without reply he placed his finger in his mouth and gave a loud whistle, then stepped forward, keeping his eye steadily upon me and his rifle ready. I began to have misgivings as to his intentions, and involuntarily drew my gun closer, for I had heard of men mysteriously disappearing in this country of moonshine, and the words of the landlord flashed through my mind on the instant, but he saw the movement and quickly said: "Keep yer gun down, mister. No one 'll hurt ye if ye 'r' tellin' the truth." At the same moment footsteps in the rear announced the approach of another, who proved to be his companion of the night before, but who remained silent while the first gave him my story. Then to me he said: "Ye may be all right, mister, 'n' we hope ye are. If ye ain't, the sooner ye git out o' yere the better fur ye."

I assured him that nothing would please me more, and all I wanted was to find the road. Then I told him my business in the settlement, and how I came to be hunting in the woods, which seemed to satisfy him.

"Well, that's all right, mister, but we don't allow huntin' on these premises; we been watchin' ye all day. The road's over yon," pointing in almost the opposite direction to which I had been traveling, " 'n' it's a purty good stretch 'til ye reach it; ye better git there 's quick 's ye kin, 'n'," significantly, "don't ye git lost ag'in."

Thanking him, I lost no time in going, and found it was as he said "a purty good stretch," and I was conscious of being followed all the way.

When I reached the tavern and returned the gun to the landlord he seemed to notice something in my appearance which he fully understood, but said nothing, nor even inquired of my luck. My man had returned and was waiting for me. As an old acquaintance, he was pleased to see me, and we ate an early supper together in the tavern, while I related to him my experience. He expressed no surprise, nor made any comments further than to say it was not safe for strangers to go out in the woods alone.

After supper he accompanied me the whole distance to the railroad station, and it need not be said that his company was agreeable. The interview was favorable and he made a good witness. While attending court he invited me to visit him for a hunt, and assured me that in his company I need have no fear of being warned off the "premises," but I never went. It is a game country, and the moonshiners are pretty well raided out now.

Only last year an acquaintance returned from a shooting trip there with more wild turkeys and ruffed grouse than I have seen together in a good many years, and I am now anticipating a trip with him next fall.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

A DAY ON LONG ISLAND.

THE 3:30 train from East Thirty-fourth street that Monday had at least one happy man aboard. I had been scheming for at least two weeks to get a try at quail, and finally, when about discouraged, I saw a loop-hole which I could squeeze through without entirely rupturing my conscience.

No use trying to read my paper, for visions of flying quail at every conceivable angle danced before me, so that I at least gave myself up to a daydream of bliss—by the way, that's a great habit of mine, and is frequently the only way and time when I really get good shooting. My destination—Bellport—being finally reached, I landed my gun, my bag and myself in the village stage, and was soon under way for the Bell House, a mile distant. A chat with the stage driver showed that the conditions for duck shooting were unfavorable, although a few were being killed—mostly redheads, black ducks, broadbills, coots, with an occasional canvasback—but that quail were abundant. Arriving at the hotel, I was cordially welcomed by Mr. Kramer, the proprietor, and with a heartiness that it seems to me is to be met with solely between gunners—I mean the firm handshake and genuine look of pleasure in the eye that makes one's heart glow, and sinks all the mean pettiness of business aims and strife out of existence for the time being. Friend Bill hustled around and stirred up the great logs in the open fireplace until they snapped and cracked, throwing a glow of warm light about the room and making things seem doubly comfortable by the contrast formed by the dark gray of the sky and landscape showing from the windows.

"Well, so you thought you'd have a try at them, eh? What's it going to be, ducks or quail?"

"Why, Bill, I guess I'll see how my pup will work on quail to-morrow. Charlie is talking pretty big about what he can do, and I'd like to see for myself whether he's preaching or telling a true story."

"I guess from what I hear you'll be more than satisfied," said Bill, "but at all events you'll know to-morrow, and Charlie generally drops in of an evening, so you can arrange your programme for the hunt to-night and let me know what you'll need in the way of eatables, horse and wagon, etc."

"Oh! by the way, Bill, do you remember that redhead you had cooked for me last fall? I'd give considerable to have another feast like that, but I'm afraid there's no such luck for a fellow twice in a lifetime. My! but the thought of it makes my mouth water—cooked just right, dressing and plenty of crisp celery."

Bill's eyes twinkled and he answered, "We'll see; perhaps I can scrape up an old coot or sheldrake and help you out." And with that he picked up my bag and led the way to my room. Now, one word about roughing it: I am only too glad to rough it if it's necessary to do so to get where game is, but I must confess when I looked around at the large, well-furnished and home-like room friend Bill had assigned to my use, with its comfortable, clean-looking bedding, and turned from them to get the warm water sent up to me for washing, I felt that I wasn't called upon to do much "kicking" because some more fortunate gunner was going to sleep under the gray sky, cook his own food and wash in water that numbed one.

To a certain extent the Bell House office partakes of the nature of a country store, inasmuch as during the fall and winter it is the general meeting place of the villagers. After supper one by one they came dropping in with a howdy, generally followed by silence if a stranger was present; but I knew and was known by most of them, and a general chat ensued. "Well, Jay," said one sea captain, "I hear yer goin' to try yer pup on the quail to-morrow. Charlie thinks a heap of him, and I guess he's a pretty good one from what they tells me. Say, boys, did you ever hear about the time Jay and me had awhile ago, shootin' snipe? No? Well, 'twas this erway. Jay here had an idea that he could everlastingly kill snipe, even if he couldn't hit much else from his say so; so one day we started out early, and first we set decoys, and when they didn't show up we finally calculated we'd hunt for 'em; so we tramped and tramped till we were about tuckered out, when Jay spied a couple of creekers a-settin' on the medder. 'Now,' says I, 'let me see you make a clean double on em.' So he walked easy like till he got closer and closer, till by 'm by we wasn't more than ten feet from them, when up they got, one up wind and t'other down wind. I guess he tried trap shootin' style on 'em, for he emptied both barrels at 'em before either had got off twenty feet and clean missed 'em both. Well, he did look tired. He never said a word, but marched straight home; and the reason I've told of it is I've never hearn him say nothin' about it when he's been tellin' any of his huntin' yarns, and I thought maybe he'd forgotten all about it." A general laugh followed cap's yarn at my expense.

By 8 o'clock Charlie M., Jim R. and Charles R., who were to constitute our party, came in and we planned for the morning trip. Charlie M. was to furnish a horse and two-seated wagon, bring my pup Sport and an English setter dog, Brad, of his. We arranged to be off by 6:30 A. M., so as to get the early morning shooting, especially as we had some five or six miles to drive to Yaphank, near which place we expected to find the best shooting.

We were under headway on time, with the dogs scampering and barking around us, for they were to have a run first to take the wire edge off of them.

Now for a word or two of our party. First, Charlie M., a bright, active young fellow of about thirty, quiet and earnest, a native of the place, a carpenter by trade, and one of those men who command respect no matter where they are and among whom; one of the best quail shots in the section and a man second to none in handling a bird dog. Second, Jim R., a right royal good fellow and a first-class duck shot, but with little experience on inland birds. Third, Charles R., the most mischievous imp and best company going, but new to quail shooting. And fourth, the Scribe, a city man, one who delights in gunning above all things, but particularly for quail, woodcock and grouse over a good dog; whose time is too limited to do more than steal away a day at a time two or three times during the shooting season, and whose success with a gun so far hasn't been such as to make him conceited.

Sport, my pointer pup, is fourteen months old, and although quick, is one of the most careful dogs on game I've ever known, and I think he is a wonder considering his age. Brad, the English setter, is finely bred, strong, eager, quick, but apt to get too near his birds and consequently at times flushing them.

With what a thrill of expectancy we watched the dogs quartering the first stubble on the road. Brad, high-headed, was going like the typical field trial dog he is; his broad flag handled with a vim showed his strength and eagerness to first find the birds; his white body with bold orange markings certainly constituted a beautiful picture as he made his long tacks to windward, and then his training and instinct showed in his careful working of the hedge along the fence.

Sport runs a little stilty; his strong point is not his beauty and grace while quartering his ground, although his work is rapid and thorough; but when birds are winded, with his careful, almost cat-like, approach, his eager feeling of the air, followed by his stanch point—then, oh, then is when he seems beautiful to me—for he can be relied on implicitly.

The field, the hedge and nearby woods failing to produce birds, we returned to the wagon; the next two or three fields proved equally barren. Arriving at last at the Yaphank station, we hitched the horse to a nearby tree and struck south through a couple of fields toward a woods where we had heard several gun shots. There we ran across the station agent, who had a bunch of quail scattered and was quietly picking them up one at a time by means of very close careful work on the part of his Gordon setter. He greeted us pleasantly and invited us to try our luck on the birds. No game hog he, but a man well worthy of the name sportsman.

We divided; Jim R. and Charles R., with the setter, bearing slightly to the west; while Charlie M. and I, with the pup, went slightly eastward. We were in dense brush of from 2ft. to 2½t. 6in. high, with here and there a bush from 8 to 10ft. high and trees rather widely scattered. Suddenly whir, out went a quail to my right. I turned quickly and had but a snap shot as he slipped around a big bush. I saw him pitch, but knew he was only wing-tipped. We searched diligently for him, but without success, as everything was as dry as powder and gave the dog no chance; it was some twenty minutes later when the reports to our left showed us Jim and Charles R. were onto them.

We hailed to them and said we'd work toward the wagon and look elsewhere for birds, as we didn't care to impose on our friend the station agent's good nature. On meeting, we found Jim had one bird to his credit, while Charles R. had asked too much of his gun, the bird he shot at being out of range. We tried two more stubbles, the dogs working well, but failed to find birds. It then being nearly noon, we had lunch and stood westward for a couple of miles. Here again we hitched the horse and worked a couple of fields. We were just getting over a rail fence, the dogs to one side, when I heard the report of a gun, saw what I supposed to be a large hawk pitch to the ground, and at the same instant friend Jim took a tumble from the fence and fell headlong into the sweetest tangle of green cat briers you'd wish to see. In an instant up he came, smiling, his face and hands scratched, but with a look of wonderful satisfaction on his face; and why not? He had killed his first partridge (grouse) in a thoroughly sportsmanlike manner. We hurried forward and found the grouse to be a male and one of the largest I'd seen in some time. We shook hands with Jim, heartily congratulating him, and told him there were two things unusual in his case: one being that it very seldom happens that a person kills the first grouse he ever fires at; and second, it was not considered absolutely necessary for a man to turn a back somersault and shoot between his legs.

Jim certainly was happy, and showed it; but turning to me he said, "Jay, there's one thing would make me feel better." Being asked what, he answered, "To have seen you kill him!"

Now, what do you think of that for generosity? I'm afraid not many of us who lay claim to the name of sportsman are up to it. It's a pretty high standard, friends.

We walked on a short distance further and came to a cider mill—one of the old-time kind—wandered around, and finally came across one of the women folks, who showed us where to find the best cider. Charlie M. syphoned it into a measure and handed us each a glassful, when we drank to Jim's further success and another one to our own. We were by this time in a comparatively hilly country, with wild wastes of pasture land here and there, patches of woods, and again stubble and meadow.

Starting once more, we crossed the road and walked through an old orchard. When halfway through I was startled by the report of a gun, and turned in time to see Charles R. with a grin on his fat, roguish face; he had shot at a cottontail just as it was going through a fence, but failed to connect. "I'll get the next one if I get a ghost of a show, you can bet a dollar," said he. We laughed; but sure enough, in the very next field up jumped another, only to be stopped by a clever shot from Charles, to his evident satisfaction.

We separated once more. Charlie M., the pup and I started through the corner of a field over the fence, and had just got in the road when I saw what looked to me like a partridge silently disappearing among the trees. I asked Charlie if he had seen it, and he said he thought he had caught a glimpse of a partridge, but wasn't sure. The trees through which the bird flew formed a hedge of from 50 to 100ft. across, and ran parallel with the road, and there were open fields on the other side.

We decided to shoot even if the bird arose out of range, so as to make him lie close the next time. I kept the road, while Charlie M. and the pup searched the woods. Before long I heard a shot and Charlie reported the bird as having flushed some ten rods ahead. Finding the bird so wild, I went well along the road to where a cart path intersected it leading into one of the fields. I took a stand here and made up my mind at least to burn some gunpowder if she tried to run across the road. Soon I heard Charlie working his way through the trees, when with a whir up went the partridge from among the bush and trees on the opposite side from where I expected her to start. I got a momentary glimpse of her form disappearing, took a snap shot and had the satisfaction of seeing her strike with a thump in the open field on the other side, and roll over, but to my utter astonishment take wing again instantly, when she gave me a somewhat better shot, and with the second barrel I succeeded in finally stopping her.

Delighted as I was at killing the partridge, nevertheless

it was a disappointment to me not to have had the pup have a chance of pointing or trailing her. Charlie came up and after letting the pup nose the bird for a moment I stowed it away in my pocket. Charlie was wonderfully pleased at my good fortune and acknowledged that he was about getting disgusted at our hard luck in not finding more birds, for he knew they were plentiful thereabouts, but couldn't seem to find them.

We soon came up to Jim and Charles R., who in fact were coming our way, thinking from our having fired three shots that we had found a bunch of quail. Jim was delighted when he learned of my getting a partridge.

We then started somewhat spread out toward the wagon, then distant about one and one-half miles. We went through some bits of woods and stubble, but failed to find a bird. On a hillside a bunny cottontail started from under my feet. I covered it for an instant, felt how easy it would have been to shoot, decided the little fellow wanted his life more than I wished to take it, and let him go. When within a short distance of the wagon, where we had arrived without any further luck, a rabbit slipped off through some rather heavy underbrush, making a somewhat difficult mark, a hasty sight, a bang, and poor bunny had rolled in a heap. It was now after 3 P. M., and our sum total of game killed was two partridges and two rabbits and one quail—among four persons and the day nearly gone. But we weren't discouraged yet. Quail lead into the stubble about this time and feed until time to roost; and we were in hopes of running across them yet. So into the wagon we climbed, taking the dogs with us for a rest, and headed the old horse for home, intending to visit the stubbles that lay on our route.

A drive of a couple of miles brought us to the next stubble, and this not being a very extensive one Charlie M. alone got down from the wagon, and with the pup had worked well across it before the dog began to road on birds. We climbed down as quickly as possible, but before we had gotten half way the birds had flushed wildly a long gunshot ahead of the pup. Charlie managed to catch one as it was topping a bush.

The flock divided, some going north and the rest south. We started after the birds that had gone north; here we saw some very pretty work, roading and pointing, on the part of both dogs, but particularly the pup. We got three birds and made a couple of misses, for the brush was very thick. Finally the pup began working on one and located it at the edge of the woods. Charlie M. and I stood almost over the dog, and when the bird got up it hadn't got more than 10 or 15ft. south before it swung sharply to the north and west. We had both fired just as it turned, and consequently had shot ahead of it; then in our hurry to better matters both snapped at it, only to record a clear miss again. We looked at each other for a second in silence, when Charlie remarked, "I'll be darned," when we both laughed.

I now started for the wagon with the setter, Jim and Charlie R., as I was anxious to catch the 6:28 train from Patchogue, as there was no train from Bellport to take me to the city that evening. Charlie M. said he would skirt the edge of the woods in the stubble with the pup and we could pick him up with the wagon a little further along; he was in hopes of finding another bird or two. We had gotten to the wagon and Charlie had worked close to 1,000ft. south when he called to us and pointed to the dog, who was standing rigid. We hastily loaded again, hurried the horse to the nearest point, leaving him unhitched, and went on a run to where Charlie and the pup were. The pup looked over his shoulder as much as to say, "Well, are you here at last?" and began roading the birds, which were running by this time. We followed them some distance, when the dog left the field and went over into the undergrowth, where Charlie finally flushed them. He got one when they rose, and just then two started to swing across me; one fairly close, and the other considerably further. I pulled on the nearest and had the satisfaction of seeing him wilt, and looking hastily around for the other, saw it some 40yds. or more distant disappearing among the trees. I took a hasty snap at it, and felt if I didn't hit I wasn't far off, when Charles R. sung out, "Got it, by thunder!" The prettiest double of the season. Charlie M. said the same thing, but acknowledged afterward that he also had fired at the first bird, so we called honors easy on it. To say I was pleased but faintly expresses it.

We drove now rapidly back to the hotel, where I had time to eat a little supper before Charlie M. was at the door with his fast mare, who took us in short order to Patchogue in time for the train.

I found that the boys had tied their birds up with mine—to make it look decent, they said. After a hearty handshake, and expressing my thanks to Charlie M. and the boys for the pleasant day they had given me, I got aboard the train and was once more headed for the city and work.

In summing up I found it had been a mighty pleasant day, and notwithstanding our hard luck in finding but few quail, a day that had been to me entirely satisfactory, and I think a fair bag for so near New York, considering the short time used.

Next day I divided my birds among my friends, and set to work with renewed zest in consequence of my day's outing. JAY DEE.

A good story is told at the expense of a well-known Leominster sportsman; it runs something like this: A few days ago he and another fellow went gunning; while walking side by side through a patch of woods they flushed a large flock of quail. Both emptied their guns in short meter; a bird was seen to fall. The Leominster sportsman picked the quail up and claimed it, from the fact that he "always picked out his bird to shoot at when a flock went up;" the other fellow admitted that he "fired point blank into the bunch," and as he had no means of knowing whether or not his shots took effect, laid no claim to the bird.

Meanwhile the dog scurried around and to the utter astonishment of the gunners retrieved four more dead quail. "All right," said the other fellow, "if the bird that we saw fall is yours, these four must be mine," and he straightway stowed them away in his game pocket.—*Unknown Ex.*

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

HOLLAND.—IV.

[*Concluded from page 510.*]

Occasionally a few birds were found among the birches near where we left the team, but it was rare that we found more than two or three. Returning from this cover, we take the first left-hand road and keep on about a mile, when we turn to the right and soon come to an old orchard on the right-hand side that is one of the most unlikely looking places for woodcock that could well be imagined. Nothing but a few scraggy apple trees, plenty of rocks, both large and small, without a bush for cover, made of this an ideal spot for woodcock to shun, but they were here nevertheless, and I have often seen from six to ten birds flushed in the small space within these stone walls. Upon one occasion, when here with Messrs. Ashmun, Bowles and Sabin, we gathered in ten of the beauties, and as we finished at the corner next the road Mr. Ashmun sat down at a low place in the wall, Mr. Sabin taking a seat near him on top of the wall and Mr. Bowles occupied that rock, while I stood just behind him leaning against that crooked ash tree, then scarcely bigger than my arm. Mr. Ashmun was discussing with Sabin the reasons that induced the woodcock to tarry here, when Mr. Bowles, with a merry glance to me, whispered, "Yellow jackets," and pointing to Sabin, around whom several of the pretty insects were buzzing, as calmly as he could awaited events. Some wise old duffer has put down in black and white that "it is the unexpected that happens." When you disturb a yellow jacket's nest it is not the "unexpected" that happens; therefore, as we expected, the fun soon began. Mr. Ashmun started the racket by jumping to his feet and giving a vigorous slap on his thigh, while Sabin, with three or four whacks at his legs, flopped off the wall squarely into the nest, from which the infuriated inhabitants swarmed around his ears in such numbers that he took to his heels, and with wildly gyrating arms and heartfelt grunts he floundered over the stones and left us to our fate. Although Mr. Ashmun was decidedly busy in hitting out at the foe, he appeared to rather enjoy the general results, and I never heard so hearty a laugh from him as when, a moment later, Mr. Bowles's wide open jaws came together with a snap as he made a vicious whack at the back of his neck, and with a jump that would have done honor to an athlete he also deserted us. In the meantime I had received a fair sample of what was going in the shape of a slight one under the ear and a full fledged one considerably lower down; but as I had, as quietly as was possible under the circumstances, mashed the torments, I flattered myself that my companions had not noticed that I was more than a spectator; but that evening, after giving a circumstantial account of the affair to our friend, Mr. Herring, the safe manufacturer, who had called to spend the evening with us, Mr. Ashmun quietly remarked in his inimitable manner, "A well told tale, but our friend has omitted two very striking points. One you will find just under his right ear, and the other about eight inches below the belt. This last is a red-hot one if I am any judge of the workings of the human countenance."

After leaving "the orchard" we drive a short distance to where the road turns sharp to the left. Hitching our team to the right-hand barway, we cross the road and are on the ground known as "the old place." When or for what reason it obtained this patronymic all my researches failed to discover; it was a good old place, however, and many delightful hours have I passed among the bounteous supply of woodcock and grouse that were nearly always to be found here. That tangled thicket of tall birches in the cover in front of us was then of young growth and a favorite spot, where we often enjoyed a rare bit of sport; while this open pasture to the right was then a dense alder thicket, where "eye of faith and finger of instinct" were very necessary adjuncts to successful sport. Between these two bits of cover, and extending for quite a distance along the lower edge, was a straggling growth of alders and birches, occasionally a dense patch a rod or two in extent, but generally open shooting clear down to the timber, where we turn to the right along the gently sloping hillside among the witch hazel, always a capital place for birds. Up the ascent a few steps, just at the head of that little hollow, where you see that large clump of witch hazel, old Trump once came to a point. Mr. Ashmun took position on the south side, Mr. Sabin by the dog, and I stood on the north side in that open place. Mr. Sabin stepped in ahead of the dog, a brace of woodcock rose, one turning to the left past Mr. Ashmun, while the other went straight away, both of them collapsing at nearly the same instant. At the crack of the guns two more sprang, one came my way and the other to Mr. Ashmun. The old dog still held his point, and we proceeded to load. No sooner were ramrods returned—for this was in the day of the muzzle-loader—than I moved forward a step or two, when, from the upper edge of the clump, three were flushed, Sabin making a beautiful double, while Mr. Ashmun doubled up the other. This we thought to be good work, seven birds from one point and all of them accounted for without a miss, as Mr. Ashmun well said, "Something to remember, with quickening pulse, when our shooting days are over." Kindly fate vouchsafed me yet another souvenir of this red-letter day, that is still one of the chief treasures of memory's store. We had beat out all the cover, except a small patch of alders just over the wall at the beginning of the dense alder thicket that I have previously mentioned, when Trump found a woodcock at the far edge of the patch, and Sabin went to him and flushed the bird, which came partly toward me, but turned at the edge of the thicket and went straight away. Just as I raised my gun a grouse—started by a rabbit dog in the woods to the left—came by like a winged thunderbolt. I did not see the meteor until it was about crossing the line of the woodcock, but as soon as I caught a glimpse of it, with an inspiration born of my great love for the royal bird, I threw my gun well ahead and cut loose; then again covering the woodcock, I let drive and both birds struck the ground almost at the same instant. The memory of this day doubtless adds much of luster to the halo which surrounds the pleasant spot, but other days of most enjoyable sport also have their share in the pleasant emotions that swell my heart as often, very often, upon the pinions of thought I again revisit the well-remembered slopes and shady nooks of the dear old place.

After working over this cover we return to the team, and passing through the barway just to the left of the horses' heads we follow the old road down the hill until we come to the reservoir, or rather to an arm of it that forms a little bay, surrounded for the most part with quite a growth of weeds. At the upper end of the bay on that little knoll there was then a scattering growth of birches and witch hazel, and we usually found three or four birds there, while the border of the bay often held a number of grouse. Beating out this cover down to where the bay joins the reservoir, we turned sharp to the left and worked out all the cover, finishing it at the alder thicket close by the team, generally picking up a few woodcock and a grouse or two. Once when here with Messrs. Patten and Sabin we drove Mr. Kinney's horse old Isaac, a staid old fellow, perfectly trustworthy in every respect, at least so Mr. Kinney said. Just as we were about to return through the barway to the team a grouse started from the cover below us and flew back along the south edge. Sabin and Patten went for the bird, while I took the team to meet them at the top of the hill. When I arrived there I saw a large hawk coming directly to me, and as he was passing over I cut him down; then the fun commenced, at least it was fun for the spectators, so far as I could judge from the ill timed shouts of laughter that I heard above the roar and clatter of steady old Isaac and the big farm wagon, as at breakneck speed we fairly flew down the steep and crooked road, and it was not until we had rattled over the bridge and struck the deep sand that I succeeded in moderating the wild speed of the perfectly trustworthy Sir Isaac. Casting a retrospective glance over the scene of action, I noted, without a particle of surprise, that with the exception of myself there was absolutely nothing remaining in the wagon, not even a feather; but scattered in picturesque groups all along the road were the various articles that made up our cargo, while at the top of the hill were my two friends, still in convulsions, Sabin making ridiculous signals with our best blanket, while Patten was insanely waving the hawk above his head, and both making such a hideous racket that it was all that I could do to keep old Isaac—and small blame to him—from jumping into the pond.

We have now explored all the principal woodcock covers in this immediate vicinity; there are, however, many little nooks and corners scattered along the different highways and byways that were capital places to pick up a bird or two, and well worth looking over when, as it sometimes happened, the main covers were not quite up to the mark.

Two such covers I must not forget. Across the road from the house just at the top of the first rise was a sparse growth of witch hazel where I have frequently gathered in two or three birds before breakfast, and just south of this, down by the brook below the Butterworth cover, is quite a growth of alders at the edge of the woods, which was also a sure place to find a stray bird or two, and nearly always one or more grouse could be found. One morning upon my return from this locality I met Mr. Kinney at the door and told him where I had been, when he remarked that the only time he ever went bird hunting was several years before down near the brook. Judging from the twinkle of his eye that there was something worth hearing, I asked him, "What luck?" "Well," said he, "I had mowed the brush after haying, and along in the fall when there came a good dry time I went down there armed with a rake and began to put the brush in piles ready to burn. I had been at work a short time when I saw a flock of quail flying toward me, and I kept perfectly quiet and they lit within 4ft. of me, and were out of sight in an instant under a few scattered brush and leaves; but I knew that they were there, as many as twenty of them, for I saw them light. I had nothing but the rake, and I made up my mind that I would whack it down upon them and get at least half a dozen; but just then a happy thought struck me, and I made up my mind to take hold of the skirts of my coat and throw myself right on top of them and catch the entire lot. So I braced myself, meantime thinking that we would have seven of them—one apiece for the family—on toast, and the others I could give away, as I had read that, although quail on toast is nice, too much of it is too much. So, as I had them all disposed of and was good and ready, I made my spring, and with coat tails well spread to take them all in I landed squarely on top of the little brush heap." "Well," said I, as he came to a full stop and drew a long breath, "how many did you get?" With a queer look and most expressive roll of his eye he said, "Well, I didn't have any to give away and none of us had any on toast, nor have I seen a single feather of one of them since; but," added he, "I'll tell you what I did get. I stuck a stub in my side which laid me up 'most a month, and ever since that time I can't bear quail on toast."

Such was Holland in the good old times, and pleasant memories of the glorious days enjoyed in the well remembered and dearly loved spot will remain while life shall last to cheer my waking hours and bless my slumbers with blissful visions of rarest sport. Although the chief attraction of this beautiful resort has in a great measure taken flight to other scenes, there is still left to the sportsman a fair share of the once beautiful supply of game; and if he be a lover of nature in its rugged wildness, and can enjoy the peaceful, calm and quiet beauty of woodland slope and sylvan dell, the weird music of babbling brook, and the restful calm of the still waters, there is yet left to him a wondrous store of rarest gems, adorned with nature's choicest setting, spread before him at every turn with lavish hand, pleasing the most fastidious eye with picturesque beauty, and soothing the troubled spirit with balm more potent than most favored town or proudest city can boast. SHADOW.

At Chipmunk Lodge.

FROM his summer cabin on the Platte, thirty miles from Denver, Mr. Wm. N. Byers last summer sent us the charming picture which is reproduced on page 5. It is from a photograph by Mrs. W. F. Robinson. The chipmunk, a wild one, had from association become trustful of humankind, as chipmunks are quite ready to do if their confidence be not betrayed. The photograph is a clever bit of amateur work with the camera.

Natural History.

TRADE RATS AND COYOTES.

BY FLORENCE A. MERRIAM.

ONE of the animals one hears most about in the San Francisco Mountain region of Arizona is the "trade rat," an original character noted for strong commercial proclivities. His one idea of happiness seems to be to trade. He helps himself to whatever takes his fancy, provided it is not too big for him to handle, but with scrupulous honesty he brings back something to replace it. From some points of view his trades may not be quite fair, but they seem to satisfy the conscience of the rat. The log house where I boarded during the summer had an outdoor cellar excavated in the side of the hill a few rods away, and almost every day when the ranchman's wife went out there she found freshly cut goldenrod or lupin blossoms scattered on the cellar floor, a spray here and a spray there, brought in trade for such useless articles as a lemon, or the cord by which the butter pail was hung. Sometimes the rats come into the house at night and carry off towels and socks, replacing them with valuable pine chips and cones.

The ranchman thought they had no object in their collections, but traded just for mischief, and brought in anything that was handy for them, although he considered them "partial to lupins when they make their trades." He once took up a floor and found the whole space between the ground and the boards—a space 6in. to 12in. deep, under a room 14ft. square—filled in tight with lupin. He told me of his surprise.

"I took up one board and found quite a wad of it," he said, as he sat down beside the kitchen stove.

"I didn't expect to find any more, but as I took up the boards I found it covered the whole floor, packed in tight between the joists and close up to the floor; you couldn't have wadded it in there as tight with your hands; there was all as much as a good sized haycock, over 100lbs. of good cured hay lupins, not disturbed, no leaves eaten off. I didn't see them at it, but I know it was their work.

They might have put it in to eat and then been ketched," he concluded. While the rats were storing lupins under the floor they came into the cabin and piled the fireplace full of trash—chips, cones, papers and rags—carrying away beans, blocks of matches and whatever lay around in the bunks—even old suspenders and buttons. At night he could hear them "come draggin' those weeds across the ceiling."

In the camps of the men who were chopping railroad ties—the tie choppers' camps—the ranchman had often seen the rats. He said:

"I've seen them sneak in. They're cunning and sly. They'd come and lay down what they had in their mouths and look around to reconnoiter. They have a very intelligent look when they come to look around, and if they thought their way was clear they'd grab up what they had and run. Sometimes they'd cruise round the boxes. They'd carry out anything except what they'd brought in—a darning needle with thread in it, spools of thread, bits of candle, pipes, pens, and I've found a package of coffee out in the middle of the room and could see where they had hold of it with their teeth.

"During the time they were annoying us so much they were making a pile down in the bottom of the cupboard—chips, stems of dry weeds and twine. We had nothing in the cabin they'd eat, you know; they did it just for mischief. They'd just come to ransack round and carry away trinkets. They took a pack of cards and put it among their trash.

"They never destroyed books or papers and never injured anything in any way—just piled it up. Sometimes they'd make a pile as big as a bushel basket—pile it up in a heap. They'll take anything they can carry when they get one of their trading streaks."

The rats seem to be particularly fond of anything that glistens, such as nails, razors and spoons. One of the ranchwomen told me she had found nearly 200 bright metal cartridges up in the hay mow, where the rats had deposited them in a mat of cotton and gunnysack. She spoke of their habit of moving things. One of her friends had been kept awake nights by their trundling the kindlings from one part of the floor to another, and a Colorado woman she had known had had a whole baking of cookies carried from the kitchen table up on the canvas that was stretched under the peak of the roof.

Wood rat is another name for trade rat, and the kind we had about the mountain does not occur outside of the the timber. In the cedar woods our farmer had found rats' piles made of dry cedar boughs, cedar bark, Spanish daggers, handsful of juniper berries and pinon cones, and assured me that "they never miss a cone of any kind." A Texas neighbor told me he had seen nests of the desert rat made of cactus and Spanish bayonets.

Trade rats, rabbits, prairie dogs, badgers and antelope were the only mammals I saw while at Mount Wing Ranch; but coyotes had been plenty in the neighborhood a few years before. The farmer's wife told me she had heard the dogs barking at dusk one night, and on going to the door found three wolves standing by the barn.

The ranchman came in while his wife was talking, and broke in:

"They used to come round here and howl—they'd set up cackling like an old hen, and just bark and bark. To hear one you'd think there was a whole drove of them. They are great for makin' a noise—barkin', especially before a storm and during a storm."

When I asked if they had ever done any harm, as farm work was not pressing that morning, the ranchman took off his hat and sat down good-naturedly to tell me what he could remember of his experiences with the wolves. He began:

"We used to miss our pigs when they were a month or six weeks old, and one day when I was carrying on the piling business I come out to the ranch and the hogs were up here, and I rode along, and as I got on to the rise where that black stump is," pointing out of the window toward the pasture fence, "I saw one of the old hogs chase a coyote. I thought it was a dog first, and stopped to see. Then I saw another coyote and the other hog after him."

Two coyotes commonly work together, it is said, one to decoy the guardian of the young while the other does the stealing.

"The little pigs was scart," the ranchman went on, "and they stood themselves up in a little pyramid pile while the old hogs was chasing the coyotes away. One coyote would come up and the hog would chase him, but the coyote would keep a-going to get the hog away from the pigs; bother and tease him to get him away. The other coyote would be dodgin' round close where the pigs were. Then the coyote that was furthest off he run and skipped by his hog and run as fast as he could for the pile of pigs and got one. By the time the wolves killed the pig, the old hogs were back after them, but they maneuvered round till one got the pig and dragged it off. Then the old hogs went after the other little pigs and took them to the hill."

"Have you ever seen the wolves chase a calf?" I asked the ranchman.

"Seen them?" he ejaculated. "I've seen them right there on that flat," pointing to the meadow below the house.

"There were two coyotes and a cow and a calf. The coyotes would both rush up together and the cow would take after one and he'd run off, and while she was chasing that one the other one would slip up and kill the calf. If a coyote attacks one cow with a calf, when she sets up a-bawlin' all the cows within sight or hearing will come to the rescue, all bawlin' and bellerin' to drive you crazy."

AT CHIPMUNK LODGE. PHOTO BY MRS. W. F. ROBINSON.

The cowboys are greatly troubled by coyotes and the farmer explained the reason by saying: "You know the cowboys here take a cow's hide and slit it up into strips and twist up a lariat for lassoing, and put a drag hondoo—a block of rawhide or wood—on the end. They picketed their horses out with them years ago when things was new, and often had their horses cut loose at night. The coyotes never bother rope, but I've seen rawhide lariats cut up into short pieces by them as slick and smooth as if cut with a knife. Everybody always looks out for his lariats when they are off on the ranges. A coyote would slip right up and cut them. I've been told of it by a great many horse men and have heard of it out in the deserts here."

"They're a sneakin' animal," the ranchman declared, stroking his beard, and then went on to tell his experiences around the sheep camps. "If they get round the bed ground the sheep will bunch up. I had a bunch of sheep, about 2,400, on the desert near the Grand Cañon. The coyotes was thick there. You could hear them barkin' in every direction, such gangs of them all barking and howling at the same time. On a dark night like this they'd make night hideous. We were doctorin' the sheep for the scab and had them all in a corral, and at night could hear them surging back and forth from one side to the other. The sheep men say coyotes never get inside a corral to get the sheep, but get close to the outside. When they get inside an inclosure they haven't much show to get out with anything—they're a sensible animal. But they're awful bold in the daytime when the sheep are out in the herd. They'll run up to one and cut its throat. Then there's a grand scatterin'," he concluded, as he reached for his hat and went out to hitch the bucking broncho.

[There are people who have grave doubts about the honesty of the trade rat, and this doubt expresses itself in one of the names given to the animal—camp robber. Other names are mountain rat and bush-tailed rat. In the Rocky Mountains this species is regarded with deep hatred on account of its trading or stealing proclivities. It will take anything, from a cartridge—as Miss Merriam says—to a butcher knife, from a needle to a tin plate. When a family of these animals take up their abode in a house, the practice of the ranchman is to stop work and hunt them until he has killed them all.]

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

RANGE OF THE PRONGHORN ANTELOPE IN 1896.

IN response to my request to readers of FOREST AND STREAM for notes on the distribution of the pronghorn antelope, which was printed in FOREST AND STREAM of Oct. 3 with a provisional map, I have received a number of letters which add several localities to those earlier given, and extend the range of this species beyond what I gave it on the west and on the south. I bring up the matter again at this time in order to thank my correspondents for their kindness, to print the revised map, and to repeat my request to readers of FOREST AND STREAM to send me any notes on the range of the pronghorn.

Prof. L. V. Pirsson, of Yale University, in 1896 observed antelope along the stage road between Fort Benton and Lewistown, Mont., and about ten miles out and south from Fort Benton in the open country between Fort Benton and the Highwood Mountains. These antelope stood quietly and watched the passing of the stage at about 75 or 100yds. A tame antelope was seen at a ranch on the south side of Judith Mountains, not far from Fort McGinnis. He was caught in that country and reared there. There are still a considerable number of antelope in that country east of Cone Butte and Black Butte, and they were hunted there this summer. The animals spoken of as seen were observed in July and August, 1896. In 1894 antelope were seen by Prof. Pirsson in the open broken country south of the Highwood Mountains and in the bad lands of Arrow Creek. There are no doubt still some there. In 1893 antelope were seen in the open country between the South Fork of Smith River and the head of Shield's River, a tributary of the Yellowstone.

Prof. Pirsson concludes by stating that "In the central part of Montana, namely the Judith Basin country and contiguous parts, the antelope still has a wide but very sparse distribution. They are not very plenty anywhere, and travel a good deal. The general sentiment of the cattle men is against killing them, and I am inclined to believe that it will be some time before they are entirely exterminated there."

Mr. C. L. Herrick, in reply to an inquiry from me asking him for details concerning a statement made in a paper which he published in 1892 in the Bulletin of the Minnesota Geological Survey, in which he stated that the antelope formerly occurred in southwestern Minnesota, very kindly wrote me as follows: "I can only say that during a personal examination of the southwestern part of Minnesota in 1886 or so I found settlers agreed that the antelope formerly ranged considerably east of the Big Stone Lake region, and probably nearly to Lake Shetek. I have no data and cannot at this distance of time and place refer to the person from whom the information was received." Lake Shetek is in Murray county and not more than forty miles from the boundary line between Iowa and Minnesota. If the antelope ever actually ranged as far as Lake Shetek on that parallel, it is altogether probable that at the same time they were found in Iowa as well.

As against this, however, I may quote paragraphs written me by Mr. Orin Belknap, of the State of Washington, in which he says: "My father moved to Pottawottamie county, Iowa, twenty-five miles east of Council Bluffs, in the spring of 1854, forty-two years since. No trace or tradition of the antelope was ever found by us at any point east of the Missouri River, and I am inclined to doubt their existence at any point in Iowa. I remember very distinctly how the starch was taken out of my boyish ambition when, Tom Sawyer like, I struck a boy from Council Bluffs who coolly informed me that across the Missouri, in Nebraska, where he had hunted with his uncle, there were animals entirely different from the deer, called antelope, harder to hunt, swifter, had to be flagged, etc.

"Another thing, too, you will remember, the grass on the Iowa prairies was double the height of buffalo grass on the Nebraska plains, and the antelope never seemed to like the tall grass. Of course there is a tradition that buffalo grass once grew on the right bank of the Mississippi, and if this is true it is quite probable that the pronghorn flourished there; but that must have been long ere my time."

Inquiry among two or three people who traveled across Iowa in 1855 shows that they have no memory of having seen antelope, and the question of their existence in Iowa must be left doubtful until further evidence is obtained.

Mr. W. R. Hall, of Nebraska, has kindly given me some notes in regard to the existence in northeastern Colorado and western Nebraska of the antelope at the present time. He sends me a marked map and says, "That they are still ranging around the cross marked in northeastern Colorado, I had ocular proof no later than May this year, having seen two bunches, one of six, the other of nine. Those of northwest Nebraska I have not seen lately, but have information from sources which I consider as reliable that they are still there. It is estimated that there are in the neighborhood of 200 in this section."

Mr. C. W. Evers, of Ohio, advises me that he saw antelope during the month of February, 1896, in Texas, in the western part of Pecos county. This carries the range about two degrees of latitude further south than shown on the first map. Mr. Evers says, "First we saw about daybreak from the train a single individual, a large buck. He ran near the train in fleeing, and but for his white hips and the peculiar jump or canter I should have almost been deceived into the belief that it was a deer in the misty morning gray. A passenger fired a revolver from the window, and the brute changed its course at once. Ten miles or so further on I saw far away a bunch of seven antelope near the foot of a bluff. These also took to their heels at the report of a revolver, and their bobbing white sterns reminded me of other days on the Little Missouri in Dakota."

PROVISIONAL MAP SHOWING DISTRIBUTION OF THE ANTELOPE IN 1896.

As amended Jan. 2, 1897. The range is indicated by the black dots.

Mr. C. H. Blanchard, of western Utah, gives me a locality south of the western part of Salt Lake, in Utah. He says: "This spring I was interested in an expedition that went out on the desert to examine a deposit formed by an extinct geyser, and from which now flow warm springs. This deposit is about thirty-five miles northwest of Oasis, Millard county, Utah. The gentleman told me that he saw two bunches of antelope, one of six, the other of eight, by actual count; and he was told by the man who drove the team, and who had been familiar with the country out there as a cowboy for years, that there must be at least 100 antelope in that vicinity. They are very wild, and my informant told me they could not get within what would be considered shooting distance of them, although they had no guns with them."

Mr. Ripley Hitchcock, of New York, writes me that he believes that there are still plenty of antelope in Arizona. He says: "In 1883 I was camping in the San Francisco forest in northern Arizona, and hunting antelope. The forests are very open, as you know, and there are many natural parks where the antelope found food. They were then very abundant, and as that country is not very thickly settled, I cannot believe that the antelope have been entirely killed off in 1896." Confirmatory of this opinion is an article in the Los Angeles *Daily Times* of Aug. 15, 1895, which says: "Herds of 50 or 100 antelope are still easily met with on the grassy foothills of the White Mountains. They are quite timid." This article purports to be written by some one who is familiar with the antelope at the present time.

Mr. Lester B. Hartman, of Oregon, writes me that during this summer he found antelope quite plenty, having seen several hundred in two days, on the Pumice Stone Desert at the head of the North Fork of the Umpqua River, south of Diamond Peak, in that State. The antelope which inhabit this desert during the summer go down into the Upper Deschutes Valley to winter. Mr. Hartman advises me that antelope are also abundant in the open country about Stein's Mountain in southwestern Oregon.

Dr. C. Hart Merriam's records for Oregon are given below and are shown on the amended map printed with this. Dr. Merriam remarks in a letter to me: "I have no doubt that the antelope still occurs in California, both on the Mohave Desert and on the Colorado Desert, though none of our men have visited these localities during the past year."

During a recent trip to the West, at which time I spent some weeks in Wyoming and Montana, I passed through Nebraska and Dakota, and made some few observations and inquiries with regard to this species. In Wyoming, in the bend of the Platte, I saw, in one day, I think 1,000 antelope. They were exceedingly tame and I openly rode within 20 or 30yds. of a dozen or fifteen different individuals. I had no gun, as I was riding for stock, and used no caution in approaching the antelope. They are used to feeding among horses and cattle and see range riders frequently, and besides this they were just bunching up into the winter herds. If I had wished to, I could have easily gotten a wagon load of them in a day. As it was, I did not fire a shot. In southwestern South Dakota and in northeastern Wyoming, south and west of the Black Hills, there are still some antelope, though they are very wild and only sparsely distributed. East of Tongue River, between that and Powder River, there are also a few.

I repeat my request to any reader of the paper familiar with the range of this animal, to give me any notes that he may have on it for the years 1895 and 1896

GEO. BIRD GRINNELL.

IN FOREST AND STREAM for Oct. 3, 1896, Dr. George Bird Grinnell published an interesting article on the present distribution of the antelope, accompanied by a map showing the localities at which the animal is known to have been observed during the present year.

Such data as those here recorded are of the utmost importance to naturalists, and it goes without saying that the more complete such records are, the more valuable. As stated by Dr. Grinnell, we have a general knowledge of the general facts of distribution of the large game animals of North America, but when one attempts to compile the available information he finds very little of positive character which will enable him to map out the range of any particular species for a particular period—much less for a particular year.

Since our large game is becoming less and less common each year, since many kinds have already disappeared from vast areas over which they formerly roamed, and since the areas now inhabited by the different species are shrinking with appalling rapidity, FOREST AND STREAM could hardly have taken any step of more permanent value to the science of natural history than the step it has taken in attempting to ascertain and record exact data on their present limits of distribution. It is hoped that all persons who can contribute additional information will do so, in order that the records may be made as complete as possible. It would seem to be worth while to ask for specific information in advance of publishing each article, in order to make such article as full as may be at the outset.

With a view to completing the antelope map already published, I hereby contribute my mite. In July, August and September of the present year (1896) I found antelope in greater or less abundance in Arizona, Oregon and the Province of Assiniboia in Canada. In addition to my personal observations a few notes are contributed by my assistants, Vernon Bailey, E. A. Preble and Clark P. Streator. In each case the initials of the observer are added to the record.

RECORD OF ANTELOPE IN 1896.

Arizona: San Francisco Mountain region, early July—C. H. M.

Oregon: Steen Mountains, July 23—C. H. M.; Guano Creek, twenty-one seen July 30—C. H. M. and V. B.; Paulina Creek, small bunch seen Aug. 28—C. H. M.; Upper Des Chutes River, three seen in woods near the crossing at East Fork, Aug. 27—C. H. M. and V. B.; Curry's Spring on Silver Creek, between Prineville and Harney, end of June—V. B. and E. A. P; Catalow Valley, middle of July—C. P. S.; Barren Valley, Malhuer county, Aug. 10—C. P. S.; Tumtum Lake, Harney county, Aug. 22–29, common—C. P. S.; Honey Creek, Lake county, June 25–July 3—C. P. S.

Nevada: Noted at Deep Hole, Flowing Springs and Badger, in the northwest corner of Nevada, May 13-June 9—C. P. S.

Assiniboia: Between Swift Current and Lake Chaplin, three bunches of antelope seen Sept. 26—C. H. M. and V. B.

C. HART MERRIAM.

REMNANTS OF INSTINCT.

INSTINCT may be broadly defined as an unreasoning prompting to action, and is a quality possessed by animate nature in its wild state. It is true that the mental operations of wild animals sometimes approach very close to reasoning, but it is certain that most of their actions are governed by that keener and finer sense known as instinct.

In proportion, however, as a wild creature becomes tame it loses this subtle faculty, is less alert to danger, grows more dependent, and after a few generations changes not only its character, but also its physical structure. The wary wildfowl of the Orient becomes the dull, clumsy bird of the barnyard; the sly denizen of the trackless mountains degenerates into the witless sheep, and the swift and clean-cut steed of the desert becomes the plodding, heavy-limbed cart horse. Nevertheless I firmly believe that the old instinct is never entirely lost, and that on occasion it reasserts itself in spite of centuries of repression.

The little dog that runs snapping at the heels of the cow seems to inspire that huge animal with a panic. Why? The cow could kick the dog's brains out or toss him over the fence with her horns. Is it not because of an hereditary dread brought down through long generations from the time when all wild horned cattle were the prey of coursing wolves, to which this cur's ancestry could readily be traced? There is little of the deer or wolf left in these creatures, but the old instinct of flight and pursuit has never been fully eradicated.

This same dog, having more food than he can eat, still furtively buries his bone. Sometimes he digs it up again, but more frequently he does not, and this habit is perhaps a relic of that old instinct of self-preservation, "the first law of nature," which prompted his wild progenitor to secrete a part of the spoils of the chase against the time of need. Four-footed as well as two-footed hunters have their unsuccessful days, and it behooves them to know where they can find a cold lunch to sustain life.

Most of us have noticed that on certain windy November days some strange excitement suddenly seizes the domestic fowls. They squawk and hop and run about, extending their wings as if about to fly. What does this grotesque exhibition mean, and what prompts this lame and impotent attempt to do something out of the ordinary line? Simply, I imagine, the fact that certain wildfowl a thousand years ago used to emigrate about this time of the year, and their degenerate descendants are suddenly touched with a spark of the same old intelligence. But it is only a glimmer of inspiration, and the abortive attempt to quit the earth and cleave the upper air leaves them more dejected than before.

If given an opportunity, however, it often happens that tame creatures relapse, to a certain extent, into a wild state. Gilbert White noticed that, if left to themselves, tame fowls soon learn to roost as high as their wild ancestors did, although the necessity for this precaution no longer exists. It is worth noting in this connection that, although tame things do occasionally revert to a wild state, wild creatures never voluntarily become tame.

The farmer's boy, driving his cows home through the dusk, sometimes sees the sheep preparing to lie down for the night, and it is certainly a very interesting process. The father of the flock trots round them, driving them closer and closer together, until they are a solid mass, into which he finally insinuates himself. When they are all down it will be noticed that those on the outside all have their heads pointing outward, presenting a circle of watchfulness, so that the approach of danger from any point would be quickly discovered. Now all this occurs in regions where large predatory animals have long been extinct and such wariness is uncalled for. It is therefore but an inherited instinct, and all the more remarkable on that account.

The chicken hatched and raised in the city coop, that never saw a hawk or owl, scurries for cover when a pigeon flies overhead. The new-born colt exhibits as much fear of man as if its dam had never known a whip or rein. The sow deserts her pen previous to giving birth to her pigs, and makes a nest for herself in some out-of-the-way place, carrying straw and leaves in her mouth for the purpose, just as the wild hogs do. The domestic turkey once a year quits the farm buildings and seeks some wild, secluded spot in which to lay her eggs and raise her brood. It would be easy to multiply instances of this outcropping of instinct in all the domestic creatures.

But the most interesting manifestation of this subtle sense is in man himself. There comes a time in every boy's life when he wants to live in caves, and subsist on what he can catch or kill or dig from the ground; to play Indian and talk in some half-coherent jargon. He feels a prompting to turn wild and savage, just as the partridge hatched under a hen and brought up with his domestic fellows is always ready to fly away to the woods and be free again; or just as the bees will swarm and leave the hive to seek a home in some maple or basswood, forgetting they were ever tame bees. Who shall say what primitive influences are at work upon the boy in these days spent in the woods and fields.

And when the boy becomes the man, what then? I believe that in hunting and fishing there is something besides the sport itself that lures us. It is not the mere pleasure of killing, it is not the admiration of our friends when the well-filled bag or basket is displayed, not the breath of the woods, nor the sights which please the eye, that, alone or collectively, draw us—aye, drive us—to the forest and brook with gun and rod. It is the instinct born within us—old as our oldest ancestors—of taking life to sustain life. The conditions have changed and we are no longer our own providers; but this instinct is still with us, and lends an earnestness and tenacity of purpose to that which we call sport, but which to primitive man was a matter of life and death. To hunt and fish is to get back to first principles, and a man is never nearer a savage than when on the track of game. How he adapts himself to his surroundings, sheltering himself behind rocks and trees, stealing along silently, peering this way and that; crafty, relentless, absorbed, alert. For the time being he has become a wild thing; instinct takes the place of reason, and the hereditary craving is satisfied.

Is it all a fancy, or have we still in us a residuum of old savagery which can only be satisfied by the fierce delights of the chase and the shedding of blood?

ARTHUR F. RICE.

Antelope and the Great Storm.

WE are permitted to print some extracts from a private letter written by Dr. Edward L. Munson, of Fort Assinaboine, Montana, which show, among other things, how the bitter cold weather of the autumn and early winter has affected the antelope in northern Montana.

Dr. Munson says: "The snow and intensely cold weather have made antelope—never seen here in years—a drug on the market. A competent observer told me that between Havre and Glasgow, 125 miles, there were probably 40,000 antelope in Mild River bottom alone, a bunch every half mile. Every ranch has two or three hanging up, and in Havre they were stacked up in front of the market like cord wood. One man killed fifteen in ten minutes; another got twenty-seven in a morning; another, twenty-two in a day. The Indians are killing them by the thousands over the Fort Beck and Fort Belknap reservations to the east of here. They have evidently drifted south from a long distance, probably from the Sascatchewan country, and few would have gone back had not the weather become warmer. Nothing like this has ever been known here. There are plenty of deer within reach of the post, but no one has gone for them."

Game Bag and Gun.

CHICAGO AND THE WEST.

A Question in Cookery.

CHICAGO, Ill., Dec. 19.—To-night about 10 o'clock, when I went down to my club, I asked the cook, or rather the cookess, for it was a girl, to broil me a chop. As I leaned carelessly over the counter I noticed the cook, cookee or cookess, whatever title suits her, put the chop on top of a long iron slab which rested over the gasoline fire and which served as a stove top to carry all sorts of cooking vessels, from a frying-pan to a tea kettle. I asked the girl whether that was going to be a broiled chop or a fried chop, and she seemed to be puzzled by my question.

"Oh, I guess it's a broil," said she. "Anyhow, that's the way we make a broil."

"But the fire never touched it," said I.

"That's so," said she, "I guess it must be a fry."

"But no butter ever touched it," said I.

"That's so," said she, "I never thought of that. I don't know what it is."

I have been thinking it over since then, and I can't tell what it was either. But it reminds me of all sorts of good chops, different from this one, which I have seen cooked flat down on the coals out of doors. And thinking of those makes me rebellious. Sometimes I almost think I would rather live where they cook things flat down on the coals than at my club.

A Sporting Mayor.

Mayor Swift, of Chicago, is a red-hot sport. He goes to Wisconsin and Florida, and all sorts of places, and comes back and tells bigger stories than anybody about fish and game. His honor is just back from East Florida, where he had a successful trip after alligators and other shellfish. Others of the party, all of whom are of Chicago, were: Judge Kohlsaat, Corporation Counsel Beale, Health Commissioner Kerr, G. H. Wheeler, S. B. Raymond, John C. Spry, Clay Mark and D. F. Flannery, and Assistant Chief of Police Ross.

Mortality among Small Fish.

There was this week a singular instance of the fatality which sometimes attends small fish. The whole shore of Lake Michigan for nearly half a mile just off Lincoln Park was lined with dead minnows, which appeared to have died in untold thousands, from cause unknown, though probably from getting too near the Chicago River. Thousands and thousands of sea gulls came in upon the shore and fed upon the dead fish, making a wild and uproarious scene of it all.

Ptarmigan in Chicago.

I append from a local daily paper a review of the South Water street game market, from which it appears that ptarmigan are among the delicacies of the season, though we may be allowed to doubt whether they came from Nova Scotia.

"White ptarmigan or grouse from Nova Scotia, and mountain quail from the Rockies, are among the Christmas novelties in the game line which South Water street men have on sale this year. The ptarmigan are a rarity, and only one importation will be made this season. The birds are plump and beautiful from their diet of spruce buds and tender pine shoots, and their flesh is regarded as a great dainty. The mountain quail is a trifle smaller than his brother of the Mississippi Valley, and is crested, but not so beautifully marked. The difficulty in getting them here in good marketable condition makes them scarce. The English pheasant is the handsomest bird in market, but he has ceased to be a novelty. Next to the wild turkey, he is the largest game bird outside of waterfowl that reaches this market. Wild turkeys sold at wholesale yesterday at 11 to 13 cents a pound, while English pheasants brought $12 per dozen, Nova Scotia ptarmigan $5 per dozen, and mountain quail $1 per dozen."

Chicago an Opossum Center.

A Chicago hotel keeper had four fat possums sent to him this week, and one of them got away and ran down the alley. As the possums were intended for the Sunday dinner of the hotel (the Auditorium), the escape created great excitement. It chanced that the animal was seen by several colored men. From that moment the case was hopeless for the Auditorium.

Ethics.

Last week I mentioned the fox hunt of the Germania Club, which was to occur to-day. The agent of the Humane Society says: "If it is a drag hunt, that is, if the hounds only chase foxes already killed and dragged by horses, we shall not interfere. But if there is any chasing of live animals we will enter the hunt ourselves and be in at the finish with warrants for the whole party. We have been assured that it will be a drag hunt, but we will take no chances and will be present with our deputies." If I were a fox I would rather have a run for my life than to be clubbed to death and then dragged, with no chance for my life, after I was dead, as it were.

How Wild Turkeys Feed.

A friend who is an old turkey hunter tells me something which may not be familiar to all hunters of that matchless game bird. He says that during the day the gobblers and hens never feed together. They all roost together at night, but soon after they fly out from the roost and go to feeding, say after 10 o'clock in the morning, the hens and gobblers straggle apart and remain separated till evening. This is their habit from the month of October on through the winter.

From Florida.

Mr. Byron S. Swearingen, of Tallahassee, Fla., is good enough to write as below in regard to the sport in his section of the world. A great many sportsmen go to Florida each winter from Chicago, and all speak of it as a land of beauty, peace and loveliness. Mr. Swearingen says:

'Sportsmen in this vicinity are hunting a great deal, with splendid success. Quail, woodcock, snipe and doves are very plentiful this year, and ducks are abundant on the many beautiful lakes in the surrounding country. A two hours' drive will take one to good turkey shooting, and at a distance of twenty miles deer are easily found. There are a great many splendid dogs owned here, and they are not only good show dogs, but good, hard workers. There are a number of Northern sportsmen here, and a good many more are expected after the holidays."

The Fox was Dead.

Dec. 20.—The *Tribune*, of Chicago, prints this morning the following description of the fox hunt of the Germania Club, to which earlier reference has been made. The report shows alike the humaneness of some humanity and the sportsmanlikeness of some sport:

"At 2:30 P. M. the Germania Riding Club, the Garfield Park Equestrian Club, the Chicago Hussars, and other riding organizations in uniform, left the Sheridan Drive club house at North Clark street and started for Dymond Farm, west on Montrose Boulevard about a mile. Reynard was carried in a cage in the band wagon, and the thirty hounds kept up an eager barking from an adjoining wagon.

"At North Leavitt street the progress of the cavalcade was interrupted by an accident. W. C. Mortimer, of the Germania Club, lost control of his horse. Two bicycles were run into and their riders thrown, one of whom, J. I. Smith, No. 1744 North Halsted street, was picked up in an unconscious condition and taken to a neighboring house. The horse then dashed into a carriage and threw the rider into a ditch. The horseman, however, sustained no injury.

"On arriving at Dymond Farm reynard was taken from his cage and the hundreds of people who had assembled waited breathlessly for the start. But what was their surprise and disappointment on seeing the little animal quickly dispatched with a blow on the head from a club, the Humane Society deputies critically watching the operation. As the dead fox was tied to the tail of a horse and galloped across the prairies a derisive shout was sent up. The hounds were set loose a moment later, but did not take the scent. They ran in all directions and dodged the riders as they came on eager for the glory of winning the brush. The horse, with its dead fox attachment, made a circuit of about two miles, the riders following far behind, being delayed by their efforts to coax the hounds to keep the scent. Only two dogs out of the pack were found near the finish, and as no one had caught up with the fox a controversy arose as to who should have the brush. It was finally awarded to A. M. Booth, who bid $30 for it.

"For several hours the country was scoured for the scattered hounds. When they were brought in all the party rode back to the Sheridan Drive club house and banqueted in hunters' style.

"J. M. McGarigle declared to a *Tribune* reporter that the party had had more fun than if a live fox had been chased. 'We now have a brush to show for the chase,' he said, 'but if the fox had been alive he would have run into the woods, where we never could have caught him.'"

St. Paul Wolf Hunt.

Sportsmen of St. Paul, Minn., are making plans for their annual wolf hunt, and a local paper of St. Paul says:

"A party of gentlemen interested in getting up a wolf hunt for this season had a meeting at Kennedy's yesterday afternoon. R. G. Brooks, one of the best known deer hunters in the city, is taking a lively interest in the matter, and interested with him are W. H. Ebner, Captain Gibbs and several other equally well-known shots. Letters have been received from several points in this State and Wisconsin requesting the hunters to visit these points for the hunt. The last of these came to-day from Ernest Reinins, State game warden at Aitkin, Minn.

"Reinins begins by assuring the projectors of the wolf hunt that they will get all the game they want by holding their big hunt in Aitkin county. He says that in the great swamp wilderness, on range 22 of that county, and about twenty miles west of Moose Lake, the wolves are so thick that it is hardly safe for a human being to travel the territory in daylight, and at night parties caught in the strip are compelled to light fires all round them to keep the timber wolves away." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

The Failing Game Supply.

COMOX, B. C., Nov. 30.—*Editor Forest and Stream:* I have been so much occupied by official duties of late years that I really have almost forgotten how to shoot the old rifle. I was up among the Islands of the Gulf a short time ago, but the weather had been so fearfully dry that hunting was paralyzed quite.

I got a couple of small deer, very poor. Grouse were scarce, and what with the dry weather, duties and being restricted to time I did not have any sport to speak of. Neither did I come across any live mastodons, which I notice Mr. Hallock claims still exist in Alaska. Would not mythadons be a better name for the beast?

I have read with great interest the efforts at game protection in the United States in FOREST AND STREAM. How important this is we can judge out here in the farthest if not the woolliest West. Here, where shooters are few indeed compared with the hordes of the effete East, game of all kinds is getting alarmingly scarce. Geese and ducks, in localities which a half dozen years ago fairly swarmed with them, are now exceedingly scarce and becoming scarcer every year.

The ruffed grouse a few years ago were as plentiful here as chicks in a barnyard. Lucky the man who gets six couple nowadays under the most favorable of circumstances and in the very best and least hunted ground. Deer of course still hold their own, having the great ranges of hills as reserves to draw from. Coons don't count. Cross ring-neck pheasants we introduced here some years ago are doing remarkably well. California Valley quail we tried, but they did not succeed.

I hope the foreign birds introduced in the United States, capercailzie, black game, etc., will succeed. It seems that our poor ruffed grouse are doomed. Let us hope that they may be replaced by some worthy species, though from a gastronomic point of view that is impossible. W. B. A.

BOSTON NOTES.

BOSTON, Dec. 19.—Messrs. Walter L. Hill and James Bailey have gone on a duck shooting trip to the home of the Ragged Island Club in Old Virginia. They are the guests of Mr. Woodward, a prominent friend and member of the club, and several years its president.

E. M. Gillam and Frank W. Hallowell were out in the woods of Reading Friday forenoon after partridges. They had remarkably good success, securing four birds. They were back in Boston again by noon.

The Wayne H. North party, including Dr. Frederick Freeman, Bert Atkins and M. D. Cressey, is back in Boston after a successful big-game hunt in Maine. Their camp was at Big Fish Lake, Aroostook county. They secured seven deer and three caribou. Mr. North, who had the misfortune to badly strain the ligaments of his knee the first day he hunted, is very enthusiastic concerning the game in that section. He says that it is no trick at all to get deer, while the caribou are very plenty. They also located moose several times, but were prevented from securing them by snows coming in the night, followed by crusts. Mr. North's hunting trip was completely ruined by his accident. He could scarcely step at all, but would not permit of the party breaking up to get him out. He stayed the whole ten days in camp, with nothing to enjoy but the pain in his knee. It was all done by stepping over a log on to what looked like firm snow, but was in reality but the covering of one of those treacherous holes the hunter has to avoid It is about three days from Boston to that favored hunting ground.

The Magaguadavic Fish and Game Club gave a reception and dinner to Thomas A Sullivan, their superintendent and general manager, who is in Boston on a visit. Mr. Geo. D. Loud is secretary and treasurer. The club is popular, with its list of membership about full.

Dec. 26.—Mr. Walter L. Hill is back from his shooting trip to the home of the Ragged Island Club. He was accompanied by James A. Bailey, Jr., late Senator-elect. Mr. Hill was the guest of C. A. Woodward, formerly president of the club, and Mr. Bailey, though invited at the suggestion of Mr. Woodward, was taken in hand by Mr. Davis, the present president of the club. That the Boston gentlemen enjoyed the shoot thoroughly goes without saying. They got six or seven canvasbacks and other ducks without number. They shot four days in all. Wednesday is a closed day to all shooting—a "rest day" it is termed there—according to the laws of Virginia, and also Saturday and Sunday. This gives the birds time to rest. It seems that wild goose shooting is not considered quite up to the mark by the sportsmen of Currituck Sound, but the geese were remarkably plenty. Mr. Hill remarks that a boy was out in a boat just below them and in less than half a day he had twenty-one geese, loading the boat almost full. Mr. Bailey desired to shoot a goose or two and Mr. Davis fixed him out with decoys. In half a day he got seven geese. This he considers remarkable shooting for a Boston sportsman. Both gentlemen are greatly pleased with the shooting and the courtesies of the Ragged Island Club. President Cleveland was shooting not far below them a part of the time.

I hear a great deal of dissatisfaction expressed among sportsmen in this vicinity at the bare thought that the Maine Commissioners suggest, according to reports, the changing of the legal open season on deer to from Sept. 15 to Nov. 15. Such a law will leave no chance whatever for deer hunting on snow, since there rarely is any snow in that State before Nov. 15. Sportsmen say that if deer were scarce and on the decrease there would be good reason for such a law, but so long as the reverse is true there is no need of shutting off the last of November. Making the open season end with Dec. 1 would be far better and would seem to afford the deer ample protection. The opening of the last of September is looked upon as a very safe move, so far as the deer are concerned. So dense is the foliage all through September and well into October there is little chance of finding deer. Water hunting is forbidden in that State, and hence few deer would be taken in September, provided the laws are enforced.

Mr. J. S. Clarke, Jr., is back from Billy Soule's Pleasant Island camps. He is much pleased with that region, though not particularly successful in getting big game. Active measures are being taken to remove the dead trees from the shores of the lake there. SPECIAL.

Effect of the Game Laws in Michigan.

A CORRESPONDENT in Detroit, Mich., says in a recent letter: "Partridge and quail shooting has been very good and the birds are on the increase, thanks to the good law that prohibits their sale. This law has been in force two years. I went north of Bay City the week after election and bagged sixty-eight partridges and thirty quail; and you must bear in mind that that is not a quail country. I have never seen quail in that section before. I had one dog, a young pointer, that had never worked on partridges before; but he did fairly well. I had a fine shoot, but being alone did not enjoy myself as well as if I had a good companion along with me."

Louisiana Quail.

OPELOUSAS, La., Dec. 6 —The fields are alive with quail. Never before in the history of the country has there been such an abundance of them. The open season began on Nov. 1, but the cover was then too rank to permit of nice shooting. The cattle are now in most fields, and it is much more pleasant now to hunt. We are enjoying fine weather, mild and pleasant. Last week we were treated to severe freezes, the first of the season. T. A. J.

LIVE DECOY GEESE AT SILVER LAKE.

TWELVE HOURS WITH GEESE.

I WROTE some time ago about a goose hunt at Silver Lake, but beside the one we have just taken the first was nothing. I have told you about Widgeon Point, and the persons who run it; but since then I have found there are others interested, namely, Cary, Keith and Potter, all good fellows, making a club hard to beat.

On the afternoon of Nov. 15 Charles and I went to the lake with our traps. On the way we met William, the crack shot, and were told by him that the boys had killed eighteen geese that morning. Our blood was up at once, for we had not forgotten the last hunt. As we went into the stand we were met by our shorty friend Addison; he looks the same as when we saw him last fall; same pleasant smile and hearty grasp of the hand, and always ready for geese. Oliver and Old Sleuth were there, but rather under the weather. Millard will sit and sleep with eye-glasses on his nose and they never drop. You can't tell whether he is asleep or not, and it makes little difference, for at any time it takes only a word and he is wide awake and ready for business. Herb and George are in the stand. After greeting them and unpacking our guns, we hear George say, "Boys, we will get some geese now, Fred and Charles have come." Little did he think how true this would be.

We got fixed after a while; looked the decoys over, about two hundred of them; paid our respects to old One Wing, Scituate. Johnson and the rest, and then found that our friend Thomas had just arrived and was getting into his shooting togs. Thomas is the same fat, jolly fellow, and everyone who knows him unites in saying he is all right. He thought I was a little hard on him in my last yarn, when I told of his infirmities. He still says I am the only one who ever accused him of snoring.

After supper we stood in the stand, when from out the sky came the faint long honk of geese. There they are, and George stirs up the decoys. Old One Wing hears the call and straightens out for work. Soon the whole point is in one grand roar. The wild geese swing over us and we can just make out the line of black rushing through the air. They wheel out over the lake, honk a few times and we hear them no more. In a little while, as we look up the lake, we see a flash, then three or four, and then come the reports of the guns. They have shot at a stand on the east side of the lake, and now the air is full of geese. We try to stop some of them, but it is of no use, so this ends the fun for the present.

It is now about 12 o'clock. Add, Tom, Herb and I are in the stand. George has turned in, having been up two nights. There is a light ripple on the water. The moon shines brightly and we are saying that it is an ideal night for birds, when Herb says: "What is that just inside the block?" Tom looks with glasses and says "Ducks, about fifteen." They come nearer and are almost near enough to shoot when there comes *honk, honk, honk* right over us. There are fourteen geese with wings crooked scaling to our decoys. Have you ever seen them? and didn't your blood tingle? Something startles them and they whirl to the north, going toward the place where the other shot was fired. "Our chance is gone," said Tom, "and I am going to turn in."

As the boys had been up nearly all of two nights, I offered to stand watch to-night. As I stood there looking at the water it came to me why this place was called Silver Lake. The moon shining on the water, which was stirred to a little ripple by the breeze, made it seem like a lake of silver, and I thought it well named. The geese decoys had settled for the night, with only now and then the low growl of an old gander, which would be quickly answered by one of his goslings on the hill. The faint hoot of an owl comes to me from the eastern side of the lake, while from the southern end I hear the quick *quack, quack* of some ducks which have just lit. Then the soft call of the decoys at the new stand comes to me from afar off and startles me from my dreams, causing me to stir up the decoys and almost sending me in to wake the boys before I knew what it was. As I get over my excitement and find that my heart is not in my mouth, I hear the boom of a volley of guns at Oldham Pond, then in a short time another, and right upon it three reports from the new stand. I go into the air about a foot, and see Oliver, and Herb close at his heels, bare-headed and hair standing on end, although it would be hard work to make Oliver's hair stand on end. "Great Scott! Have the British landed?" from Oliver, while Herb is saying, "What's the matter, Fred; are you trying to blow us up?" I explain matters, and as it is after 3 we decide to turn in and let the lake take care of itself. Nothing thus far. But our time is coming.

In the morning about 8 o'clock, after Thomas and Millard had gone home, George said, "I am looking for a large flock of geese to-day." He had gone to feed the decoys, when Gene said, "There are geese." We pressed the button, and in a minute all were in the stand. "There they are," said George, "I never saw so large a flock before. As they came out over the lake the new stand let out their flyers, then Gunner's Point let theirs go; and when George and Herb pulled on them, the way those goslings went from the hill was a caution. The wild ones see the flyers and hang, then crook, and then scale toward the water. They head into the wind, then wheel and come up in the wind, then settle into the lake, and there they are. "Four acres of them," says George. I shall never forget how those geese looked coming in. Talk about pictures, it was the prettiest one I ever saw. Such a large flock of wild ones, with about 300 decoys flying around the three stands, was enough to open any sportsman's eyes. The gunners at Gunner's Point break about a dozen from the bunch, but do not shoot at them; the rest come toward us. George says, "They can't help it." We get fifty near enough to shoot; then another flock of twenty came, and eight lit with our decoys. Charles and I were going to attend to these, but they swam away before George could get the rest as he wanted them. We rushed up beside Add and George, and as George said, "Get on to them," we rose up over the stand. Geese everywhere, where shall I shoot? I see four together, with some more in range. I hold on the four. "Are you ready? Fire!" What a roar from the guns, and also from the wild geese and decoys. Twenty-seven dead and wounded geese. We are not to shoot flying, but William from force of habit shoots and says he knocked his goose. Well, the world was full of them and some must have flown into it. They circle around the lake and light everywhere. Ten come with our decoys. We "get on to them" and kill nine. In a few minutes six light with the decoys at the north end. We go up there and kill them all. Now they shoot at the new stand, then at Gunner's Point, and about a hundred light in the lake in front of us. We get out the boat and pick up the game, then hustle after the flyers. As we are driving them in we see one among them looking rather wild. "Close in on them, boys, that is a wild one," says George. It proves as he says and we have driven in a wild one. He will make a decoy another season. After we got the flyers in I hear Add say, "Here comes a single goose; nail him, Fred." I grab a gun, shoot twice and the goose flew on. "Razzle-dazzle," Add is saying; "you are a pretty shot; I think you had better take a few lessons from Bill." When we got cleared up after the shooting we took account of stock and found we had thirty-eight.

I hear some one saying "Well, well; good boy," and Thomas is beside me. We had wired him the news and he could not stay at home; but what a shame he could not have been in it. It is a cold day, however, when his luck goes back on him and it was not going to play him false to-day.

After dinner we try for the flock, which is in the lake in front of us. Tom sees a flock of seven coming; they light with the others. After a time thirty-six start to come on; they get almost near enough to shoot when they turn and swim away as fast as they can. What's the matter? We are no longer in doubt, for a man comes into the stand, having walked around the shore. He must have had an idea he was goose hunting in the Frog Pond on Boston Common.

Soon we see another large flock coming, fully as large as the first. They come over and we throw on them; it does the business, and they light. I would like to know how many geese there are in the lake now. We drew about sixty, but could get only twenty-two together. Thomas gave the word, George not being there. We killed twenty-one. George came into the stand just as we fired, and we had the laugh on him. By this time it was dark. Geese were honking all over the lake. We drew on six and killed them all. I would rather not say anything about the next shot, but perhaps it will be as well to give the bitter with the sweet. There must be some hitch, and here it was: Eleven geese near enough; all hands in the stand, and as George said "Get ready" some one shot. We all fired at the break of the gun, but only got three. George was mad, and the way he talked left no doubt in any mind what his opinion was of the man who shot. Put yourself in our place and see how you would feel. It was too bad, but could not be helped.

We find that we have made a record for the stand, sixty-eight geese in twelve hours being the most ever killed in the same time at any stand at the lake. One amusing incident at one shot was of a young fellow who had never shot from a stand before. He was standing beside his father when the word was given. After the shot he said, "I fixed one on the wing, Dad, I saw him drop."

He did not think that five or six guns were shot on the wing and perhaps they were fired at the same bird that he saw drop. His chance was as good as the rest, but it made his "dad" smile.

Charles and I picked up our traps and very reluctantly went home. If we had not been obliged to go it would have taken a yoke of cattle to have drawn us. Millard went to the stable with us, and as we harnessed we heard a nice flock strike into the lake. We told Millard to go back, and as we drove away we would stop and listen for the volley, which we knew would come sooner or later. We had the pleasure of witnessing two sights that day that the oldest gunner in the crowd said he had never seen before and probably would never see again. Two such large flocks of geese coming into the pond. I would have liked everyone who enjoys a trip with dog and gun to see this sight, as we saw it. It was certainly a picture and it will be in our minds for many a day.

The boys say that we brought them good luck, and we say "Hurrah for Widgeon Point and the boys who run it." Does Thomas ever get left? We guess not. May we all live to have another day together is the wish of

F. E. WOODWARD.

WAYS OF THE RUFFED GROUSE.

IN FOREST AND STREAM of Dec. 12 Mr. G. S. Ellis, of Maine, does me the honor of bestowing some kind words on my paper devoted to the ruffed grouse, taking exception, however, to my statement that that bird seeks its habitat apart from the abode of man. Mr. Ellis cites his experience in Oxford and Cumberland counties, of Maine, wherein he found many birds on the skirts of the woods near farmhouses. I feel quite sure that had Mr. Ellis noted carefully all the pertinent local circumstances he would have found local conditions which forced the birds near the haunts of man in those counties; that is to say, their food supply was in those places wherein the birds were found.

A forest may be both dense and secluded, yet if it contains insufficient food it is not an available habitat for the birds. In my experience, which covered many a day in pursuit of the ruffed grouse from dawn till dark, when I found them near dwellings they were in such cover as gave them a ready refuge and a certainty of protection, it always being the best cover in the vicinity available for that purpose, the abode of man near by being but an incident irrelevant to the bird's existence. In such sections as have is a dearth of food and cover, or where the competition for food and cover is great owing to the numbers of birds, they must make the best of what is available, and some birds must necessarily be forced to content themselves with the less desirable places. If their food is not in such places as they fancy, they must compromise by going to the best places where it and a certain security may be found. And each bird may venture into the open betimes, though rarely far from cover.

Pellets, in FOREST AND STREAM of Dec. 19, also differs from me on this point, though there is such a serio-comic tone in his objection that it is difficult to determine whether it is really an objection or the relation of a rare incident. The single circumstance of finding three birds at the edge of an opening near some cottages could hardly be advanced as proof that such was a habit common to the species. Once in North Carolina, while shooting with Mr. S. T. Hammond, a charming companion and a skillful shot, we found a bevy of quail in an abandoned log barn, yet that one circumstance would not warrant a conclusion that all quail sought and used barns as a part of their habitat.

In severe winters, when the snow covers their food, birds are forced to approach the dwellings of man, that they may glean such food as is accessible. Cause and effect then being so apparent, there is no difficulty in readily understanding them, but the intermediate stages of green fields and forests and yet a dearth of bird food are not so readily understood by the superficial observer.

But if either one of my critics will consider the difficulties of writing a monograph on this subject, abounding as it does in such an infinity of detail, they will find, if they confine their writings to a certain amount of space, that only the traits common to the species can be considered; to note the individual exceptions would make a task as endless as it would be unprofitable to writer or reader.

B. WATERS

Proposed League of New York Counties.

BINGHAMTON, N. Y., Dec. 27.—*Editor Forest and Stream:* I have just finished reading the Christmas number of your valuable paper and can find but just one fault with it: I very much miss your motto, "Stop the sale of game." I doubt not that there is not another thing that is so earnestly desired by so great a number, and has so little said in its favor, as this one thing. Among the shooters of my acquaintance the ratio is at least ten to one in favor of prohibiting the sale of game. Those of the minority are a class of men who, as a rule, would be on the wrong side of most any question, and not one of them go shooting for the sport derived.

I have just finished what I consider a very

conservative estimate of the number of ruffed grouse killed in this county alone during the present season. I calculate that at least 10,000 have been killed. When I see sure extermination going on at this rapid rate it makes me feel as if I must try and help do something to put a stop to it. As I have remarked, it is not a lack of numbers of those desiring further protection, but rather a united, concerted action. We see public-spirited individuals and associations expending money and time liberally to introduce and acclimate some foreign game bird, which is very commendable, but let us suppose that all should bend their energies toward protecting one already acclimated. Give him enough close season in which to get his growth and strength of wing; remove the 25-cent bounty from his proud, defiant head, and we shall always have him with us, the king of them all. New York is a very large State, and the interest taken in some particular kind of game varies much in different sections. With us ruffed grouse shooting is our chief sport. Very naturally we wish to see him protected. What we would like to see would be a law to make the open season Oct. 10 to Dec. 15, and to prohibit the sale. Our present plan is to get some of the adjoining counties, whose interests are identical with ours, and form a five-county league (or whatever the number of counties may be) We feel that we can accomplish more this way than any other. To this end I would be pleased to hear from all sportsmen in adjoining counties who take enough interest in protection to write me that I may be able to submit plans to them looking toward the formation of county league. We recognize FOREST AND STREAM as our only medium and earnest ally in this work. H. W. BROWN.

Maine's Indian Guides.

WORCESTER, Mass, Dec. 15.—*Editor Forest and Stream:* In a copy of FOREST AND STREAM published some time about Nov. 1 I noticed an article by Mr. A. L. Turner describing how he got even with his Indian guide. The tone of the article reflects on Indians in general, and has caused a great deal of indignation among not only the Indians, but among the people in general in the Penobscot country. It is a gross injustice to the Indians to publish such an article, and I hope you will publish this to show the true facts.

I spent two weeks among the Indians at Debsconeag deadwater this fall. My guide was Joe Francis, the best guide and keenest hunter I know of. He would see more game, and give the sportsman more opportunities in a given time than, any guide I ever knew.

During my first week out I shot at no less than six or seven deer, missing every one. I then discovered that the sights on my gun were wrong. On Monday of the second week I killed a spike buck; on Tuesday, a beautiful buck deer with fine head; and on Wednesday by 8 o'clock in the morning I had killed a caribou weighing some 400 or 500lbs. The weather was not favorable to moose hunting, so we only hunted one day.

On my return I had the thrilling experience of traveling eleven miles over ice so thin that constant care was necessary to avoid going through. Air holes on every side were a constant reminder of the danger, and no man in the party felt willing to release his hold on the canoe, which was carried on a hand sled.

The uniform kindness and courtesy of the Indians, their untiring efforts to please, and the conscience displayed in their work and charges command my highest respect, and I condemn the man who would maliciously disparage them. E. A. C. BECKER.

[This being Christmas week, and a proper time for promoting good feeling, we cheerfully explain that we never for a moment thought of the article complained of as casting general reflections upon the Indians of Maine, and we regret that it should have been so interpreted by the people of the Penobscot. We know Joe Francis; and if all the others are like him we cannot imagine that anybody would wish maliciously to disparage them.]

Boone and Crockett Club Meeting.

THE annual meeting of the Boone and Crockett Club will be held at the Metropolitan Club in this city on Saturday, Jan. 16, at 6:30 P. M., and will be followed by a dinner.

The business of the meeting will be the election of a president to succeed the late Gen. Bristow, election of officers and committees for the coming year, and the consideration of measures for the more effective protection of big game in certain parts of the country where it is most seriously threatened.

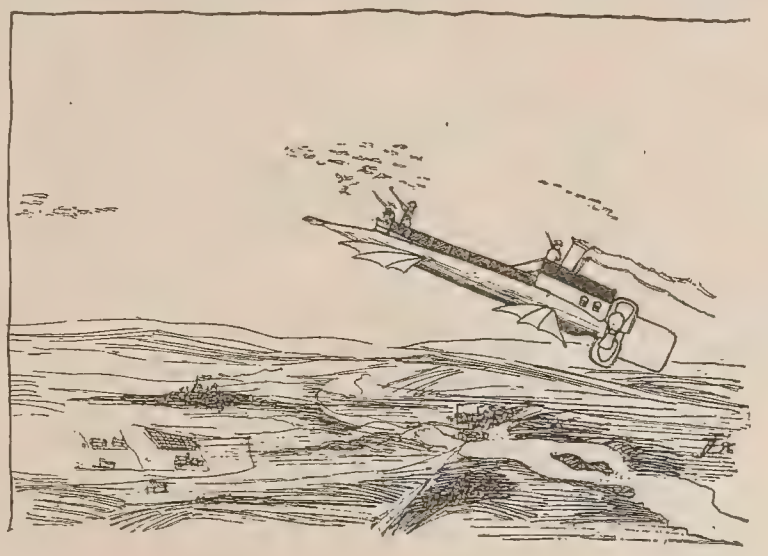
This meeting will inaugurate a new plan which it is intended to carry further in the future, and which is likely to result in making the meeting still more attractive as well as more significant of the purposes and interests of the club.

Mr. A. P. Low, of the Canadian Geological Survey, will be the guest of the club at this dinner and will read a paper, to be illustrated by stereopticon pictures, upon his recent explorations, made for the Dominion Government, in the interior of the Labrador Peninsula. Mr. Low's explorations, one of which occupied two years, are the first ever undertaken in a region which until then was unknown. His paper deals with those portions of the peninsula which are of most interest to sportsmen.

Connecticut Game Birds.

HAMDEN, Conn., Dec. 14.—Birds and other game have been more plentiful this year than for a number of years, and some excellent bags have been made. The Mongolian pheasants, however, which were introduced in this vicinity during the past three years and which seemed to be doing so well last summer, appear to have been exterminated. Whether they were killed by shooters before the law was off, or by other enemies, it is hard to say. It is to be regretted that the efforts of such public-spirited sportsmen as J. B. Robinson and others, who have unselfishly given both time and money in order to introduce this bird here, have been crowned with such discouraging success. It is said that Mr. Robinson alone has spent more than $500 in an attempt to make the introduction of this bird successful.

While snaring has nearly become extinct in this immediate neighborhood, still another lawbreaker is very much in evidence; I refer to the Sunday shooter. I have had it from very reliable authority that these Sunday shooters, some of them at least, are loud howlers for the observance of the game laws and against the snarers through the week, but that when Sunday comes they quietly slink with dogs and guns into the woods and break the laws themselves. There is one thing certain, anyhow, and that is some one is breaking the law regularly, as the reports of guns can be heard in the woods every Sunday. WILLIAM H. AVIS.



Camp-Fire Flickerings.

"That reminds me."

Ducking Air-Ship.

BOSTON, Dec. 17.—*Editor Forest and Stream:* During the heated debates on the proper caliber of a rifle for big game, I suggested a contrivance for the rapid extermination of it (the game, not the debate). I have waited patiently to hear from somebody who wants such a thing, and now I have given up all hope of ever hearing from anybody. Why don't Deerslayer apply for one? It would be much surer than a shotgun.

Now that the duck-shooting season is at its height, I thought it would not be out of place for me to offer to the

sporting public the latest improvement in that line. The inclosed sketch speaks for itself. It has several advantages over the sunken barrel, hole in the mud or iceway, viz: No cold or wet feet; no danger of tide rising and you having to swim for shore; no decoys. If the birds feel indisposed to come to you, why, all you have got to do is to go to them.

Now, there is a great field for improvement even in this method. Take, for instance, a suitable net or something else to catch the killed birds in. We have often heard of showers of toads, but unless some inventive genius contrives some way of catching the birds after they're shot, showers of ducks will not be an uncommon occurrence in the future. THE SLAUGHTERER.

How to Keep your Clothes Dry in a Shower.

BY the by, some of your readers may like to know how the Indians manage to keep their clothing dry in a heavy shower. A good many years ago, when southwestern Michigan was a newer country than at present, a friend of Antler's went out there to look for a home. He "met up" with four or five more men on the same business, and together they tramped across a large prairie. A heavy shower came up, and they "pulled foot" for the timber, but when they reached it were thoroughly drenched. They halted, built a large fire and stood around it to dry their steaming clothes, when they saw approaching a small party of Indians, whom they had passed at speed on the prairie. It was a conspicuous fact, and one not to be forgotten, that every Indian was at that time attired simply in his native modesty (which with an Indian is generally an unknown quantity), and further, that each sat upon a tightly rolled bundle of clothing, thus protecting it in a great measure from the pouring rain. When they passed the whites, the shower had passed, and they were once more duly attired in dry clothing.

The whites, after some hours passed in attempting to dry their duds, moved on, saying among themselves that after all there was something to be learned from an Indian. KELPIE.

"Fezzunts" and: their Ways.

OIL CITY, Pa., Dec. 22.—I extracted so much pleasure and comfort from reading Mr. Waters's able article on the ways of ruffed grouse that I feel like trying to add my little mite to the literature that treats of the noblest game bird that flies. With that idea in view I have clipped the following from the Oil City, Pa., *Blizzard*, being an essay on "fezzunts" from the pen of a small boy:

"i don't no much about fezzunts only what i hav hurd my pa tel. he hunts after them rite along but I never see eny of them only what hangs in frunt of the mete shop pa sez the fezzunt is quite taim when trout is in seezun but thay keep gettin' smarter rite along til fall and then thay are to smart to shoot. Thay must be offul cute. Pa says thay will preten not to see him and get behin a tree an pa wil shoot whare he thot thay wuz. Sumtimes he cums home reel mad. He sez if he only had a good settur dog he could hav plenty of fezzunts to eat for the mete is very wite and nice only i never had eny. Sumtimes pa blaims it on the kind of shott and powdur in his gun and then ma laffs wen pa is gone. She says pa used to talk that way befour i was borned; i think i will buy him a fezzunt for crismus from the mete shop; i know that wil make ma laff too."

A GOOD SHOT.

Mrs. Younghub: "Oh, Ferdy! I have such a surprise for you?"

Younghub: "You have, love?"

Mrs. Younghub: "Yes, dear. See this sweet little dog I bought for us—only $20, and the dog-seller warranted him to be a pure mongrel!"—*Puck.*

Sea and River Fishing.

MEN I HAVE FISHED WITH.

XXVII.—Kenneth King.

THOSE who have followed these sketches may recall meeting "Ken" King in the story of Capt. Stephen Martin, three months back. In the spring of 1860 King was a man past middle life, broad of shoulder and built like an athlete. He was an Englishman of the genial, companionable kind that love dogs and gun, keep road houses just out of town where the bar is hung with guns, fishing rods and trophies of the hunt, while the talk is mostly on dogs, a good bit o' snipe ground or the prospect of a change of wind that would start the ducks up the river. When you see his full ruddy face, with its closely-cropped beard, and note that he always wears a suit of brown corduroy which has charged through many an abbatis of brush and *chevaux de friese* of briers that have left their scars, you know the man thoroughly.

It was the first mild day in spring after the ice had left the Hudson that I walked down the Bethlehem road which leads from Albany along the river and dropped into his inn, for there were inns and taverns then and every country house with a bar and a bed was not a "hotel."

"Hello, Ken," said I, "how are you? Haven't seen you in some time."

He took the proffered hand while about a dozen pointers of different ages took a sniff of the stranger's legs. "Good morning!" he said, and then to another man in corduroy: "You use the whip too much on that dog, 'e's lost confidence in you an' in 'imself. Let up on the whip; I know un an' 'e's a good un, but none o' his breed 'll bear much whip."

The man went out and King turned to me and remarked: "It's a nice morning."

"You don't seem to know me, Ken," and I mentioned my name.

He put one hand on the bar and lightly vaulted over. "'Eavens! Lad, is it thee come back, an' so pale an' sick-lookin'; I'd never 'a' knowed thee. Aye! I remember well the day when I sold ye that pointer puppy Nell, that you spoiled in the breaking; but Mr. Raymond has some grand dogs from 'er; why not? Ther's no better pointers in America than her stock. Here, Click, Sally, Wads, Jim, come 'ere, you rascals. Look at that lot; feel o' their ears; ever feel silk softer 'n that? Look a' them strong legs, straight backs, an' then gaze at the heads Ever see anything like it in the West? No; I'll answer fur ye, ye didn't."

After I had sufficiently admired the really fine animals Ken asked: "But what's a matter o' ye? Ye aint a bit like yer old self. Yer pale an' peaked an' thin; never 'd 'a' knowed ye in the world."

After I had explained that living for some years among decaying prairie sod had resulted in a form of ague that had pulled me down, he said:

"What ye want is to keep out of doors. Come an' live wi' me an' shoot an' fish for a month and stop taking medicine and you'll be all right. I'm goin' down to the mouth of the Normanskill in the morning to spin for pike or perch an' I'll give ye a bed here if ye'll go. I want to talk over old times. What d' ye say?"

I arranged to go back for my tackle, and as I didn't care to spend the evening at the inn, I turned up about 11 P. M. and went to bed. The morning was foggy, and as the current took us down the river we talked of the old-time pigeon shoots at the Abbey and out at the Bull's Head, where the West Albany reservoir now stands. He asked: "Do ye remember the day at the Bull's Head when Lige Simmons killed twenty-five birds straight and was tied by Hank Webb? Well, that was a large day, an' when they shot off the tie ye remember that Hank won by a bird? Well, I'll tell ye; I loaded for Hank an' put a leather wad, with a hole in the middle, over the shot, an' the scatter fetched 'em ev'ry time. Lige missed on his fifth bird an' Webb killed.*

"Lige got a hint of this before he left the grounds and asked about it. I showed 'im the wads an' he laughed an' said: 'I'll have to get some o' these for trap shooting.' Bring the boat inshore here at the mouth of the creek."

Pulling up the creek until we found its current strong enough to spin a minnow, we tied up to the limbs of an overhanging willow and used a primitive gang of hooks, "a flight," Ken called it, consisting of a lip hook fastened to the gimp snell a couple of inches above the larger hook, which was inserted in the tail of the bait so as to bend the latter and make it spin in the current. Our rods were plain ash and lancewood, stiff, as bait rods should be; and here for the first time I used a reel, a poor, cheap one, but still a reel. The most common fish in the upper Hudson in those days was the yellow perch and they were always plenty. We took a score of perch before I had a good strike, and under Ken's advice let the fish run until he stopped and the word was given to strike him, and I reeled in a pickerel of about 4lbs. This was a new form of fishing to me, and a little higher kind than any of the methods of boyhood.

We had our guns, a thing which to-day I dislike to have on a fishing trip, on the principle that made the old darky throw a big perch overboard, saying, "W'en I goes a-cattin' I goes a-cattin', an' I leaves dese yer' fellows till I wants 'em." But Ken King was primarily a gunner and only incidentally an angler. I was watching the current alternately bring the spinning minnow to the surface and then take it below, while speculating if the swivels were working properly so as to avoid twisting kinks in the line or unlaying it, when a kingfisher suddenly came upon us and gave its whirring alarm, and at the same instant Ken shot without warning. I wondered why he shot at the kingfisher; the bird went on unharmed, while I looked at the old man, whose back was toward me, and no game in sight. "Cast off, quick!" he said, and in a minute I was at the oars, pulling as he directed. His gun spoke again, and he picked up a fine mallard which had

*I know nothing of using this sort of wad on top of shot. Never heard of it before nor since, and give it as 'twas told to me over thirty-five years ago. It was not necessary to put a card wad over the leather because in those days a man could go to the score with the muzzle up. I have killed many a squirrel with no wad over the shot when he was above and time was short. Old Albanians will remember Elijah Simmons as one of the greatest horsemen of his day in the State, and also Hank Webb as the most formidable rough and-tumble fighter of Albany's volunteer fire department when fighting was the most important qualification of a fireman.

dropped at the first shot, and which I now saw for the first time.

The fog thickened after we had gone back and fished until time came to eat, for our very light breakfast needed reinforcement early; few men not accustomed to rising before daylight can eat much at that unseemly hour. As we finished eating the fog was so thick that a man couldn't see over 50ft.; but we could hear the ducks near the mouth of Normanskill, some distance below, and even the whistle of their wings and splashings in the water, as well as the loud greetings to the newcomers. "Cast her off again," said Ken; "this is too much to stand. I never could waste my time fishing when such a lot of ducks as that are calling out for some un to come and shoot 'em. You won't get such a day for ducks in a month o' Sundays. Steady now; don't make more noise than you can help. Stop here on the point and make fast to that bush."

Ducks on the wing could not see us until within good distance, and we banged away for an hour with our muzzle-loaders; and then a south wind rolled up the fog, and we started to pick up the game. A bed of eel grass prevented the dead from being carried down the river, and also hid some cripples, a few of which we got. We had about twenty ducks, mainly mallards and black ducks, with an odd whistler, bluebill or teal, and a half bushel of perch and a few pickerel. It was one of those days that a fellow runs into by accident when all the conditions are favorable for a big day's sport, and which he couldn't repeat in a whole season. Every sportsman knows how this is, and also knows that if he wishes to give a friend a good day's sport and promises it to him it is sure to be a blank day on his favorite ground, which never before failed him. And then how mean you feel! I can imagine a veteran sportsman reading this, and with a "that's so" go off into a remembrance of the chagrin he felt when he invited a friend to join him on "the best bit of woodcock ground in the State, and but few know of it." A blank day for himself would be nothing; he is troubled by what his friend may think of the disappointment, and his friend realizes this state of his host's mind and grieves for him. The suffering is mutual, that is if the persons are men of fine sensibilities; other people have no such sorrows, nor have they the keen pleasure of seeing a friend have a grand day—but this is not what I was going to say, and I've gone off moralizing instead of telling you about the fish and the ducks.

At the inn we received a grand welcome from the whole kennel, some of which had felt hurt at not being invited to go when they saw us take guns; but we were forgiven for that, and they tried to divine where we had traveled by the odor of our boots and trousers, and the pile of ducks was sniffed at in order to determine the species, just as a scientific fellow would count primaries and measure tarsi. Then their heads were rested on our knees, and great, intelligent eyes would look reproachfully at us because they had been left behind; and at the same time a number of waving tails assured us of a welcome home, and a forgiveness for all neglect. A man who does not love some dog must be incapable of appreciating the truest friendship that exists on this earth. In sickness or in health, in the depths of poverty and misery the most faithful friend of man sticks to him when all others have left him. I said "some dog," for there are dogs that are not lovable: mongrels, snappish curs, and ladies' lap-dogs. But the dogs of the sportsman, setters, pointers and terriers, are intelligent companions who know more than some entire families. I except hounds from this category, for they have been bred to be of service in the hunt, but not companions of man.

Shakespeare, who knew more of all things than any other man who ever lived, always excepting Ignatius Donnelly, realized that dogs were no more to be classed alike than men are, for Macbeth says to the professional murderers:

> "Ay, in the catalogue ye go for men,
> As hounds, and greyhounds, mongrels, spaniels, curs,
> Shoughs, water-rugs, and demi-wolves are 'cleped
> All by the name of dogs; the valued file
> Distinguishes the swift, the slow, the subtile;
> The housekeeper, the hunter, ev'ry one,
> According to the gift which bounteous nature
> Hath in him clos'd, whereby he doth receive
> Particular addition from the quill
> That writes them all alike; and so of men."

Life was assuming a new aspect; hitherto it had been "one grand, sweet song." True, there had been a few minor discomforts and discords which were forgotten in a week and only remembered to be laughed at, but to be a semi-invalid for over six months caused some serious thoughts. Before the trip West "ague" was merely a word without meaning, like many medical terms, but on acquaintance with people who had it, or said they had it, it seemed only a synonym for laziness. The shake and the fever were indulged in behind closed doors, and a poor, spiritless creature devoid of ambition was all that was visible, and these had mostly been a lot of long-legged, sallow specimens that fed on bacon and hot saleratus bread. "No, sir!" said one from the swamps, "I never was poor enough to eat cold bread; we allers have it hot and yaller as a gold ring." A man from Posey county, Ind., saw me eating a muskmelon in Kansas and remarked: "I kin eat one o' them things and set in the sun an' git up a shake any time." But I thought there was better sand in my gizzard; yet here I was.

King sent up for me to come and shoot snipe over some of his dogs; somehow the invitation did not awaken any of the old-time enthusiasm, but there was an awakening when we met in the evening. The chill and the fever had given my liver a song and dance that morning, and to-morrow would be a "well day" as far as they were concerned, but there would be that lethargy which had seemed to be merely laziness in the saleratus-eating men. On entering the inn in the evening every dog wagged recognition as to an old friend, although they had met me but once. Ken had his opinion of doctors, and after retiring he brought up a little pitcher of some decoction that was hot, sweet and strong, and not only prescribed it, but in order to prove its good qualities actually drank a whole tumbler himself.

The morning was young when we left the inn with Click and Sally, two handsome, well-broken liver and white pointers, whose eagerness required frequent words of caution. A bit of springy ground between the river and the road, near the Abbey, was to be looked after first. Ken warned the dogs to go slow, for they were too fresh and eager, and liable to run in and flush any birds which were lying close after hearing our voices. The dogs quartered the ground beautifully, and after ranging to the left turned at the signal; and then Sally suddenly became a statue, and Click backed her point. Being on the left of King, I flushed the bird. The first barrel sent its messengers behind the bird, but the second brought it to grass; the dogs dropped to shot, for they were not retrievers, and they were sent on toward King, while I sought the bird and wet both feet before it was picked up. By this time King bagged a bird off to the right, and we took four out of that bit of bog. The working of the dogs, the rapid beating of the heart as a snipe rose and cried *scaipe! scaipe!* but didn't 'scape, was of more benefit to an ague-burdened man than a feast of quinine. It was sundown when we reached the inn with a goodly bag of snipe, and as we parted Ken said: "It's done thee good, lad, ther's a color in yer face that shows it. When ye want another day with the snipe or with birds let me know."

In the fall came a desire for a day with woodcock, and King said: "Wait until the first good frost and there'll be a flight from the North." So after a few light frosts, when the moon was near the full, the evening was clear and cold, and gave promise of a hard frost before morning and a good day for "birds." "Just in time," said King, as I dropped in on him, "there'll be a hard frost to-night and a good prospect of finding birds plenty in the morning." He introduced me to a gentleman from Virginia who would accompany us on the morrow. The name is hopelessly lost, but he was a slender man of about forty-five years, rather reserved and dignified, and with one stiff knee, which, from something he said afterward, might have been a relic of the Mexican war. He had a fine fowling piece, a Joe Manton, which had been altered from flint to percussion locks. His family was at Saratoga, and he was on a visit to Albany to see the famous kennel of pointers owned by Ken King.

We were afoot early and on nearing the first bit of bog heard a shot. "No use," said King, "some fellow is ahead of us," and we went on. A single wild pigeon crossed the road and the Virginian dropped it at a surprising distance. "A good shot that," said Ken, "an' a good gun. I shouldn't wonder if I traded you some good dogs for it before you leave; I have several good guns, an' two of 'em are Manton's, but there's room in the racks for more."

Our friend looked up and said: "If you get it I should wonder, sir! That gun was a present to my father, sir, and he gave it to me. My father was a good wing shot when but few men in Virginia thought of shooting at a flying bird, and the old gun may rust out, but it will not be sold or traded. There must be birds back there in that marsh, that man has shot several times, sir."

We entered a bit of marsh well filled with brush, swamp alders and the like, but not very wet now. The dogs were eager and at first disposed to range widely, but continued caution from their master corrected this. The Virginian was in the middle, and as King managed the dogs we were necessarily close together. I had wondered why the old dogs, Click and Sally, had not been taken on this trip instead of the puppies Spank and Trot. King let his friend flush and kill every bird that the dogs found on his side, while I took a share of the others. And so it went until the sun was long past meridian and we turned homeward. King had not killed a bird. He had made those puppies back each other's points, drop to shot and come to heel when there seemed no necessity for the latter order. And it was a mystery.

At the inn it was all plain. I had been interested only in the sport, while King was displaying the perfect working of his young stock for commercial purposes. We counted out of our game bags twelve brace of woodcock and an odd snipe or two. I said "game bags." The sportsman of to-day has probably never seen one. They were elegant and expensive but—must I confess it? a nuisance. A big leather bag for lunch, wads or other necessaries slung over the shoulder, and outside of the bag was a net for carrying the game so that it might be seen of men. Perhaps this last part of its construction was what put it out of fashion; suppose there was no game? Certain it is that the old-fashioned sportsman was more picturesque with his powder flask, shot pouch and game bag than the modern one with his cartridge belt and shooting coat with its capacious pockets; just as the old 74-gun frigate under full sail was more beautiful than the iron-clad fighting machines which to-day make the great navies of the world.

But—and please emphasize this "but"—the iron-clad has taken all the poetry out of a sea-fight. Call up Perry, Paul Jones, Farragut or Nelson and ask them their opinions of the iron pots worked by steam; but those old sea-dogs are not at hand to give opinions on warships, and but few of the older sportsmen are living who shot in the days of Wade Hampton, Herbert, Col. Skinner and the older American sportsmen; that class who by precept and example elevated field sports above market shooting. They came at the right time and had their influence on reading men. Their work will not be complete until all men who shoot or fish are reading men and learn that the destruction of life in great numbers is not the highest form of sport.

Quite a number of pointers went to Virginia that fall, and for years I had the beautiful embossed game bag which the stranger presented to me and wish it was hanging on the wall with other relics, but it disappeared and is among the unaccountables.

In 1865, on returning to Albany after another absence of several years, I naturally drifted down to the old inn; but the faces there were all new and to a question a man replied: "O, yes! Ken King; I knowed 'im well; 'e used to shoot a great deal an' 'ad a lot o' dogs. 'E's been dead a couple o' year and the widow went back to England."

Among his sayings that are remembered is the remark he made after our last trip. Said he: "That man who was shooting in that first bog as soon as it was light enough to see was an old fellow from across the river who shoots snipe and birds without a dog, an' 'e knowed ther' 'd be a flight o' birds that night as well as the birds knew it. His name is Port Tyler, an' 'e traps mink and muskrats along the river in winter, but when it comes to the shootin' season I wish 'e'd stop on his own side of the river; confound 'im, 'e's always out afore anyone else. Did you ever meet him?"

"Yes," said I, "often; I know him quite well."

"Then you tell 'im that I'll give 'im the choice of that new litter if 'e'll stop on 'is own side of the river w'en the birds are in season."

FRED MATHER.

* "Birds" in his vocabulary meant only that king of all game birds, the woodcock.

NEW JERSEY POUND NETS.

[From the forthcoming report of the Commissioners of Fishery and Game.]

POUND NETS.—It would be difficult indeed, in the opinion of your Commission, to suggest any measure which would prove more conducive to the fishing interests of the State, and to the general welfare of all persons residing near the coast, than an act regulating the taking of fish by means of pound nets. New Jersey is one of the few States which permits individual and corporate greed to slaughter thousands of fish annually with but a slight return therefor to the general public. The highest court of the United States has decided that the fish within three miles of the coast line are the property of the State, and that the State has a right to regulate their taking. Enactments have been on our statute books for nearly a century regulating the taking of shad and of other fish coming to our shores and into our rivers; for a similar period have Legislatures recognized the necessity of taking care of our game to prevent its extermination; but nevertheless, in these days when fishculture and game protection have been brought to a state approaching perfection, the most destructive and most pernicious system of slaughtering fish is permitted to go on without let or hindrance. All the devices which modern ingenuity can contrive are adapted to the taking of fish from the sea, not solely for the purpose of supplying food, but in order to accumulate wealth from the manufacture of compost. Every interest in the State has bent to the will of the people, and has admitted the propriety of government by the Legislature, with the single exception of the monopoly which has strung unsightly pound nets along our coast by the scores. The paid agents of this trust have appeared year after year in the halls of legislation for the purpose of frustrating any plans tending to restrictive legislation. No one denies the propriety of levying tribute upon the sea for the purpose of supplying food to the human family, and with proper restrictions there will be food there for centuries to come. But the pound net trust is not satisfied with a fair return, but insists on taking everything possible in as short a time as possible. Their nets have been erected in close proximity to inlets from the ocean, which are ascended every spawning season by thousands of fish for the purpose of propagating their kind; the female, distended with spawn, and the fingerling, wending its way seaward for the first time in its existence, all fall an easy prey to the rapacity of the pound net. It requires no skill in fishculture to foretell what the result will be, for be the larder of nature ever so great it cannot stand any such drain. Your Commission does not advocate prohibitory measures, but we do most strenuously urge the passage of some law by which the heritage left us by our forefathers will be preserved for our descendants. It is not a question of New Jersey alone; it is a question vitally affecting the food fish supply of the entire country.

But New Jersey has other interests at stake besides those of a food supply for its inhabitants. The sands along our coast have become favorite abiding places during the heated months for thousands of strangers and the seaside resorts are increasing in population every year. The revenue to residents of New Jersey from this source is inestimable and none would be so foolhardy as to deny that it is worth preserving. But the cool winds and the foaming breakers do not alone constitute the attractions which bring to our shores annually thousands from other States. A large proportion of these are attracted by the fresh fish and by the sport of angling. The pound net trust has destroyed both after having first deprived hundreds of our residents of a means of obtaining a livelihood. In former years our hardy fishermen depended upon the sea for a never-failing means of subsistence, and the hotels and residents along the coast depended upon these fishermen for a supply of fresh fish for daily meals. Now the fishermen have been deprived of their means of gaining a livelihood, for the large nets prevent the fish from coming within their reach; a monopoly has taken the bread from the mouths of hundreds of honest toilers. The large steamers of the trust remove the contents of the pockets of the nets and these contents are taken to the large marts of New York and Philadelphia, there placed on ice, and in a stale and much deteriorated condition they are returned to the very shores from which the monopoly snatched them, to be sold at prices a hundred per cent. higher than they commanded when in former years they were taken by our own residents fresh from their briny habitat. Two of the greatest charms of summer life by the sea have been removed and the public has not reaped a commensurate advantage therefrom.

The advocates of pound net fishing tell us that the ocean is so large that its stores are inexhaustible. We were told the same some years ago when some of our birds were sought for millinery decorations; the white egret and other birds of beautiful plumage came from southern climes, where they bred by the hundred thousand; according to the claims of those who reaped illgotten gains from the slaughter of these birds there could be no danger of extermination, for the source of supply was so great. In those days the birds whose plumage was in demand for decorations were plentiful along our shores, but despite this fact and the alleged inexhaustible source of supply many of the species have been practically exterminated. The egrets are no longer seen where formerly they were present in large flocks, and the history of the egret has been repeated many times in other species. Your Commission hopes that the Legislature will provide measures by which the fish in the sea will not share the same fate as the birds of the air.

In addition to the claim that the fish supply is inexhaustible came last year the claim that the men who had engaged in pound-net fishing should not be subjected to restrictive legislation or required to pay a tax for the continuance of their privilege because they had invested their money without any idea of such regulations or tribute. This claim has been utterly nullified by the action of the angry sea, which twice during the past season destroyed the nets and strewed its sands with the iron pillars and chains which held the nets. A more fitting answer to the alleged poverty of the trust could not be found than the fact that after the first ravages of the sea the nets were quickly replaced by new ones; now, when our coast is clear of these pernicious contrivances, their former owners are making plans for the erection next

year of even more destructive and larger nets than have ever disfigured the sands of New Jersey. They cannot now plead the injustice of a tax on property supposed to be exempt, for if the Legislature should enact a law for the proper regulation of pound-net fishing, that law will have been on our statute books long before the first stake is driven or the first mesh woven. It is high time that something be done to protect the fishermen along our coast and the dweller at the seaside, and no time can possibly be more propitious than the present, rendered so by the action of the elements, nor more urgent, made so by the rapacity of the trust in the past season.

ANGLING NOTES.

Justice In England.

In Whitehaven County Court, England, a convicted poacher sued a justice of the peace for the value of a net and for damages for its retention. The plaintiff had been convicted of illegal netting before the defendant, and after conviction the latter had retained the net captured with the prisoner. It seems that by an old act of Parliament, which had never been repealed, there was no clause forfeiting the tools of a convicted poacher, although subsequent acts relating both to fish and game contained provisions by which nets could be retained or destroyed by the legal authorities when their owner was convicted of using them illegally. Judge Steavenson, who presided, said that to give back a net to a convicted poacher was like handing back poison or a dagger to a convicted assassin, but the law being as it was he would have to find for the plaintiff, and his decision was that the defendant must return to the plaintiff the net or its value; and as the law was silent as to the value of such property and also as to when it must be returned to its owner, he would fix the value at 1 penny and give the defendant six years in which to return the net or pay the penny. A man who dispenses law as Judge Steavenson did in this case, impartially and with an eye to the eternal fitness of things, should be Lord Chief Justice of England, and every sportsman in the realm should support him. I should not be surprised if brother Marston should make Judge Steavenson a guest of honor at the next dinner of the Fly-Fishers' Club in London.

Walton's Angler.

FOREST AND STREAM informed its readers only last week that at Sotheby's, in London, a copy of the first edition of Walton's "Compleat Angler" sold at auction for £415, or $2,075, and was knocked down to Mr. Pickering.

An enterprising daily newspaper in New York State must have seen a notice of the sale and judged it to be worthy of a leaded editorial notice, for it contained such a notice, giving the price for which the book sold as $525, and concludes: "It must be remembered, however, that the book contains the champion fish stories."

Great Scott! Izaak Walton's Angler contains the champion fish stories, in the sense that this writer intimates; it is enough to make one weep and gnash his teeth.

The paper from which I have quoted gives some attention to field sports, and in its news items was an account of a wild deer invading a small village in southern New York. It describes the passage of the deer through the town and how it finally disappeared by jumping over a fence, "leaving some of its silky hair on the top rail." The writer could not have meant that a deer really has silky hair; he was probably thinking of a dear mermaid jumping a fence and leaving her silky hair on the top rail, for mermaids do have silky hair, and they do jump fences, although Izaak Walton does not mention the fact in his Angler.

Newfound Lake and Its Trout.

The people about Newfound Lake, New Hampshire, are not—at least, some of them are not—entirely pleased at the manner in which the New Hampshire Fish Commissioners are conducting fishcultural operations at the lake, as I learn from letters and editorials in the Bristol *Enterprise*. The paper vouches for one Mr. E. T. Pike, who says of the lake trout in Newfound Lake: "There is no doubt in my mind that there would be to-day many more trout in our lake had the Commissioners not interfered with the natural order of things at all. Every fall previous to twelve years ago vast numbers of these fish were speared. Why, thirteen years ago this fall over 300 large trout were speared, to my positive knowledge. I saw one boat that contained seventy-two, another sixty, and there were several other boats that had ten or more each. Farmers and others used to salt down these fish by the barrel, and yet even such slaughter did not diminish the number seen each year on the spawning beds."

If I should write a statement of that sort for FOREST AND STREAM over my own name the editor not only would not print it, but he would go posthaste to the nearest court to make a motion to have me confined in an institution for the feeble-minded, and my twenty years' connection with this journal would come to an inglorious end at the drop of the hat; but there is nothing in the Boston papers to indicate that Mr. Pike has been confined in any sort of an institution since he informed a curious world that his head was of a peculiar shape, with unique trimmings. Mr. Pike should have lived before Jacobi, before Garlick, before the days of fish commissions and fishcultural associations, and if he could have convinced the fathers of fishculture that the surest way to keep up the supply of food fish was to slaughter them when they came onto these spawning beds to reproduce their kind, there would have been no experiments in artificial fish propagation.

There would have been no need of costly fish commissions if Mr. Pike's theory could be proved to be correct; for instead of a fish commission turning hundreds of thousands of young fish, artificially hatched, into a lake when the stock ran low, it would be a far better way, and a cheaper, to furnish the people with spears to kill the fish on their spawning beds before they deposit their eggs.

Mr. Pike and his statements would not be worth one dip of a pen into ink to reply to if he were not supported by Capt. W. A. Beckford, and Capt. Beckford's confirmation would not be worth the second dip of the pen if both were not supported by the editor of the paper in which their views are printed.

Read what Capt. Beckford says under the heading, "It is a Robbery:" "There is no doubt in my mind that the policy pursued by the Fish Commissioners during the last nine years has been of vast injury to the fishing interests of Newfound Lake. There used to be a vast number of fish speared every season on the spawning beds, but yet the natural hatching of the eggs in the lake kept the supply good. * * * Nine years ago the Fish Commissioners were attracted by the immense number of fish that could be taken from the spawning beds of this lake. They built a hatching house capable of holding at the most only 800,000 eggs. They captured the trout by the hundreds, took bushels of eggs from them and carried them all off to different parts of the State, except enough to fill the trays in our hatching house."

This is where the robbery comes in, that after the trays in the hatching house were full the balance of the eggs were taken elsewhere to be hatched. I imagine Capt. Beckford uses figurative expressions when he speaks of hundreds of trout and bushels of eggs, for one of the New Hampshire Fish Commissioners told me years ago that Newfound Lake had been speared almost to death, and it would require a long time to get the lake back to normal condition, so far as its trout were concerned, after the years of spearing, poaching and other outrages the lake had been subjected to. Are all the people so blind that they cannot see that they are now paying the penalty for the years of spearing that nearly destroyed the trout; that the best efforts of the Fish Commission cannot restore in half a dozen years what the people have been 100 years in exterminating? Seemingly there was no protest from the people when the robbery of the spawning beds of the fish was carried on year after year, but the moment intelligent fishculture comes to their aid to restock the despoiled waters with trout it is robbery to take any of the eggs or fry from the lake. The views of the two correspondents and of the editor regarding fishcultural methods show such an ignorance of the subject that they are not worth quoting at length, and one sample will do. The Commissioners are advised to keep the fry until they are large enough to take care of themselves, "because the cost of the tanks for this purpose would be but a trifle."

A good many years ago I spent some time in the West. It was during the building of the Union Pacific Railroad. Col. Harry Brownson, the general freight agent of the road, was visiting me in my tent in Wyoming Territory, and wished my striker to do some mending for him. The Colonel went into a tent store in Bryan to buy a paper of needles. The merchant recognized him as the man who was chief of the freight department of the road and charged him $1 for the paper of needles. The Colonel protested at the exorbitant charge, but when the man explained that it was not the cost of the needles, but the freight on the needles that made them so high, the Colonel paid the dollar without further murmur.

So with the matter of rearing fish; it is not the trifling cost of the tanks, but it is the cost of feeding and attendance that make yearling trout come so high; and in a State like New Hampshire, where the appropriations for fishculture are not as robust as elsewhere, the food question has to be considered; for, as I have remarked on several occasions, fish do not long thrive on a diet of pure air, even the pure air of New Hampshire.

This part of an editorial will probably appear to the uninformed like a true bill against the Commissioners, and it is really the only part of this indictment worth considering seriously after the admission that spearing of fish on the spawning beds has been a common practice for many years: "Many of our local fishermen are becoming aroused at what they call the bad management of the Fish Commissioners in regard to Newfound Lake. They claim that the policy which has prevailed for many years of stripping the fish of this lake of their eggs and carrying a large proportion of them to other lakes is ruining the fishing. That not only are vast quantities of the eggs carried away, but a too large proportion of the fry hatched at our hatching house is treated in the same way." I do not know what proportion of the eggs are returned to the lake in the shape of fry, but it is safe to say that the Commissioners return several hundred per cent. more than would result from the "natural order of things" mentioned by Mr. Pike. What per cent. of eggs result in fry from the natural order of things? Five per cent. would, in all probability, be a very large estimate. We do know that by count only two per cent. of salmon eggs were impregnated in one case of the natural order of things, and allowing for all casualties and fatalities between impregnation and the date of hatching, which may be 150 days, five per cent. is a liberal estimate. In the hatching house something over ninety per cent. of the eggs taken artificially produce healthy fry, and if the Commissioners return one-quarter of the fry to the lake it is a vast improvement on the natural order of things.

The Fisheries, Game and Forest Commission of New York has contracts with the owners of five private lakes. Three are in the Adirondacks, one is in the Catskills and one is on Long Island. Understand that these are absolutely private waters, where the fish can breed under the natural order of things and all the increase will belong to the owners of the lakes. In spite of this fact the owners enter into an agreement with the Commission by which it can send its men to these private waters and take the spawn from the trout. For this privilege the State in return agrees to hatch the eggs and restore a proportion of the fry to the lakes. In four instances the Commission must return to the lake one-fifth, or 20 per cent. of the fry; and in the fifth case the Commission must return one-sixth of the fry, keeping four-fifths and five-sixths respectively to be planted in the public waters of the State. The owners of the lakes are successful business men, so successful that they are able to own valuable trout lakes as private preserves, and it is not at all probable that they would voluntarily enter into an agreement with the State by which they would get the hot end of the deal. Being in a position to make their own terms, it is safe to assume that they consider 16⅔ per cent. and 20 per cent. respectively of the eggs returned as fry to their lakes a better arrangement for them than the natural order of things.

It is true that none of the gentlemen referred to permit their trout to be speared on the spawning beds, as they probably have not heard of this method of keeping up the stock. A gentleman in New Hampshire, not connected with the Fish Commission, writes me: "Have you read the ridiculous statement in a Bristol paper regarding Newfound Lake? The truth of the matter is that all the trout were speared out of the lake when the Commission took hold of it to restock it, and the complaints read to me like the wail of disappointed poachers who would like to return to their vomit again."

I wish to assure the gentleman that I have read the statement he refers to, as he will discover if he reads this note in FOREST AND STREAM.

New Book by Mr. Halford.

There will soon be issued a new book by Mr. F. M. Halford upon "Dry Fly Entomology," giving brief descriptions of leading types of natural insects serving as food for trout, with 100 best flies and manner of dressing them. There will be ten plates of flies, hand colored, and plates of insects. A. N. CHENEY.

NEW YORK FISH COMMISSION REPORT.

WE have received the first annual report of the New York Commissioners of Fisheries, Game and Forests for the period from April 25, 1895, to the close of the fiscal year, Sept. 30, 1895. In the elaborate character of its preparation and the fairly sumptuous style in which it has been produced by engravers and printers, the volume differs from all other fishery reports we have had in this country. That which will attract most attention is the series of colored lithograph plates of fishes. Of these the report says:

"It would be worse than useless to attempt to portray any fish in colors, unless it were done with absolute fidelity in every detail. Mr. Sherman F. Denton, the artist of the United States Fish Commission, was engaged to make sixteen color drawings of fishes and game, and this he did so faithfully that they will serve to identify the originals of the drawings, for fin rays and scale formation are as faithfully represented as the external colors of the subjects. These color drawings have been reproduced so exactly that no colored figures of fishes in existence exceed them for truthfulness or beauty of execution. They are absolutely faithful reproductions, which can be said of no other work of this kind."

We need not add that because of these plates the volume is one which will be treasured by those who are so fortunate as to secure a copy, and we can do no better service to the reader than to hint that one will do well to make sure of his individual copy, provided he shall have the requisite influence to secure it. The time will be long before another opportunity will offer itself to secure such pictures of fishes without money and without price.

The subject matter of the report has to do with the customary business of the Commission. There are special reports relative to the purchase of lands, an account of fines and penalties, of net licenses, of the oyster franchises; with reports of the shellfish commissioners and of the superintendent of hatcheries. There are special papers on Food for Fishes, by A. N. Cheney; Muscalonge, Pike, Pickerel and Pike Perch, by Mr. Cheney; and on the Shad of the Hudson River, from the same pen. The Rainbow Trout is described by Dr. Tarleton H. Bean, the Brown Trout by Mr. R. B. Marston, editor of the English *Fishing Gazette*, and the Quananiche by Mr. E T. D Chambers. Judge S H. Greene writes of the Chinese Pheasant, and Mr. Granville Hills has a paper on Summer Woodcock Shooting, to accompany reproductions of his photographs of a nesting woodcock which have already been noticed in our columns. One paper which is likely to have very marked interest at this juncture is an exhaustive Report on the Adirondack Deer by Superintendent of Forests William F. Fox.

New York Convention.

THE annual convention of the New York State Association for the Protection of Fish and Game will be held in Syracuse, Thursday, Jan. 14. All clubs and associations are urged to send delegates, and to communicate at once with President Frank J. Amsden, Rochester.

The Kennel.

FIXTURES.

BENCH SHOWS.

Feb. 2 to 5.—New England Kennel Club's annual show, Boston.
Feb. 22 to 25.—Westminster Kennel Club's twenty-first annual show, New York. James Mortimer, Supt., Hempstead, L. I.

FIELD TRIALS.

Jan. 11.—Tupelo, Miss.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.
Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.
Sept. 6.—Morris, Man. Manitoba Field Trials Club's eleventh annual trials. John Wootton, Sec'y, Manitou, Man.
Nov. 8.—Carlisle, Ind.—Union Field Trials Club second annual trials. P. T. Madison, Sec'y, Indianapolis, Ind.
Nov. 15.—Newton, N. C.—Eastern Field Trials Club annual trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

A REVIEW OF 1896.

THERE has been something of a depressed condition in the kennel world during the past year, though matters in a general way have been mending of late, and some special branches seemed to have suffered but little, if any, from dull times. The commercial features of the kennel world are in direct sympathy with general commercial prosperity or adversity. Dogs in a way are a luxury, a popular and wholesome luxury, one that appeals to the hearts of all whether they are rich or poor, haughty or humble, whatever may be their nation or clime; but when revenues are cut down economy is a necessity, and while people love dogs then none the less, a certain percentage is forced to forego the fancy for them.

Active sales at long prices are far less frequent now than they were a few years ago, though there is a healthy general interest, the tendency of prices being to a basis of real values, especially in respect to those given for pointers and setters whose ability and service for field work are considered.

For shooting dogs there has been a fairly good demand at fair prices, though much less than the excessively large prices of a few years ago, which no doubt did much to injure setter and pointer interests, since those inflated prices were within the reach of but relatively few sportsmen, and therefore they made ownership more exclusive. Such prices could have no healthy, permanent basis. They were of the boom order, sure to collapse. The big sums of money won a few years since at field trials by certain dogs did much to increase their value, for if a dog

HURSTBOURNE ZIP AND PINMONEY.

could win several hundred dollars or several thousand in a season it was plain that he was not to be sold for a song.

Prices are now measured more on a dog's field merit than on ability to campaign and win money, as the heavy purses put up by nearly all the clubs a few years ago are now of the things which have passed away.

Field trial interests are taking a turn for the better in every way, though there are some clubs which are not so well adjusted financially as we would like to see. However, by adjusting their finances according to their revenue, they can pull through. If a club spends more than its income, it is almost certain to have serious problems to consider sooner or later.

Field trial supporters seem to foster the trials now more on a basis of sport and less on a mercenary one than obtained when prices were so much higher. Such is a healthy sign. It denotes a return to practical worth instead of the excessive development of the few qualities which dominate in a half-hour's spin, and which will be so manipulated as to overshadow the work of a really meritorious dog, whose work is based on all-day standards.

The beagle trials also have been well sustained, though there has been some falling off in interest, probably temporary, as the genuine love of sport which their promoters and supporters display, and the wide scope of country North and South wherein the beagle may be used, and last, but not least, the high grade of sport which the musical little fellows provide, will insure that the beagle will not be neglected. His intrinsic merits are too well appreciated to be ignored.

His larger cousin, the foxhound, is developing a strong following; but unfortunately it is difficult to hold a trial where the conditions of weather and fox and grounds are in harmony for good tests, and at the best, owing to the very nature of a competition which is largely out of sight of the judges, there is much of haphazard in making decisions. As a sport it is steadily growing in favor.

The bench show interests have probably experienced the greater vicissitudes, quite a number losing financially on their ventures, though as some clubs disappear others appear, so that the value of the general whole remains fairly intact.

There seems to have been a severe frost in the challenge industry, which flourished so vigorously a short time since, owing perhaps to the fact that they were not challenges, but advertisements.

The Pacific coast is now enjoying practically the blessings of home rule in kennel matters, the A. K. C. is governing wisely, and on the whole there is a prospect of a better year on healthier and more permanent lines.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

THE IRISH SETTER AS A FIELD DOG, PAST AND PRESENT.—III.

LITTLE VALLEY, N. Y.—*Editor Forest and Stream:* Queen Bee, the dam of Redfern, had quite a reputation as a field dog, and to her individual field quality I attribute most of Redfern's excellence. Probably no dog was ever heralded far and wide more than Sarsfield was, and probably no dog so little deserved it. As a field dog he never deserved any consideration. I saw him run at the trials, and a worse exhibition is rarely, if ever, seen. It will therefore be clear that the mating of Gypsey Maid with Redfern was one of individual quality rather than of blood lines. The results as portrayed in Nugget were an advance on either sire or dam. She had her dam's pluck and go, with more speed. And she had her sire's good nose, style and level head.

Redfern was sold by me to Mr. A. M. Valentine, Janesville, Wis. He has always been highly prized by his owner. Indeed he should be, as he is all any sportsman could desire as a field dog.

I have mentioned the fact of Redfern's gunshyness because the gunshy puppy is generally condemned by sportsmen who have had a limited experience with dogs. It has been my experience to have had a number of these dogs to deal with at various times. I have invariably found that dogs of this character were possessed with splendid capabilities.

Gunshyness is by no means the serious fault that it is claimed to be. It can be cured in the puppy in a short time by kindness and careful handling.

In 1890 the Irish Setter Club opened a special stake in connection with the Eastern Field Trials Club. The Irish setters were to compete in the regular stakes with the English setters and pointers. There were six or eight dogs entered for this special, the running of which afforded no little amusement to the spectators and opened the eyes of those who were handling the red dogs. I was handling in this stake the Irish setters Ready II. and William H. I had the misfortune to be down with William H. against the ultimate winner of the Derby, Tory Lieutenant. He was handled by that good handler and great wag, John White. Tory was a wide, fast ranger, and he distanced William early in the heat; in fact, the latter wasn't in the hunt at any time in the heat. White noticed my discouragement, I suppose, for he said in his droll way: "You look as if you'd like to go up in a balloon." That just about expressed my feelings, for I then and there determined to never run another dog in the trials that could not at least make a decent showing.

I was more fortunate with Ready II., as she was placed second in the special to Tillie Boru. The showing the red dogs made in the stake in comparison with the other setters revealed their weakness. I have always contended that the club at this time was on the right course, because owners and breeders would have a chance to compare their dogs in actual competition with other setters and pointers; they would then be able to discover their weak points and know better how to improve their dogs. To those of us who were there, all the weakness of the dog as herein pointed out was apparent. He had not the nose, speed and endurance to compete with the English setters and pointers. While this is true, it is no reason why breeders should give up trying to improve their dogs. English setters and pointers were not always up to the high standard of to-day. Their owners and breeders attend the trials in numbers, and by careful comparison of the work done select dogs to breed to and from, and are thus enabled to keep up the high class of their dogs. While I attended the Irish setter trials, which were inaugurated in the next year for Irish setters alone, only two or three owners and breeders of the dog put in an appearance. Of these not all had got rid of the color craze, but as these trials were for Irish setters only there was no chance for comparison, and much thereby in my opinion was lost. DR. H. B. ANDERSON.

Hurstbourne Zip and Pinmoney.

THE subjects of our half-page picture this week, Hurstbourne Zip and Pinmoney, by their excellent field trial performances are fresh in the memory of those who admire dogs for their capabilities in actual work, and their prowess in competition. Hurstbourne Zip distinguished himself last fall by winning three Derbys in succession, namely, that of the Manitoba Field Trials Club, run at Morris, Man.; that of the Continental Field Trials Club, run at Kennedy, Minn.; and that of the Eastern Field Trials Club, run at Newton, N. C., Pinmoney at the latter place running a very close second, and winning first the week following in the United States Field Trials Club's trials; running then more in the steady, mature manner of an aged dog and showing a very high class of work, sound in all details. The portraits are from the original painted from life by Prof. Edm. H. Osthaus, which is but a way of saying that they are admirably true and artistic.

Meet of the Dixie Red Fox Club.

Editor Forest and Stream:

The second annual meet of the Dixie Red Fox Club, held at Rowland, Ala., the week ending Dec. 19, was one of the most successful hound trials ever held in the United States. The attendance was large, and many of the prominent fox hunters of the country were present with their hounds.

For the most part the weather was bad, and conditions for fox hunting unfavorable; nevertheless there were several fine races, two red foxes holed and a bog fox caught by the puppies.

The Derby was for hounds under eighteen months of age at $2 50 each; 50 per cent. to first, 30 per cent. to second, and 20 per cent. to third. There were fourteen entries, and the prizes were awarded to J. L. Green's Frank, A. L. Hennigan's Hoodoo, and J. W. Gilman's Flash, in the order named.

Hoodoo is a remarkable puppy when the fact of his being under twelve months of age is considered.

The stake for hounds of any age had twenty-one entries at $2 50 each; money divided as in the Derby.

Dr. I. F. Delaney's Captain Bankhead, J. W. Gilman's Tom, and J. L. Green's Grady received the awards.

At the annual meeting, held Wednesday evening, the following officers were elected for the ensuing year: President, H. C. Trigg, Glasgow, Ky.; First Vice-President, Wm. B. Hamilton, Columbus, Miss.; Second Vice-President, Malcolm Gilchrist, Courtland, Ala.; Secretary-Treasurer, Major Val Yound, Waverly, Miss.

Waverly, Miss., was selected for the next meeting place, and the time wss fixed between Oct. 15 and Nov. 25, the exact date to be arranged by the secretary so as not to conflict with that claimed by any other similar organization.

Among those notably present were: Dr. I. F. Delaney, Rowland, Ala.; Hon. R. H. Lowe and J. H. Wallace, Jr., Huntsville, Ala.; Mac Gilchrist, Garth Gilchrist and Mr. Sykes, Courtland, Ala.; Chas. B. Richardson, Nashville, Tenn.; Ivanhoe Spears, Ingrams Mills, Miss.; Capt. J. A. Turner, Ras Richardson and J. W. Tilman, Athens, Ala.; Col. Wm. B. Hamilton, Columbus, Miss.; Jackson Bros., J. L. Green and J. L. Ames, Tenn. H.

Milwaukee Kennel and Pet Stock Association.

MILWAUKEE, Wis., Dec. 26.—*Editor Forest and Stream:* The M. K. and Pet Stock Association will hold a show the week following Chicago, March 17-20, on the plan of the Grand Rapids show. The ladies of Milwaukee will give the club their assistance, and the profits will go for charity. LOUIS STEFFIN, Sec'y.

POINTS AND FLUSHES.

A bite and a sup is an index of as true hospitality at times as is a prince's entertainment, but a bite alone is as it may be. Under the caption "Three Hundred Dollars for a Dog Bite," the *Sun* has the following: "A jury in the City Court gave yesterday a verdict for $300 in favor of Abraham Margolien, a glazier, in a suit he brought against John W. Bosch to recover $2,000 for a dog bite. The plaintiff alleged that he went to the house of the defendant to put in some glass and was attacked by the dog. He called upon the defendant to call off the dog, and he says that the defendant said: 'Don't be afraid; the dog won't eat Yiddish meat.' The plaintiff testified that, relying on this statement, he entered the house of the defendant, whereupon the dog tore away the seat of his trousers and some of his flesh."

Of the advantages afforded to exhibitors through the kindness of the N. E. K. C. in offering special concessions in the use of its kennels, situated on the club's farm at Braintree, Mr. Allen Chamberlain, press agent of the club, writes as follows: "Dogs are here not only boarded, but trained for the field or house broken, and a competent veterinarian is within ready call in case of illness. The club makes a special point of preparing dogs for shows, not only its own, but for any in the circuit. This year the club will make special boarding rates for the interim between the Boston and New York shows for the accommodation of dogs from a distance which are going the round of the circuit, and will give all such dogs the benefit of the club's special car to New York, a feature which has proved very beneficial to those who have availed themselves of it for the past two years. Thus the scope of the club's usefulness has been greatly increased and its new departure is already being as fully appreciated by dog owners outside the club's membership as ever its shows were."

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

RIGHT OF CYCLISTS ON CABLE ROADS.

BY WM. GEO. OPPENHEIM, LL B. (NO. 70,835),

Member of the New York Bar.

A CASE of considerable interest and importance to bicyclists has just been decided by the Appellate Division of the New York Supreme Court of the First Department (New York city and county).

Mr. Justice Barrett, probably the most eminent, learned and logical member of the Division, which is composed of seven judges, has written an opinion reversing the decision of the trial court in the case of Rookes vs. The Houston Street & Pavonia Ferry R. R. Co., in which he holds that a cyclist on a cable car slot was lawfully thereon.

It is worthy of notice that all the other six members of the Appellate Division concur in his opinion.

From the law report of the case it appears that a young man was riding his bicycle on the slot of the cable car aforesaid; that at Nineteenth street (New York city), and without warning from the motorman or conductor of the cable car, which was approaching him rapidly from the rear, he was run down and thrown from his bicycle and severely injured.

The young man brought suit against the railroad company, and on the trial (which I reported about a year ago, animadverting on the injustice of the decision) his case was dismissed on the ground "that he was guilty of contributory negligence, as he was in a place of danger when the accident occurred."

The plaintiff, Rookes, admitted that he was familiar with the rumble made by the cable car, but that he was run down before he could change his position, and that no cable car bell was rung and no gong sounded before he was struck.

The Appellate Division of the Supreme Court reversed the decision of the trial court and held that "under the laws of 1890, chapter 568, sections 162 and 163, Mr. Rookes was lawfully on the track; that he certainly had a right to expect the usual warning in the rear; that he was proceeding lawfully and with a justifiable sense of security; that no duty was imposed upon him to look back; that his primary duty was to look in front of him, to keep a good look all around, but that he could not ride upon his bicycle at all—certainly not with safety—and yet keep his head turned so as to observe what was going on behind."

Evidently Judge Barrett has a level head and does not look back.

The opinion concluded, "therefore the question of negligence or contributory negligence was one for the jury."

A new trial was ordered, and some questions of interest to bicyclists may hang thereon.—*L. A. W. Bulletin.*

GOOD ROADS LEGISLATION.

BICYCLE riders in New York are arranging for a concerted movement on the State Legislature this winter to obtain the passage or a good roads bill, and there is reason to believe they will succeed in their effort. The bill will be fathered by the State Division of the League of American Wheelmen, and its provisions are just now being debated upon.

In all probability the measure will resemble in a general way that which in Massachusetts has resulted so successfully. State aid will be called upon to lend financial and engineering assistance to the improvement of roads deemed worthy, and for which the county, the town or the resident taxpayers stand ready to contribute their share of the expense. It has been amply demonstrated that in most localities the farmers, alone and unaided, are utterly incapable of building good roads, as they lack both the means and skill to do so. An extended system of good roads cannot be obtained without State aid, and though the farmers benefit most directly by such aid, there is good reason for giving it, and the cost cannot be called an imposition upon other taxpayers.

As has been pointed out by Mr. Sterling Elliott, a farm may have around two sides of it a mile of road and be dear at $3,000, while a city block bounded by a few hundred feet of road may be worth a million. The owners of the city block are benefited by all good roads extending from that city, even to a distance of many miles. Likewise the residents of cities are vitally interested in what it costs to haul the food they eat. Consequently the little part they pay in the form of taxes for road improvement is amply returned to them, and the investment is one that benefits the urban and rural population alike.

Mr. John F. Brayer, of Rochester, has written an open letter on the subject of good roads legislation in which he sets forth some of the objects to be attained. In it the necessity of æsthetic considerations and the demands of posterity are pointed out. Mr. Brayer believes in making a finished job while we are about it, and in leaving to our children an inheritance that will be worth something and not constantly require expensive additions and outlay for reconstruction.

To attain this end he believes that a sufficient width should be allowed the roads selected for improvement to meet any future demands that may be made upon them, and that the possible beautifying of the road in time to come also be intelligently considered Comprehensive plans should be made and filed with the officers of the various counties or towns through which such roads pass, showing the proper grade, fence and walk lines, tree lines, etc., to which all future improvements may be made to conform.

Mr. Brayer points out that in most of the plans so far submitted reference is only made to the building of hard driveways 12 to 18ft wide for vehicles to pass over, and the necessary side ditches for drainage. No attention is paid to the width of the highway between fences, which is an extremely important consideration, and the æsthetic side of the question is never mentioned. Apparently only the present is considered, and the easiest way of obtaining a hard, practical driveway; entirely regardless of tree planting or other means of beautifying the road, or of the future demands for sidewalks or street car lines, telegraph, telephone or electric light wires, or conduits, gas and water mains or cycle paths.

As two main principles Mr. Brayer urges, first, that highways connecting important towns or leading to cities, or such as by reason of their importance the State is likely to help improve within the next ten years, should not be less than 100ft. between fence lines; and, secondly, that one of the State highway commissioners to be appointed in accord with the provisions of the bill be a landscape artist of acknowledged reputation.

The State should not lend its assistance toward improving any road unless it is wide enough between fences to accommodate the traffic of the future, and also capable of being made into a beautiful highway. To secure the first consideration, abutting land owners should dedicate sufficient land to give it the required width, with the assurance that the subsequent improvements would enhance the value of their property more than sufficiently to repay them.

"Before any work is done on any roadway, the commission should have a broad, comprehensive plan. They should designate the proper line for future tree planting and the proper distance apart. As it is now, trees belonging to adjacent farm owners are set at varying distances outside of the fence line—sometimes so close to the fence as to make it impossible for a person to pass between. Sometimes they are on the fence line, or inside of it, and sometimes encroaching on the driveway, making it almost impossible to lay out a path or sidewalk. If a line had been established long ago these people would perhaps have been glad to have planted their trees accordingly. Any one can observe how crooked, disjointed and cramped are the walks and paths at the outskirts of most cities and villages, caused by trying to avoid trees. The space set apart for trees should be sufficient to allow for their growth without encroaching on the walk or on car lines, as is often the case when the roots of trees have to be cut off in laying walks, or that people get jammed between cars and trees."

Where old trees are in the way new ones may be planted and allowed to grow till such time as it is considered desirable to remove the old ones, and all trees planted hereafter would of course correspond to the new tree lines.

So much for æsthetic considerations. On the side of utility Mr. Brayer points out our marvelous rate of development and rapid increase in population, and the certainty that territory adjacent to the main highways of the State will in time be much more densely populated than at present.

"In time there will be electric car lines on many country roads radiating out from important centers of population, and these should have ample room for double tracks and should have a separate place of their own, and not be built into the driveway.

"There should be ample room for a walk, and with the popularity of the bicycle as a means of locomotion is it too much to expect that in time we may have, in addition to a good roadway, a cycle path 6ft wide, and possibly one on each side of the road exclusively for cycles?

"The horse driveway, however good it may be, can never be an ideal roadway for cycles, with its mud and paste in wet weather, its ruts, its horse droppings, dust and loose stones, besides the danger of collision with horsed vehicles.

"It would be an advantage to horsemen if bicycles had a separate path. A cycle path can be cheaply constructed and maintained. There is practically no wear on it.

"It can be made to drain off quickly after a shower.

"It is always smooth, hard and clean.

"All of which cannot be said of the horse driveway.

"Hence there should be sufficient room for a future possible cycle path and perhaps one on each side of the road.

"Any road improvement will tend to draw people from the crowded cities into the country for residences, and the bicycle will have helped much to do this.

"In all of our large cities we are spending millions of money to obtain parks, breathing places for the people. The smaller cities and villages hope to have parks some time.

"The acquisition of the necessary land for these parks is generally so long delayed that it becomes expensive, and they have to be located at quite a disance from the center of population

"So much so that many of us rarely get to them and enjoy them.

"Parks are good, but our streets and highways must of necessity be all the park that many of us can get time to enjoy.

"Therefore let us beautify them when we have an opportunity to do so cheaply, and let us enjoy life and nature at all times—while at our work, while passing through our streets on business—and not be compelled to travel miles to our parks."

MODEL OF '97.

NINETY-SEVEN sees fewer radical changes in cycle construction than any previous year. In a general way it may be said that there are no distinguishing features in the new wheels to separate them from last year's models, and the attention of the manufacturers seems to have been confined to the perfection of minor details. On critical inspection it may be seen that the new models surpass their predecessors in mechanical detail and finish, but the improvements strike one as being finishing touches, a smoothing down and leisurely correction of slight faults that were passed over the previous year owing to the necessity of more important modifications rather than indications of material advance.

No doubt this condition of affairs is largely due to the fact that perfection has been nearly approximated along the present lines of bicycle manufacture. It is also in measure due to the unsettled condition of the trade, and the fear that consumption will not immediately catch up with production. No large outlays for improvements whose success is problematical will be made while manufacturers are uncertain of their market

One effect of the similarity of this year's models and last will probably be the hastening of a general reduction in the list prices of the highest grade bicycles. As soon as a new model is put upon the market the price of the previous year's stock is discounted, and this year it is likely that purchasers generally will not see enough difference in value to pay full price for the new models, with the result that the new models will remain unsold while the stock of '96 wheels lasts.

While the $100 list price for the highest grade bicycles has been maintained, a slight reduction in the price of medium and low grade machines has been made, and many manufacturers have added to their lists lower priced wheels than heretofore. Frequently these lower priced wheels are the standard wheels of last year, built from the same lines and of the same materials, so that for all intents and purposes the price of bicycles has been reduced and riders will this year have the benefit of better wheels than ever before at a moderate price.

An inference that seems warranted by this state of affairs is that the necessity of a $100 list price arises primarily from the changes expected each year, which involves considerable expenditures for royalties, tests and new machinery, and that where such changes are not demanded it is apparently possible to turn out the highest grade bicycles at a profit to be sold for much lower prices.

Cause for Depression.

"It always depresses me greatly to meet a bicycle scorcher."

"Why so?"

"I hate to see a man's legs work so much better than his brains"—*Chicago Record.*

Yachting.

AS WAS not unexpected, the proposal that the New York Y C. should depart from a long established precedent and inaugurate the work of forming a national association of yachtsmen has met with serious opposition from some of the older members of the club, and it is even yet a question whether the experiment will be put to a practical trial. Such opposition, while not unnatural, is we believe without good grounds, and based mainly on a failure to comprehend the existing situation in American yachting. The nature of the objections may be gathered from the following interview of the New York *Herald* with an anonymous member of the club:

"This league business is totally unnecessary. It cannot add to the prestige of the club, and may involve it in so many outside complications as to be both inconvenient and unpleasant. The N. Y. Y. C. has been able to care for itself in the past, and is likely to do so in the future. It has never in its regattas sought outside entries, nor do I believe it will care to do so. It has kept complete records of the country's yachting history, which have always been open to the inspection of properly accredited representatives of other clubs. It will not want to be governed by a committee the majority of whom are from clubs of much less strength, and whose boats are of the smaller size. It has a distinct antipathy to having its constitution tampered with, and for it to become a member of the proposed league there must be a change in that instrument. Most of the members appreciate that the difficulties to be overcome in forming such an association would be almost disheartening, but that might not be an insurmountable objection if the N. Y. Y. C. were to derive any special benefit from the proposed league."

This may all be very true; the New York Y. C. has a

prestige of its own that cannot be questioned, nor can it be usurped by any other club. It is the oldest, the largest, the richest and most prominent club in the western world. It numbers the first yachtsmen in the country among its members and the finest yachts of the world in its great fleet. It has the America's Cup, which it has successfully defended for many years, and without going into all the minute details of this defense, it may be said that its whole action in the last two races and the disputes which have attended them has increased rather than diminished its prestige. It is able to hold its own races without the aid of other clubs; it has a more than ample fund to draw on for prizes apart from the public spirit of such individual members as Mr. Ogden Goelet; and its annual cruise is one of the established fixtures of the season.

Conceding all this, there is still another side to the question: The past two seasons have witnessed a turning point in American yachting in the matter of racing legislation. In this particular branch of yachting the advance has been notably slow. When the battle of the types was first begun by the FOREST AND STREAM, with the aid of a few individual enthusiasts, the subjects of attack were not limited to design and construction alone, not even to the measurement rule, but the faults and errors of the then existing methods of racing were also included. In spite of the wonderful advances long since accomplished in design and construction, and the early introduction and general adoption of the Seawanhaka rule, but little was accomplished in the direction of uniform and improved racing management for many years The conflict of minor details of measurement, classification, allowance tables, entries, etc., was endured year after year, with no general effort for a change; the "time start," with intervals of sometimes as much as twenty minutes in which to cross the line after the starting gun, was rigorously adhered to by all but a small number of American clubs; owners were freely allowed to build at the bottom instead of the top of a class, or to slide about at will from one class to another.

The change that has been wrought in all of these matters has been so rapid as to be almost marvelous. It seems hardly more than yesterday that the FOREST AND STREAM was abused as an "anglomaniac" for advocating the building to the upper limits of a few common classes with no time allowance; the general use of the one-gun start; the filing of measurements before starting; the limiting of each yacht to one class; and other essentials of systematic racing. To-day there is in existence a strong union of the Boston clubs, another of the New York clubs; on the lakes the old L. Y. R. A., the pioneer in all of this work, promises to become the nucleus of an interlake association; and throughout the country yachtsmen are generally interested in the associated tasks of improving and unifying all racing regulations. Though the work as a whole is yet in its preliminary stages, and many serious obstacles to a national union must be encountered, sufficient progress has already been made to warrant the adage: "Well begun is half done."

Experience in the past has taught us the slow and discouraging steps through which every reform in yachting must come, and we are not prone to be too enthusiastic; but we have never felt more encouraged as to the future of American yachting than on this present New Year of 1897. The tendencies of the times are entirely in the direction of such harmonious and concerted action among the great body of American yacht clubs as must bring about good results immediately, so far as each separate locality is concerned, and also in good time lead to a national union of many, if not all, of the clubs.

It is stating the case entirely too mildly to say that this work has been done without the aid of the New York Y. C.; it is much more correct to say that it has been done in the face of opposition, positive, however carefully masked at times, from the club Again and again have steps toward united action on different matters been inaugurated by other of the larger clubs only to fail when submitted to the New York Y. C. for its coöperation. With all of its wealth and prestige, the club has made no yachting rules save those relating to the America's Cup; but it has taken from time to time the rules introduced and tested by one or the other of its younger fellows.

The new movement within the club is inaugurated by men who are in active touch with yachting and who are looking forward instead of backward. Whether they are one and all in hearty accord with the present trend of yachting is of no moment, but they probably appreciate the one vital fact that this movement, begun out of nothing and gathering force of itself, until in but two years it has resulted in a strong, progressive body that is even now the controlling factor in the yachting system of New York and the Sound, has come to stay; that work thus begun under unfavorable auspices, and drawing its strength from no one club, but from the many individual yachtsmen to whom it appeals, must succeed when many previous efforts in the same direction have failed. In this they are right; the Massachusetts Association and the Sound Union, each just beginning its third year, with no pretensions to either wealth or prestige, are already factors in the actual yacht racing of Massachusetts Bay and Long Island Sound that far outweigh any of the great yacht clubs

It is true that the New York Y. C. can go on without them in the future as it has done in the past; it needs no aid from them to maintain its large membership and its prestige, to obtain challenges for the America's Cup or to defend it; and the club may also be able to turn the tide of recent years and to bring back some of the old-time glory to its annual regatta and to infuse new life into its annual cruise.

Granted that in all of these points it can gain nothing from a part in a national association, it is quite as true on the other hand that its aid is by no means essential to the furtherance of the work now in hand. Even in the event of a triumph of the opposition and the failure of the new scheme, the various existing local associations will continue as before; and presumably with a proportionate growth. The immediate result which may be looked for is the control by the Association of the great bulk of building and racing; and a more distant but almost inevitable result is the union of the local associations in one national body; leaving to the New York Y. C. all that it now has, but taking from it much that it might have, and depriving it of all claims to preëminence in actual yacht racing and lawmaking.

While we do not believe that the present work will fail for lack in the future of a support that it has never had in the past, we at the same time recognize that the New York Y. C. is by its position the natural leader in a movement of this kind, and that nothing better can happen to American yachting than the realization by the club of this fact and of the opportunity now offered to it to take the lead. The scheme now under consideration, and which may do in a season more than may otherwise be achieved in ten years, is entirely too extensive to be carried through without the active aid of the New York and all the other large clubs. The preliminary work has already been done by various agents, it only remains for the New York Y. C. to step into the field plainly open to it and to lead the way. In doing this it need have no fear whatever of a loss of prestige through association with small clubs, or that the latter will in any way infringe on the rights of the New York Y. C. to manage its private affairs in its own way.

THE battle of the types on the lakes promises to be an interesting one, as the fin-keel has found many opponents there. Lake Ontario has already been the scene of a yachting conflict for some years, the shoal centerboard sloop once being supreme on the lake. What with importations from salt water and the local productions of the late Alexander Cuthbert, an expert in such craft, the centerboard type was strongly represented when the first narrow cutters, Verve I., Verve II and Cyprus, invaded its waters. Gradually the old sloops have disappeared, and the narrow cutters as well, to make way for the modern cutter of the Minerva type, a thoroughly wholesome craft in design and construction; fast enough to outsail anything of the old types, and in accommodation and general usefulness excellently adapted to the conditions of lake yachting.

This type, which has proved in every way satisfactory, is now threatened with extinction at the hands of the bulb-fin racing machine, of which at present there are hardly half a dozen of over 25ft. r l. on the entire chain of lakes The only claim that can be made for this type is that it gives a small increase of speed at a cost of a serious loss of accommodation, the yachts being somewhat faster in the comparatively few races sailed in a season, and practically useless for the large amount of cruising and general sailing which has up to this time been the custom of the Lake yachtsmen. While the harm resulting from the free introduction of the fin-keel will be very much more serious in the larger classes, the advocates of the type are all men interested only in the smaller boats. The so-called compromise at the recent meeting is simply an impossibility and cannot be allowed to stand; the question is one that must be decided positively in one way or another.

FROM first to last the conduct of the gentlemen who built and raced the successful Canada last summer must commend itself to experienced yachtsmen as eminently wise and sportsmanlike. In declining in the first instance to build a large fin-keel to meet the Chicago copy of Niagara, and in insisting on adhering to a smaller class, they were acting upon a long and intimate experience of lake yachting, the different members of the syndicate having between them owned and raced many of the best yachts on Lake Ontario, and having raced and cruised on all the lakes. Realizing fully the uselessness of yachts of extreme draft and limited accommodation, as well as the impossibility of building up a 55ft. class, they refused to build out of the largest existing class on the lake, the 42ft.; making an agreement to meet the larger yacht under certain conditions, which they fully lived up to.

Though in the 42ft. class, the yacht which Mr. Will Fife gave them for the Toledo race was of a very undesirable type, a semi-fin of extreme light construction, and by no means the yacht to promote yachting on the lakes. No one knew this more thoroughly than they at the end of last season; and they were certainly not so obtuse as to underestimate the fact that all the prizes in the 42ft. class for next season were theirs if they chose to race Canada again.

One result of their meeting with other lake yachtsmen was to convince them that the time had at last come for a successful effort, after many unsuccessful ones, for a union of all the clubs of the great lakes in one association, and before the season was fairly over they had taken the necessary steps toward the creation of such a union. Possessing the fastest yacht on the chain of lakes, their first effort was to bar her and others like her, in accordance with what they deemed to be the best interests of the sport under existing conditions. In accordance with this end, they have offered to withdraw Canada from all races, to sell her on salt water if possible, or if not, to keep her from the racing; to accept three, four or five times the regular allowance if she were still raced and her type prohibited, or to make any other concession necessary to bar the fin and semi-fin types in favor of the yacht of moderate section, such as Zelma and Yama.

In addition to this, the cup which Canada won being their personal property, they have been for some time discussing the best means to make it a permanent trophy for the Great Lakes, their intention being to donate it for that purpose. After giving their time freely through the spring and summer to the building and racing of the Canadian champion, they have been equally busy since the season closed in organizing the new Union, preparing rules, corresponding with other organizations, etc.

Except for the opposition of some of the Lake Michigan yachtsmen to the barring of fin-keels and professionals, all has gone well; the Union has been formed and its rules adopted, the Interlake Yachting Association of Lake Erie has indorsed both; the Royal Canadian Y. C., the largest on the lakes, has amended its rules to conform to those of the Union, and it was fully expected that the Lake Y. R. A. would do the same. At the very last moment all this work has been frustrated by two or three persons, one armed with a handful of proxies and casting a vote on each of them.

However serious the immediate results may be in delaying the joining of the Union by all the associations, and in the encouragement it gives to the advocates of the fin-keel and the opponents of Corinthian sailing, we have little fear that such a misuse of power and failure to recognize its responsibilities will do permanent harm to a good cause.

WITH the present issue the series of articles on Yacht Designing is resumed. We hope to continue it at regular intervals through the winter and spring.

YACHT DESIGNING.—XI.

BY W. P. STEPHENS.

(Continued from page 481, June 13.)

IN the preceding chapter the general principles of orthographic projection on three coördinate planes were described as applied to a simple rectangular solid. The application of these principles to the delineation of buildings, machinery, etc., is a comparatively simple matter; such objects usually possess numerous plane surfaces, with the bounding lines and angles sharply defined, and consequently readily projected on one or more of the coördinate planes.

In the case of a vessel, however, the problem is apt to be much more difficult, from the fact that we have to deal almost entirely with curved surfaces of the most complicated description, and with practically no plainly marked edges or angles, and not even one flat side as a basis for measurement. Especially is this true of the modern as distinguished from older yachts; the latter had certain plane surfaces and sharp lines about the keel, but the former, such as Defender, Gloriana, Minerva, Niagara, or even El Heirie, is bounded by but two curved surfaces—the two sides merged into one single surface by the continuous curve of the sections across the keel—and the deck. The only positive edge or line that such a body presents is the joining of the deck with the topsides of the hull.

In examining such an object with a view to its exact representation on paper, the novice, even though familiar with ordinary mechanical or architectural drawing, would be puzzled as to where to begin. Fortunately there is one step by which matters may be very much simplified at the out-set. In most structures it is necessary that the complete object should be represented, but in a vessel it is seldom necessary to draw more than one side, the other being precisely similar. The first process then will be to cut our vessel into two parts by a *vertical, longitudinal* plane through the center; in other words, supposing that we have the reduced model of the vessel, we will hold it vertical, in the exact position in which it should float, and pass it, in a direction from bow to stern, over a circular saw. We now have two halves, symmetrical, but reversed, one of which we may throw away entirely, confining all our operations to the other.

The question of which one to retain is commonly considered of no importance; but as we propose to start right from the very beginning a few words on this point are in order. It is usually a matter of chance or taste with a marine draftsman whether he discards the port or the starboard half; in other words, whether he represents a vessel with her bow to the right or to the left. In a general way, one method is as good as the other; but it is highly desirable

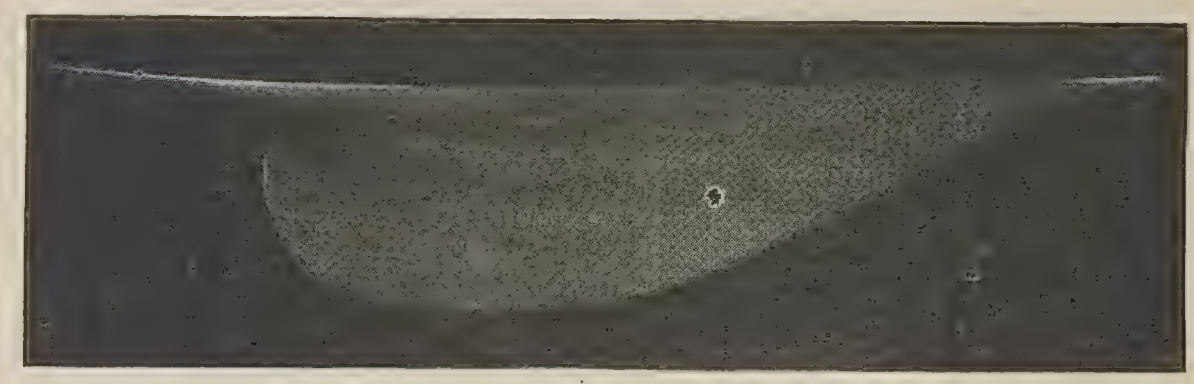


FIG. 20.

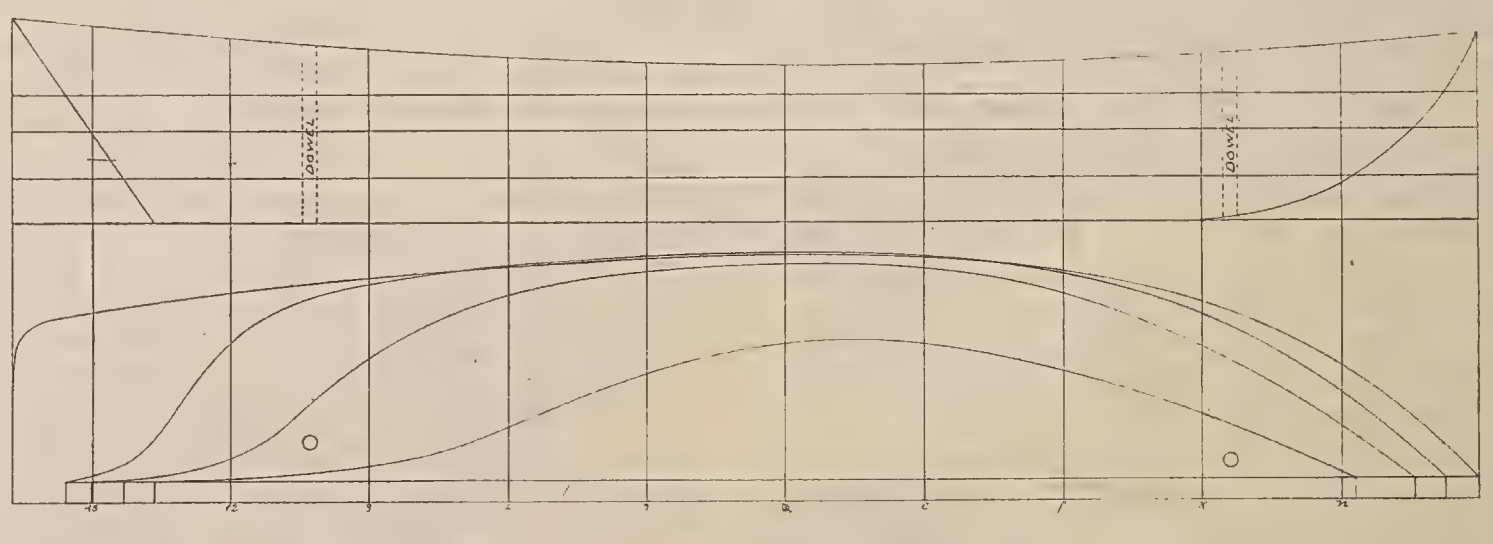

FIG. 21.

that certain conventional methods shall be followed in marine drafting as in all other branches of the art. As in all other handiwork, far better results are obtained by following some definite system of operation; and, what is of particular importance in marine drafting, if all designs are made after one general system, it is much easier to make those close comparisons between them which are the main basis of successful study and designing.

While all designers and naval architects work approximately in the same way, the usages and conventionalities are much less marked than in other similar professions, such as architecture and machine designing; and each marine draftsman is a law unto himself as to the innumerable details of his work. It has been for nearly fifteen years an important part of our work to prepare for publication in the FOREST AND STREAM designs derived from many different sources, the work of numerous draftsmen. The most striking point about the large collection of drawings that has thus passed through our hands is the entire absence of system, save in the few basic points that are absolutely incapable of variation, such as the use of the three planes of projection and the conventional "waterlines," "diagonals," etc., soon to be described. Failing to find in all of the works on designing and naval architecture any thoroughly systematic method of operation, we began some years since to plan out such a system, both for our personal use in the study of drafting and designing, and because it seemed in every way desirable that in presenting together a very large number of designs, as in the numerous volumes of the FOREST AND STREAM, all should be made after some one system. In the gradual evolution of such a system we have followed the established usages of draftsmen in general, endeavoring to combine them into a simple and definite system of working. Those who are familiar, as many are, with the long series of designs which has been such a feature of the FOREST AND STREAM since 1880 will recognize that of late years a marked uniformity of style has prevailed, with the result that the different designs are more closely related to each other, and more easily compared. While some designs come to us so cleverly executed that it would be but a waste of time to redraw them, the majority are entirely redrawn, with totally different arrangement of stations, level lines, etc.

Without claiming anything novel, radical, or indispensable for the methods followed in the course of these articles, we can at least present them as definite and systematic; and we would recommend to the beginner that he should follow them carefully until he finds good reason for abandoning them for others.

As the first step then, we will discard the port or left side of our imaginary model, retaining the starboard or right side as the object of our future operations and investigations. This will bring the bow to the right hand and the stern to the left, as in Fig. 20.

We know of no special reason why a drawing of a vessel should be made in this way rather than the reverse, as is very frequently done, but it is plain enough that all drawings should be alike in this respect. In our early experiences we began to draw hap-hazard, one design with bow to the right and another with bow to the left. The absurdity of this was readily apparent, and we soon drifted into the habit of drawing with the bow to the right, probably because this plan is the more common one. It is followed to day by most designers and draftsmen, though exceptions are by no means rare. In many cases designs for the FOREST AND STREAM, if on tracing cloth, are redrawn by turning the drawing face down and using a new piece of cloth over it for a new tracing, thus reversing the bow from left to right.

We will start then with our half model, as in Fig. 20, with the bow to the right. The operation of sawing the whole model in two has given us one flat side, which is a very great help. This side we can place directly against the back of the box described in the previous chapter. The first step which suggests itself is the tracing of the *side elevation* of the model on the back of the box, which is easily done by running a pencil around the outline of the stem, keel, rudder, counter and upper side. The next simple step is the projection of the greatest breadth of the model upon the bottom of the box, by placing a vertical straightedge, or a plumb line, alongside the deck line at the bow and marking where the foot touches the bottom of the box, then moving the straightedge along by small degrees and marking the foot at each point.

The next step is not so plain, we have but a smooth and irregular surface, of complicated curvature, and with no lines or edges that can be projected on either of the planes. The presentment of this surface in the picture, Fig. 13 and Fig. 20, is very pretty, but absolutely useless for purposes of accurate delineation or measurement, and something very different is necessary.

It is manifest that we can handle this surface both accurately and conveniently if we can mark on it a sufficient number of lines and draw them, each in its proper plane. The simplest way to do this is to saw up our model into a number of thin slabs or slices, tracing the largest edge of each slice in its correct position relative to the others. If we have a model made, as is sometimes the case, of a number of thin boards of the same thickness fastened together with screws or with wooden pins—*dowels*—we can take it apart and trace on the proper place the outline of each board—*lift*, as it is called; then we can reunite them and saw the model into other sections by a series of parallel cuts at right angles to the fore and aft line of the vessel. These sections may also be traced, giving projections of other curves of the surface on the ends of the box.

This process of a dissected model in many pieces is slow and cumbersome at best. It was, however, the only one in use by yacht builders in this country for very many years, and it is but a few years since it has disappeared entirely. The usual method was to get out from a dry pine board a sufficient number of *lifts* to make the required depth of the model, the top piece being thick enough to allow for the curve upward of the deck, the *sheer*. These pieces were fitted together and fastened with screws, or more frequently with wooden pins—*dowels* The solid block thus made was fashioned to the required shape with saw, spokeshave, chisels and gouges, being finally finished with sandpaper. The only guide to the correct shaping was the eye of the modeler. While the block was still in the square, vertical lines were drawn across the back, usually *scribed* in with the point of a knife, and after the upper side was shaped to the required sheer similar lines were scribed or drawn across the top. These lines were usually located where the frames of the vessel were to be, no special attention being paid to the number or lengths of the *intervals* or spaces between the lines, except as regards the proper distance for the frames.

After the model was thus completed, it was laid flat on a board or sheet of paper and the outline of the stem, keel, sternpost, counter and upper side were marked in, also the positions of the seams between the different lifts and of the vertical lines on the back. The model was then turned with the upper side down on the paper, being wedged if necessary until the waterlines were parallel with the paper, the back edge being parallel with the lines of the lifts in the first drawing; then the outline of the upper side was drawn in with a pencil held vertically. It frequently happened in the old vessels, with *tumble home* to the topsides, that the line thus drawn was not the outline of the deck, but the line of greatest breadth, at whatever height this might be on the various *stations*. After this the screws or dowels were removed, the lifts separated, and each in turn was laid on the paper, properly adjusted by the line at the back and the different verticals, and its outline drawn in. From the two drawings thus obtained, the side *elevation* and the *ground plan*, the third drawing, the *end elevation*, was easily obtained by methods shortly to be given.

While this was the usual method of *taking off the lines* from a model, it was not the only one. The edges of the lifts were not only easily damaged, but in some places they were reduced to the thinnest *feather-edge* that crumbled in the cutting and finishing and made a very rough and indefinite line when traced. A much handsomer and more durable model could be made by gluing the lifts permanently together at the outset, or even by cutting the entire model from a single block of pine. Such solid models were often made, the lines taken from them in this case being vertical, along the different *sections*, instead of horizontal, along the waterlines or edges of the lifts. This was done in several ways; sometimes a strip of lead was used, perhaps ⅛×¼in., this being pressed to fit the surface of the model at the required point and then transferred to the paper, a very unreliable and unsatisfactory method. Another way was to cut a light *saw kerf* into the model at each station, inserting a piece of cardboard and tracing the outline of the model on it, the cardboard being cut out to form a mould from which the section might be drawn on paper. After this was done at every station, the kerfs were filled with pieces of veneer, glued in, and the model smoothed and polished anew.

[TO BE CONTINUED.]

LAKE YACHT RACING ASSOCIATION.

Thirteenth Annual Meeting.

ROCHESTER, DEC. 19.

THE thirteenth annual meeting of the Lake Yacht Racing Association, of Lake Ontario, held on Dec. 19, at Rochester, N. Y., will long be remembered as the most tiresome and protracted meeting yet held, as well as a notable exception to all preceding meetings, which have uniformly been characterized by harmony and good feeling and unselfish work for the good of the Association. The Lake Y. R. A. since its foundation in 1884 has done in a quiet way, unknown to yachtsmen at a distance, a work of which its members may well be proud. At its birth yachting and yacht racing on Lake Ontario were in a most backward condition. There were a few clubs, most of them weak in numbers; a scattered fleet of yachts, all old boats and of varying sizes and types; no single locality boasted of a good rule, and no two localities had the same rule, the racing being of the most haphazard description. The lake itself is a large body of water, with ports few and far apart; comparatively few wealthy men were interested in yachting, and matters were complicated by the further obstacle of a divided nationality, part of the fleet sailing under the blue or red ensign and part under the Stars and Stripes. The organizers of the new venture established a wise and liberal policy, which has been maintained ever since, adopting modern rules and methods, but at the same time protecting as far as possible existing boats. The result has been that the odd sizes and types have dropped out by degrees as new boats came in to take their places, this change being made without giving serious offense to the owners of the old craft, and as for the new ones, they have been built to established rules and classes. As in the American Canoe Association, the Lake Y R. A has known no one nationality, but has gone on amicably under two flags. We fail to recall a single case in which what might be called international issues have arisen within its membership. Out of the score or more of similar organizations of yacht clubs started within the past fifteen years throughout the country, the Lake Y. R. A. is almost the only one that has survived the second or third season, and the only one that has shown a regular and constant growth.

Not being present at the meeting, we quote the following detailed report from the Rochester *Democrat and Chronicle;* we believe that it is substantially correct.

It was 3:30 o'clock this morning when the delegates to the meeting of the Lake Yacht Racing Association concluded business. They had begun a little after 2 o'clock, first meeting at the Powers Hotel. They finished at the Rochester Y. C., where a banquet had been given them. They had met to accept or reject two clauses principally; all the other matter was of minor importance, and contained no radical change. The greatest of these two clauses was the one which required that the midship section of the yachts built in the future must have a coefficient of 35 per cent. The other was that the vessels should have their load waterline measured with crews aboard. The first one was not adopted, as it was formulated by the delegates who met at Buffalo a month or so ago to formulate rules which would be accepted by a Yacht Racing Union of the Great Lakes, yet to be formed. The second was also amended somewhat.

The delegates gathered at the Powers Hotel, and from there adjourned to the Chamber of Commerce, where they were called to order by Æmilius Jarvis, president of the Lake Yacht Racing Association. J. E. Burroughs, vice-president, and E. H. Ambrose, secretary-treasurer, were also present. The clubs and the delegates representing them were:

Oswego Y. C.—R. A. Downey, com; John T. Mott, J. P. Doyle.

Rochester Y. C.—J. E. Burroughs, T. B. Pritchard, F. W. Bickford.

Royal Canadian Y. C., of Toronto—Geo. H. Gooderham, J. Carl Reed, A. Jarvis.

Royal Hamilton Y. C.—Frank Monck, E. H. Ambrose, J. H. Fernside.

Victoria Y. C., of Hamilton—George Webster, William Burnside, Geo. Allen.

Queen City Y. C., of Toronto—William Burnside, as proxy for Owain Martin and W. J. Foy.

E. C. Berriman, of Chicago, owner of Vencedor; and T. Sebastian Poekel, of Racine, Wis., designer of Vencedor, were present in an advisory capacity.

The new rules and by-laws which will take the place of the present constitution of the Lake Yacht Racing Association were discussed. There was no discussion of any importance until the question of measurement came up, and there the first hitch occurred. This section was presented as follows:

"Yachts shall be rated for classification and time allowance by racing length, which shall be determined by adding to the load waterline length the square root of the sail area and dividing the sum by 2.

"The load waterline length shall be the distance in a straight line between the points furthest forward and furthest aft, where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim in smooth water, with all persons aboard when the measurement is being taken stationed amidships.

"All yachts shall be measured for load waterline length with the same number of persons on board as are allowed for crew in the yacht's class, and whose average weight shall not be less than 150lbs. each, or a dead weight placed on board equivalent thereto."

Here argument arose on the ground that modern vessels are buil so close to the waterline limit of their class when no one is aboard that the addition of the weight of their crews would put them at the bottom of the class above and out of the racing question.

Mr. Monck said that he believed that the Lake Yacht Racing Association should adopt the amended rules with as little change as possible, because this Association had made the initial move, and it would be well for the delegates to waive some points in order that the desired uniformity of rules on the Great Lakes be obtained. The only objection to this clause is that it would affect present boats, but it is the aim of these rules to promote the building of boats, and the present objection is but temporary, as in four years or even less there would be entirely new fleets built under uniform laws.

A couple of compromise resolutions were offered, but were lost on being put to ballot.

Mr. Burnside said that he did not consider that it was just to ask him to favor any such change of rule, and he would not favor it for all the clubs on the lakes. When he built his vessel he had thought the rule under which it was constructed would hold for several years,

Mr. Jarvis said that on the Sound and in England it is now the rule to measure with crews aboard, and that upon this point the Interlake Yacht Racing Association of Lake Erie had strongly insisted.

This resolution was not acted upon at the afternoon session, but was postponed until after the banquet, and it was not until after midnight that it came before the assembled delegates. All through the banquet this rule and the one bearing upon the midship section was the subject of considerable lobbying. The principal opponent to both sections was the Michigan Yachting Association, as represented by Commodore Berriman, who, although not a delegate to the meeting, yet has been appointed delegate to the Yacht Racing Union of the Great Lakes when it takes place. According to him the changes proposed in measuring with crew aboard, and in requiring a 35 per cent. coefficient of the midship section of yachts, will not be accepted by the association he represents. It may be that this dissension will prevent the Michigan association from racing. The midship section rule referred to reads:

"The area of the midship section or largest vertical cross section of any yacht over 22 feet r. l. launched after November 7, 1896, when in racing trim shall not be less than 35 per cent. of the beam (at l. w. l.) multiplied by the extreme draft whenever found, exclusive of centerboard, if it be not a board weighted for ballast."

Mr. Gooderham said, as one of the owners of Canada, that he would not like to see other boats of her model, and would advocate that boats of Zelma type be built in future.

It was 12:15 A. M. before the business session adjourned from the afternoon was resumed. It was then seen that it was impossible to settle the above differences, and Mr. Monck moved that the meeting be adjourned, and that a committee be appointed to confer with the delegates of the Yacht Racing Union of the Great Lakes, and that the election of officers be proceeded with. He said that the meeting would be a memorable one, and would go down in the history of the racing of the Great Lakes.

He considered that it was impossible to come to an agreement at the present time, that it would be a breach of faith to the delegates who met at the Buffalo meeting, where the rules under consideration were drawn up, to act hastily upon the matter.

Mr. Fernside said that it would not do to let the matter go over the meeting.

Mr. Burnside argued in favor of the skimming dish, fin-keel type. Then it was moved that this section be taken up.

On behalf of the owners of Canada, Mr. Gooderham said he would guarantee that Canada would not be put forward as a defender unless the challengers should be given the plan of her midship section as a model after which to build.

One after the other, amendment after amendment was lost. An amendment was finally put which looked as if it would settle matters, when it was discovered that Delegates Monck and Bickford had disappeared, and no search could discover them.

The meeting had failed to come to an agreement upon the proposed changes to the constitution after 3 o'clock this morning.

Then the meeting broke up for a time, while everybody did a little lobbying. Then Mr. Gooderham made a motion that boats of the 50ft. class take Zelma's midship section; the 42ft. class, Zelma's; the 37ft. class, Vivia's; the 32ft. class, Eva's; the 27ft. class, Hiawatha's; the 22ft class, Caruli's; up to which future boats must be built, Canada to be allowed in the 42ft. class, but to be taxed three times the time allowance of her class. This received no second. More lobbying. Messrs. Burnside and Fearnside wanted Canada's midship section adopted.

Then Mr. Gooderham moved that these boats be the representatives; Zelma, Canada, Vivia, Eva, Hiawatha, Caruli, in the respective classes. Mr. Fearnside said this suited him. It was what he wanted. "I have the courage of my convictions," he said. In making his motion Mr. Gooderham added: "And, gentlemen, there's not an American boat in the lot." Mr. Jarvis, who sailed Canada, Mr. Gooderham, one of the owners, and Mr. Ambrose said: "That kills the 42ft. class."

Then the question of measuring vessels with their crews aboard was taken up, and dropped like a hot potato. Then the question of whether a professional shall steer a boat of over 32ft. in length, was decided he could. Mr. Pritchard objected to the disbarment of a professional sailing his own boat, no matter what the length. Nothing official was done about his objection.

It was decided that existing boats be continued in their classes, although with crews aboard they may be forced over their class limit; otherwise boats must be measured with crews aboard.

J. E. Burroughs insisted that the delegates of the Rochester Y. C. be put on record as being against the decision to use the midship section of Canada as a model for boats built for the 42ft. class. The election of officers occurred some time as the eastern sky heralded the approach of the sun, and resulted as follows: Pres., E. H. Ambrose; Vice-Pres., T. B. Pritchard; Sec'y-Treas., Frank Gray; Ex. Com.: Rev. Dr. Whitcomb, Royal Hamilton Y. C.; Com. R. A. Downey, Oswego Y. C., and Com. Owain Martin, Queen City Y. C.

Mr. Pritchard said he thought that the best interests of the L. Y. R. A. required that the secretary-treasurer should be from Toronto or Hamilton, so as to be in closer communication with the president. Mr. Burroughs said that he knew Mr. Pritchard meant what he said. Mr. Gooderham stated that he knew Mr. Pritchard's attitude was correct, and he would resign as vice-president, and would nominate Mr. Pritchard for the office. Mr. Pritchard objected, but he was elected vice-president, and Frank Gray, of the Royal Canadian Y. C., Toronto, was elected secretary-treasurer.

A vote of thanks was tendered the Chamber of Commerce for the use of its rooms.

It was decided to apply for admission to the Yacht Racing Union of the Great Lakes. Mr. Burroughs wanted Mr. Jarvis to act as a delegate to the meeting of the Union. Mr. Jarvis declined on the ground that he could not go to the meeting feeling as he did in regard to the adopted rules of the L. Y. R. A. It was carried that the three original delegates, Messrs. Ambrose, Jarvis and Burroughs, make up the committee.

It will be seen from the above that the battle of the fin-keel has broken out in earnest on Lake Ontario, with what result no one can yet foretell. Anyone acquainted with the *personnel* of the two parties to the controversy would most naturally suppose that the advocates of the fin-keel were the comparatively few wealthy owners who own such craft or are able to build and run them, and that the advocates of the yacht section, so to speak, were the men of more moderate means who desire to race in a yacht adapted to other uses of yachting. As it happens, this is very far from being the case; the proposal to prohibit the fin-keel on Lake Ontario comes from the owners of the only important yacht of the type on the Lake, the new Canada, men who are willing to set their personal interests aside and to bar their own yacht for what they consider the good of yachting. The opposition, on the other hand, is composed mainly of men who have no interest whatever in the larger classes, who do not propose to build in them, and whose objects, when we consider the external bearings of the question, are hard to fathom. The leader of the opposition is a part owner of the 27-footer Hiawatha, a new yacht last season, a skimming dish with a wooden fin, her dimensions being: Over all, 40ft.; l.w.l., 24ft; beam, 10ft; draft of hull, 2ft.; total draft, 7ft.; weight of bulb, 2,700lbs.; sail area, 950sq. ft By a peculiar and unusual rule, this gentleman was enabled to cast three votes, one for himself and two as proxy for absent delegates. With him was associated in the opposition to the proposed amendment the owner of a 22ft. boat designed by Dyer, with a loaded oak fin. The 27-footer would be affected by the proposed restriction in its original form, to include the 27ft.

class; the 22-footer would not, as no limitation to the midship section was proposed in this class. At the same time the owner of Hiawatha was not asked to make the same sacrifice of his yacht which Canada's owners were willing to make of her, and they offered to place the 27ft. class with the 22ft., with no penalty on the bulb-fin, provided the restriction were adopted in the larger classes.

These gentlemen were actively aided in the meeting by two strangers, the owner and designer of Vencedor, members of the Lake Michigan Association, but not of the L. Y. R. A., who made the long journey from Chicago to Rochester expressly to oppose the adoption of the limitation of the midship section, the measurement with crew on board, and the exclusion of professional helmsmen. By the courtesy of the meeting they were allowed to be present, and they were active in their efforts to oppose the will of the majority

Looking first at the domestic side of the dispute, as concerns the Lake Y. R. A. alone, the so-called compromise is a piece of botchwork that is in marked contrast to all previous legislation of the Association, and which cannot possibly stand. It is absurd, inconsistent and without reason. It recognizes one type here and another there at mere hazard, and is utterly useless as a guide in building. Taking the whole result of the meeting as a victory for the fin-keel, it means that such yachts as have been used in the past, yachts of adequate construction and accommodation for the rough service of the lake, must give place to the fin-keel machine that can pick her way from port to port in summer and win the prizes in ordinary weather, but which is lacking in all the essentials of a yacht.

The plea which is made elsewhere for the fin-keel—that all experiments in the direction of extreme speed are desirable as increasing the knowledge of the naval architect—does not hold in so isolated a locality as the Great Lakes; but with yachting yet in its infancy, they can well afford to leave expensive experiments to others, and to limit themselves to such yachts as, while fast, are still capable of other uses than match sailing. The conditions of yachting are more favorable on Ontario to-day than on any other of the lakes; but even there the existing classes are poorly built up, and there is the constant complaint of lack of entries. Given a few second-hand Herreshoff fin-keels on the lake, Drusilla in the 37ft. class and Dilemma in the 27ft., for instance, sweeping the classes for a single season, and every good boat must be shut out of the raci g. The men who are responsible for this condition of affairs do not propose to remedy its evil results by building fin-keels or semi-fin-keels to take the place of the outclassed yachts, their work is merely that of destruction and not construction.

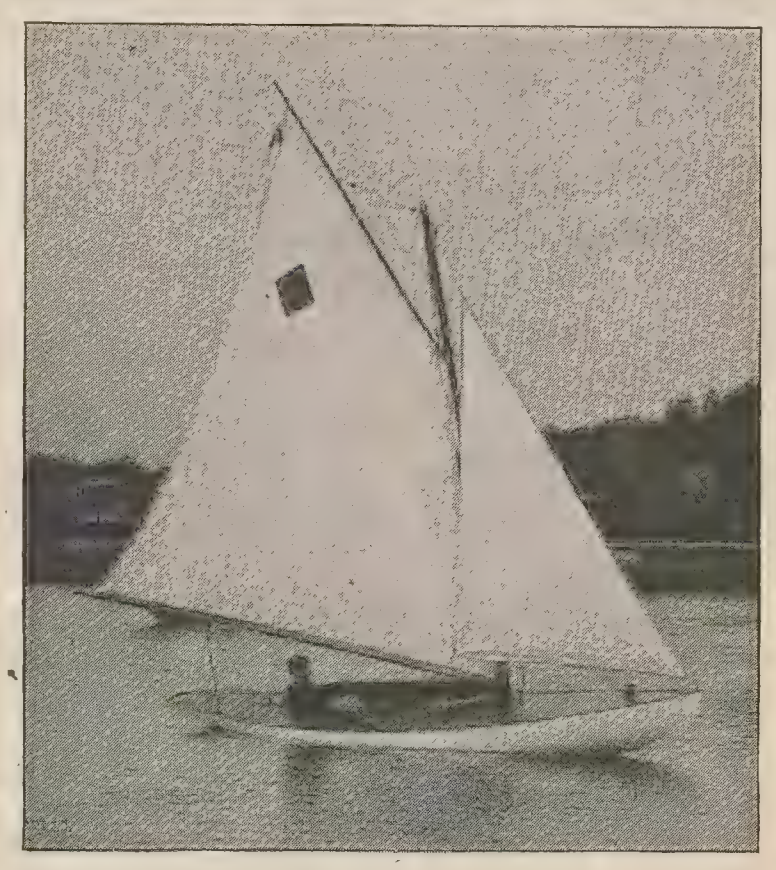
The consequences outside the immediate limits of Ontario are quite as disastrous as at home. The effort to form a permanent union of all the lake clubs under rules that would promote yachting and yacht building had its origin with the members of the Royal Canadian Y. C. Through their exertions the recent conference at Buffalo became an accomplished fact; they made the original draft of the rules there adopted; they placed the subject before all the lake clubs, and they have labored to bring all together on a footing of equality. The one serious point in dispute—the limitation of the midship section—has been accepted by the Interlake Y. C , of Lake Erie, and the only question was whether the Vencedor interests would be powerful enough to induce the Michigan Association to reject it; that it would be refused on Lake Ontario was hardly a possible contingency, considering that its proposers represented almost the only vested interest involved in the barring of the fin-keel. Now their work is destroyed and their intentions discredited, not by strangers, but by their neighbors and associates.

It is quite evident that the Lake Y. R. A. cannot, in its present position, enter a conference of the different lake associations and oppose the introduction of the fin-keel; and the result of a general meeting will either be that the L. Y. R A. will itself be prevented from joining the new Union founded by its leading men, or the rules already adopted for the Union will have to be remodeled to suit it.

Our advice to the L. Y. R. A., first of all, is that it should at the earliest possible moment amend its rules in accordance with the usage in most similar bodies, giving no delegate more than one vote, either personally or as a proxy. In the present case, a majority of two-thirds being necessary to the adoption of an amendment to the racing rules, the vote at one time stood 11 for the restriction of the midship section to 7 against it, one delegate with his two proxies, representing the two smallest and least important clubs on the lake, controlling the entire meeting. It is the business of a delegate to attend such a meeting, especially where questions are to come up in which he or his club are interested. If he cannot attend, he should have the privilege (or his club should) of naming a proxy to represent him; but it is unfair to all the other delegates when one individual can come to a meeting with a proxy in every pocket and a vote for each one. We cannot say in the present case how the absent delegates might have voted if present after taking a personal part in the discussion and hearing the other side; but we can state from our own knowledge that at least one of those whose rights and responsibilities were thus turned over bodily to another was so completely in ignorance of the full facts of the case as to be in no way competent to form a judgment on them.

The result of the meeting is likely to do considerable harm, for a time, both to the new Union and to Lake Ontario itself, but we hope that those who have worked thus far for better things will be in no way discouraged by this regrettable occurrence.

The Yacht Racing League.

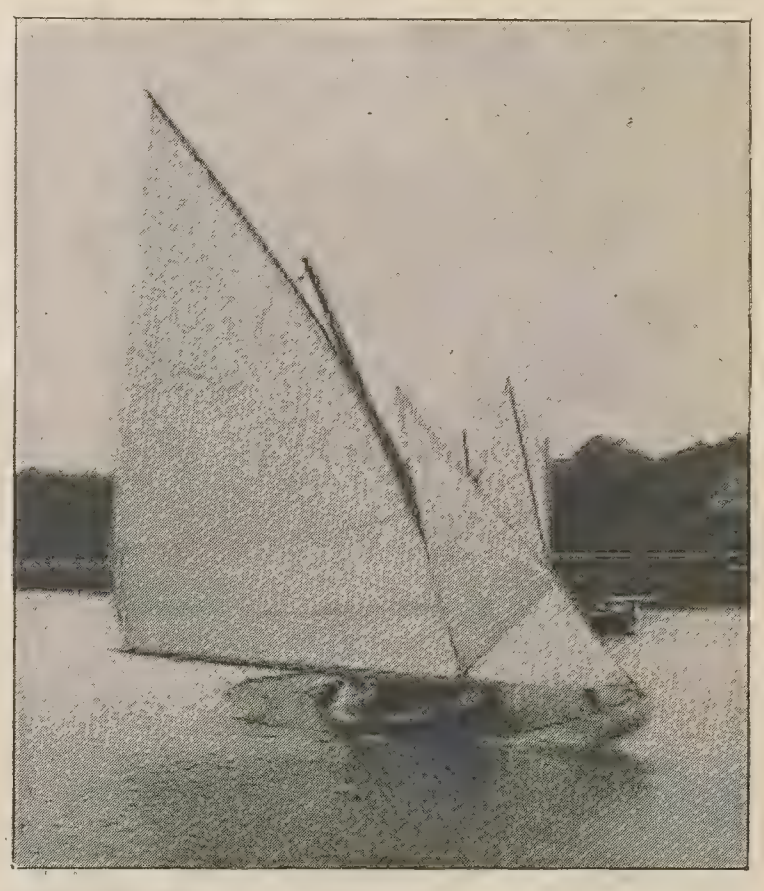


THE special meeting of the New York Y. C., called to consider the proposal for the formation of a yacht racing league of all American clubs, was held on Dec. 22 at the club house, Com. Brown presiding. The scheme for the proposed union was explained in detail by J. F. Lovejoy, with whom it originated The proposal brought out out a good deal of discussion and no small amount of opposition. The original motion, for immediate action, was so strongly opposed that the following compromise was finally offered and passed:

Resolved, That a committee of seven, one of whom shall be the Commodore, be appointed by the chairman for the purpose of considering the advisability of organizing a Yacht Racing League, the object of which league shall be to establish uniform coöperation on measurement, classification and racing rules, the promotion of yacht building, the encouragement and development of the sport, and the preservation of yachting history and racing records, and that said committee report back to the club at a special meeting to be called for the purpose.

The following committee has been since appointed by Com. Brown: Com. E. M. Brown, James D. Smith, S. Nicholson Kane, E. D. Morgan, Rear-Com. L. C. Ledyard, C. Oliver Iselin and Clarence Postley.

The Cohasset 15-Footers.



THE accompanying photos show two of the Cohasset class of "one-design" 15 footers built from the lines of Scarecrow, as published in the FOREST AND STREAM of Jan. 27, 1894. We have previously published a very full account of the

BLINK.

Cohasset 15-footers designed by W. P. Stephens. From photos by N. L. Stebbins.

performances of the class, by W. E. Robinson, of the Boston *Globe*. While the boats were not much liked at the outset, they have shown so many good qualities during the season that they have become very popular. The class has made

HONEY.

good racing about Cohasset. The fins were fitted to lift, as the mooring ground is bare at low water. All of the boats were originally rigged like Blink; the rig of Honey was put on as an experiment. The builder, Mr. McIntyre, turned out an excellent little fleet at a very reasonable cost.

Elections of Officers.

Harlem Y. C.—Com., Daniel Ryan; Vice-Com., John Kipp; Rear-Com., Henry Hanlein; Fleet Capt., Arthur Hochstetter; Treas., Charles Hutchinson; Financial Sec'y, John Traugott; Recording Sec'y, H. L. Fuller; Corresponding Sec'y, F. H. Davis; Measurer, W. D. S. Heyer; Fleet Surgeon, Dr. H. M. Cox; Steward, M. L. Goetze; Board of Directors: James F. Lalor, John Wimmer, B. F. Meyer, E. F. Delevante.

Knickerbocker Y. C.—Com., J. D. Billiard, Jr., slp. Tempus; Vice-Com., John F. Phillips, schr. Southern Cross; Rear Com., Stephen H. Mason, Jr., slp. Moccasin; Treas., Geo. H. Cooper; Sec'y, J. O. Sinkinson; Fleet Surgeon, Dr. E. Ringer; Fleet Chaplain, Rev. William Everett Johnson; Board of Directors: Edwin G. Davis, H Stephenson, E. Eberspacher, C Schlesinger and O. D. Dike.

Harvard Y. C.—Com., A. B. Emmons, '98; Vice-Com., G. H. Scull, '98; Rear-Com., C. C. Stillman, '98: Sec'y-Treas., J. A. Burnham, '99; Election Committee: J. A. Burnham, '99; H. Sampson, '99; E. A. Boardman, '99; Regatta Committee: A. H. Higginson, '98; E. Wadsworth, '98; H. D. Prescott, '98.

Hempstead Y. C.—Com., Charles H. Southard, of Baldwins; Vice-Com., John H. Carl, of Milburn; Rear-Com., Floyd Weeks, Hempstead; Meas., Thomas D. Smith, Bellmore; Sec'y, I. W. Williams, Treas., Frank Place, of Hempstead. Board of Governors: C. H. Southard, Baldwins; Frank Place, Hempstead; J. H. Carl, Milburn; Floyd Weekes, Hempstead; Thomas D. Smith, Bellmore; I. W. Williams, Hempstead; Thomas Martin, Brooklyn; Seaman L. Pettit, William E. Clowes, Bergen R. Carman, Hempstead. Regatta Committee: J. Wheeler Glover, Baldwins; Samuel R. Smith, Freeport; L. W. Williams, Hempstead.

Village Y. C., Boston.—Com., C. O'Connor; Vice-Com., C. Diedrichs; Fleet Capt, W. I. Hartley; Sec'y, T. F. Buckley; Treas., A. J. Pabst; Sergt.-at-Arms, A. Leach.

St. Louis (Mo.) Y. C.—Com., E. A. Shay; Vice-Com., C. F. Mulkey; Rear-Com., F. H. Medart; Sec'y, O. B. Plass; Treas., E. Will Thompson; Fleet Capts., sailing, George D. Woodward; power, John B Retallack; Fleet Surgeon, George W. Kale, M.D.; Official Measurer, James F. Jones.

Tappan Zee Y. C.—Com., O. C. Pickney; Vice-Com., N. Bolet; Sec'y, H. Sturdevant; Treas., Major Hinton.

Montreal Model Y. C.—Capt., H. E. Codd; Mate, J. Fotheringham; Purser, George A. Moore; Committee, J. Keyworth, J. Moore, E. D. McGuire, R. Dease.

Maple Leaf Y. C., Toronto.—Com., J. Lee; Vice-Com., W. Delaney; Capt., C. Burley; Hon. Sec'y, J. McLellan; Hon. Treas., J. Lang; Hon. Meas., W. Ramsey; Ass't Meas., M. Green. Executive Committee: J. Lee, W. Delaney, C. Barley, M. Crosbie, G. Crute, J. Virgin. Sailing Committee: C. Burley, W. Ramsey, M. Green, T. Delaney, E. Wickleson. House Committee: J. Clark, A. Johnson, J. McLellan.

Huntington Y. C.—Com., A. W. Palmer; Vice-Com., J. Woolsey Shepard; Treas., O. W. Ingersoll; Sec'y, Daniel S. Wood; Trustees, for three years, the Rev. Thomas McKee Brown and David A. Storer; Trustees, for one year, George R. Rogers and Charles A. Klots. The amendment to the constitution providing for a vice-commodore was carried, and ex-Com. H. H. Gordon was unanimously elected to the position.

Long Island Y. C.—Com., Joseph N. Goldbacher; Vice-Com., Chas. Hagen; Rear-Com., Theodore Meyer; Rec. Sec'y, Wm. B. Richards; Cor. Sec'y, Charles Williams.

Pavonia Y. C.—Com., D. W. Kahn; Vice-Com., James Johnston; Fleet Capt., G. T. Smith; Meas., A. P. Curtiss; Fleet Surgeon, Dr. L. Bauman; Cor. Sec'y, W. A. Miller; Fin. Sec'y, W. F. Tobin; Treas., B. H. McClain: Trustees: W. J. Kent, F. G. Agens, S. Morris, E. J. Smith and T. J. Roach; House Committee: J. A. Denin, L. Mitteisdorf, J. G. Benta, J. F. Clark and W. Willis; Anchorage Committee: A. F. Roe, A. J. Kreymeyer and J. W. Strober; Delegates to New York Y. R. A.: James Johnston, A. J. Kreymeyer and H. Heidelberger.

Douglaston Y. C.—Com., Hazen L. Hoyt; Vice-Com., Clay M. Greene; Rear-Com., F. R. Parsons; Sec'y, George H. Petit; and Treas., John A. Cartledge.

YACHTING NEWS NOTES.

H. M. S. Virago, the fourth of the 30 knot torpedo boat destroyers building for the Admiralty by Messrs. Laird Brothers, Birkenhead, has had a full power preliminary run, with Admiralty officials on board, prior to her official trials. As it was the first time the vessel had been run at full speed, the results, both as regards evenness and speed, reflect great credit on the builders. The following are the particulars of the six runs on the mile at Skelmorlie:

Steam.	Lbs.	Time on Mile. Min. Sec.	Speed. Knots.
First mile	215	1 59½	30.120
Second mile	215	1 57	30.770
Third mile	215	1 59½	30.120
Fourth mile	216	1 56½	30.890
Fifth mile	218	1 58½	30.380
Sixth mile	218	1 58	30.510

The mean steam was 216lbs. and the mean speed 30 503 knots. Mr. Welsh and Mr. Ball attended on behalf of the constructive branch of the Admiralty, and Mr R. Ratsey Bevis and Mr. J. W. P. Laird of the contractors. The vessel subsequently completed the anchor trials satisfactorily at the Tail of the Bank.

The torpedo boat destroyer Furor, lately launched by Messrs. James and George Thomson, Limited, Clydebank, for the Spanish Government, has completed her trials on the Clyde. The mean speed on a three hours' run was 28.25 knots, or a quarter of a knot in excess of the guarantee. During the trial the Furor had the full load of seventy-five tons on board, which is considerably greater than the load carried by the destroyers of the British and other Governments. His Excellency, Com. Cámara, chief of the Spanish Royal Naval Commission in London, and a staff of assistants were on board representing the Spanish Government.—*Engineering*.

After the mess dinner of Dec. 19 the members of the Seawanhaka C. Y. C. to the number of about forty spent the evening in an informal discussion of the subject of clouds, fog and moisture On Saturday evening, Jan. 9, the topic will be "Ship Hygiene," with a paper by Dr. Frederic E. Sondern. In consequence of the holiday interruption, the "Talk" announced for Dec. 26 was postponed to Jan. 16. Topic, "Winds, their cause, various kinds, density, effects, how to interpret changes in, etc."

The annual meeting of the Rochester Y. C. resulted in the following officers being elected: Com., A. G. Wright; Vice-Com., Dr. J. W. Herriman; Fleet Capt., Edward Schirck; Rec. Sec'y, F. T Christy; Cor. Sec'y, E. B Leary; Treas., George H. Clark; Fleet Surgeon, Dr. Sumner Hayward; Meas., W. H. Pillow, Jr.; Directors—J. S. Todd, Dr. W. J. Herriman, J. W. Robbins, A. T. Hagen; Delegates to Lake Yacht Racing Association—Dr. W. J. Herriman, J E. Burroughs, Dr. C. H. Nicholson.

The following record of races and prizes for the year was read:

May 30—Class A, Cinderella, flag. First class, Iris $15; Nox $10, Magel $8, Amelia $5. Second class, Zanita $10

June 24—First class, Iris $15, Facile $10, Weno $5. Second class, Nydia $12, Nixyi $8, Zanita $4. Third class, Priscilla $10, Chic $7, Zenobia $5, Viola $8.

July 18—First class, Nox $13. Second class, Priscilla $10, Zenobia $7, Quella $5.

July 30—First class, Iris $15. Second class, Zamba $12, Nixyi $8. Third class, Chic $10, Zenobia $7.

Aug. 8—First class, Undecided $13. Second class, Nydia $12, Nixyi $8, Zanita $4. Third class, Priscilla $10, Zenobia $7, Chic $5.

Aug. 27 First class, Facile $13 60, Kelpie $8 60, Iris $3 60. Second class, Nydia $12, Zanita $8, Althea $4. Third class, Zenobia $10.

The total amount of prize money awarded was $358; saved by not filling, $53; extra awards, $53.

The prize flags were presented together with the prize money; the colors for the prizes were as follows: Yellow, first; red, second; blue, third; white, fourth.

Sapphire II., steam yacht, originally Cleopatra, has again been renamed, and is now Penelope. This last change has been made by her new owner, H. E. Converse, of Boston, who recently purchased her from A. L. Barbour, giving the steam yacht Calypso in part payment.

Nourmahal, steam yacht, J J. Astor, is refitting at the Erie Basin and will start this month on a cruise to Buenos Ayres with Mr. and Mrs. Astor and a party of friends. The yacht's bridge has been enlarged and a number of alterations made.

May, steam yacht, Mrs. Sarah Drexel Fell, arrived at Malta on Dec. 11 from Tunis, and sailed next day for Alexandria.

Columbia, steam yacht, J. H. Ladew, arrived at Nassau on Dec. 11 and sailed for San Domingo on Dec. 16.

The nominations for the annual meeting of the Atlantic Y. C., on Feb. 8, are as follows: Com., George J. Gould, steam yacht Atalanta and cutter Vigilant; Vice-Com., Frederick T. Adams, schr. Sachem; Rear-Com, Benjamin M. Whitlock, schr. Hildegarde; Sec'y, David E. Austin; Treas., George H. Church; Meas., George Hill; Trustees, J. Rogers Maxwell, Philip G. Sanford, Alexander P. Ketchum, Newbury D. Lawton, Thomas L. Watson and Henry B. Howell; Membership Committee, Louis F. Jackson, Spencer Swain and Henry W. Banks, Jr.; Regatta Committee, Newbury D. Lawton, David E. Austin and George W. McNulty.

It is now announced that the Prince of Wales and Mr. A. Barclay Walker have reconsidered their determination to omit the Mediterranean races this year, and that both Britannia and Ailsa will fit out soon for the voyage. Mr. Walker has presented the Club Nautique de Nice with 1,000 francs for the international regatta, which will take place on March 12 next. A number of small yachts, including Sampshire, will be sent out from England.

The following nominations have been made for officers of the New York Y. C.: Com., J. Pierpont Morgan, steam yacht Corsair; Vice-Com., Lewis Cass Ledyard, schr. Montauk; Rear-Com., Perry Belmont, steam yacht Satanella; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M D.; Regatta Committee—Theodore C. Zerega, Dr. J. C. Barron and Dr. W. Barton Hopkins. House Committee—Edward E. Chase, J. V. S. Oddie, C. Alfred Grymes, Frank M. Cronise and William L. Stow.

Arcturus, steam yacht, Rutherford Stuyvesant, has been at Fay's yard, Southampton, for alterations, being converted from a three-masted schooner to a two master. She is now fitting out.

The Almy boiler has recently been the subject of a series of exhaustive tests as to its evaporative powers by George H. Barrus, the Boston expert. The result is summed up as follows in the report of Mr. Barrus: "In point of economy the boiler compares favorably with the best types. An evaporation of 11.922lbs. of water per pound of combustible, which was obtained in the test of November 2, is rarely exceeded by any form of hand-fired water tube boiler, whatever its size. One of the noticeable features in the operation of the boiler was the dryness of the steam exhibited on all the tests. Even with conditions of forced blast, when over 7lbs. of water was evaporated per square foot of surface per hour, the moisture was less than 1 per cent. The heat balance given in table No. 2 shows that practically all of the heat units available in the coal were accounted for, either in useful evaporation, or in chimney and other wastes."

Varuna, steam yacht, Eugene Higgins, reached Bermuda on Dec. 16 after an exceptional passage of 48h. 10m. from New York, sailing from there for Madeira.

Mr. N. L. Stebbins, of Boston, has just issued another of his interesting yacht books, the "Yachtsman's Album," with heliotype portraits of 240 yachts of all classes. The book is a complete list of the more notable American yachts, from the 15-footers upward, the portraits being supplemented by the dimensions, list of owners, de-

signers, etc. Through it the yachtsman may post himself thoroughly concerning the many yachts known to him by reputation, but not by sight. The Boston knockabouts are very fully represented.

Canoeing.

Brooklyn C. C.

THE annual meeting of the Brooklyn C. C. was held at the residence of Percy F. Hogan, No. 202 Jefferson street, on Dec. 8 There was a full and enthusiastic attendance. The reports of the officers and committees showed the financial condition to be good and the club property ample for the members and in good repair. The regatta committee reported the holding of five sailing, five paddling, four tandem paddling races and a combined sailing race during the season. F. L. Dunnell won the all-round record trophy cup and gold bar, R. J. Wilkin the second prize and silver bar, and James F Eastmond the third prize and bronze bar. F. L. Dunnell won the Budington sailing trophy twice and now holds it, and R J Wilkin the Rudd paddling trophy. The average number of starters was four in each race. The election of officers resulted in the selection of the following: Com., M. V. Brokaw; Vice-Com., M. M Davis (re-eleted); Purser, F. L. Dunnell; Meas., W. N. Stanley, and member of Board of Trustees, W. McK Miller, in place of R. J. Wilkin; Regatta Committee, R. J. Wilkin, W. McK. Miller and Paul E. Vernon; House Committee, P. F. Hogan, D. A. Nash and J. F. Eastmond. The annual dinner of the club will be held at Rolfe's, in John street, New York, on Jan. 12, 1897.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O, Dec. 13.—The members of the Cincinnati Rifle Association were out in force to-day. Captain Gindele spoiled one excellent chance for making 96 by putting in a 6 instead of a 10; this is but a sample of the ups and downs of riflemen when at the score. Conditions were as usual: 200yds., off-hand, standard target, 7-ring black. Scores:

Calumet Heights Riflemen.

CHICAGO, Ill., Dec. 19.—The rifle shooting members of the Calumet Heights Gun Club shot to day under conditions of weather favorable for good scores: clear atmosphere, with only a slight wind. Under such conditions Dr. J. O. Hobbs made the excellent total of 48 out of a possible 50, making a new record for the 200yds. range of this club. Scores:

200yds., off-hand, standard oval army target, 10 shots:

PATTY.

Zettler Rifle Club.

NEW YORK, Dec. 26.—At a recent meeting of the Zettler Rifle Club the following officers were elected: President, Bernard Walther; Vice-President, H. D. Muller; Recording and Financial Secretary, Gus Schurman; Corresponding Sesretary, Fred C. Ross; Treasurer, Charles G. Zettler; Shooting Master, Bernard Zettler.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 9-10.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

Jan. 11-14.—BUFFALO, N. Y.—Audubon Park first annual midwinter tournament. First three days, targets; last day, live birds.

Jan. 12-14.—ERIE, Pa.—Clover and Pope's midwinter tournament at Massassauga Point. Live birds and targets. Added money and merchandise prizes. For programmes address Seth Clover or A. P. Pope, Erie, Pa.

Jan. 20-21.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club. Sparrows. Royal Robinson, Sec'y.

Jan. 23 —HACKENSACK, N. J.—Shoot for the E. C. cup. C. O. Gardner, Sec'y.

Jan. 25-29.—SAN ANTONIO, Tex.—Second Texas Midwinter tournament. Targets and magautraps. $2,000 added. Under the management of J. M. George, Albert Steves and O. C. Guessaz, at San Pedro Springs grounds. Open to the world.

Feb. 8-20.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live-bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Feb. 10.—HACKENSACK, N. J.—Second contest for the *Recreation* cup, under the auspices of the Bergen County Gun Club. C. O. Gardner, Sec'y.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week) —CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The circuit of the Interstate Association for 1897 will probably be somewhat on these lines: Grand American Handicap in March, followed by target tournaments as below: Baltimore, Md ; Richmond, Va.; Mobile, Ala.; Monroe, La.; New Haven, Conn.; Lewiston, Me.; Montpelier, Vt.; the eighth tournament being given, if possible, at some point in New Hampshire. From the recommendation made to the manager by the Interstate Association's classification and tournament committee, it seems probable that Nashville, Tenn., will be substituted for either Monroe, La., or Mobile, Ala. The Association wanted to give a tournament at some point in New Hampshire last season, but no club came forward with a request for the Association's services. Is there any club in that State that wants it this year? Don't all speak at once. Write to the manager, Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa.

It is the intention of the Interstate Association to make all events shot during the Grand American Handicap tournament high gun events. The Nitro Powder Handicap, 15 live birds per man, will be a feature on the first day, as usual, but it will not be class shooting, as in the past. The number of moneys, high guns too, will be graduated according to the number of entries, on a plan somewhat similar to that adopted for the Grand American Handicap. This tournament is a shoot for shooters, and we are glad to see that the Interstate Association is cutting away from the old system of dividing purses on the 50, 30 and 20 per cent. plan—a plan by which it was possible for a man to "kill them all" and yet come out of the contest worse off than a friend who had dropped one or two birds. The programme for the Grand American Handicap week of 1897 will be well worth studying

Platt Adams, of the New Utrecht Gun Club, and also of the Boiling Springs Gun Club, of Rutherford, N. J., is a hard man to handicap. His double win of the Class A badge and the Hegeman medal at the New Utrecht Gun Club's grounds this season shows that he is about on top in that company. On Christmas Day at the Boiling Springs ground, with a handicap of 2 extra targets to shoot at, he succeeded in making his score one of 30 out of 32, scoring a highest possible. As a matter of fact, take him day in and day out, he is just as near an 85 per cent. man as you'll find anywhere round about. He has improved at least 10 per cent. during the past twelve months, and is a shining example of what pluck and perseverance will do when it comes to trap-shooting.

The Brooklyn *Eagle* of Dec. 26 had the following item in regard to a proposed shoot at Bayport, L. I.: "At the pigeon shoot at the Bayport House yesterday afternoon Bergh officers forbade the shooting of live birds. The society notified Mr Harris some days ago and the officers were on hand to enforce the law. There was quite a discussion as to whether it was more cruel to shoot live pigeons from the trap than quail or other game in the fields. The sportsmen who came to take part in the match had to content themselves with shooting at clay pigeons The live pigeon match will take place on New Year's Day under the auspices of the Sayville Club, as it is understood that this club is exempt from the law."

The annual meeting of the New Utrecht Gun Club, of Brooklyn, N. Y., was held on Wednesday evening, Dec. 23, in the rooms of the Fountain Gun Club, 361 Flatbush avenue, Brooklyn. About twenty members were on hand to take part in the proceedings, the most interesting portion thereof being the discussion as to the club's future trap shooting home. It was decided, after considerable discussion, that a committee of three, appointed by the chair, should select a suitable piece of property and report back to the club. For the present the club's live-bird shoots will be held semi-monthly on the Dexter Park grounds. The officers elected to serve during 1897 were: President, Cornelius Furgueson; Vice-President, Adrian A. Hegeman; Secretary-Treasurer, Dr. George E Pool.

Dr. Carver caused John L. Winston some trouble during the past week, winning four 50 bird races from him with consummate ease. Two were shot on Monday, Dec. 21, the scores, as given in our issue of Dec. 26, being: Carver 46, Winston 44, and Carver 48, Winston 41. Two more were shot on Tuesday, Dec. 22, the scores being largely in favor of Carver: No. 1 was Carver 45, Winston 39; No. 2, Carver 45, Winston 38. The birds on this occasion are said to have been very fast, with some wind to aid them. There must, however, have been something else that troubled Winston, because "147" is a better man than 77 per cent. on any class of birds. The fact that he accounted for 77 out of the 100 is probably some consolation to the gentleman who has such faith in the mystic figure 7.

"Saving his Scalp" is the title given to the picture that adorns the calendar for 1897 issued by the Union Metallic Cartridge Co., of Bridgeport, Conn. The scene depicted by the artist is a stirring one, representing a ride for life and scalp on the part of a scout, with Indians in pursuit. One of the redskins, who has just topped the hill, is drawing a bead on the fleeing horseman, who is coming toward us at a great rate. It is unfair to leave us in doubt as to whether that Indian's bullet did its work or whether the scalp was saved. As a hint to the U. M. C. Co., let us suggest that this picture be marked "To be continued in our next," the sequel being given next year. We want to know what happened.

The sporting reporters attached to the Buffalo, N. Y., dailies are striking examples of the truth (in their case, at least) of "Wick's" (the late W. F. Limber, of Cincinnati) statement, that "the pen is mightier than the gun." (Ed Taylor's always quoting this at us, so we know that Wick said it.) Six reporters are said to have entered in a 10-bird race at Audubon Park. Mason, of the *Courier*, was *facile princeps* with 6 out of 10. Far behind him came Brooks, who is given as "unattached," with 2 out of 10. The other four were bunched at the finish with a row of goose eggs, Hasbrouck's nose just showing in front of the others by virtue of a "dead out of bounds" on his 6th bird.

Jim Elliott is getting acclimated to the air of Long Island and Dexter Park prior to his match with Fulford, Dec. 31. Jim's present address, one that will find him as readily as "Care of W. R. A. Co., 312 Broadway, N. Y.," is Dexter Park, Jamaica avenue, Brooklyn, N. Y. By 1 p. m., Thursday, Dec. 31, the hour at which the match begins, he will not only have learned the grounds thoroughly, but will also have something like a speaking acquaintance with every bird that will be trapped. There is every likelihood that he will abuse that friendship shamefully.

Charlie Grimm now wears the "cast iron championship medal," and we know no one who can wear that medal with more honor or with more becoming humility. He has won it fairly and in a great fight, the scores at the end of the 100th round standing: Grimm 98, Carver 96. Our Chicago correspondent can speak with authority as to the quality af the birds, but it must be remembered that 98 and 96 on any class of birds is true championship form. Carver, though defeated, is by no means disgraced.

Fred G Moore, of this city, is shooting in something like his old form. On Christmas Day, at the grounds of the Country Club, of Westchester, N. Y., he made some good runs Besides winning a cup with 13 straight, he divided 8 out of the 10 miss-and-outs shot during the day, scoring at one time 33 straight in those events, and dividing in consequence 5 consecutive miss and outs.

A. W. du Bray writes us from Dallas, Tex., that Parker guns won first place in the live-bird events each day of the North Texas Gun Club League's tournament. We understand also (but not from Du Bray) that Parker Bros.' representative carried off the honors in the badger baiting contests at Waxahachie, Tex , on the same dates.

The New Year's attraction at Elkwood Park, N. J., will be the Shrewsbury Handicap, 10 live birds, $10 entrance and $10 added by the management, 6 entries to fill. If 10 entries, three high guns; less than 10 entries, two high guns. Sweepstake shooting will also be run to suit shooters.

We learn from Secretary Reeser, of the Oil City, Pa., Gun Club, that Elmer E. Shaner, manager of the Interstate Association, will manage the State shoot for the Oil City Gun Club, June 22-25.

We extract the following paragraph from a personal letter written to us by Mr. J. A. H. Dressel, secretary-treasurer of the Sportsmen's Association: "It will undoubtedly interest you to know that on or before Jan. 1 next the Association will take possession of its newly equipped and roomy headquarters in the new Williams Building, 377-379 Broadway, where it will be pleased to receive its members and friends; that nearly every State in the Union is now represented in the membership roll, which is being increased by from six to ten applications daily; and that the third annual exposition, to be held at Madison Square Garden in March next, promises to be the most successful yet held by the Association."

Gus Nowak, a prominent member of the Zettler Rifle Club, of New York city, and also a member of the Emerald Gun Club, has added to his trophy exhibit by taking the first prize for the season of 1896 in the monthly competitions of the Hell Gate Gun Club, of which club he is also a member. The secretary, Eugene Doeinck, gave him a good race for first honors, but failed to score more than 6 birds in the last shoot, three others falling dead out of bounds.

Christmas Day in this vicinity was just the kind of a Christmas Day that is more generally met with in novels than in real life. There was a brisk feeling about the air, without any wind to speak of, thus making it ideal weather for a winter trap-shooting entertainment. The many shoots held by local clubs in the vicinity of New York were all well attended. Nothing could be complained of except the glare of the bright sun on the snow that made it difficult to keep one's eyes from watering when the word "Pull" was given.

We have not seen the name of W. G Clark attached to a score for a long time. Mr. Clark is located at Elwood City, Pa., and is attending to his hotel business. We have an idea, however, that the score attributed to one named Boker in the shoot on the Herron Hill grounds, Dec. 16, is one with which Clark had something to do. A match between W. S. King, of Pittsburg, Pa., and Clark was to have been shot Dec. 23. Owing to sickness in his family Clark was unable to be present, so the match was postponed,

The Winchester Repeating Arms Company, of New Haven, Conn , has gotten out one of its usual attractive calendars. A. B. Frost has been requisitioned for the hunting scenes depicted thereon. In "A Chance Shot" he shows us one of those things that generally occur "when you haven't got a gun." This time, however, is one of the exceptions, and the curiosity of the antelope is likely to be fatal. The drawing of the horse and the attitude of the hunter are capital.

The classification and tournament committee of the Interstate Association will not visit Dwyer's track at Elizabeth or Elkwood Park until some day next week. The original intention was to inspect both places to-day (Dec. 29); the committee, however, could not get together owing to various business arrangements.

Harvey McMurchy is in town. It's not necessary to mention that Harvey represents the Hunter Arms Company, and that therefore he is to be found just now in W. Fred Quimby's quarters at 300 Broadway. Harvey is only here on a brief visit, but hopes to be able to stop long enough to witness the Elliott-Fulford match on Thursday. He will be on view at San Antonio, Tex., Jan. 25-29.

Old Hoss has achieved the distinction of being the first entry regularly made for the Grand American Handicap. On Monday morning, Dec. 28, the sum of $10 was paid to J. L. Lequin, secretary of the Interstate Association, as forfeit money for the above entry, the name of C. M. Hostetter, of Pittsburg, Pa., being placed at the head of a column that will soon rapidly fill with other names.

Jim Elliott and E. D. Fulford meet at Dexter Park, L. I., on Thursday of this week, Dec. 31, to shoot for the Kansas City *Star*'s cup at 100 birds per man. Fulford will use the Greener which he handled so well at Trenton on Dec. 3, while Elliott will show the boys that he is not very seriously handicapped by shooting a Winchester repeating shotgun.

The Kewanee, Ill., Gun Club holds a two days' shoot on its grounds Dec. 28-30. The programme states: "Nothing barred but black powder." On the first day the main event will be a 4-men team race, a 2 men team race taking place on the second day.

Charlie Zwirlein, of Yardville, N. J., writes that he will hold a live-bird shoot Jan. 6 at his grounds. The main event will be 20 birds, $15, birds included at 25 cents each, three moneys.

As will be noted, the dates for the Texas Midwinter shoot have been changed to Jan. 25-29. The dates for the Hot Springs, Ark., tournament have also been changed to Feb. 8-20.

The Texas State Sportsmen's Association will be held at San Antonio, Texas, April 21-23. This meeting will be the Association's "twenty-first annual." Mr. O. C. Guessaz is secretary of the Association.

In consequence of the change of dates at San Antonio, the Limited Gun Club, of Indianapolis, Ind., has changed its dates to Jan. 20-21.

DEC. 29. EDWARD BANKS.

Trap Around Pittsburg.

HERRON HILL GUN CLUB.

PITTSBURG, Pa., Dec. 23.—Though somewhat late in the day, the following scores made by members of the Herron Hill Gun Club, of this city, on December 16 will be of interest. No. 1 was a 25-bird race, handicap rise, $20 entrance; No. 2 was at 10 birds, $10. The Pittsburg *Leader* of Dec. 17, in speaking of the contest in No. 1 event, says:

"The Herron Hill Gun Club shooters enjoyed some magnificent sport at the shoot pulled off yesterday at their grounds on Davis Island. The shoot in question was the second in a series of five at 25 live birds. Four hundred of the best birds ever trapped in this vicinity were used in yesterday's shoot and every man in the contest shot to win. In addition to having the best of birds yesterday the clear, cold weather made an ideal day for trap shooting. Will King and McPherson took first money with 24 birds killed. T. D. Flowers was referee of the match. C. A. May looked like a winner from the start. He brought down 17 birds in succession, the best run of the day. After the tenth round there were five new men with a clean score. They were May, McPherson, Alex. King, Will King and Al Hofmeister Alex. King and Hofmeister missed their thirteenth birds and McPherson his fourteenth. This left Will King and May in the lead. King missed his sixteenth bird and May had the lead all to himself. King's bird fell dead out of bounds, and, by the way, this was the only bird he missed all day. May, by missing his eighteenth bird, which also fell dead out of bounds, dropped back in line with the King brothers, Messner and McPherson for the lead, with one miss apiece; Hofmeister having missed three birds. It was nip and tuck now to the finish between the five shooters. Messner was the first to drop behind, missing his nineteenth bird Alex. King missed his twenty-first, and the race for first place lay between May, McPherson and Will King. They shot carefully and ran neck and neck to the finish. May missed his last bird, and Will King and McPherson ran out their string without a further miss. They divided first money, amounting to $77. May and Messner divided second money, $57.75. Third money, $38.50, was divided among Jacque, Alex. King and Bonn. Fourth money, $19.25, was taken by Farmer, Hofmeister and Boker."

Limited Gun Club.

INDIANAPOLIS, Ind., Dec. 21.—The Laflin & Rand Powder Co. offered us a trophy, but by mistake sent two of them. We put them up for competition at 50 targets, with drum of E. C. powder for third prize. The scores were:

Tutewiler 47, Beck 46, Wildhack 46, Britton 45, Morris 52, Robinson 42, Cooper 40, Deschler 40, Buck 33, Socwell 23. Wildhack defeated Beck in shooting off tie on 46 for second place.

Beck and Robinson shot two races at 50 targets, each winning one as follows: Robinson 46, Beck 42; Robinson 42, Beck 47

Dec. 18 we shot a few pigeons. All were individual matches for the price of birds: Parry 16, Marott 14 out of 20; Beck 14, Wood 12 out of 15; Holliday 9, Kershner 7 out of 10; Hearsey 10, Robinson 9 out of 10; Deschler 9, Morris 3 out of 10; Cooper 7, Lilly 7 out of 10.

Dec. 31 Beck and Wood will shoot a match at 50 pigeons for $50 a side. Other matches have been made, enough to use 400 birds.

The Buckeye Gun Club, of Dayton, O., will pay us a social visit on New Year's Day. The main event will be be a team race, 10 or more men on each side. ROYAL ROBINSON, Sec'y.

A New Year's Idyl.

ROLLA HEIKES'S DREAM.

IT all happened last September—on the second day of the Pennsylvania State Sportsmen's Association's tournament at Harrisburg. The conversation between whiles, that is, while we were waiting to be called to the score, somehow or another turned on millionaires. There was nothing personal about the conversation, not a single millionaire being a member of the little crowd under the tent fly. Rolla wasn't saying a word, but the cigar which he was smoking went out, always a sure sign that he is doing something heavy in the way of thinking. A few minutes later he roused himself, suggested that we should go and get a cup of buttermilk or something of a similar nature, and sauntered off to the restaurant.

On the way there, without a word of warning, he said: "Yes, I'd just like to have a million or so. I'd give the boys a shoot that was a shoot; just give them one real tournament; something to think about and something to talk about. Just imagine what a gathering I'd get together! Purses ranging anywhere from $5,000 for first money down to $50 or $100 for each man in fourth place in any event! No entrance fees and nothing taken out of the purses for targets! Would the boys come to it?"

Just then came the voice of Elmer Shaner: "No. 1 squad, get ready. Heikes 1, Bartlett 2, Edwards 3, Howard 4, Von Lengerke 5, and Capt. Money on the trolley! Let 'er go, boys!" That broke us up, and Rolla's plan for a big tournament passed out of mind.

That same evening, somewhere in the neighborhood of bedtime, I got my key and went up to my room. Hearing voices next door, and knowing that in that room was the eyrie of the Bald Eagle of the Ohio Valley, I tapped, received the proper response and entered. Rolla was lying on his bed listening to Dick Swiveller's disquisition on the merits of Gold Dust. Taking the only vacant chair, I sat down and took upon myself the strain of answering "Yes" and "No" at the proper intervals. Before I'd taken half a dozen puffs at my cigar Rolla was asleep and dead to the world, but Dick still kept on.

Presently Rolla got restless and began to talk in his sleep. "Not a cent for entrance fees," we heard him say. Then he kicked out one leg and clenched his right hand, exclaiming, "Let 'em all in? Why of course." He was quiet for a few moments, and Dick utilized those few moments to proceed with his lecture. Then came another, and this time a final interruption. Raising himself into a sitting posture, Rolla said: "Look at them coming! More than half of them will have to walk home! Ha, ha!" and with his laugh he woke up and rubbed his eyes, while Dick and I smiled.

His first words were: "What woke me up? It's a shame, boys, but I was just enjoying the pleasure of giving a perfect tournament." Of course we wanted to know all about it, so he told us his dream in something like the following words:

HIS IDEAL TOURNAMENT.

"You remember our talk this morning about millionaires, and my idea of what sort of a shoot I'd give if I was one of those things? Well, I've just been dreaming that I was worth a million or so, and felt very pleasant over it. Of course, I was bound to have my ideal tournament and give the boys a good time. Ordinarily there's a lot of bother connected with the getting up of a tournament, but when it comes to a dream tournament with a million or so back of it, everything's O. K.

"First thing I did, as far as I can remember, was to get Elmer Shaner, Paul North, Jack Parker and Paul Litzke and set them to work locating grounds for the shoot. Elmer Shaner's hair stood on end when I told him what I proposed to do: $100,000 added, no entrance fees, targets thrown for nothing, everybody's fare paid to and from the shoot from any point in the United States, provided he came and shot through the entire programme and made over 80 per cent.; no hotel expenses. In fact, everything free. Elmer said: 'They'll all come, but a whole lot of them will have to walk home.'

"All Jack Parker said was: 'Let 'em come and we won't do a thing to 'em!'

"Paul North nearly fell off a cane-bottomed chair when I told him that he was to prepare to put in fifty magautraps. (I didn't tell him that I had already given Fred Quimby an order for fifty sets of empire traps).

"Paul Litzke was to look after the scorers. When he saw the long line of traps in prospect, about three miles of them in a straight line, he said he'd have to have a dozen Arkansas mules to ride, or he wouldn't look at the job. I told him he'd have to ride a bicycle or hoof it, so he quit, saying: 'FOREST AND STREAM is good enough for me. Bicycles be jiggered!'

"Then we set to work preparing for the tournament. There was a canopy of the Stars and Stripes over each score, with easy chairs behind each man for him to sit down in case there was a balk at the traps. A little colored chap was posted at each chair with a fly-scarer to keep the flies off any shooter who wasn't breaking straight. In rear of each score was a spacious tent of gayly colored material; and in each tent was any amount of easy chairs for the waiting squads, while cool beverages were served by a colored attendant from a bowl of cracked ice and things that adorned the center of a table in that tent. Cigars and cigarettes could be had for the asking—no limit.

"The music was a great feature. Sousa had charge of everything. The Marine band was there as well as five other magnificent orchestras. In fact there was a band every half mile down the line. Every piece of music played was composed specially for the occasion. What were they? Well, as I remember the names of some of them something like this: 'Parmelee's Patter Song,' 'Fred Gilbert's Lament,' 'The Dago Chief Has Dropped a Target,' 'Charge of the Nitro Brigade,' 'Come Where the Boodle Awaits You,' 'Who Missed that Straightaway,' and so on.

"Halfway between each bandstand was a fountain of perfumed water—*eau de Cologne*, frangipani, wood violet, attar of roses, etc. Um! but they smelled delicious.

"How about the eating arrangements? They were all right, I can tell you. Every 100yds. was a tent with a full-blown Delmonico restaurant. It was simply a case of 'walk in and order what you want.' That was the sign over the door. As you came out you were confronted with a sign of 'Have you had enough?' We took that down after a bit, as some of the boys—Seth Clover among the number—wouldn't leave the tents because, as they said, they never knew when they'd had enough.

"Then you ought to have seen the arrangements for transferring the shooters from one end of the line to the other. Two tracks of rails were laid down behind the tents, and trains drawn by noiseless motors ran up and down on about one minute headway. There was nothing to pay, and you got on and off at any point of the journey you wanted to.

"The cashier's department was no trouble at all. There were no entries to take; only money to pay out to the winners after the shoot was all over or when a fellow went broke at poker over night. We took I. O. U's from anybody who could produce proof that he wanted a few dollars to help him along 'until the shoot was over.'

"I suppose you think that we'd have some trouble preventing the boys re-entering several times for the same event. We fixed that all right. Agents met every train about fifty miles from the scene of the shoot and made up squads from the men on that train, giving each man a diamond badge with a number on it and a ticket showing where he commenced to shoot; that is, what set of traps he was to shoot on first. He commenced at that set of traps and went down the line from right to left until he reached the last set, when he went back to the head set (No. 1) and shot down the line until he'd got back to the set he started on. Then he was through. Every event was at 25 targets, and at the end of the shoot there was to be a grand drawing: 100 numbers were to be put into a wheel, and the first number out was to be the number of the event in which scores for the largest prizes were to count, and so on. No one could tell until the drawing took place what prize he was in for.

"Took a long time to shot? Of course it did. The programme called for 100 events of 25 targets each. Each man had to shoot 250 targets a day, so that the shoot was to last just ten days, with an extra day for distributing prizes.

"Of course it was impossible to get a place where we could hold the shoot close to a city of any size. But I didn't care. We located away out on some prairie; ran a track from the railroad to the grounds. Put in a few miles of sidetracks, and held the Pullman cars for the boys to roost in while at the shoot. Built a few small hotels for those who were unable to sleep in the upper berths, and had one or two houses specially built, sort of bomb-proof, away off from the others, where we located all known and proved snorers of any ability. Then we had sidetracks for freight cars. There were solid trains of freight cars packed with cases of loaded shells of all kinds and also many car loads of bluerocks and empires.

"It took an army of railroad employees to handle the freight that came in daily, such as Chicago beef, mutton, etc., not to speak of the car loads of ice and other things that are used with that article. On the first day we ran out of mint, and there was at once a gentleman-like remonstrance from our friends from the South. It didn't occur again, but I had to send off a special train to bring in a fresh supply.

"Oh! boys, I tell you it was great, and I was just enjoying myself when you woke me up. Get out of here. I want to go to sleep again and find out who won the money. Good night."

Such was Rolla's dream. EDWARD BANKS.

A dispatch to the New York *Sun* from Long Branch, N. J., dated Dec. 22, states that the Ivins Woolley match, scheduled for that date, did not come off, owing to Woolley refusing to shoot unless Ivins put up twice the amount of stake money already agreed upon. The match was arranged for 100 birds per man.

North Texas Gun Club League.

SAN ANTONIO, Tex., Dec. 16.—At Waxahachie, Tex., on Dec. 9-10 was held the fourth tournament of the North Texas Gun Club League, under the auspices of the Waxahachie Gun Club. The weather on both days was simply charming, in fact, rather too warm on the 10th than otherwise. The grounds on which the shooting was done are exceedingly good, though rather difficult of access, owing to the long intervals at which the horse cars run, and, moreover, the distance one has to walk after leaving the cars. But when once on the spot one feels fully repaid for all small inconveniences, for really a more jovial, pleasant and hospitable set of men than those who compose the home club would be exceedingly hard to find. There is one man, however, whom I must particularly mention, and that is the worthy president of the League, K. M. Moore, of Farmersville. Be it North, South, East or West, we all know him, and when he extends his hand and greets you a glow of warmth wraps itself around one. In paying tribute to Mr. Moore I will mention that he made the highest average during both days at the targets.

The primary object of the League is to bring the shooting men of northern Texas together and to encourage trap shooting generally; therefore many of the matches are purely for a very small entrance, where one competes for merchandise prizes donated by the merchants and citizens of the town in which the tournament is given. Each day a substantial dinner was served gratis on the grounds. The utmost good feeling prevailed, while the evenings were spent by the sportsmen in whatever game or pastime seemed to meet with most general approval.

Badger baiting is quite a sport at Waxahachie, and really one must have pulled—lustily at that—on one end of the string to feebly take in the sport in all its beauty, and under all the excitement and interest it brings about.

Waxahachie is not as big as New York—not quite as broad as Chicago, but nevertheless it will do, and a more pleasant set of sportsmen it would be hard to find anywhere.

W Pickett.	..	..	..	..	8	17	10	15
N Hughes.	..	..	..	..	..	19	10	17

A consolation race, 10 targets, 25 cents entrance, merchandise prizes, resulted as follows: Blocker and Thomson 9, Boone, Hughes, Fowler, George and Meredith 6, Lomax and W. V. Pickett 5, Strain and Edwards 4, Dodd 3.

An event at 10 live birds, $7.50 entrance, four moneys, was also shot, with the following result: Du Bray and Maledon 9, Scherer and Blocker 8, Worden, Wilcox, Faurote, Hughes and Moore 7, Thomson and Haggard 6, Teutsch, Lomax and Russell 5, Norman and Matthews 4, Lautznester, Allen, Becham, Boone and W. V. Pickett 3, Strain 2.

The five-men team race for the E. C. Powder Company's cup resulted in a win for the Waxahachie team, which scored 89 out of its 100. This total was tied by the Honey Grove team, but as it was a made up team its score did not count for the cup. The scores were:

Waxahachie No. 1 team: Teutsch 20, Maledon 19, Sims 18, W. V. Pickett 17, H. E. Pickett 15—89.

Greenville team: Norman 19, Lautznester 18, Becham 17, Williams 15, George 14—83.

Dallas Clippers team: Faurote 19, Russell 17, Worden 16, Allen 16, Haggard 15—83.

Waxahachie No. 2 team: Meredith 18, Thomson 17, Boone 16, Strain 15, Howell 13—79.

Dallas team: Hughes 19, Du Bray 19, Dodd 13, Stewart 13, Spicer 12—76.

Honey Grove team: Moore (Farmersline) 20, Wilcox (Golathwate) 19, Matthews (McKinney) 18, Scherer (Farmersline) 18, Blocker (Farmersline) 14—89. GAUCHO.

Country Club of Westchester.

NEW YORK, Dec. 25.—The shooting grounds at the Country Club of Westchester were well patronized to-day. The programme for the day was a lengthy one, and those present had plenty of shooting. The weather was charming for the season of the year, although there was plenty of snow on the ground. The air was brisk and keen, with a cloudless sky overhead.

Three cup shoots at unlimited number of birds (handicaps of misses as no birds and misses as kills being awarded to the weaker shooters) were shot off; in addition to those three shoots, ten miss-and outs, $5 entrance, were also shot.

Cup shoot No. 1 was at 5 birds, $5, those handicapped at 27yds. and forward receiving one miss as a kill. This cup was won by P. H. Adee with a score of 5 kills. The scores were:

P. H. Adee (27) 5, E. C. La Montagne (26) 4, W. G. Brokaw (29) 3, W. H. Butler (28) 3, B. F. Kittridge (28) 2, George Work (31) 2, W. S. Edey (28) 2, J. Seaver Page (28) 1, F. G. Moore (29) 1, H. B. Gilbert (29) 0.

In the following two cup shoots no account is taken of previous misses made by the allowance men. No. 2 was shot under the following conditions: Miss-and-out, $5 entrance, those handicapped below 28yds. to receive an allowance of one miss as a kill; first round, all to shoot at 25yds., and then all to go back 1yd. on each round until the 30yd. mark is reached; winner to receive a cup and 60 per cent. of the sweep, and the second 25 per cent.

No. 3 was shot under the following conditions: Miss-and-out, $5 entrance; 29yds and back, miss-and-out; 28yds, one miss as no bird; 27yds. and forward, two misses as no birds. Cup and 60 per cent. to the winner, and 25 per cent. to second.

The scores in these two events were as below:

	Cup No. 2.		Cup No. 3.	
J Seaver Page (28)	20	— 1	.....	
F G Moore (29)	2221222222222	—13	20	— 1
H Gilbert (29)	2220	— 3	22221222221222220	—16
W G Brokaw (29)	2221220	— 6	22222212222222220	—17
B F Kittridge (28)	2220	— 3	220	— 2
P H Adee (27)	320	— 2	.....	
George Work (31)	220	— 2	20	— 1
W S Edey (28)	2220	— 3	22212222222220	—12
E C La Montagne (26)	2212222222220	—12	2222221 2210	—10
W H Butler (28)	20	— 1	22221222212222222	—18
T W Thorne (26)	2222222220	— 9	22212222222222220	—16
N D Thorne (27)	.....		22222210	— 7

The results in the 10 miss-and-outs, $5 entrance, were as below, the scores of the winners alone being given:

First, Moore and Kittridge, 3; second, Moore and Kittridge, 4; third, Page and Gilbert, 6; fourth, Moore and Brokaw, 4; fifth, Moore, Work and Butler, 7; sixth, Moore and Brokaw, 9; seventh, Moore and Page, 6; eighth, Moore and Brokaw, 8; ninth, Gilbert and Butler, 7; tenth, Moore and Butler.

Philadelphia Trap-Shooters.

SILVER LAKE GUN CLUB.

PHILADELPHIA, Pa., Dec. 19.—The Silver Lake Gun Club held its regular semi-monthly club shoot at its grounds, Southwark, Pa., nineteen members taking part in the main event. Murphy, with a handicap allowance of 3 misses as breaks, scored a highest possible, the same counting as 3 points to his record. Gregory, who had 7 misses as breaks, broke 20, and of course was also credited with a highest possible, and had 3 points added to his score for the year's prizes. The detailed score given below shows the records made to-day by those who shot in the club event. Everything was shot at unknown angles. In addition to the club shoot three sweeps at 5 targets per man, ties miss and out, 25 cents entrance, were shot off for turkeys, one turkey to each event. In No. 1 Woodsteger, Day and Murphy were the only ones out of fourteen entries to score straight. On the shoot-off Woodsteger won by breaking 6 more targets, Day breaking 5 and Murphy 2 in the tie. No. 2 turkey was won by Mink, who outshot Gregory and Apgar in the third round of the ties. Turkey No. 3 was won by Murphy without a shoot-off, no one else breaking 5 targets. There were eleven entries in each of the last two events. Scores in the club shoot were:

		Hcp.	Tl.	Points

FLORISTS VS. U. OF P. G. C.

Dec. 19.—The Gun Club of the University of Pennsylvania and the Florists Gun Club, of Philadelphia, have arranged a series of three team races at targets. To-day's match was the first of the series, and was shot on the grounds of the University Gun Club, at Fernwood, Pa. The second match will be shot on the grounds of the Florists Gun Club, at Wissinoming, early in January.

The Florists had an easy victory to-day, winning by 28 breaks with the score of 142 to 114. Mr. P. M. Peltz was referee; J. K. Starr scorer. The conditions were: 3 traps, rapid-firing system, known traps, 25 targets per man, 8 men to a team. Scores were:

MURPHY VERSUS WILLIAMS.

Dec. 21.—Peter Murphy and Harry Williams, both of Philadelphia, shot a race to-day on the Stockton, N. J. Gun Club's grounds, the conditions being 50 live birds per man, use of one barrel only, gun below the elbow until the bird is on the wing; Murphy at 25yds., Williams at 21yds. Murphy won easily, his opponent retiring at the end of the 40th round. How well Murphy shot is best shown by his score of 42 out of his first 44 shot at. William Moore was referee; J. K. Starr, official scorer. Scores, showing the flight of each bird, were as follows:

J. K. S.

Joplin Gun Club.

JOPLIN, Mo., Dec. 24.—We tried our hands at live birds to-day, and inclose you scores. We were disappointed in not getting as many birds as bought, and the 25-bird race, $25 entrance, that we were to have had was not shot. We will, however, make another effort soon. After the live-bird shooting we shot four 20-target events, the scores of which I inclose. The scores made by McIlhaney and Cox at targets were very poor for them, and were no doubt caused by their only having double guns to use. Both of the gentlemen use Winchesters at targets.

Our shooters are ready for the San Antonio shoot next month, and our club will furnish a squad of producers who will ship 10,000 shells next week. The fact that the magautrap is to be used will keep a good many of our shooters from attending on account of not having had an opportunity to practice with it. Scores to-day were as below:

	No. 1.	No. 2.	No. 3.
McIlhany (32)	12222—5	11222—5	1022012222—8
Best (32)	21210—4	12•22—4	0121221111—9
Calhoun (32)	12222—5	11022—4	2122021112—8
Morgan (30)	21222—5	00011—2	0120110211—7
Sergeant (30)	21222—5	22202—4	2222222220 • —9
Kinmonth (31)	21222—5	22022—4	2022022022—7
Sumner (28)	.....	22022—4	0012200220—5
Horn (30)	.....	.....	02J1122111—8
Huffman (32)	.....	.....	0211221201—8
Cox (28)	.....	.....	1•12010001—5
Webster (23)	.....	.....	21•1021010—6

The scores in the four target sweeps, 20 targets per man in each event, unknown angles, were as follows:

Events:	1	2	3	4	Events:	1	2	3	4
Huffman	16	..	..	..	Webster	14	16	13	16

W. G. S.

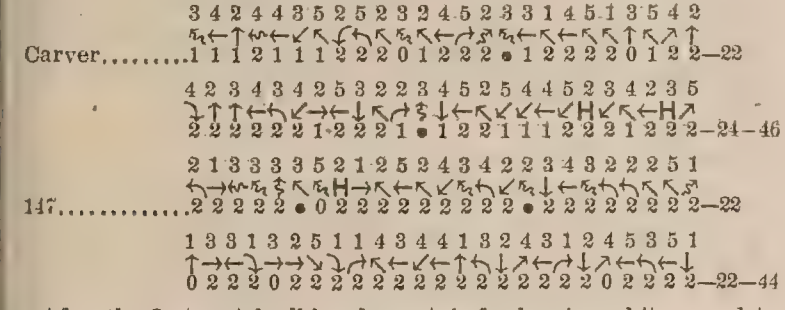
The Texas Midwinter.

SAN ANTONIO, Tex., Dec. 22.—*Editor Forest and Stream:* The dates of the Midwinter are again changed to read, "25-29 or January, 1897." The Land Seekers' excursion trains will leave every point in Minnesota, Iowa, Kansas, Nebraska, Missouri and Wisconsin. All points bounded on the West by Chicago, Springfield, St. Louis and Cairo; on the South by Evansville, Louisville, Cincinnati and Parkersburg; on the East by Pittsburg and Buffalo; on the North by Toronto, Port Huron, Detroit and Lansing. Tickets sold from Atlanta, Rome, Dalton, Anniston, Opelika, Childersburg and Memphis. These tickets are good for twenty-one days and return, and sold at one fare for the round trip plus $2.

Everything will be in readiness for what we firmly believe will be the greatest tournament ever held in America. We will have magautraps and the "gang." The country is alive with game, and the visitors will be entertained by all southwestern Texas. To give you an idea of the wildfowl shooting on our coast, I will say that a party of eight men shot 500 shells each in half a day. One man shot two and one-half shells per minute for 200 consecutive minutes. Deer are very plentiful, but the visitors will not get a chance at that kind of game, as our season closes on the 20th. But all can be surfeited with turkey and four varieties of quail. The jacksnipe shooting is also the best in the world. O. C. GUESSAZ.

Walter R. Patten, of Pleasure Bay, N. J., and Eugene Magee, of Trenton, N. J., shot a match at 50 live birds per man on the Elkwood Park grounds, Wednesday, Dec. 23. Patten won by 40 to 37.

Trap at Chicago.

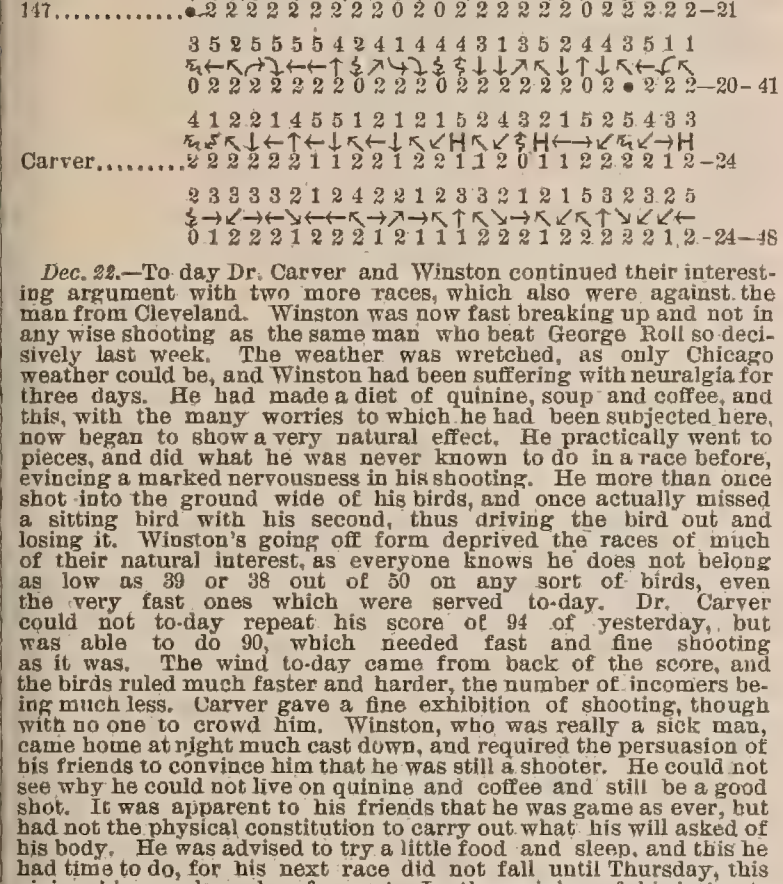


CARVER—147.

CHICAGO, Ill., Dec. 21.—As wired to FOREST AND STREAM, Dr. Carver to-day defeated 147 (J. L. Winston) in the third and fourth races of the six in which they have been engaged. The conditions were, as given earlier, 50 live birds, $50 a side, A. S. A. rules. A very small crowd gathered to see the events, though the number of spectators was larger in the afternoon. Among those from outside the city were: Messrs. W. F. Ellis, of Winnipeg; E. E. Ellis, of Seattle; A. P. Pentz, of the Spratts Patent, New York; C. M. Wills, of Cleveland, the latter representing the Austin Cartridge Co. The birds were brisk and strong. The wind was light from northwest by west, making it blow from the score at a left-quartering angle. This prevailed till near the end of the first race, when the wind shifted to blow in, though but weakly. It became apparent to those who have known the history of Watson's several parks that the new park is not by any means so good as the old one, which was very fast. As the grounds are now laid out they are not fast, for the wind does not often blow in such direction that the birds will rule outgoers, as was the case on the old grounds. Instead of these grounds being the hardest in this part of the country, they are now no harder than many others. The position of the score cannot be changed, for the firing would then be toward a street which runs by the side of the gate.

Carver to-day shot in fine form, and with his usual elegance of style. Winston was plainly not in the form of last week, and his nerves were not working as smoothly as they should. At times he was swift and accurate, and again he waited an apparently interminable time with his first or his second. At times he thus got down long and hard kills, but the style will not win races, and it lost him too many birds to land him first, though in long reaches of the race he showed a brilliant gait, and kept up the favorable impression he made last week as to his improvement and style. Score:

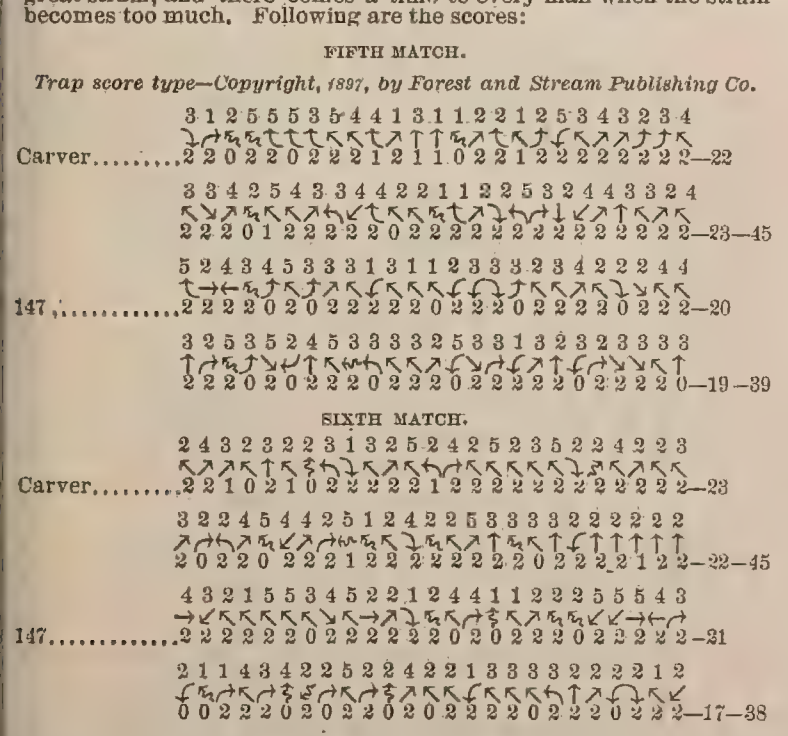
THIRD MATCH.



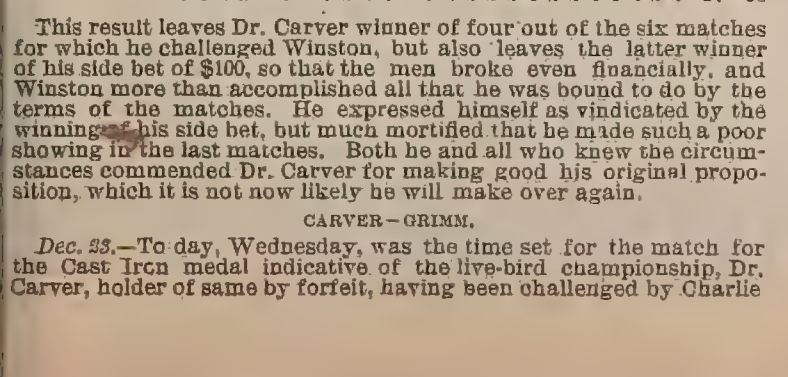
Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

After the first match all hands went in for lunch, and it seemed to have a bad effect, for at the beginning of the next race both men shot like rank amateurs, slobbering their birds as though they had never shot at pigeons before. Carver's score does not show the quality of this shooting, for in his first dozen birds he was in great luck, some of his birds falling up close to the wire, and one actually striking the wire and falling back inside. The birds were strong and good, none being flagged in the 200 shot at in the two races. Carver's luck at the first half dozen birds gave him inspiration, and he came on in good shape. Winston, on the other hand, seemed breaking up, and made two or three rank misses at easy birds which he should have cut to pieces. Carver increased his win of 2 birds in the first match by going out 7 ahead in the second. Scores:

FOURTH MATCH.



Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

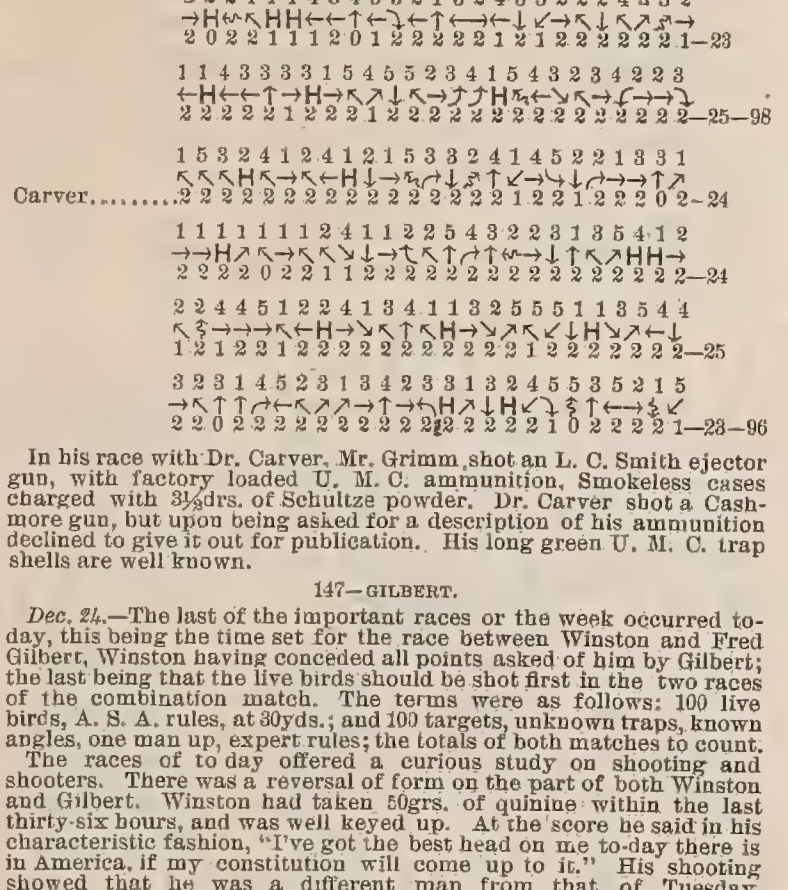


Dec. 22.—To day Dr. Carver and Winston continued their interesting argument with two more races, which also were against the man from Cleveland. Winston was now fast breaking up and not in any wise shooting as the same man who beat George Roll so decisively last week. The weather was wretched, as only Chicago weather could be, and Winston had been suffering with neuralgia for three days. He had made a diet of quinine, soup and coffee, and this, with the many worries to which he had been subjected here, now began to show a very natural effect. He practically went to pieces, and did what he was never known to do in a race before, evincing a marked nervousness in his shooting. He more than once shot into the ground wide of his birds, and once actually missed a sitting bird with his second, thus driving the bird out and losing it. Winston's going off form deprived the races of much of their natural interest, as everyone knows he does not belong as low as 39 or 38 out of 50 on any sort of birds, even the very fast ones which were served to-day. Dr. Carver could not to-day repeat his score of 94 of yesterday, but was able to do 90, which needed fast and fine shooting as it was. The wind to-day came from back of the score, and the birds ruled much faster and harder, the number of incomers being much less. Carver gave a fine exhibition of shooting, though with no one to crowd him. Winston, who was really a sick man, came home at night much cast down, and required the persuasion of his friends to convince him that he was still a shooter. He could not see why he could not live on quinine and coffee and still be a good shot. It was apparent to his friends that he was game as ever, but had not the physical constitution to carry out what his will asked of his body. He was advised to try a little food and sleep, and this he had time to do, for his next race did not fall until Thursday, this giving him a clear day for rest. In the opinion of his intimate friends the real cause of Winston's breaking up was not in the closeness of his races, but in the mental worries and troubles to which he has for several days been subjected. He was shooting under very great strain, and there comes a time to every man when the strain becomes too much. Following are the scores:

FIFTH MATCH.

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

SIXTH MATCH.



This result leaves Dr. Carver winner of four out of the six matches for which he challenged Winston, but also leaves the latter winner of his side bet of $100, so that the men broke even financially, and Winston more than accomplished all that he was bound to do by the terms of the matches. He expressed himself as vindicated by the winning of his side bet, but much mortified that he made such a poor showing in the last matches. Both he and all who knew the circumstances commended Dr. Carver for making good his original proposition, which it is not now likely he will make over again.

CARVER—GRIMM.

Dec. 23.—To day, Wednesday, was the time set for the match for the Cast Iron medal indicative of the live-bird championship, Dr. Carver, holder of same by forfeit, having been challenged by Charlie Grimm, of Clear Lake, Ia., to shoot for this rugged emblem. This time Carver kept up his good form, but he was not good enough to win, the Iowa strong man going out ahead after one of the most remarkable races, or rather one of the most remarkable scores, ever shot in the country. The scores are not so good as they look on paper, for the birds were shot in a snowstorm and did not fly at all, but even had they been tied at the traps the score of 98 birds in the air is a great one, and one but rarely seen on any grounds. It is the largest made on these grounds since Charlie Budd shot Frank Kleintz, scoring 98, with one or two dead out, I do not remember which. That race I saw, and it was under harder conditions than this of to-day, for it was in flying weather.

To-day the sky was lowering and the light which came through the fluff of snow was dim, coppery and dull. One could hardly see to score the race, and a bird a little way beyond the traps was like a gray ghost. Confused by the storm, the birds did not know which way to fly, and the majority rose high in the air above the traps, flopping up slowly, and then heading for the buildings as soon as they saw them. This made them rule high side shots, so it was like chopping off their heads with a hatchet. Not a dozen birds went out with anything like speed, and of these half were missed, the men being unable to quicken up the slow time which the other shooting demanded of them. It was a most monotonous affair, and of course not even the men engaged in it could call it a good pigeon race. It was simply a day for a record, and the opportunity was not allowed to escape. By this no wish to belittle the shooting is expressed, for as all know it is very easy to miss somewhere in 100 shots, and on even the easiest of birds the gun, the load and the man must be just right or there will be a slip somewhere. Grimm shot in perfect form or he could not have done what he did. Carver was in practically equal form or he could not have come up within two birds of such a score. One could not ask a day more perfect for killing a thousand straight, but if this had been proposed one could not have picked a man more apt to do it on that day than the one who all but killed a hundred straight. The two birds that Grimm lost were quick flyers that got up and away too far for the second to stop them. Both these were drivers, but both were high at the time the second was fired. I have marked many birds in the score with the letter H. While such birds did not actually hover over the trap, they were really nearer hoverers than flyers, the height gained in their flight at the time they were struck being greater than their distance from the trap. Reference to the score sheet shows the letter F four times, indicating that that many birds were flagged to start. The style of the shooting requires small comment. It may be seen that it was regular and methodical to the extreme. Carver was surprised when told he had but half a dozen more birds to shoot at. If there was any luck in the race it fell to Carver, who came near falling back another bird on his 96th, that bird being retrieved by the pointer Cyclone almost against the wire. Carver's 40th, 45th, 48th, 52d, 61st and 76th birds were among his hardest. His 95th was a high twister, but not fast. His 14th bird was luckily stopped at his very feet. The race had few of the interesting features of a hot match on fast birds, and so was a much tamer affair than all who noted the matching of these two good ones had hoped to see. Grimm ran his first 51 straight, and dropped his two lost birds inside the first 60, running 41 straight on the home reach. Carver ran 47 at one stretch in the middle of the match. The weather was not cold, but sharp enough for good flying had it been bright and free of snow. It was said no two such scores were ever made on any of Watson's grounds before. Following are the scores:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

In his race with Dr. Carver, Mr. Grimm shot an L. C. Smith ejector gun, with factory loaded U. M. C. ammunition. Smokeless cases charged with 3½drs. of Schultze powder. Dr. Carver shot a Cashmore gun, but upon being asked for a description of his ammunition declined to give it out for publication. His long green U. M. C. trap shells are well known.

147—GILBERT.

Dec. 24.—The last of the important races or the week occurred to-day, this being the time set for the race between Winston and Fred Gilbert, Winston having conceded all points asked of him by Gilbert; the last being that the live birds should be shot first in the two races of the combination match. The terms were as follows: 100 live birds, A. S. A. rules, at 30yds.; and 100 targets, unknown traps, known angles, one man up, expert rules; the totals of both matches to count.

The races of to day offered a curious study on shooting and shooters. There was a reversal of form on the part of both Winston and Gilbert. Winston had taken 50grs. of quinine within the last thirty-six hours, and was well keyed up. At the score he said in his characteristic fashion, "I've got the best head on me to-day there is in America, if my constitution will come up to it." His shooting showed that he was a different man from that of Tuesday, though occasional patchy places and frequent long waits in getting on his bird showed that he was in bad nervous condition after all, and not in shape to make a great showing in a hard race. As for Gilbert, he was apparently in perfect health, and made no complaint of any ill feeling whatever. Yet he made the lowest score of his life, one which any duffer could beat, and one which has never been made on any grounds by any professional shooter of the country. Gilbert could find no explanation whatever for it, for he should be in perfect fettle and not in the least "shot out," as he has been resting of late and only doing shooting enough to keep in practice. His load when seen on the snow seemed a bit wide, but gun and load were not the cause of his trouble; he was slow in his nerves somewhere, and it could be easily seen that he made the fatal mistake of dwelling as he fired, getting his lead and then stopping to pull the trigger. Consequently he was always behind and under any good outgoing bird. He slobbered down a good many birds out of bounds for this reason. Grimm, who was handling him, told him what was wrong, but it seemed impossible for Gilbert to quicken up and get on with his second, though he at times made good fast stops with the first. Time after time the birds would go out through his tardy charge, some of them to drop outside, but most of them hardly tickled, and it was generally felt that Gilbert was clear wrong somewhere, as 68 birds to the 100 is not a score which belongs with Fred Gilbert's name by any means. But he should not be disheartened by this at all. It is only another phase of the pigeon game, which is one of the oddest of all games and the hardest to depend upon. It more than ever proves the truth of the belief of all knowing shooters, that there is not and can never be any one man who can claim with justice the title of champion. No man can beat all the good ones all the time, and the luck of respective form is what makes the quality of a race when two good ones come together. Next week Gilbert may feel worse and shoot better. There is no accounting for it.

To-day the birds were screamers, not one needing the flag. The wind made them rule outgoers, and they tarried not on their going. These birds were taken from the same coops as those of yesterday, but they did not offer the same spectacle by any means. The weather was bright and clear, with a keen, fresh air, and a bit of wind moving to give life to the flight. On the ground was a couple of inches or so of snow, and the glare from this was very trying, as the sun was almost directly in the eyes of the shooters. Winston adopted the old mountain trick of blackening his face and nose with cork, which helped his eyes very much. Gilbert used a long visored cap. Both said that at times it was next to impossible to see a fast bird as it went out over the snow.

Winston was chipper and "sassy" before the race began, and seemed more like himself. He was not averse to making a cheerful remark or so at some of his own kills, occasionally reminding the spectators that he did it with "load 147." He could have killed perhaps three or four more birds if he had been crowded to it, but he struck one of his fooling streaks, and at times apparently tried to see how long he could wait and still kill his bird. Once or twice he made phenomenal kills in this way, getting a bird down almost at the wire with a screaming second-barrel kill. At other times he lost birds by this sort of thing, and showed what a slow second would have meant in a closer thing than that he had in hand. A study of his form would indicate that he needs a rest and a little less shooting for a while. He should vary his quinine diet with a little beef, and cease depending on nerve which has no red blood behind it. To-day he did not shoot with any of the quality he showed in his match with Roll, and fell back into more of his old irregular way of shooting. He was fast on some birds where he had time, and awfully slow on some where he needed to use every fraction of a second. Winston left town to-night for home in far poorer form than when he came here. As he stood last week he was a hard man to beat, and a better shot than he ever was before in his life. He thinks he is somewhat shot out, and says he will take a rest. Those who think he is going to prove easy hereafter might do well to be a bit cautious.

Gilbert was never in the race at all, but pounded along behind, falling further out of it all the time. As Fred is a deservedly popular shooter, and has many friends here, his bad showing hurt others beside himself. It should not be thought that Gilbert was in any way disconcerted by any of the fabled antics of Jack Winston at the score, for that sort of thing has been abandoned by the latter. The race was shot with perfect pleasantness throughout. Winston stood back of the score, never sitting down at all, Gilbert sitting with his handler between shots. Winston had no handler, as it is his preference to shoot alone. It would be folly to undertake any description of individual birds in a race like this, as so many were missed, and it will do to say that the birds were very good ones, so good that a 90 score would have been better than 96 on the day previous. This race attracted more attention than any yet shot this week, and there was a goodish crowd assembled. The following is the score of the live-bird half, Winston winning by 13 birds:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

In this race both men used L. C. Smith guns. Winston used his 147 load, and Gilbert shot 3½drs. Du Pont powder in U. M. C. green trap shells.

Shortly after the close of the live-bird match the party adjourned to the target traps to settle the other half of the affair. A few practice birds were shot, and the traps were put in as good shape to comply with the rules as possible. I neglected to ascertain what targets were used. Ike Watson was chosen referee, and acted most acceptably, making two or three close but correct decisions. (It goes without saying that John Watson was referee in all the live-bird contests which have occurred during the two weeks of shooting chronicled.) For judge, Winston chose Oswald von Lengerke, Gilbert choosing Charlie Grimm.

In the targets Gilbert pulled himself together better, and shot with something of his old speed and accuracy. The scores are not high, but it should be remembered that the conditions were difficult, the glare from the snow being very bad for the greater part of the race. It was anybody's race for awhile, and the men see-sawed over the tie line, being tied at the 75th round. Gilbert was then getting better, and Winston apparently worse. On Monday night last, as he was going home, Winston in the presence of several friends picked up a hand bill which he saw laying on the ground, and which displayed on its face a large figure 7. He picked up really two of these bills, and tore off the figure 7 from each, putting one figure in each vest pocket. He declared he was going to beat Gilbert just 7 birds in each match. Along toward the close of the target match, when Winston was plainly fooling along and not extending himself at all to shoot, he asked what the score was. He could then have gone out, if he had not missed, with a total of 11 birds ahead of Gilbert, but this did not seem to please him. While I do not feel in a position to say what can not be proved, it seems to me a trifle significant that Winston lost 4 birds out of his last 10, and that he won by the regulation number, 7. I would not consider Winston's score of 77 under these rules as conclusive of what he might do if he were crowded. Gilbert scored 83, a low score for him under favorable conditions. This made the total scores stand: Winston 158, Gilbert 151. Following are the target scores:

147.....1110111111111111111111111111101111011010111011101111—43
1111010110101100100111111011111111000111111110101100—34—77
Live birds..... 81
158

Gilbert.....0110111111101111111111111111101101111111111101101—43
1010011101101101101101111111111111101111011111111111—40—83
Live birds..... 68
151

During the morning Messrs. O. von Lengerke and E. Rice shot a race at 50 live birds, the former scoring 35, the latter 22, as reported elsewhere.

On the evening of Thursday Winston left for his home at Washington, Ind., where he will remain a few days before going on to New York. He has been very welcome in Chicago, and all hope he will come again and stir things up a bit among the pigeon shooters. He has won four races and lost four, winning $400 and losing $200. He was ready to shoot more races last week when he had a few vacant days, but none were ready at that time, and of course he is not apt to come back to attend to the men who will be ready to shoot next week, as he has all along said he was going home for Christmas and then on East. As we have all too little match shooting here now, it would be appreciated if Winston or some other troublesome party with a good nerve and a shooty disposition would drop in and sort of stir up the animals in the old-time way. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Boston Shooting Association.

BOSTON, Mass., Dec. 25.—The Boston Shooting Association held a shoot at Wellington to-day. The principal event was a 100-bird handicap race for the W-A trophy, presented by the Laflin & Rand Powder Co. The trophy was won by Capt. E. B. Wadsworth, president of the Association. Sweepstakes were shoot as follows:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	10	25	25	25	25	10	Targets:	10	10	25	25	25	25	10

Change of Dates at Indianapolis.

INDIANAPOLIS, Ind., Dec. 23.—To keep in line with the San Antonio Midwinter tournament we have changed the dates of our sparrow shoot from Jan. 14 and 15 to Jan. 20 and 21.

Leaving here on the evening of the second day, we will reach San Antonio 7:15 P. M. the 23d.

The indications are that we will have a good attendance, and enough going to Texas to enable us to secure party rates and a special sleeper through. ROYAL ROBINSON, Sec'y.

This issue is the first of the series for 1897. It is fitting at this date to remind shooters that on Jan. 1 Tom Keller starts in to boom King's Smokeless and Peters's reinforced shells. Neaf Apgar also puts a red mark against Jan. 1, that being the date on which his connection with the Austin Powder Company, of Cleveland, O., formally commences. Another business connection with the King Powder Company is that made by Jack Parker, of Detroit, who will in future shoot King's Smokeless and show what Milt Lindsley's production can do when handled properly.

IN NEW JERSEY.

BOILING SPRINGS GUN CLUB.

Dec. 25.—As usual, the Boiling Springs Gun Club of Rutherford, N. J., had a goodly gathering at its annual Christmas Day shoot. The weather could not have been pleasanter for a shoot in midwinter, with a foot of snow on the ground. The beauty of the day had a good deal to do with the attendance, and probably also had something to do with the good scores made by many of those present.

The main event was a handicap at 30 targets, club handicap of extra targets to shoot at. Adams, by grace of his two extra targets and some good work with the gun, scored a highest possible; the same may be said of Dr. De Wolf, one of the coming shots of the club, who had three extras to work on. Baron was close up, with 29 out of 33, showing that he didn't miss many. Colin R. Wise was top-notcher of the scratch men, his score being mainly made up of the figure 1. Greiff and Apgar scored 27, Huck and Paul 26, and Frank 26, all the above shooting from scratch.

A feature of the afternoon's sport was the shoot for a cup donated by the club for "the champion duffer of the Boiling Springs Fishing and Gun Club." For some time there has been a dispute between Messrs. O. Marvin, C. Coe and F. Broshart as to who had the right to that title. To-day the question was to be settled in the club handicap race by mutual agreement. It will be seen from the scores that Mr. Marvin outclassed his opponents by breaking 25 out of 38 to their totals of 24 out of 39. This work deprived him of all chance of the trophy. The tie was shot off after the club race at 10 targets per man, Coe breaking 6 to Broshart's 5. This entitled Mr. Broshart to the title and the cup. Later, in the club room, he was presented with the trophy by Count Lenone, of Passaic, who made a really excellent speech on the occasion, his remarks being very happily chosen. The terms of the cup are "two consecutive wins to entitle the owner to the ultimate possession thereof." Mr. Broshart has thus but to win it next time to become the owner of the trophy. (The cup is a work of the tinsmith's art, being of beaten metal with a couple of handles on it, an exact copy of many loving cups we have seen. It was made under Secretary Huck's directions, a shield of copper being on one side and a copper pigeon on the other. On the shield was engraved: "Presented to the champion duffer of the club by the Boiling Springs Fishing and Gun Club." The engraving was the work of ex-Capt. P. A. Jeanneret.) It is unnecessary to state that the presentation as above put a fitting climax to the club's Christmas Day shoot.

The work done during the day is given in full below, the table of scores giving the records of the sweeps, all of which were at unknown angles, nominal entrance fees:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	*10*	*10*	*10*	*10*	*15*	Targets:	*10*	*10*	*10*	*10*	*15*
Apgar	9	8	8	8	13	Marvin	..	..	..	6	10
Hegeman	9	8	9	5	..	Lane	..	..	..	5	..
Huck	9	9	9	8	14	Lawrence	..	..	..	2	..
Adams	8	10	8	9	12	Black	..	..	..	..	9
James	8	6	..	7	..	Brown	..	..	..	..	4
Coe	..	..	5	7	..	Wise	..	..	..	..	9
Greiff	..	..	9	8	14	Palmer	..	..	..	..	12
Frank	..	..	..	8	14						

The merchandise event was shot at 30 singles, 15 known angles and 15 unknown. The scores in detail were as below, all handicap allowances being shot off at unknown angles:

Adams (32)	111011111111111111111110111111111	—30
De Wolf (33)	111111111111111101011111111111011	—30

* Did not shoot any handicap.

Dec. 26.—This being an off day at the Boiling Springs grounds, it was not to be expected that many shooters would put in an appearance. As a matter of fact, only six members showed up: Colin R. Wise, of Passaic; W. M. Harding, Platt Adams, Gus Greiff, Theodore Baron and F. S. Edwards, all of New York. The above six kept the traps busy and had lots of practice. Harding and Edwards being early on the grounds, they had a little preliminary practice and shot a small race for the lunches, all of which is told in detail below. Gus Greiff did the best work of the afternoon on singles, breaking 27 out of 30 at expert rules, and 43 out of 50 at unknown angles. His work on doubles was not as good as we have seen him usually do at this style of shooting. He shoots a featherweight Francotte, 28in. barrels, 12 gauge a gun that handles more like a toy than a shooting iron. Wise shoots a Parker, Brown a Francotte, Platt Adams a Smith, Harding a Lefever, and Edwards a Winchester.

A curious feature of the shooting was the comparatively low scores made at unknown angles. Greiff was high with 43 out of 50; Edwards next with 103 out of 125; Adams third, 80 out of 100; Wise broke 72 out of 100, and Baron 33 out of 50, each making an average of 72 per cent. Harding, who is only a beginner, scored 83 out of 125. The shooting records in each event are given below:

Ten pairs:

Edwards	11 10 00 11 11 01 01 11 11 11—15
Harding	10 10 10 10 11 11 00 10 10—11

A match for the lunches at 25 targets, unknown angles, was next on the list, Harding being allowed 3 extra targets to shoot at. He retired at the end of the 25th round, being unable to win if he broke his allowance:

Edwards	0111111101111101101011111—20
Harding	1111110101010010010110 —16

After lunch, Platt Adams and Colin R. Wise having put in an appearance, the following scores were shot at unknown angles:

F S Edwards	00111111111111101111101011111110111111111111111001—42
P Adams	00110111111101111111101101111111011101111111111 41
C R Wise	11111111010 00 0111111100011110111111111111001 —39
W M Harding	11111100101010101101111101111010100101011001111 0—32

The above 50 targets per man were divided into two 25-target events shot as team races, the teams being Adams and Wise against Harding and Edwards; as a result of this arrangement Adams and Wise went scot free, winning both matches:

The next event was at 50 targets, 30 singles, expert rules, and 10 pairs. The results in this race were as below:

Gus Greiff	11111111011111001101111111111—27
	10 10 01 11 10 01 10 10 11 01 —12—39
F S Edwards	1101'0111110111111101111101 11—25
	10 10 01 10 11 11 01 10 11 11 —14—39
Platt Adams	0110111101110111111 110111 1—25
	01 11 10 11 10 10 10 10 00 11 —12—37
T Baron	1010111010111011111010111111—23
	11 10 01 10 10 00 10 11 10 11 —12—35
C R Wise	1101101110110011111111111001111—23
	10 10 00 10 00 10 11 00 11 00 - - 8 - 31
W M Harding	1101111100011001000000111011111—16
	01 01 10 11 01 11 00 00 10 00 — 9—25

Two team races brought the afternoon's practice to a close, each at 25 targets per man, unknown angles. In each event the losing team paid for the targets. Grieff shot well in No. 1, running out with 23 after losing his first and third. The results of the races follow:

No. 1.

Edwards	21	Greiff	23
Adams	20	Harding	19
Baron	18—59	Wise	14—56

No. 2.

Edwards	20	Greiff	20
Wise	19	Adams	19
Baron	18—57	Harding	16—55

EDWARD BANKS.

CHRISTMAS DAY AT MARION.

Dec. 25.—The Endeavor Gun Club had a very enjoyable shoot to day at its grounds, Marion, N J. Both live birds and targets were trapped, A. R. Strader furnishing 200 pigeons as good as anyone would wish to see trapped. Among the number were a lot of white birds which were very hard to see when flying low over the snow. Scores were as follows:

	No. 1.	No. 2.	No. 3.
Lott	2220020—4	1220222212 9	222—3
G Piercy	1221020—5	1021022222—8	021—2

J. A. CREVELING, Sec'y.

FORESTER GUN CLUB, OF NEWARK.

Dec. 25.—The Forester Gun Club, of Newark, held an all-day shoot to-day. A long list of events was shot off, some of them sweeps for turkeys and chickens. Among the winners of turkeys were Dr. Cummings, Warren Smith, Mel. Hayes, Charles Hedden and E. Jewell. Scores were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
D Fleming	7	8	8	6	7	6	6	7	9	6	8	7	10	8	6	10	5	6	8	12

Backus	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	7	12

All events were at 10 targets, except No. 16 (15 targets) and No. 20 (20 targets).

H. E. WINANS, Sec'y.

BERGEN COUNTY GUN CLUB.

Dec. 25.—The Bergen County Gun Club, of Hackensack, held a shoot to-day. Two 25-target events were shot during the day in addition to several 10-target sweeps. In the 25-target events No. 1 was the club shoot; this resulted as follows:

Griffiths 22, Bell 19, Raymond 18, Chaffee 17, Jackson 16, Gardner 15, Warner 15, Van Keuren 14, Stern 14, Ward 12, Fleischman 12, Tittrington 11, C. O. Gardner, Jr., 10.

No. 2, at 25 targets, had 10 entries, Horton and Bell tieing for first place on 17 out of 25. Scores:

Horton 17, Bell 17, Jackson 15, Van Keuren 15, Warner 14, C. O. Gardner, Jr. 14, Stern 13, Fleischman 13, C. O. Gardner 11, Chaffee 11.

MAPLEWOOD GUN CLUB.

Dec. 26.—The Union Gun Club, of Springfield, N. J., shot a race to-day with the Maplewood Gun Club, on the grounds of the latter. The conditions were: 3 men to a team, 25 targets per man, unknown angles. The home team was defeated by 3 breaks. Scores:

Union Gun Club.

A A Sickley	11011111110111111111111111—23

ON LONG ISLAND.

HELL GATE GUN CLUB.

Dec. 22.—Twenty one members of the Hell Gate Gun Club took part to-day in the last regular monthly live-bird shoot of the club for the season of 1896. The shoot, as usual, took place at Dexter Park. The birds were a good lot, not a single one of the club's members being able to make a clean score. Jas. A. R. Elliott, however, who has a match on with Fulford at these grounds Dec. 31, was on hand and shot along as a guest of the club, and incidentally showed them how easy it was to make 10 straight. To-day's scores were as below, all standing at 25yds., the handicaps being by number of points, as explained below (Elliott stood at 30yds.):

F Trostel	1122221021— 9	C Webber	0110210201— 6
J H Voss	2112101102— 9	C Lang	0012220122— 7

* Guest.

Twenty prizes are donated by the club this year, the prize winners being given below in order of merit, together with their handicap number of points. Under the system adopted by the Hell Gate Gun Club, points are scored on the following plan: A shooter handicapped at a given number of points must score more birds out of his 10 than his handicap calls for before adding a point or half point to his record for prizes. For example (taking to-day's contest): W. A. Sands scored 8 birds; his handicap being 6, he added 2 points to his record. L. C. Muench scored 9; his handicap being 5½, he added 3½ points to his record. Prizes for 1896 were won as below:

Name.	Handicap.	Total.	Name.	Handicap.	Total.
Gus Nowak	6½	18½	Fred Trostel	7	11
E Doeinck	7	18	S J Held	6	11
L C Muench	5½	15½	J Schlicht	6	11
Emil Steffens	6	15	J Himmelsbach	6	11
E Paynter	6	14	J Newman	4	11
W A Sands	6	13	J H Voss	7	10
John Kreeb	5	13	C Webber	6	9
E Metz	5½	12½	H Foster	5½	9
E Petersen	5	12	Chas Lang	4½	9
R Regan	5	12	E Marquandt	4	9

CRESCENT ATHLETIC CLUB, OF BROOKLYN.

Dec 25.—Christmas Day at the Bay Ridge grounds of the Crescent Athletic Club was marked by some spirited contests at targets. Six sweeps, all 25-target events, were shot by those present, in addition to the main event, the Christmas handicap. The latter was won by Bert Fish, D. G. Geddes, the scratch man, being second. Scores follow:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
D G Geddes	19	20	15	18	21	17	A D Lewis	..	7	..	..	10	..
C H Chapman	10	7	7	..	10	10	F D Lawrence	..	6	..	..	..	..

Lewis	1000000001100100000100100— 6+ 7—13

Dec. 26.—The following sweeps were shot this afternoon on the Bay Ridge grounds of the Crescent Athletic Club. Bert Fish carried off the bulk of the honors. Nos. 2 and 3 were shot at expert rules; No. 8 was 12 known angles and 13 unknown angles; all the others were at known angles:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
Targets:	*25*	*25*	*25*	*25*	*25*	*15*	*10*	*25*	Targets:	*25*	*25*	*25*	*25*	*25*	*15*	*10*	*25*

WESTMINSTER KENNEL CLUB.

Dec. 26.—A few members of the Westminster Kennel Club went down to Babylon, L. I., on a special train for a small live-bird shoot. Event No. 1 was at 5 birds, $5, two high guns, then miss-and-out. No. 2 was at 10 birds, $10, two high guns, miss-and-out on ties. No. 3 was shot under the same conditions as No. 1. Knapp, Watrous and Stafford did the best work in the above event, Stafford's run of 19 straight being an excellent one under the circumstances. Knapp made a run of 22 straight. Superintendent Mott provided a good lot of birds, as usual. Scores were:

	No. 1.	No. 2.	No. 3.
W H Stafford (28)	22222222—8	2222222222220—11	022 — 2
Col Butler (28)	11222220—7	012112212 — 8	100 — 1
W W Watrous (28)	1222220 —6	22202220 — 6	212222222222—11
C M Chapin (29)	220 —2	202220 — 4	120 — 2
W S Edey (29)	021 —2	200 — 1	02 — 1
J P Knapp (30)	020 —1	2222222222222—12	22222222220—10
George Magoun (28)	2020 —2	202220112 — 7	022 — 2

A series of 8 miss-and-outs were shot, all $5 entrance, the shooters standing at the same handicap marks as above. The records in these 8 events were:

	No 1.	No. 2.	No 3.	No 4.	No. 5.	No. 6.	No. 7.	No. 8.
Knapp	5	1	5	1	5	1	.	.

NEW UTRECHT GUN CLUB.

Dec. 26.—The last live-bird shoot of the year for the New Utrecht Gun Club was held at Dexter Park this afternoon. The attendance was very small, all the interest in the club prizes centering in the contest between John Gaughen and Conny Furgueson for the Class B prize. Up to to-day each had five wins to his credit. This afternoon Gaughen made his tally 6 by scoring 9 straight, his 10th bird dropping dead out of bounds. Conny lost a fast bird in the first round, and dropped another cipher on his score by losing his 7th. Jim Elliott, who is at present domiciled at Dexter Park, shot along as a guest of the club. Scores:

	Club shoot.	No. 1.	No. 2.
C Furgueson (AA, 30)	212222•222— 9	12222—5	02222—4

A. G. C.

The Interstate Association.

CLASSIFICATION AND TOURNAMENT COMMITTEE.

THE Classification and Tournament Committee of the Interstate Association met at the office of the Winchester Repeating Arms Company, 312 Broadway, Dec. 23, at 11 o'clock.

The members present were: Chairman Irby Bennett, of the W. R. A. Company; Noel E. Money, of the American E. C. Powder Company; J. L. Lequin, of the Hazard Powder Company, secretary-treasurer of the Association; and Mr. Detmold, representing his partner, Justus von Lengerke, of the firm of Von Lengerke & Detmold. Paul North, of the Cleveland Target Company, was unable to be present. J. A. H. Dressel, president of the Interstate Association, was also present.

The report of the manager, Elmer E. Shaner, on grounds for holding the Grand American Handicap was read, discussed and placed on file. The report showed that Mr. Shaner had visited the race tracks in the vicinity of Elizabeth, N. J.—Waverly, Linden and Dwyer's—and also the new grounds at Elkwood Park; and that he found that the tracks at Waverly and Linden were unsuited for the purpose required, but recommended that the committee visit in person the grounds at Dwyer's track and at Elkwood Park.

A proposition from Messrs. Zwirlein and Astfalk, the parties who desire to have the shoot at Dwyer's track, was read and placed on file.

Acting on the manager's recommendation, the committee decided to view both grounds on Tuesday, Dec. 29, leaving New York by the 10:10 A. M. train over the P. R. R., visiting the track at Elizabeth prior to going to Elkwood Park. After the trip the committee will meet and finally decide upon the grounds for holding the Grand American Handicap of 1897.

The committee also instructed the manager to make as favorable arrangements as possible in regard to dates, etc., with clubs in the following cities, with the idea of holding target tournaments at those points during the coming season: Baltimore, Md.; Richmond, Va.; Mobile, Ala.; Monroe, La.; New Haven, Conn; Lewiston, Me.; Montpelier, Vt., and some point in New Hampshire. The committee recommended that the name of Nashville, Tenn., be substituted for one of the cities in the South named above.

The question of revising the division of the purse in the Grand American Handicap was also discussed. The purse will be divided on the same plan as last year: First high gun will receive $500, second high gun $300, and third high gun $200. All surplus will be added, the above $1,000 being the usual guarantee. The surplus will be divided into a certain number of additional moneys, the proportions being graduated for every additional ten entries above forty up to 100 or more.

Answers to Correspondents.

No notice taken of anonymous communications

F., New York.—A friend of mine declares that in shooting rabbits when snow is on the ground dogs can be dispensed with, as the rabbits can be tracked to their hiding places or forms and started within range. I doubt it. Will you kindly give us your opinion? Ans. Your friend is correct, provided the tracks were made within a reasonable length of time, and the snow is soft enough to receive the foot imprints.

MAC, Philadelphia.—I have a large shepherd dog who will jump the fence, and I would like to know how to hobble him to prevent jumping, as I dislike to keep him chained. Ans. You can run a wire or two or three barbed wires from 12in. to 4 or 5ft. from the bottom of the fence and about 12in. from the ground, so that he cannot make a spring to jump. Or you can build your fence higher. A clog chained to the dog will also prevent him from jumping, but it will make him irritable, and in time injure his physique.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 9, 1897.

VOL. XLVIII.—No. 2. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

Fly-fishing gives more varied play and greater exercise to the muscles; it bestows a keener excitement; it intensifies the perceptive faculties; it requires nicer judgment than bait-fishing, quicker and more delicate manipulation, and greater promptness in emergencies; it is more humanizing in its influences; it is beautiful in its associations, and poetic in the fancies it begets.

—Chas. Hallock.

THE LION AND THE UNICORN IN FLORIDA.

IN the year 1562 John Hawkins, father of the British slave trade, set sail from Plymouth on a negro-selling expedition to the West Indies and the Spanish Main. "Serve God daily, love one another, preserve your victuals, beware of fire, and keep good company"—that is, keep your ship in company with the others—were the sailing instructions he gave his captains. If this were the place for its telling, the story would be interesting of how the English seamen, making first for the coast of Africa, inveigled their victims into the pens below decks and then sailed away with them to the Spanish settlements in America; and of how, arriving there, and orders having been promulgated by the royal governors to forbid trading with the Englishmen, Hawkins manned his guns, fired some shot, made a show of bombarding the settlements, and so persuaded the Spaniards that despite roya decrees they might buy his negroes if they wanted to, or at all events if he wanted them to. But it is not with Hawkins the slave trader, but with Hawkins the naturalist that we have to do here.

The old voyagers recorded a vast store of quaint and curious lore respecting the phenomena of nature observed by them. The new world was peopled by creatures strange and marvelous, and the accounts written of them by the explorers are for the most part simple and ingenuous, and marked by a graphic delineation not to be improved upon even now. Sometimes in the chronicles we find mention of creatures which it is difficult for us to identify. Such was the Florida unicorn, of which record is made in the story of this voyage of Hawkins.

On their way home in 1564 the fleet coasted along Florida and put into the River May, now the St. John's, to visit the French Huguenots, who had established a fortification under Laudonneire. There in Florida John Sparke, the chronicler of the expedition, tells us, they found "deer marvelous store, with divers other beasts and fowl serviceable to man;" and among other species there were unicorns:

"The Floridians have pieces of unicorns' horns, which they wear about their necks, whereof the Frenchmen obtained many pieces. Of those unicorns they have many; for that they do affirm it to be a beast with one horn, which, coming to the river to drink, putteth the same into the water before he drinketh. Of this unicorn's horn there are many of our company that, having gotten the same of the Frenchmen, brought home thereof to show."

What was the Florida unicorn, this creature with one horn which it plunged into the water before drinking? Sparke gives no further particulars of it. To say that it was a unicorn and that a unicorn is a unicorn is not to give light, for we do not know what a unicorn is. They did not know in those days. The Hawkins sailors who took home their specimens of the Florida unicorn to show as one of the wonders of the new world, with their hazy, hearsay description of the beast, only added to the confusion already existing and due to the multiplicity of articles cherished in the old world as curiosities and reputed to be unicorns' horns. From the time of Pliny down to that of Hawkins, Greek, Latin, German, French and English savants discussed the identity of the unicorn and no two ever agreed as to what it was. Some said it divided the hoof and others that it did not; some described it as of the size of a sheep, others declared that it was as big as an elephant; it was identified as the ox, the wild ass, rhinoceros, oryx, a dozen other beasts. A recent caller at the FOREST AND STREAM gave it as his opinion that the unicorn of Cæsar was the reindeer.

Shortly before this Frobisher had carried home from his voyage to America, in the search for the Northwest Passage, a narwhal tusk, and this took its place with other objects in the world's collection of unicorn horns. But the narwhal belongs to the latitude north of 65° N., and we may not conjecture that the Florida unicorn was a narwhal unless we assume that in the course of the extensive barter, which is known to have been carried on in those times, this product of the far north passed from hand to hand toward the south in exchange for shells of the southern seas, until it came into the possession of the Floridians and was added to the barbarous adornments hung about their necks. This theory cannot be entertained, for it does not account for the creature reported by Hawkins as alive in Florida and coming down to the water to drink; the narwhal lives in the sea; it does not come down to the river to drink, no more than a deer climbs trees to eat lilypads.

The Florida Indians to day wear as an ornament the bill of the ivory-billed woodpecker. A study of the current fashions of adornment and those of the aborigines, as pictured by an artist who was with the Frenchmen visited by Hawkins, shows that there has been no change from that day to this in the general character of trinkets, and as the ivory bills are worn now, they probably were worn then. Perhaps Hawkins's unicorn horn was the woodpecker's bill. If any shall object that this is to make of the unicorn an unduly insignificant creature, it may be said in retort that it were better to light on something, even the bill of a bird, than to consign the unicorn and his horn to the realm of fable. When we applied the other day to Dr. DeWitt Webb, president of the St. Augustine Literary and Scientific Society, for information respecting the present existence in Florida of anything answering to Hawkins's unicorn, he frivolously observed that probably Hawkins had taken a horn himself; that is to say, that there was no unicorn, a conclusion in which we are reluctant to concur, for it means the obliteration also of the lions which once prowled through the piney woods and skulked in the hamaks. There were lions in Florida in the days of Hawkins and the unicorn. Says Sparke

Of beasts in this country besides deer, foxes, hares, polecats, coneys, ounces and leopards, I am not able certainly to say; but it is thought that there are lions and tigers as well as unicorns—lions especially, if it be true that is said of the enmity between them and the unicorns; for there is no beast but hath his enemy, as the coney the polecat, the sheep the wolf, the elephant the rhinoceros, and so of every beast the like, insomuch that whereas the one is the other cannot be missing.

That is a delicious bit of reasoning for you. There were unicorns, ergo lions. No lions of fancy these, but lions of logic; and how to overcome logical lions in one's pathway is something not laid down in the manuals of big-game hunting.

SIR HENRY HALFORD.

THE announcement of the death of Sir Henry Halford, who died in London on Monday last, will recall to many minds the days when long-range rifle shooting was as interesting to the general public in this country as yachting has been since. In those days—from 1875 to 1880—Sir Henry Halford was a prominent figure in all the international rifle contests that took place, and whether as host at home or as guest in this country, he was ever the same genial, cheery, fair-minded sportsman. Many an American who was interested in rifle shooting twenty years ago will feel a sense of personal loss in reading the announcement of his death.

Henry St. John Halford was born in 1828, and received his education at Eton and Oxford. On the death of his father in 1849 he succeeded to the baronetcy, and from this time on took a prominent part in the affairs of Leicestershire. He was interested in all outdoor sports, but was best known to Americans in connection with rifle shooting Upon his estate in Leicestershire he had a private rifle range, and he devoted much time to practicing there.

For many years, beginning in 1872, he shot on the English team which competed with teams from Ireland and Scotland for the Elcho shield, and often captained his team with judgment and success. In 1875 Sir Henry Halford entertained the American rifle teams that visited England, and in 1877 he brought over a British team to compete for the Centennial trophy and the championship of the world. After two days' shooting, beginning Sept. 14, 1877, the American team defeated the British by a score of 3,334 to 3,242. The best score made by the British team was Sir Henry's, 412.

In July, 1880, a return match was shot at Wimbledon, when Sir Henry Halford's team defeated the Americans by about 80 points. In 1882 he again visited this country as captain of a team to shoot a military rifle match at Creedmoor. The British were successful on this occasion also, winning by 176 points.

SNAP SHOTS.

In their report for 1895, just issued, the New York Commissioners of Fisheries, Game and Forests recommend that "All bills relating to the fisheries, game and forest interests of the State should be referred to them for their consideration by the legislative committees in charge before action is taken upon them." That depends altogether upon the Commissioners. Sometimes their opinion of proposed legislation is worth having and sometimes it is not. President Davis issued a pronunciamento of the Commission's endorsement of the foresty amendment job at the last election; and the people repudiated the Commission's recommendation by an adverse majority of over 300,000 votes.

Commissioner Henry O. Stanley, of Maine, tells us that the Swedes in the vicinity where the black game from Sweden were put out last year report that they hear the birds calling occasionally in the morning. There appears to be no doubt that the black game bred last summer, and there is probability that the newcomers may become established as a permanent addition to the Maine game supply. Of the capercailzie nothing is known; they have not been seen; but this may be due to the fact of their more pronounced wildness and seclusion in the depth of the wilderness The expected consignment of black game and capercailzie for Maine last fall was not received.

A correspondent writes that he has been reading the FOREST AND STREAM for many years, and it was not until he happened upon one of Mr. Hammond's stories of the old days at Holland that he found in it anything to indicate that the flask was one of the necessary articles of an outfit for the field. If our correspondent had read the sportsmen's papers of forty years ago, he would have found the flask much more in evidence. From a perusal of the chronicles of those days one would with certainty draw the conclusion that though a man might go fishing without hooks, and hunting without a gun, no sporting excursion on land or water would be a success if by sad mischance the bottle were left at home. We set out very early in the history of the FOREST AND STREAM to publish a journal which should differ from its predecessors in this respect. There is little wonder then that, as our Virginia correspondent avers, one may have read the stories of shooting and fishing in these pages without learning from them that the flask was an essential equipment for the field.

That is a very satisfactory report which comes to us from Secretary Kimball, of the Massachusetts Fish and Game Protective Association, telling of the efficient and summary ways in which grouse snarers were brought to book by the officers of the State police. The case is all the more noteworthy because of the impudent aggressiveness of the trappers who appear by their truculent and menacing carriage to have terrorized the law-abiding citizens of the community. As is usually the way in such affairs, prompt and determined action demonstrated the emptiness of the bluster of these fellows, and showed that there was no difficulty in putting an end to their work, provided only the public officials who were paid to prosecute them would do their duty. The real confidence of the violators of the game laws lies not in any notion that they actually could frighten the community into letting them alone provided the community really cared to interfere with them. They put on a bold front only because htey think that the officials do not mean business.

The Sportsman Tourist.

THE FIRST VOYAGE OF THE CURLEW.

WHEN we of the gray-headed fraternity of out-of-door sports were young and studiously "doing sums," or studying the old battered spelling book in the country schoolhouse, some bare-footed urchin would hold up his hand, patiently at first, then with a frown and a wiggling arm toward the teacher, and in answer to the look of recognition would say, "Please may I go out?"

Well, brethren, I still do so. Most of the time I have that wistful longing to go out to escape from the busy desk and the constant stress of business, from the cramped confines of "house and yard," and to get where the bounds are more extended, where the limits reach from the north to the south, from the east to the west, from the center to the circumference.

The summer was long and very heated. The creeping and flying pests of the Sea Islands had worked their sweet wills upon our cuticles. Gossamer-clad and panting we had worried over the weary time and when fall came at last our souls rose within us and we hastened to make preparations to "go out."

Just here I must introduce you to the Curlew. That renowned craft is a strong sailing launch of the naval type, but so improved by a comfortable house built on her that she is spoken of as a "daisy." She sails well, and being fully prepared, was launched and ready for the channels, sounds, creeks, straits, bays, rivers and other water courses and places leading into, among and through the "Hunting Islands." Are ducks there? They are, and more are coming. Do plover, curlew and yellowlegs abound? They do, being on their southern flight. Does the festive deer gambol in the woods? Oh, yes, plenty of him. Fish? Plenty. On the islands Bob White is in season and everything is ripe.

There are those who like to adorn themselves in ancient hunting clothes with an "Injun" smell about them, avoid bathing or washing for weeks, will not sleep in a tent or house for fear of taking cold, rather enjoy lying down in a mud puddle to sleep and rising up filthy, unkempt and of unsavory smell, as who should say, "See what a hunter I am. I rough it like an aborigine, always ready." These claim that it is unlucky to wash, that filth and the clean woods can assimilate. They are frauds, every one. The great "out-of-doors" is clean, sweet-smelling and balmy. Its influence ought to make a dirty man clean. It ought to receive the dweller from the town and send him back perfumed and fragrant, cobwebs all swept away from mind and heart, imagination invigorated and soul pure. I have no use for an unclean sportsman.

As we grow old we are more solicitous for creature comforts, and so we made the Curlew very cozy. She takes four folding spring cots for beds. She has a table that will seat eight, and folds away in the carlins overhead when not in use. There is a carpet on the floor. A good lamp gives light at night, comfortable camp chairs afford easy seats for tired hunters, while the roomy cockpit outside is the common dressing room and lounging place by day. In the forecastle two men for cook and crew find comfortable places. This is the craft that furnishes transportation and quarters, and some account of her wanderings and the luck of the travelers will, I am sure, interest your readers, and therefore I will try to give you here a description of

The First Voyage of the Curlew.

The *personnel* was congenial, and made up of true sportsmen. I doubt if an invitation to any other amusement would have lured any of them ashore again after he had once embarked. The party was composed of the Skipper, the Surgeon, the Soldier and the Clerk, Elliot for cook and Jerry for crew. The route selected was more of the nature of a reconnoissance than for active shooting, as the air still remained as balmy as summer, without the great heat, and it had not become yet cold enough to drive the ducks down to us from northern latitudes. The Skipper is no stranger to your pages. Well seasoned with much salt water, he still tips the scale at over 280lbs.; but he can shoot a little if he gets in the right place, and the game does not wobble too much. The Soldier and the Surgeon are thin, wiry men, good for anything, and warranted to tramp from daylight to dusk for game. The Clerk is a fine young man whom the others are trying to bring up in the right path, and as he is willing and agreeable there are strong hopes for him. Elliot is the best cook who ever slept in a hammock, and Jerry is a multitudinous crew with many solid virtues. Elliot and Jerry are colored people.

Provisioned for a week, the gallant Curlew made sail from Paris Island on a beautiful spring-like day in this last November. All the ladies of the station turned out to see us off. They cheered and gave us many sweet wishes, and their smiles were very wide. Now a man may go very far afield when sent off with such a farewell, so we set the mainsail, hoisted up the jib, and were off in fine style. We hove to off Beaufort for a package of "Rough on Rats," for there were signs of a mouse on board, and the medicine was for him, and not as a sure cure for human despair. The brethren of the rod and gun at Beaufort shouted good wishes from the wharves, and with a fair wind and tide we were off on our venturesome voyage. On that day we had a crooked wind. Whichever way we turned the wind was fair. Through the devious way of the brickyards, into the broad Coosaw, down the same and into Bull River, with blue skies and smooth water, the fine breeze favored us. As we swung into Bull River a large flock of plover, curlew and other shore birds tempted us, and in a few minutes we had bagged fifty-four nice birds for the pan, and felt well satisfied for a beginning. Then we filled away, and in half an hour were snugly at anchor at Buzzard Island, at the Quarantine Station, where the kind hospitality of the venerable Dr. Sams made us feel very much at home. We lay there that night and slept the sweet sleep of the righteous sportsman, with none to molest us or make us afraid. In the early morning the Surgeon and the Soldier paddled up the creek and brought back a brace of ducks, which seemed to give them a good appetite for breakfast. After that repast we got under way and ran up Bull River to the Pacific Phosphate Works, where we were most generously received by Captain Roberts, the superintendent, who then and there laid plans for a deer and duck hunt in the near future whereat great sport is promised us, and of which the readers of FOREST AND STREAM shall have an account, if the present writer can get there.

We left those hospitable shores and worked down the Bull River and anchored in the Coosaw about dark on the second day of the voyage, having picked up a few more shore birds at the mouth of Bull River. Hoisting our stay light and saying our prayers, we turned in again in our comfortable quarters and passed the second night like unto the first, "and even more so."

We were up early the next morning, and worked up to the mouth of Parrott Creek to pass through into Morgan River. Just as we were fairly in the creek a heavy and threatening squall struck us, bringing on a norther. The little Curlew scudded under her jib in fine style, running down Morgan River at great speed, and so we ran into Savage Creek, on St. Helena Island, and anchored for breakfast. After that meal we were not satisfied to remain cooped up there all day, so the sails were close reefed and we beat out of the creek in fine style, and squared away down the river for Egg Bank, a great resort for shore birds. Presently the bank appeared above the sea horizon, but when we arrived there it was blowing too hard to land, although great flocks of birds were seen. We therefore ran to the southward for the mouth of Harbor River, leaving Egg Bank to the seaward of us, and hoping to visit it on some future voyage and get the birds that congregate there. The fresh, fair wind drove us rapidly into Harbor River, behind Hunting Island Light, and on to a mud bank that we did not know was there. Such a little thing as that did not dismay us and we soon hauled "our house and home" into deep water, and went on our way rejoicing. Our joy was short, however, for the tide was high, and among the marshes we entered a false lead, but after awhile found the true channel, and at sunset anchored in Fripp's Inlet, at the west end of Hunting Island. Supper tasted good that night, and the sleep could not be complained of. The appetites of the Soldier and the Surgeon were monumental, and the Clerk and the Skipper were fairly contented when they lighted their nocturnal pipes.

The morning of the fourth day dawned fair and lovely. The Surgeon slipped off for certain ponds, and returned later with several fine ducks. The Soldier and the Clerk picked up a few shore birds, while the Skipper "kept ship" and Jerry paddled across the inlet and returned with half a bushel of fine oysters. We had a noble breakfast that morning, and all the appetites seemed to be renewed, as is usual on such occasions. After breakfast we weighed anchor and worked up to Story River, and on our way passed a small island, as the higher wooded ranges on the marshes are called, and it seemed to promise well for ducks; while opposite it were long flats, on which curlew and sandpipers seemed abundant. We marked this spot, promising ourselves that we would return at some future time and see what could be found. We did so later, which will make "another story."

We ran out to Trenchard's Inlet, hoping to pass out to Bay Point and shoot birds there; but the tide was against us and the wind was light, so we steered for Station Creek on the homeward route. We made into Port Royal Sound just at sunset, and had just wind enough to stem the tide and reach the Naval Station at 9 o'clock. Four more delightful days it would be hard to match. We did not get much game, but we spied out the land and laid plans for more trips of the same kind which we hope to take in the future. The cold weather has not yet been severe enough to drive the ducks south to us, but we live in hopes and are all ready. At another time I hope to give you an account of other voyages, which will take us out of the dull routine of every-day life and give us glorious outings with great comfort. The first taste has been so good we still "want to go out."

C. H. ROCKWELL, U. S. N.

NAVAL STATION, Port Royal, S. C.

FLORIDA OYSTERS.

TARPON SPRINGS, Fla., Dec. 28.—The Captain and I have just returned from a short cruise. We had for some time talked of making a little run to some oyster beds that he knew of, up north of the 'Cootie, but one thing and another balked our plans. Last week we resolved to go anyway, and though the morning did not promise the usual bright Florida sunshine, we put our mattresses, stores and camp equipment aboard the Kingfisher, filled the water kegs and at 1 P. M. made sail.

With a light wind from the north'ard, we finally beat out of the river, and shaped our course to clear Deer Island. For a wonder, the wind was not quite dead ahead, being about north by west, and with a couple of "hitches" we weather Cedar Point about dusk, the trusty little yawl having walked along at a four-mile gait. Soon after we make out the mouth of the 'Cootie, but the light is so dim that we can see little more than the tree line on shore. The skipper is undecided whether to run into the 'Cootie for the night or go on, but finally decides that we can at least make "4ft. hole," so we continue north.

Having made out and rounded Grass Island in the gathering gloom, we stand in shore, for a palmetto "lump" on the mainland, and the Captain, having got his bearings, gives us the helm, and hanging on by the mainmast, directs the steering up the channel, in and out among the "Coon" oyster bars, back and forth for half an hour, till we drop anchor at the head of navigation "up Salt Creek."

Supper is the next thing in order, and we soon had the oil stoves going in the cabin. Having attended to that important duty and washed the dishes, we spread the awning over the cockpit, unroll the mattresses in the cabin—one on each side of the centerboard case—and make snug for the night. Then into the dinghy and paddle ashore to do a little exploring; and an ideal camp ground it is, high and dry, and as fine a grove of palmettoes as can be found.

With plenty of dry red cedar, we soon have a roaring fire of this fragrant wood, and seated before it the Captain smokes and recalls other tr ps to this favorite camp ground.

Here the lamented Nessmuk camped at one time for several weeks.

The fire burns low and we paddle out to the Kingfisher and are soon in the land of dreams. Next morning finds the wind still from the north, and none too warm, but oysters are what we came for and must have, so donning some old clothes, with a small "elevator" as a precautionary measure against cold, we paddle ashore, and carrying the light canvas canoe across the narrow strip of land, launch her in Oyster Bayou. Now for business. Armed with an oyster knife and gunny sack apiece, and the canoe between us, we wade along knee deep in the water, picking up the bunches of oysters, knocking off the small ones, and quickly filling our sacks with the large size.

Then back to the camp ground, where a roaring fire of cedar is made and we fall to opening the delicious bivalves.

A stew is soon in process of construction, and never did Blue Points taste half so good as these Floridas, fresh from the water, cooked with evaporated cream and Elgin butter, and washed down with coffee that only Captain Tarpon knows how to make, and with an appetite born of the salt air, leaves a breakfast long to be remembered.

Well, we ate oysters and oysters—on the half shell, fried, stewed, roasted and scalloped—till all hands voted enough. Then for something else. The tide is out, showing long rows of oyster bars in all directions for a mile, among which winds the tortuous channel, and how we ever got in here in the dark without once touching bottom no one but the Captain can tell. Bird and animal life in this wild and almost uninhabited country is of constant interest to a Northern tenderfoot. In the early morning the air is filled with thousands upon thousands of cormorants going out to the gulf to their daily fishing. In the evening they return inland, and disgorging part of their fish, feed it to their young partially digested. In the top of a pine near by is a lordly "bird of freedom" just finishing his breakfast of fish, which he has compelled a poor fish hawk to give up. This bald-headed robber does not fish for himself, but watches the fish hawks, and when one makes a catch quickly relieves him of his hard-earned breakfast.

At low tide the flats are alive with beach birds, plover, yellowlegs, jacksnipe and many others. Not 50yds. from the Kingfisher is a flock of "jacks" feeding where a man might kill twenty-five at a shot. Of course, we left the gun at home. We ramble around the cedar and palmetto groves, with here and there broad reaches of savanna, dotted with occasional clumps of palmetto that are islands at low tide. A half wild razor-back with six young pigs dispute our way, and as she seems decidedly on the offensive Tarpon discreetly suggests that we take the canoe and paddle up the creek to Salt Spring. So, stretched at full length in the bow of the canoe, Tarpon on his knees in the stern, we watch with delight this veteran canoeist wield the single blade, as without a sound or splash we glide up this beautiful stream, the water of which is so clear and transparent that one seems to be floating in air. The spring boils out in great volume from unknown depth, with a strong odor of sulphur, and is very salt.

Returning to the cruiser, the weather seems anything but encouraging, and with rain in the air, and a "norther" threatening, we reluctantly decide to cut short our stay at Oyster Bayou. And with the wind aft and plenty of it we slip outside and are soon making good time for the Anclote, and pick up our moorings in the "spring" about dark, thus finishing my first oystering trip with the genial Tarpon, who, with his sailorly ways, his knowledge of woodcraft, and his inexhaustible fund of story and reminiscence, makes a companion without whom such a trip as ours could not be possible.

CAMERAMBLER.

THE FLASK IN THE FIELD.

Editor Forest and Stream:

As I sit in my "den" to-night, having just finished a piece of tiresome work that I couldn't find the time to reach at the office to-day, my wife asleep in her chair with her pet dog in her lap, I take up, as usual, the FOREST AND STREAM; for, "chained" as I am, no one enjoys its columns more than I. For years I have been intending to become a subscriber, and since that intention has taken form I often "cuss" myself for the good things I have missed by not sooner becoming one of its family. Judging others by myself, and believing that he who knows it grows to love it, I often think that if we would induce our friends who enjoy sport, but who are not subscribers, to subscribe, we would be doing only our duty to the paper as well as a kindness to our friends.

I have been reading "Holland," by Shadow, in No. 24, and I find that on the occasion referred to both he and his companion carried a flask, and what I want to know is, is it only permissible to carry a flask when one goes woodcock hunting? I have read all the accounts of the hunting and fishing trips that have appeared in FOREST AND STREAM for nearly two years, and, unless my memory serves me false, this is the first trip in which a flask figured.

I had been told in my early days that without a flask fish would not bite; that to be a successful fisherman one had to sample the aforesaid flask and spit in the water, and that when you went hunting it was necessary to have something along to provide against snake bites; it mattered not what time of the year or the then whereabouts of the aforesaid snake. Was it Guy Carleton, when, initiating a novice, and telling him of the necessary "tackle" that would be required for a successful fishing trip, said something like this: "A jug of whisky; a few hooks; a bottle of whisky; a line; some more whisky, etc."?

Minute and very much in detail are many of the accounts of enjoyable trips that appear in your columns, but allow one who always carries a flask, knows its use and despises its abuse, to thank Shadow for omitting none of the necessary "tackle" for a successful woodcock hunt.

And talking about snake bites, some years ago there was in my office Dr. Trumbo, of Warren county, Vt., an ardent trout fisherman and a "good fellow," as most true sportsmen are, and he was telling me of some of his trips in the Blue Ridge Mountains after the gamy trout. I asked him if he was not afraid of rattlers, and he said: "No, indeed, we always carry an antidote. And, speaking of antidotes, we had with us on our last trip a fellow who didn't know much about fishing, but was a firm believer in the saying that 'an ounce of preventive is worth a pound of cure,' and fearing that he might be bitten by a rattlesnake he soon commenced to carry this theory into practice, and before long was past going. We left him asleep on the banks of the stream, while the rest of us went further up, hoping he would sober up before we got back; but when we did return we found him still

asleep, and to our surprise found also that he had been bitten by a rattlesnake, and while he was unharmed the snake was lying by his side dead. What better evidence, sir, do you want than that of the value of an antidote on a fishing trip?"

My reply was a laugh, and he turned toward me with a merry twinkle in his eye, but in a most dignified tone said: "I suppose, sir, you don't believe it. When I get home I will send you the rattles cut from the tail of that very snake, and perhaps then you will think I am telling the truth."

I thanked him for his offer and in a few hours had forgotten it, and you can imagine my surprise when two days afterward, in opening a package that came to me through the mail, I found the rattles as promised, with the Doctor's compliments. This clinched the matter, and ever since then I have stuck to my flask of antidote when on a fishing or hunting trip. C. M. WHITE.

WARRENTON, VA.

[See comment elsewhere.]

PODGERS' COMMENTARIES.

SAN FRANCISCO, Dec. 20.—*Editor Forest and Stream:* For the past year I have been reading in the FOREST AND STREAM the game and fish stories and experiences, without one word of protest at the rotundity of some of them, hence it might be inferred that I have hoisted them all in and stored them away in my memory as gospel, but I hope not to be called upon to testify. It might result in trouble. Also have I read attentively the discussions pro and con on skunk bites, snakes, gila monsters, and whether deer feed on lilypads or do not, and confess I am not settled in my mind as to which side has the best of the arguments or which is ahead. As a method of relief I have a suggestion to make, which is, for the FOREST AND STREAM to organize in its office a "Court of Reference," to consist of such loose element as may be lying around the premises (not necessarily of loose habits), which shall sit in judgment on the submitted discussions, and, after weighing the evidence, give judgment, and thus relieve the doubting Thomases of the readers of the FOREST AND STREAM from the struggle in their minds, and from lying awake nights trying to come to a decision themselves, and so escape occasional nightmares of deer jumping over us with lilypads hanging from their mouths, skunks sitting on our breasts discussing stolen chickens, and snakes curled up on our pillows with glistening eyes in the act of striking (the result of having been out with the boys is indignantly denied). I believe there are numerous readers who will indorse the proposition of this Court of Reference and feel a great sense of relief in having these knotty questions decided for them.

In selecting the members of the court it would be well to select those who have not been addicted to snakes, and have not written about them, and know no more about natural history than many who write on the subject; in other words, who will be unbiased in their judgment and give their verdict according to the preponderance of the testimony.

Among other interesting questions of the day, interesting to sportsmen, I submit that of whether they have any rights that poachers are bound to respect. This is one which is very much exercising our local shooting clubs at the present moment.

Within a few miles of the city are extensive marshes that have been leased by the clubs from the owners of the land and water at a stiff rental, and shooting boxes erected at considerable expense for the winter duck shooting. All this has aroused the ire of that portion of the community of the socialistic ranks, who repudiate the idea that there should be any restriction of their right to shoot when and where it pleases their lordships, regardless of the fact that the clubs are paying the owners of the property for that privilege; and they have the assurance, born of the views of the Mosts and Altgelds, that the newly imported citizen had more rights and privileges, that he does not pay a cent for, than the native who does.

The clubs first tried invoking the aid of the constables to arrest the poachers. This proved a farce, as the justices, who owed their election to this element, discharged the culprits without trial as fast as they were brought before them. One of the gamekeepers of the clubs was shot and killed by one of the poachers, and although the crime was proved beyond question as a case of foul murder, the jury, composed of the same element, acquitted the murderer. Meantime the clubs carried the question of their rights to a Superior Court, before a judge of the locality; but this Dogberry sustained the poachers. The clubs then appealed to the Supreme Court, which reversed the decision, and decided that the clubs stood in the light of owners, and had the right to exclude trespassers. This decision raised a howl from the shoot-where-you-please fraternity, who swear that all the courts in the world cannot prevent them from shooting over the clubs' grounds, and they will and do defy the law. As a result of their determination to do so, you are very likely to hear of a dispensation of Divine Providence, accompanied by a charge of buckshot, that will deprive the victim of any further interest in shooting, as the clubs' gamekeepers are now patrolling the marshes with guns that have a tendency to go off at fitting times and places, regardless of circumstances. All this row has spoiled in a measure the winter shooting and put the clubs at great expense.

The time was not so many moons ago when I indulged in a floating shooting box on these same marshes, which we moored close under the bank of one of the sloughs, and sitting on the forward deck shot all the teal, mallards and canvasbacks we wanted. Teal in those days were sold in the markets for 75 cents a dozen, mallards and canvasbacks at from 40 to 50 cents a pair. In 1848 a deer or grizzly bear could be found on the spot where I am now writing, a street lit by electricity and paved with asphalt extending a mile or more beyond. Davis relates in his "Sixty Years in California" that on Mare Island, where the Navy Yard now is, a drove of not less than 500 elk could be counted any day, and that on one occasion, when sailing past in a small schooner, they encountered a drove of them swimming across from the island so numerous that they could make no progress through them. To get an elk now one must go back several hundred miles to the wilds of Oregon, as yet uninhabited.

It has been a day dream of mine, when sitting in front of the fire *à la* Ike Marvel smoking my pipe, that the spirit of adventure led me to come to these shores in those days, or rather letting my imagination presume that I did come. Just think what a game preserve this country would have made had not gold been discovered. The little settlement of Yerba Buena, now this great city of San Francisco, with its harbor then full of fur seals and salmon, the outskirts abounding in deer, grizzlies and elk, and ducks of all sorts in little ponds now covered with granite blocks, and nobody to take the trouble to shoot them. When Dana, the author of "Two Years Before the Mast," visited these shores such was the state of things. What a paradise for the sportsman to go to when he "handed in his chips." The Indian's happy hunting ground would have been a fool to it, not in it. There is good sport yet, but one must go a distance for it. The market-hunter, with his swivel gun and No. 8 caliber, is doing the work of destruction. They locate a pond or small lake, attract the ducks by throwing grain into it, and when it is covered with them densely let loose the swivel gun, loaded with a pound of shot, and kill a hundred or two at a shot. It is simply murder, but although there is a law against it, what does the gentleman who has his "rights," as he calls them, care for law? It is the same old story with which you are so familiar—no conviction to be obtained, he is among his friends, and laughs at game wardens.

There is one consolation we have left—the salmon. They can't deprive us of that sport as yet. In the rivers emptying into the ocean up the coast they come and go as ever, and what sport it is to land a dozen in an afternoon with rod and reel! It is not always with the fly, as some seasons they will not rise to it, and some people still assert that the Pacific coast salmon never rise to a fly, which is not true, as I have caught them galore with a fly; but as a general thing the feather spoon is used, and that they take ravenously. But, like all other luxuries, the cost of salmon in our markets has "gone up." The time was when you could buy a 10 or 15-pounder for 10 or 15 cents; now they cost 20 cents a pound, but I imagine that price would not stagger you at the East.

As I have said, what a country this would have been for a sportsman's preserve for half a dozen of your rich men. It could have been bought from the Mexican Government before we acquired it for $3,000,000, an area larger than two New York States, and what a speculation! The land covered by this city is worth fifty times that, to say nothing of the State's gold product of over a billion. But alas! as the wise old lady remarked, "If our fore sights were only as good as our hind sights," which experience has proved they are not.

I laid down my pipe and the FOREST AND STREAM, which I was reading to "make these few remarks," which I see have been as long drawn out as a "fifthly and sixthly" sermon of a hot Sunday afternoon; so I will resume my pipe and the FOREST AND STREAM, and the discussions on lilypads, skunks and catamounts, reserving my conclusions for that "Court of Reference" that I have suggested, and which I hope you will organize forthwith.

PODGERS.

Charley Reynolds.

Editor Forest and Stream:

Some time in the winter of 1872 or early spring of 1873 there came to me on the Missouri River above the Yellowstone a young man on purpose to make my acquaintance.

His name was Charley Reynolds, and his reputation had preceded him.

From time to time the Rees and Mandans had spread rumors of a strange white man on the lower river who had shown great skill as a hunter of deer, elk and other game. It was said that the Indians had offered him several ponies for the medicine or talisman by which, as they supposed, he had accomplished these feats.

I found him a clear-eyed, quiet and gentlemanly fellow, whose tastes led to dangerous exploits and adventures. His modest equipment of rifle, pony and lightly laden sledge would hardly satisfy the demands of a sportsman of to-day. He was then on his way with a companion up the river in search of new hunting grounds.

I met him but once or twice again before that fatal day on the Little Big Horn, where he lost his life, with many others, in battle with the allied Sioux and Cheyennes.

I suppose that when Major Reno retired with his command to the dubious security of a bluff in the rear, Charley, as well as Bloody Knife, whom I also knew well, was attending strictly to business in resisting the charge of the hostiles.

I regard Charley Reynolds as the most skillful and successful hunter of game that came into the upper Missouri River country in my day. The Indians first welcomed him, then, their fears and envy being aroused, they brought complaints to the agent that he was killing too much game.

There were mighty hunters in that region, dating from the days of Lewis and Clark and Captain Bonneville.

As a guide, Charley had the hunter's instinct to traverse successfully unknown regions, and if he was ever surprised it was in the last fight, when he found himself alone against vast odds. J. S. K.

Editor Forest and Stream:

I read with great interest the article on Charley Reynolds which appeared in your issue of Dec. 19, because I used to know that good man and am familiar with many of the occurrences which took place on the Black Hills expedition of 1874. At that time I was an enlisted man in the 7th Cavalry, a member of Capt. French's company, and I often used to see Charley Reynolds both on the march and in camp at night. I remember one trifling incident, not mentioned in the article which you published, which showed the constant alertness and the keen sight possessed by him.

While we were in the Hills we had a little scrap with a small camp of Indians, all of whom except one at length broke away from us. The camp of the wild Indians had been found and surrounded by a number of our Santee Sioux scouts, and one aged man, called, if I recollect right, the One Who Stabs, was captured and brought into camp. Another man was urged to go to see Gen. Custer and started to do so with one of these boys as a guard. Having these two men as hostages, the Indian camp was left unwatched, whereupon the women promptly packed up their stuff and disappeared. The man who was going to see Gen. Custer with the Santee boy got frightened before he reached the camp and bolted. The Santee shot at him, but did not stop him, and the Indian disappeared in the timber.

The next day, soon after starting, Reynolds, who was with the headquarters outfit, pointed out a whitish object standing in the timber on top of a distant hill. Those of us who saw it took it for a white rock, but Charley told the General that it was a horse, and being ordered to go and see what was there he rode on, and later in the day brought in the saddled horse of the Indian who had the day before broken away, its sides all smeared with blood.

It is most interesting to me to have the incidents of these long past days brought before me once more, and I am truly grateful for this brief biography of Charley Reynolds. ENLISTED MAN.

Natural History.

THE GRAY WOLF.

WHY is the gray wolf of Russia reputed to be so much more ferocious than that of America? This question has doubtless occurred to many hunters and sportsmen of America, and I do not recollect ever hearing an answer.

Can it be that the American beasts of prey are deficient in courage?

One is scarcely willing to concede this when the grizzly, the jaguar, the cougar, or even the diminutive peccary are remembered.

Now I have a theory, and an anecdote in illustration thereof, and I propose to offer it as the groundwork of my own opinion in the matter.

The inherent dread of man common to all the brute creation, foretold in Genesis ix., 2, seems, as a rule, not to be overcome save by hunger. This I believe to be the basic truth underlying the whole problem.

All this wide difference in the apparent ferocity of the European and American gray wolf is easily accounted for by two considerations.

In all countries where governmental despotism has deprived the common people of the natural right to bear arms, where in most cases the peasant dweller on the border of the forest has but his axe or pitchfork with which to wage war upon predatory animals, it is easily understood that the wild creatures of the jungle will inevitably become more venturesome; and, as in the case of the native population of India, still more so if the religious teaching of the people has, ages since, led them to become vegetarians, and to wholly avoid taking animal life.

Again, if any country having a severe winter climate becomes at any time, particularly in severely cold weather, deficient in ground game, the natural result of increased ferocity of animals of prey may safely be expected.

How abundantly the forests of Russia and France are supplied with small game which is accessible to the gray wolf in severe winter weather I do not know, but the very fact of the Russian gray wolf becoming a serious menace to human life among so many hamlets of the Russian peasantry argues a very serious deficiency in their natural food supply; while, on the other hand, a somewhat extended hunting experience over a large part of the northern United States has taught me that it is very probable that no continent or island of the wide earth was ever so well supplied with game, both large and small, as was North America when first the European trod its shores.

The American Indian was a hunter of the highest type of courage, and—as in the case of an Indian who perished in a night attack of gray wolves in the forest on the headwaters of Black River, Wis., in the days of the first advent of the whites, when the mangled carcasses of seven big wolves were afterward found where lay his bloody tomahawk and knife among his own disjointed and scattered bones—had, ages since, taught the denizens of the American forests that here was some one whom it was perfectly safe to let alone.

Why, then, did not the gray wolf of America harass the Indian villages and the border settlements of the white people, and live on the women and children of the inhabitants?

In the first place, owing to the phenomenal plenty of game, large and small—as the little boy on the street occasionally remarks—"he didn't have to." And secondly, he had long since learned that there were several undertakings in the hunting line more wholesome in their nature than a job of this kind.

Now, on the other hand, what could the gray wolf of America do when really cornered and driven to the wall by hunger? I happen to know of one individual brute of this type who could have given points to any gray wolf that ever swore allegiance to the great White Czar!

It is not a "Mary-had-a-little-lamb" sort of a narrative. If it were not a big story I would not tell it. And a dozen reliable men could yet be found to verify every point which I ask the readers of FOREST AND STREAM to believe.

I think it was the winter of 1865–1866 that I lived in the furthest outlying settlement on that part of the then Minnesota frontier on the east bank of the Des Moines River. The winter was a long and cold one, and one day near the latter end of winter a young man named Henry Lyman reported that a monster dog, which he supposed to have been a Newfoundland, had followed him along the snowy road while returning from a visit to a neighbor's house the evening before, and that the night was light enough to enable him to see the brute distinctly as it trotted along behind, and that twice he stopped and whistled to it and tried to call it up to him, but without success; adding that afterward, happening to glance backward to see what had become of the creature, he was startled and alarmed to note that it was almost at his heels. Although it sprang quickly away again as he turned toward it, and did not afterward trouble him, he kept an eye on it, until, nearing his home, the animal dropped behind and disappeared.

Considerable interest and some uneasiness was manifested in the little settlement regarding the young man's story, for his veracity was beyond question, and no Newfoundland dog was known on all the frontier. (Let me add that never in the history of the settlement, or in the experience of the trappers who formed it, had a gray wolf been known in all that prairie country.)

Two days after the young man's adventure, while my old trapping comrade, Jim Morehead, was busily engaged in work in the little yard around his home, situated in the timber land on the west bank of the river, and having turned a shoat or small hog weighing some 50 or

75lbs. loose from the pen into the inclosure around the house for exercise, he was about midday suddenly startled to see a gray wolf, "mighty nigh as big as a yearling calf," jump over the fence, and seizing the unfortunate porker across the nose just below the eyes, with one awful, wringing, slashing snap completely separated the nose from the head.

As Jim turned toward the great brute it turned and sprang back over the fence and disappeared in the bushes, while the pig fell and bled to death almost instantly.

As the pig was fat and otherwise entirely unhurt, Jim dressed it for his own use, and again the wolf went hungry.

Jim's story passed quickly through the little settlement, and mothers listened to its repetition with paling cheeks, and all concluded that we had a something worse than a white elephant on our hands.

Down the river below Jim's place lived a neighbor, whose name I have forgotten, who owned a bull dog of undaunted courage and ferocity, which would at the word of command tackle anything short of a buzz saw.

I think it was two days after the death of the pig, about the middle of the afternoon, while this man was employed in front of his house, and while his dog stood at a little distance, the wolf sprang over into his inclosure and made straight for the dog, which instantly bounded forward to the fight.

Seeing the formidable appearance of the wolf, without an instant's pause, the man sprang for his axe, lying but a few steps distant, and rushed to the help of his gallant dog. He was too late.

The fray was measurable only by seconds—few in number—when the wolf sprang from the uplifted axe, over the fence, and again vanished in the bushes.

The dog lay on the chips utterly unable to rise. Gathering the noble animal up in his arms, he carried him to the house, and, as some affair of business which I have now forgotten made it imperative for himself to go a few miles down the river, and to stop over night at the house of another settler, as night was approaching, he made a comfortable bed for the poor brute against the outside wall of the cabin, and hastily building a kennel around him with a lot of barrel staves and boards to make him comfortable as possible for the night, in spite of the protestations of the frightened wife and children (whom he knew to be perfectly safe so long as they remained indoors), he departed on his errand, hoping still to be able to cure the saber-like slashes in the body of his unfortunate dog.

About midnight the wife and children were aroused by an appalling racket of tumbling boards and dying cries, and when search was made in the morning by a neighbor, who followed the bloody trail of the wolf to the foot of a hill in the bushes below the house, the remains of the hapless dog were found, he having been half devoured.

Down the river a short distance below lived a man named Hall, and as he knew that I had poison, and understood the preparation of baits for wild animals, about noon he sent his girls over to request me to prepare a dose for the monster. Preparing what I believed to be a quickly fatal dose, and putting it on the end of a splinter of wood, I instructed her to be careful that on no account must it be touched by the fingers, but dropped on top of the remains of the dog; and on going down the next morning the old man found the wolf lying dead near his victim.

He was quite excited, and sent word to me to come and see the brute, adding that its size was amazing, and that it was "about 6in. between the eyes!"

As I had seen wolves before, I didn't take the trouble to go to look, and the old man got $2.50 for the skin.

The only probable solution of the mystery of his appearance seemed to be that he had drifted or wandered away from the buffalo ground to the far Northwest (probably impelled by winter blizzards, which he could not face) until he had struck the headwaters of the Des Moines River and followed it down.

As the country he had lately traversed was the very barest of ground game in winter of any land I ever knew, he had reached the settlement with a fairly craving appetite.

Had he had a comrade as sharp set as himself they would probably have pulled down and devoured the young man mentioned on the first night of their appearance.

Had there been a half dozen of them, and had they met an equal number of Russian wolves, backed by all the "offskys" of the Russian army, I fancy that when the little discussion was settled the hides of the Russian wolves "wouldn't have held cornshucks."

ORIN BELKNAP.

STATE OF WASHINGTON.

THE PIKA.

THE North American pika is a peculiar tailless rodent, very interesting, and worthy of more than passing notice. It was met with frequently and in numbers in the earlier surveys of the West, and has received no little attention at the hands of naturalists. It generally stays about timber line, but is frequently met with lower. They are quite numerous above timber line at Pike's Peak, where I captured a number several years ago. I also shot one specimen below timber line at Mount Lo Lo, Montana.

In a museum publication I gave not long ago the following notes on this species:

"The Little Chief hare or Rocky Mountain pika (*Lagomys princeps*) was described by Dr. Richardson in 1829 (*Fauna Boreali-Americana*) from a specimen collected near the south branch of the Mackenzie, considerably north of the United States boundary. It ranges southward along the summits of the Rocky Mountains, increasing its altitude with decrease in latitude. In Colorado it is never found below timber line. Only one species was recognized in the United States prior to 1889, when Dr. C. Hart Merriam described another species from the Sierra Nevada Mountains in California. Dr. J. A. Allen gives generic and specific descriptions of *Lagomys princeps* in 'Monographs of North American Rodentia,' 1877. They range much in size and color, irrespective of age, sex, season or locality. Above they are grayish brown, varied with black and yellowish-brown; sides, yellowish-brown; below, grayish, more or less strongly tinged with pale yellowish-brown. They are nearly tailless, have five toes in front and four behind, armed with short, arched, compressed nails, with a prominent, naked pad at the base of each toe. They range in length from 6.5in. to 8in., averaging about 7in. Ears large, broad, rounded. Whiskers numerous and long (1in. to 2.5in.). They are found very abundant in many places in the Rocky Mountains.

Concerning the habits of the animal Dr. Allen says (Op. cit.): "Their habits seem everywhere much the same. The animals are everywhere found in communities, living among the loose rocks from a little below timber line nearly up to the snow line. They appear to rarely wander from their homes, are timid, yet easily become familiar. Though retreating to their holes when first alarmed, they soon come cautiously out, one after another, till one may hear their sharp little cries in every direction. Their color so nearly resembles that of the rocks they live among that they are not easily seen, and their cry is of such a character as to easily mislead one in respect to the point from which it proceeds, seeming to be far away when really only a few feet distant. They sit erect like marmots, and in no way resemble the hares in habits. They carry into fissures of the rocks large quantities of grass, which they lay up for winter consumption. They are weak, sedentary animals, and are apparently strictly diurnal in their habits."

The pikas, living and fossil, are all traceable to a single genus, *Lagomys*, with eight species, found only in western North America and northern Asia. Two species are found in North America, three in the elevated parts of northern India, and three others further northward. Formerly they extended much further southward and westward, their fossil remains having been found in the Pliocene strata of England, France and one of the islands of Corsica and Sardinia (Op. cit.). They represent an ancient family, being a less specialized form than the hares.

M. J. ELROD.

ILLINOIS WESLEYAN UNIVERSITY, Bloomington, Ill.

[No one who has spent much time among the high mountains of western America can have failed to hear—if not to see—this little animal, which is better known as the Little Chief hare. It is an interesting species, found often in great numbers on the mountain side, where it makes its home in crannies and holes among the slide rock.]

Camp-Fire Flickerings.

"That reminds me."

A Vermont Rattlesnake.

"HEY? Didn't s'pose the' was any rattlesnakes in Vermont?" said Dan'l, as loudly as if he was talking to himself, and turning his best ear to me. I signaled a negative, and he continued in undiminished volume:

"Good land, yes! The' use' t' be lots of 'em on the Barnum Hill, so I've hearn ol' folks tell, and the's been some killed there since I can remember.

"Why, one day in harvestin' I was goin' 'long the road towards the house, an' I see what I thought was a snake a-layin' 'crost the road, clean acrost both wheel tracks, an', by George, when I cum clus tew, it was a tormented great blacksnake. I got me a stake out o' fence an' killed it, an' it measured six foot. That was consid'able of a snake for this Northern country."

"But it wasn't a rattlesnake," said the listener.

"Well, I was goin' to tell ye. Levi Fuller had a piece o' wheat ready to cut an' wanted me to cradle it for him. I was a pooty good hand with a cradle in them days. So we ground up the cradle scythe, an' I went at it an' he follered me up a-rakin' an' bindin'. It was the next day after I killed that blacksnake an' my head was full o' snakes."

"None in your boots, Dan'l?"

"No, sir; I never indulged. Well, I hadn't cradled more 'n half way acrost the piece afore I heard a kind o' sharp buzzin' sort of a noise just ahead of me, an' I stood right still an' begin to look, an' by George! there I see a snake kinked along 'mongst the wheat, with his head raised up a little mite, not quiled up rattlesnake fashion; but I knew he was one, for he was all spotted, an' that buzzin' noise kep' a-goin' all the time, the wheat a-wigglin' right where the sound come from.

"You'd better b'lieve I backed off pretty lively, but mighty careful. I hollered to Levi to come there, an' I as'd him if that wa'n't a rattlesnake, for I knew he'd know, 'cause he'd killed 'em.

"He stood off quite respectful, but he looked at it hard. 'Yes,' says he, 'that 'ere's a rattlesnake, sartain.'

"Well, we held a council of war, an' the upshot was, Levi put for the house to git his gun 'at had been loaded for woodchuck all summer, an' I staid an' watched the snake, but the snake didn't stir none to speak of 'fore Levi got back, all out o' breath.

"We made up our minds we hadn't better depend altogether on the gun, seein we hadn't but one charge, so I got me a good oak stake out o' the fence, an' crep' up, whilst Levi stood ready to give him a shot if I didn't lay him out. Well, I up with my club an' let the snake have it right on the head. Levi stood squintin' along the gun, with his finger on the tricker. The' was a locus' riz up an' went off snappin' his wings, but the snake only kind o' flopped up an' lay stiff as a maggit."

"Killed him the first lick, didn't ye, Dan'l?"

"Good land, no! 'T wa'n't nothin' but a butt'nut root—but it was the nighest I ever come to seein' a wil' rattlesnake."

AWAHSOOSE.

A Russian grand duke, one of the Czar's predecessors, was once the guest of a German prince. It was early in the century. In Russia the imperial double-headed eagle is to be seen everywhere and on everything throughout the empire, stamped, painted, embroidered or sculptured. At that period the education of grand dukes was somewhat limited. This grand duke went out shooting in Germany, and, among other things, shot a large bird. He asked an experienced huntsman who accompanied him what the bird was. "An eagle, your highness," was the answer. The grand duke turned on him in an irritated way. "How can it be an eagle," he asked, "when it has only one head?"—*Argonaut.*

Photographs of Dead Game.

MARIETTA, O., Jan. 2.—*Forest and Stream Pub. Co.:* Enclosed find one dollar and twenty-five cents for copy of the dead bird picture, "Woodcock." The other two ordered from you are so good that I will complete the series. Yours very truly, ROBT. N. PAYNE.

Game Bag and Gun.

ON SNOWSHOES TO THE BARREN GROUNDS.

UNTIL within a few years, the little that we knew of the musk-ox and his home all came to us from arctic explorers and from employees of the Hudson's Bay Co. Lately, however, at least two most excellent and interesting volumes have been written about this far distant land by sportsmen who have visited it for the distinct purpose of killing musk-ox, and it is with the last of these that we have to do.

In his book entitled "On Snowshoes to the Barren Grounds" (Harpers), Mr. Caspar Whitney gives us the narrative of a winter trip made from Edmonton, N. W. T., to a point in the Barren Grounds within the Arctic circle and back again—a narrative so well told and so graphic that the thoughtful reader, and above all the reader who himself has endured some of the hardships of outdoor life, may in a slight degree comprehend what is needed in the way of courage, hardihood and endurance to enable a man to successfully face the horrors of that land of desolation. We are most of us so thoughtless in our reading and our talk that descriptions of suffering make little impression on us.

Most of us indeed have never really suffered. We do not know what it is to starve, to freeze, or—worst of all—to endure the tortures of thirst. It is not strange, therefore, that we fail to comprehend descriptions of such hardships. He who has passed through suffering of this sort, however, remembers, as the days passed and no food could be had, how he grew weaker and weaker, not suffering much actual pain, but realizing hour after hour that he was becoming less and less able to do a man's work. So the man who has faced the horrors of the waterless desert preserves a keen memory of the gradual drying up within him of the water springs, unthought of in a land of lakes and streams.

Mr. Whitney's story is one of endurance rather than of adventure. He dared to face the rigors of an arctic winter, and to hunt on the Barren Grounds at a time of the year when even the Indians inhabiting the country never venture thither. On these Barren Grounds there is no wood, and the only protection from freezing at a time when the thermometer goes down to 50, 60 and 70 degrees below zero is the clothing the man wears. True, a little wood is taken along for cooking purposes, but the fire lighted is only enough to boil the kettle, and when this has been done no artificial warmth can be had until the next time comes for eating or for boiling the tea-kettle. For food the travelers depend wholly on the country, killing the caribou, if these are found, or, if it is summer, depending on the fish in the lakes and streams. As the only means of transportation are dog sledges in winter and canoes in summer, it may readily be seen that the carrying of food for the men and animals of a party is out of the question

To go to the Barren Grounds does not necessarily mean to kill musk-ox. However it may have been in the past, it is certain that to-day the range of this animal is much restricted. While we are told that in former years the musk-ox was found as far south as the timber and as far west as the Mackenzie River, it is said that now it does not reach the timber nor the Mackenzie River by a good many miles. Mr. Whitney says: "Many parties go to the Barren Grounds and never see even a musk-ox track, and many more skirmish along the edge, fearful of a plunge into the interior, yet hoping for the sight of a stray ox." As the musk-ox retreat the hardship of reaching them constantly increases, and one wonders whether a time will ever come when their remoteness will protect the species from absolute extinction.

On a trip such as that made by Mr. Whitney the traveler has to depend almost altogether on himself. It is true, he travels with Indians who know the country, and who are always on the lookout to kill food which all share, but he can not expect any one to work for him. He must drive his own sledge, feed his dogs and do all his own work. To get along at all he must show himself as good a man as the Indians who were born and have always lived in this arctic region, and so are inured to the hardships of its life. He must do all this and be ready to travel on snowshoes from twenty to forty miles a day, and when the supreme moment comes and game has been discovered he must take part with dogs and Indians in a mad race after the herd, and must literally run down what he kills. Mr. Whitney did all this, and besides did not even have an interpreter.

Let us see how Mr. Whitney got his first musk-ox, remembering that in this hunting so called it is each man for himself. The robe belongs to him who kills the animal. Hence each man tries to get the first shot and as many shots as possible before his companions can get up; there is no concert of action. Each man is working for himself and is wholly careless as to the success of his companions. Mr. Whitney says:

Instantly there was excitement enough on top of that ridge to put life into eight hungry men. I never beheld such agitation. The Indians for a minute huddled together, chattering and grinning and gesticulating, and then each man rushed to his sledge and began slipping his dogs from the harness. I knew then we had sighted musk-ox. Of course I had suited my action to the Indians', and began unhitching my dogs also, but my harness came from the fort and had buckles, which in the bitter cold were unyielding; and by the time I had got all my dogs loose, put on my lighter capote—for I saw we were in for a long run—and strapped on my cartridge belt, all the Indians and all the dogs had several hundred yards start, and were going along at a rattling pace. I saw at once that it was every man for himself on this expedition, and if I got a musk ox I should have to work for him. And then I settled grimly to the business of running. Within about two miles I caught up with the Indians, who had stretched out into a long column, with Seco and Echeena leading by half a mile. In another mile I had worked my way through the stragglers and was hard on the heels of Echeena, but Seco was still about 200yds. ahead, and going as though he could keep it up indefinitely. On my attempt to pass him Echeena let out a link, and I had all I could do to keep at his heels; but in our race for second place we cut down Seco's lead by 100yds.

Mile after mile was passed over before the musk-oxen were sighted. Through knee-deep snow, over rocks, racing, staggering, falling, the struggle continued. But at last, says Mr. Whitney:

As we were working our way up a rather higher and broader ridge I heard the dogs bark, and, rushing past Echeena, reached the top in time to see a herd of about twenty-five to thirty musk-oxen, just startled into moving along another ridge about a quarter mile beyond Seco, who with his three dogs was racing after them not 50yds. ahead of me. Disgust, disappointment and physical distress momentarily stupefied me. Then the sight of the musk-oxen, and the thought of what I had endured to reach them, fired me to re-

newed action. I anathematized Seco and all the Northland Indians for their fool methods of hunting, and increased my pace. The musk-oxen were now in full run to the north along the top of the ridge, galloping like cattle, with heads carried well out, though not lowered, and going at a pace and with an ease over the rocks that surprised me. Their big bodies, with the long hair hanging down to emphasize the shortness of legs, gave a curious appearance to the flying herd.

The wind was blowing a gale from the south, and we had hardly reached the top of the ridge on which the musk-oxen had been running when they disappeared over the northern end of it. By the time I reached the end of the ridge the main herd was a mile away to the north, and still going, but four had separated from the band, and were running through some hollows that bore almost due east. I instantly determined to follow these four because I saw I could get to the leeward of them, and I felt they would eventually head north to rejoin the herd. A caribou always circles up wind, but musk oxen travel in any direction that necessity demands. Seco, with his dogs, was just ahead of me, keeping after the main band, and Echeena I had lost sight of. I knew that separation from the Indians might cost me my life, but musk-ox was the first and life the secondary consideration at that moment And I started off at my fastest gait to the northeast, keeping a ridge between the musk-oxen and me, and knowing if they crossed ahead to the north I should come on their tracks.

At last the hunter, utterly exhausted, found himself within 100yds. of two of the musk-oxen and felt that now he must take his shot, for he was nearly spent. He says:

For a moment I rested to get my breath, and the musk-oxen were still going from me; and then another attempt. The fore sight for an instant held true—another second's breathing—a quick aim—and I pressed the trigger. What a feeling of exultation as I saw my quarry stagger and then drop! I was dizzy with delight. I gave vent to a yell, which, together with the report of my rifle, sent the other musk-ox into a wild gallop. It turned sharply to the left and went over a ridge with me following on a run, all the while endeavoring to throw another cartridge into my rifle barrel. But the excessive cold, aided probably by my excited action, handicapped the mechanism, and the shell jammed.

By the time I had sent the cartridge home, running meanwhile, I got over the ridge, and was just drawing a bead on the galloping musk-oxen, when two shots in quick succession turned it staggering; and as it dropped I sent a bullet where it would do the most good—just as Echeena and one dog came running down from a ridge opposite, so that I and Echeena had the honor of scoring the first and second musk-ox. Then I went back over the ridge to look at the one I had brought down. It was a cow. The sex was a disappointment, to be sure, and I should not take this head that had cost me so much to secure; but nothing could dull the joy of having, after a tramp of about 1,200 miles, killed the most inaccessible beast in the whole wide world.

This book is well worth reading, for it tells of a land and a climate of which we know nothing. It is also a very handsome book in respect of its numerous and very beautiful illustrations, many of which are of implements and utensils peculiar to the far north and its inhabitants, either red or white.

It should have a place on the shelves of every sportsman along with Mr. Warburton Pike's volume on the same subject.

WHO OWNS THE GAME KILLED BY THE GUIDE?

THIS question was raised by something which somebody said a few weeks ago in FOREST AND STREAM. I thought it was a foolish question for a sportsman to ask. Anybody else might ask it properly enough, but for a sportsman to ask it—or even one who desired to be reckoned as a sportsman—this, to my mind, involved an incongruity. A sportsman, as a sportsman, owns and is entitled to count in making up his score only the game which he pursues, captures and kills himself. If, in addition to this, he desires to bring home a bigger bag of game than he can thus secure, it is perfectly proper for him to buy from his guide, or to buy in the market house, or to buy anywhere he can. But game so obtained is not acquired under any law or rule peculiar to sportsmanship. It comes under the law of purchase.

But when the question was asked, instead of keeping my thoughts to myself, as, in any but a moment of weakness, I would have done, I allowed myself to answer the question in black and white, wasted 2 cents on a postage stamp, and in due time it appeared in print. And that is how I got into trouble, as men generally do when they tamper with things which are none of their business. For a few days later the editor of FOREST AND STREAM sent me a brutal sort of a note, which read as follows: "NEW YORK, Dec. 12.—*Dear Mr. Shaganoss:* I printed your sentiments on the guide game subject, although I am inclined to think that you were somewhat harsh in your judgment. That is to say, suppose one should go out in the Jackson's Hole country with Billy Hofer, and because of myopia should fail to bring down game, and they were in menace of starving to death, don't you think that if the sportsman should have Billy kill an elk and if he brought home some of the jerked venison and sent you a chunk of it, he might look upon it as one of the legitimate fruits of the expedition?"

A nice letter that for an editor to send to "one of our esteemed correspondents!" Just as if I had nothing to do except to answer Jackson's Hole conundrums. The fact is that when the letter came I was off on a brant-shooting trip down on the Virginia coast, and since returning I have had to work with the diligence of a barrel of sweet cider in order to make up for, not lost time—for time so spent is never lost—but to make up for time so utilized.

But to the letter. "Come, let us reason together," saith the editor.

First—A man so seriously afflicted with myopia that he cannot see to shoot an elk had better stay out of Jackson's Hole.

Second—The laws of sportsmanship, though unwritten, are as well settled and as unalterable as any that Mede or Persian ever made, so far as they apply.

But in the language of the immortal Jack Bunsby: "The bearings of this observation lays in the application of it."

Third—When a man, either from myopia or for any other cause, is "in menace of starving to death," he passes outside the domain of the laws of sportsmanship, and becomes subject to the code wherein "self-preservation is the first law of nature." He would then be fully justified in getting game in any way possible—killing it with a club, for example.

Fourth—If, after satisfying the demands of hunger, any "jerked venison" should be left ever, the great law of charity would then apply. Of course, it should be given to the poor, and consequently a "chunk of it"—and a big chunk too—would come to me. But this, too, would be outside of sportsmanship. It would be charity pure and simple—and a pot-hunter can be as charitable as anybody, if he wants to, and in the practice of charity or kindness to others he is entitled to full credit for what he does.

Fifth—The first great law of sportsmanship imperatively requires that as against the skill of the sportsman the game shall be given a fair chance to utilize its cautionary instincts as regards the avoidance of danger, as well as its speed and shrewdness in escaping from danger.

A man who disregards this law in the capture of game has no right, *in re* such capture, to the name of sportsman. To the extent to which he so disregards it he adopts the methods of the pot-hunter and should take rank accordingly.

Guides sometimes conform to this law, and sometimes they do not. In the latter case the sportsman gains nothing in respect of sportsmanship by claiming the guide's game. He might just as well buy the same game in the market house, where he could get it much cheaper.

Sixth—Following this rule of "giving the game a fair chance," we get the chiefest pleasure of sportsmanship—the pleasure derived from the pursuit of the game, enhanced, when fortune favors, by actual capture. This includes the pleasures of the camp, the pleasures of the woods and the waters, the pleasures of genial fellowship and sometimes of generous rivalry, and the semi-barbarous pleasure of outwitting the cautionary instincts of the game, and of overcoming its speed and endurance in flight. The pursuit and capture of game by a hired guide is no pleasure to me. I am no better for it in any way. I might as well ask him to join me in taking a dose of pills when I get sick. His operation will not cure me.

Seventh—If a man wishes to bag the game which his guide kills he should make a bargain to that effect before he starts out. He can then claim to be commercially honest at least. And while, as regards the game which he kills himself, he may be a sportsman, he should remember that as regards the game which he hires his guide to kill he is not a sportsman—no more so than if he had bought it at Fulton Market. In both cases he becomes owner by a contract of purchase. In the one case he buys for a day's pay the product of a day's shoot; in the other case he buys a specified quantity for a specified price. And in both cases the game may be lawfully acquired, but it is not in either case acquired under any laws or rules peculiar to sportsmanship.

Eighth—Primarily, the man who captures wild game owns it—always and everywhere. If, being employed as a guide, he sells it as a part of his contract of service to his employer, then his employer owns it, but not otherwise. But this, though an honest way of getting game, is wholly outside the domain of genuine sportsmanship.

SHAGANOSS.

GEORGIA'S POSSUMS.

From the Atlanta Constitution.

THE Georgia possum was under discussion in the House of Representatives last night. The House failed to pass the famous bill of Mr. McCook, of Chattahoochee county, although Mr. McCook and friends of the bill succeeded in voting down various and sundry amendments designed to bring the bill into disrepute and burdening it with provisions which would make it one of the most remarkable acts on the statute books if passed.

When the bill came up the House immediately lost its dignity, and for an hour there was a continual uproar. The occasion was one of merriment, and grave legislators put their feet on their desks and listened to possum oratory and other kinds of oratory for an hour. At one time it looked as if the House would have to sit and discuss possum all night. No quorum voted, and by reason of the peculiar parliamentary situation the Speaker ruled that no motion could be made, nor could the House transact any other business, nor adjourn until the pending bill was disposed of.

After the amendments sent up from all parts of the House had been read, discussed and voted down, the House finally reached a vote on the bill as originally introduced. The vote resulted: For the possum bill, 66; against the bill, 31. The bill was in favor with the great majority of the members, but the constitution of the State requires that to be passed all bills shall receive a majority of the whole House, 88. For that reason the bill was declared lost by the Speaker.

The bill is a simple measure and it is clothed in no mysterious terms. It is what the title says it is, a bill to protect the possums of Georgia. The bill makes it unlawful for any person to catch or hunt possums between March 1 and Oct. 1. A violation constitutes a misdemeanor.

It was 9:45 o'clock last night when the bill was reached on the calendar.

Mr. Fogarty, of Richmond, is friendly to the Georgia possum, and he said on such an important bill, one involving the interests of the whole State and South, members ought to give it grave consideration. He thought it eminently proper that the Georgia possum be protected, and well protected at that. For the information and edification of the House he thought it would be well for the author of the bill, Mr. McCook, to explain the provisions of the measure.

"Has the gentleman from Richmond ever caught a possum?" asked Mr. Edwards, of Haralson.

"In reply to that I will ask the gentleman from Haralson if he ever went rabbit hunting," said Mr. Fogarty.

Mr. Charters, of Lumpkin, put himself on record as an enemy of the possum. He said it was nearly 10 o'clock and in his county a good hour to kill possums. He wanted the House to kill the possum bill at that hour. There was a storm of nays.

Mr. McCook was recognized in support of his bill. He said:

"Mr. Speaker, I think this is a good bill. The bill is all right. No farmer in the State will object to this bill because it protects possums. I introduced this bill seriously and regret to see that fun is being made of it. Possums are good game and they ought to be protected. Possums are now destroyed by boys and negroes while they are too young and not good to eat. The committee on agriculture thinks this a good bill and it has been reported favorably.

"I think more protection ought to be given the possums than any other game. The boys go into the cane fields and pastures and catch young possums before they get old enough to be good, and that is a waste of possums. I hope the bill will be adopted."

"I would like to ask if the bill would apply to a person who catches a possum with a chicken?" said Mr. Copeland, of Walton.

"No, sir, that would be killing a possum in self-defense," replied Mr. McCook. The house roared and Mr. Copeland was for the bill thereafter.

At this point the colored member from Liberty county, J. R. Law, was recognized. He delivered a speech, which kept the members laughing. The speaker attempted to proceed and he started off by addressing "Mr. Speaker and members of this House," and the address was repeated several dozen times before the colored member was allowed to proceed with his argument. He finally said the bill was a good one in some respects and a bad one in some respects. On the whole he was opposed to the bill. It affected the interests of many poor people, he said.

Upon the conclusion of the debate, which was of a rather informal nature, members sent amendments to the desk and they were read and acted upon. The first amendment was offered by Mr. Felder, of Fulton, as follows:

"Provided that this act shall not apply to the counties of Liberty, Rabun, Habersham, Chatham and Bibb." The question was taken and the amendment was lost.

By Mr. Charters, of Lumpkin: Provided that this law shall not be operative in any county having a population of less than 100,000.

By Mr. Dickerson, of Clinch: That the following words be added after the word possum in the bill: "Coons, gophers and high land terrapins," so as to make the bill protect those creatures.

By Mr. Charters, of Lumpkin: Provided that it shall at all times be lawful to catch a possum when no advantage is taken of him by catching him on the ground.

By Mr. Felker, of Walton: By adding the words "hog" or "coon" to the bill.

By Mr. Felker, of Walton: That the act shall not apply to James Sheats, of Walton county.

By Mr. Copeland, of Walker: Amend by adding after the word possum the words "bull frogs and br'er rabbit."

By Mr. Nevin, of Floyd: Amend by adding to the original bill the words, "Provided that this act shall not apply in counties where persimmon trees grow over 10ft. high.

By ——: Provided that this law shall apply only to such possums caught after sunrise and before sundown, except such possums caught with chickens.

All of the amendments were voted down, and the House then got into a tangle on the question of passing the bill. The result was as stated, the House adjourning at 10:45 o'clock, after having defeated the bill.

MASSACHUSETTS TRAPPERS FINED.

OFFICE OF THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION, 5 Park Square, Boston, Dec. 28, 1896.—*Editor Forest and Stream:* A few weeks ago President Clark, of our Association, sent me a letter received by him and deemed of sufficient importance to require attention, and which I think will interest the sportsmen who read your paper. Leaving out the signature for obvious reasons, I will give you its contents:

"WEST GRANVILLE, Mass., Oct. 26, 1896.—*Dear Sir:* In regard to trapping, I would like to ask a few questions. In the first place, there are a good many partridges and other game caught in traps in this part of the State. It has been going on in this manner for years, so I am told, and to all appearances it will continue for a good many more, or until all the game has disappeared, and, judging by the amount that is caught every year, the supply cannot last much longer. There are men here who make as high as $200 from September to January trapping birds, so you may judge the number of birds they capture. I myself have found out who does and who does not trap birds. The latter are in the minority. They have been in the business so long that any information on the part of a stranger would be very apt to meet with a reproof in the form of a charge of buckshot, which would not be pleasant to receive. The reply they make if any mention of the law, fines, etc., is made to them is, 'Catching before hanging,' so you may see that they feel perfectly secure and do not give a straw for the law. The only way to catch the parties is to trap them as they do the game." (Signed) ——— ———.

A copy of the letter as above was immediately sent to Chief Rufus R. Wade, of our State District Police, he having previously assured me that he would attend to any matter of the kind that might be referred to him. The result will be told in few words. The trappers were trapped, and at Westfield Dwight Barnes was fined $120, George Redmund $40, and William Reeves $20. Charles Reeves escaped into Connecticut and was defaulted. Great credit is due not only to the officers detailed on this case, viz., Detectives Proctor and Rhoades, but to Chief Wade for his promptness in sending them.

The readers of the FOREST AND STREAM will recall the fact that last spring our able and popular Governor, Roger Wolcott, prevented a reduction of the legal length of the lobsters from 10½ to 9 inches by interposing a veto, and it is well known that the Governor is friendly to the sporting interests. In this respect he is following in the footsteps of our late lamented ex-Governors Greenhalge and Russell. It is to be hoped that his great influence will be felt in the way of a rigid enforcement of the game and fish laws.

Our State is paying out annually from $15,000 upward for the care and protection of fish and game, but hitherto but a small proportion of that sum has been expended for the improvement and increase of the fish in our streams or the birds in our forests.

The bulk of expenditures, as I understand, has been in connection with shore and salt-water interests.

A meeting of the Massachusetts Fish and Game Association was held on Tuesday evening, the 22d inst., at the Copley Square Hotel, and Dr. E. W. Branigan, chairman of the committee to nominate officers for 1897, presented the name of Col. H. T. Rockwell for president, Mr. Clark wishing to retire from that office. I will send you a list of our new officers after the annual election, Jan. 13.

Very truly yours,

HENRY H. KIMBALL, Sec'y.

Travel up to Date.

THE New York Central offers unequal advantages for through travel between the East and West. It is the only Trunk Line entering the city of New York; its Grand Central Station is in the very center of the metropolis, in the midst of the hotel, residence and theater district; it is the only line protected its entire length by block signals; it has the fastest trains in the world; the finest equipment; scenery including the Hudson River, Mohawk Valley and Niagara Falls.—*Adv.*

CHICAGO AND THE WEST.

Breeding Grounds of the Black Duck.

CHICAGO, Ill., Dec. 26.—The Edmonton *Bulletin*, of Edmonton, Alberta, quotes a recent article from FOREST AND STREAM which was written by Mr. Thos. Johnson, of Winnipeg, in regard to the breeding place of the black duck. Mr. Johnson thinks he has found this breeding ground at Lake St. Anne, west of Edmonton, and also at Lac La Biche, 160 miles north of Edmonton. This copy of the *Bulletin* having come into the possession of Mr. W. B. Wells, of Chatham, Ont., the latter writes me interestingly as follows:

"I doubt very much that the black duck spoken of as breeding at Lake St. Anne and Lac La Biche are the black duck of this section and east of here. At Scugog Lake, about sixty miles east of Toronto, where a friend of Mr. Robinson has a small preserve, he says they kill black duck nearly altogether, only an occasional mallard. Down about the Ottawa River and on Lake Champlain the same, I am told. If this was the feeding ground of these ducks would they not be seen between here and there, that is all throughout Manitoba and the Western States. I am told that 100 miles west of the Detroit River they are very rare. When I was shooting with Mr. Star in Texas I saw none, and he said that he had only seen one that was shot there. Mr. Pike, an old member of the Big Point Club, who was down this year for a couple of days after an absence of ten years spent in dredging operations at the mouth of the Fraser River in British Columbia, said he had seen and shot lots of apparently the same duck, but Mr. Pike may have been mistaken. The habit of diving instead of flying which Johnson speaks of savors more of a diver. I have never seen him unable or unwilling to fly. My opinion is they breed in the small lakes and marshes of northern Ontario. Probably also in the extensive marshes about James Bay. On my way to and from Winnipeg by the C. P. I only saw one flock of ducks, and those were black ducks in a small lake west of Lake Nipising. You are continually passing lakes from that lake to Port Arthur, but it seems to be no place for wildfowl of any kind; no feed I suppose is the reason.

"Our shooting season closed on the 15th, and I have been hard at it making up for lost time. I would like to have a trip South this winter, but don't know whether I can manage it. I suppose I should be satisfied after the good sport we have had this fall, but man is a hungry animal, always wanting more."

Fun in the Sound Country.

Mr. W. S. Phillips (El Comancho) has forsaken his late residence in Chicago, which city he cordially hates, and has gone back to the Puget Sound country, where there is more fishing and hunting. He deliberately makes me feel badly by writing about the fun a fellow can have out there, near Latona, Wash.:

"If you would happen out here right now," he says, "we'd go smelt fishing Injun fashion (with a stick) just to break the monotony. I saw about 17,000,000 (smelt, not Injuns) in one school to-day.

"Ruffed grouse shooting is good now and I've got a couple of good bags of the blue quail since I came home. They're a dandy for quick shooting, and are right in the second growth fir thickets, and you can burn lots of powder before you eat quail here. I see the 'Bob White' quail in the markets here this winter, but can't find exactly where they come from as yet. I think they are the result of a planting I made here several years ago. I'll know soon, I think. Deer are as thick as sheep, and a number have been killed. Steelhead salmon are plenty this year, and market fishermen are making money off of them.

"Ducks and geese are plentiful this year, owing to the flooded condition of the whole coast country.

"I've just heard of where grayling are plentiful, not over six miles from my smoke house too! I won't do a thing to them next year, maybe!

"Wish you could get out here. I can't tell you about half of the good things that are running around loose up in the woods—not counting Injuns. Come out. I've room, beds, board, boats, guns, rods and the whole outfit except buckwheat cakes, which the same I would not mention only I'm afraid maybe Roll Organ might come out too, and I couldn't stand a buckwheat cake appetite such as he carries!"

Rabbit Preserve.

A friend of FOREST AND STREAM writes: "Joe Thorn, the boss bridge-builder of the "Q," says that a company is now reclaiming about 5,000 acres of land along the Illinois River, to be used as club grounds or game preserve. As a substitute for anise seed quail it is proposed to plant a stock of jack rabbiis. If any of the million (more or less) readers of FOREST AND STREAM have a surplus of jack rabbits, would suggest that they correspond with Mr. E. P. Chapin, Galesburg, Ill., or J. O. Thorn, Beardstown, Ill. When this first came to knowledge we immediately thought that the parties establishing the 'black-cat-rat' farm in Kansas might, in clearing their land, gather a few jacks, which they would desire to dispose of. Perhaps you yourself may know of some farm full of jack rabbits."

Minnesota Deer Preserve.

Writing to Mr. R. B. Organ, of this city, Mr. R. G. Brooks, of Minneapolis, speaks as below in regard to an opportunity which he thimks he sees for a deer preserve up in Minnesota:

"The locality in which we hunted this fall was about 125 miles north of Minneapolis, in Aitkin county, this State. The particular location to which I am going to refer is situated twenty-five miles north of Aitkin. The general lay of the country in this part of the State is level, and a very great portion of it cranberry marsh or swamp—not reedy swamps, but full of moss which makes fine feeding ground for deer, but is too wet for a team or any kind of vehicle except when it is frozen. In the center of one very large swamp there is an island containing about 1,100 acres. This island is perhaps 4 or 5ft. above the level of the marsh. Much of it has been covered with heavy pine, which some years ago was cut and taken off. At the present time it is covered with hard and soft maple, elm, bass wood and white birch. On the higher lands and around the edges is fir and tamarack and balsam. There is plenty of grass on the island and a quantity of bass wood and elm sprouts, which makes the best winter feed for deer. There is situated on the north end of this island a beautiful spring, furnishing a stream of water 6 or 8in. through, which neither dries up in summer or freezes up in winter.

"In connection with this island there should be purchased enough land to make two miles square—four sections. This would be something over 2,500 acres. This is one of the greatest deer centers to be found in Minnesota, or in fact any other place. I think it is safe to say if we were to surround these four sections with a suitable fence we would at once have in our possession from 100 to 150 deer. This is thirty-five miles from the railroad, but easy of access, being only about three miles from the main lumber road, used in taking supplies to the lumber camps.

"There are no inhabitants to the west of this island within thirty miles, and I think still further to the east before you come to any settlement. The Willow River is situated about five miles to the east of this island, Moose River about five or six miles northwest. White Elk Lake is about seven miles west. The cost of this land, I think, will be between $4.50 and $5 per acre. The cost of fencing this land will not be very expensive. The posts would have to be of iron, or at least should be, and one strip of heavy wire netting and a few strands of barb wire above, or possibly two strands of netting would be better. Aside from deer there are great quantities of grouse and pheasants on the land.

"Now the question is this: Where can a suitable club be organized who would like to identify themselves with this reserve and have the money with which they would forward and foster the enterprise?"

A Handy Hunting Wagon.

Mr. F. F. Merrill, of Milwaukee, Wis., writes of a handy hunting wagon which he and his brother, Richard Merrill, had made for their hunting last fall. They tried it thoroughly in Dakota and are satisfied with their acquisition. Mr. Merrill sends also some game pictures showing bags made by means of this wagon, as well as the wagon itself, which seems a very tempting sort of vehicle. He adds:

"After five weeks' trial the only thing we would add would be to put a handle with a stationary bale on back of front seat at each side of gun holders. We generally got in and out on the move, but always with empty guns; the handles would make it somewhat easier to get in and out when wagon was in motion; it is very easy to drop out and lie flat on ground and get a shot at a goose, crane or hawk quickly, never stopping wagon; as the birds see wagon moving continuously, they are not nearly so apt to see man drop as if it was necessary to stop and get out. We were always prepared for these sudden drops and got the drop on a number of unsuspecting birds, particularly hawks. Once guns are in position, no need to pay any attention to them; they cannot be marred and are held very secure; in a rain they can be put under our storm aprons, as in any wagon. Under each seat is a box with lid cover 5in. deep to hold rubber aprons, lunch, apples or any small packages; under these boxes are removable wire baskets to hold game, rubber boots, leggins, oilskin clothes or anything wished to be carried. We carry a canvas boat in chest or a sectional iron boat crosswise of wagon between two seats by taking out foot-rest and lower stock-rest; everything except dashboard can easily be taken off, leaving a perfectly flat wagon-bed with a dashboard. We filled the dog cage with a variety of things. It has been full of dogs, live mallard decoys, dead geese, crane except their legs, which stuck out, dead ducks, shovels, spades and picks, grass suits, life preservers for sectional boats, etc. In digging pits on prairie or stubble we put all earth in dog cage and hauled it away to a plowing; in digging pits near plowing of course threw dirt on plowing. We had top and side covers for dog cage and a piece of galvanized iron sheeting at back end way across, preventing any draft striking dogs from under back seat when driving; rear end needed no curtain. Shell boxes are just back of gun stocks on wagon bottom, and by keeping boxes unhooked it is easy to get shells and gun out in few seconds. All in all wagon is about right and the easiest riding rig we ever rode in, barring none."

The Way they do In Maine.

The story of shooting trips in Maine are curiously devoid of sporting interest to Western readers, who, not being acquainted in that country, picture it as one where the game is marked and tagged out after the fashion of European preserves. I have commented on this before, comparing it with our deer country of Wisconsin, which seems much wilder, but which is gradually coming to have something of the same character. It seems that the Boston *Transcript* is of something the same mind as many Western men in regard to the way they do in Maine, for I note that in a late issue it says, "The slaughter of moose and caribou in Maine is all tabulated in the newspapers nowadays. Figures are given with counting-room accuracy concerning the number of animals killed, with the comparative increase of shooting for two years, and the amount of cash accruing to the thrifty State of Maine by the increased interest in shipments of game."

The North and the South.

A party of Northern deer hunters have been hunting deer in the South near Laredo, Texas, and a letter from a Southern shooter says that the five men of them in three weeks killed sixty deer. Yet it is asked of the Southern shooters that they receive the Northern sportsmen with open arms. If they would receive some of them with an open noose it would be better.

The Bear Located.

I have got my lost grizzly bear located again. The last time he was up in the Shawanto basin, 300 miles north of the jumping-off place in Montana and the British Provinces. This time he is on the Pecos River in New Mexico, in charge of a professional "varmint" hunter who has got him staked out for me. My friend O. C. Guessaz, of San Antonio, Tex., writes me that he can assure me of all kinds of horrors if I will just come down there again, as he has a lot of things hid out. But I opine he is seeking to decoy me to the annual Midwinter shoot in which he and his friends Messrs. Steves and George conspire. This I would not mind attending—from afar off. In fact, I think I could enjoy a trap shoot if I were at the ranch of a varmint hunter, and the trap shoot were not too close. Why do people shoot at the trap anyhow, when there are varmint hunters, and ranches, and air, and things?

Speaking of the lost bear, I have just at hand still another letter, from a friend's friend, down at San Marcial, New Mexico, saying that at his ranch back in the mountains, in a place I wot of, there are divers and sundry large and corpulent bears waiting to be destroyed.

Rabbits.

Mr. H. N. Delano, of this city, asks for good rabbit ground near Chicago, and I have sent him to De Motte, Ind., just east of Shelby, where I once found very good sport with beagles. Mr. Delano thinks it feasible to scare rabbits out of holes by means of firecrackers. This I consider an anachronism, as firecrackers pertain to the Fourth of July, and a rabbit in a hole should be let alone, not to be ferreted or firecrackered.

The Grayling Located.

Mr. S. C. Bliss, of Wellston, Mich., writes me to convince me that he has found the grayling which I lost last summer, and I offer his letter, albeit a bit out of season. I surely will get that fish next summer.

"If you have never caught that grayling yet, you drop off here at Wellston some time in May next season, and if I do not take you where you can get some it will not cost you anything. They are not plenty, but I know where there are some to be had, and fine ones at that. I have caught them that weighed 3 to 3½lbs., and it is fine sport. They are much gamer than trout.

"We used to get them in the Little Manistee, but only catch one now and then; but in the Big Pine River, about thirteen miles up from my place, there is grayling. We catch more of them on a fly after May 15, as the river gets clear then. Mr. C. H. Harrison, W. P. Harrison, ex-Mayor Washburne and Mr. Valentine have been here and fished with me, but I did not know that grayling were in Pine River at that time."

Good Ones.

Mr. Milt. F. Lindsley, of the King's Smokeless powder, writes me from Cincinnati very pleasantly about various matters. He calls to mind that the King Powder Co. now have on their staff, or will have at Jan. 1, both Tom Keller and Jack Parker. These are two good ones, and with Mr. Lindsley will make a strong line of distributors."

From the Far North.

Mr. W. F. Ellis, of Winnipeg, Man., is in town this week, and goes hence to the East for a few days, returning later. Mr. Ellis is a noted hunter in his own land, and not unknown in this. He says he has killed a black bear weighing 650lbs. dressed, but has never killed a grizzly, and has not lost any. Of deer, moose and caribou he keeps no count. Mr. Ellis is accompanied by his brother, Mr. E. E. Ellis, of Seattle, Wash. They are both tall and powerfully built men, and look as though they could do a turn at a day's walk.

Trouble with Guests.

I have all kinds of trouble with my guests here. Tom Divine has come back to Chicago again, and this morning when I asked him what he would like for breakfast he said he would just have his regular morning meal—a piece of broiled bologna sausage and a raw turnip. I had great difficulty hustling around after the raw turnip.

While upon these news matters I might add a bit which is just at hand from New York—a field which I have always held to be legitimately included under Chicago and the West, especially since both cities have taken up the habit of annexing territory. It seems that the Chief with Two Stomachs, whose residence is now in New York, has recently returned from his Southern wanderings to that city, where he was the recipient of an ovation which included a banquet, or anyhow a square meal. Few who are not acquainted with the Chief are aware how serious a proposition this is. The card, as submitted to me, demanded oysters, frogs' legs, gumbo, calf's head deviled, fillet of beef and venison, with a few other things for such cases made and provided. The waiter, it seems, made a mistake about the venison and did not bring it, but served beef instead; but the graciousness of the Chief's nature was apparent when he told his host that it was the best venison he had eaten for a long time. The Chief requested that no inkling of this should get to Chicago, but I feel constrained to speak of this, as it reminds me strongly of a little dinner the Chief and I once had, when we requested the attendant to bring us ham and eggs for dessert. I am told that ham and eggs is not, or are not, a proper article for dessert; but to this I am disposed to enter exception, for both the Chief and myself found them, or it, very good indeed. The superciliousness of average human nature is a most surprising thing. A great many people condemn off-hand ham and eggs for dessert, who never in their lives have tried it, or them, as dessert. Could anything be more unjust than that?

The Canvasback Preserve.

Additional advices from Lake Koshkonong, where the artesian well of canvasback eggs was discovered on the old Bingham homestead, state that Ira Bingham is not content with finding a flow of canvasback eggs, but will take means of increasing the supply of the live birds. He contemplates establishing in his milk house, which we may call his hatchery, a system of flat irons, arranged in concentric circles, under which the stream of eggs from the well is to be conducted. When the flat irons are heated by means of a simple device, it will be possible, as Mr. Bingham rightly calculates, to maintain a gentle and equable heat which will cause the eggs to hatch just as they would in an incubator, and the result will naturally be that, as they circulate through the milk house under the warm irons, they will finally pass out at the further end, and drop out into the waters of the lake, as it were, a stream of live young canvasbacks. This is the most ingenious scheme of game conserving that has ever come to my notice, and I recommend it to the attention of the National Game, Bird and Fish Protective Association, which is well known to be interested in such matters. He who makes two canvasbacks grow where there was but one before is a benefactor whose name should not be withheld from the merited praises of his fellow man.

Southern Crawfishing.

Mr. A. Ulrich, of Chicago, who once lived in New Orleans, and is familiar with the matter of which he speaks, sends in the following very interesting account of the way in which crawfish are taken by the men who fish for them there. He says:

"Around New Orleans there are swamps which are always being hunted for crawfish, and yet the supply is unlimited. So numerous are they that one cannot leave fish on a string in the water, for they will tear the fish into shreds.

"A small net about the size of a butterfly net, about ten cords each 2ft. long, and 5 cents' worth of meat, completes the outfit for one person.

"In the swamp there are small islands and long necks of land which intersect one another in all directions, and upon which the catchers go.

"The start is usually made in the early morning, when the sun does not shine so fiercely, and walking is much easier.

"Arriving at their destination, they cut their meat into small pieces about 2in. around, each piece is now attached to one of the cords; after this they are thrown into the water, and the other end of the cord is attached to a stick which is stuck into the ground so that the crawfish cannot pull the meat away. One usually waits a few minutes, and then when the cord is gently raised the catcher will see about half a dozen crawfish with their pinchers stuck into the meat, eating ravenously.

"The net is now gently put into the water directly under them, and with a sudden jerk they are landed, for as soon as they strike the air they will let loose of the meat.

"The crawfish are of a large species. The writer has caught some measuring 10in. from tip to tip; these are by no means uncommon.

"The average catch for three persons is about an ordinary bucketful. The meat when prepared right makes a delicious delicacy."

That Meat Dog.

Mr. H. S Humphreys, of Indiana, writes me in regard to the meat dog I was looking up for a gentleman in New Jersey:

"I have had many a good laugh over the 'meat dog' question as expounded by you, and noticed in the last issue that a New Jersey friend wanted a puppy that would make a meat dog. I have a candidate for the gentleman in question in the shape of a white, black and tan setter dog puppy, which has the making of a pure and simple 'meat dog' He is not fully up to the condition of having been 'run over by a wagon,' but can probably qualify, as I ran over him twice the same day with my buggy. He is a large dog, well muscled, in prime A1 condition, nine and one-half months old. I have had him on two shoots with me, all I have been out this fall, and he points and backs in good shape. He is a big-headed fellow like his sire (photo inclosed), and is exactly evenly marked (diagram inclosed). Of course he is yet puppyish, yet smart, and a very capable learner."

Mr. Humphreys does not quite understand my idea of a meat dog, though I am pleased to see he has tried his dog on a buggy as an evidence of good faith (I didn't say a buggy, but a wagon). As I look at it, a meat dog is one which has his future behind him. I regret to note reference to field trial winners on one side of this dog's house. As to the price quoted I have nothing to do, as I am disinterested, and just doing this for love of the dog family; but I will say that if a man has a real meat dog he is more precious than the price named, yea, more precious than rubies or much fine gold. There never was a fire sale of good meat dogs yet, and they are never damaged by water. They are always good to have on hand, and few there be who have them. I hope Mr. Humphreys's young dog will turn out to be a meat dog after my own heart. I may want to borrow him then. You can always borrow a good meat dog, because he has no pedigree to get tangled up in the brush and injured. He is just plain dog.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

THE WALL STILL BLANK.

Editor Forest and Stream:

Some of your readers may recall a trip I took with Timothyseed after the Carlin grouse in a March number of FOREST AND STREAM. I always enjoyed that story and largely because I was in it. It was to a great extent true, although out of friendship to me Timothyseed counted all birds I should have killed as "dead birds." As a matter of fact last season was my first attempt at grouse, and my statement that I killed just one during the season will be readily believed by all who have hunted that bird.

I started out by buying Trump, the pointer, and a gun. Trump is a good dog, but strange to say I have seen others that I imagine are just as good. I believe the gun is a fair gun, but it will not kill every bird at 75yds. even when in more skillful hands than my own. It is just an ordinary gun that up to the present time has not killed the owner nor any of his friends.

As I have before stated, after a season of much sport and few birds I was the possessor of one bird whose death could be fairly laid at my door. I then and there made up my mind that my record could be improved and immediately started in to find a way by which I might keep both eyes open when shooting. I finally conquered that difficulty and spent the remainder of my spare time during the winter in aiming at every door knob and picture hook in the house. While it made life somewhat unpleasant for my family to find that every time anyone opened a door my gun was pointed at the knob, it did improve my shooting and this year my record is thirteen birds; not many for those who kill fifteen straight, but then it must be remembered that I really got these birds.

I made up my mind at the opening of the season that I must have one bird mounted to decorate my den. The early birds were so small I put off stuffing them with anything but bread crumbs, until later in the season, when they would be full grown. Last week Timothyseed wrote me that he knew of some birds, and that if I failed to get one pretty soon they would be too large for my room. Timothyseed is my ten commandments in everything that pertains to shooting, so when he says, "Go," I go. We had Trump and a pointer pup I have raised named Bang, two guns and plenty of enthusiasm, which, by the way, we needed. It was agreed that when we got the one bird needful we would stop shooting. Well, the brief history of this trip is that we walked. The birds were all in the city attending to their Christmas shopping, so that when we had traveled ten miles from our starting point we were still looking for our first bird.

It looked as if it were to be a blank day as we started for home. We trudged along in a careless mood, when suddenly Trump began to take some interest in life, and presently pointed. Timothyseed was off to the right with Bang, so I had this bird all to myself.

I walked in, but no bird, Trump still on point. I kicked the bushes, but still no bird. Trump wouldn't go on, so I knew something was there. Finally I sent him on to flush, when a bird got up from behind a log 10ft. to the left and started for the next county.

I gave her a right and left, and she turned over about 50yds. away. Trump pointed dead, and at the command "fetch" started to pick up his bird; but behold! no bird; nothing but tail feathers.

I went up to see what the trouble was, and found that with a last effort the bird went under some old roots just in time to leave the tail feathers in the dog's mouth. We dug her out, but she was in no condition to decorate my den. This was the only bird we shot on the trip, and there is still a blank place on my wall.

LEGALITY.

ENJOYING HER MORNING MEAL.

PENNSYLVANIA GAME LAW.

Editor Forest and Stream:

I don't want to go on record as a kicker against any beneficial change in the game laws. On the contrary, I would favor and work for anything that would increase the supply of game and protect it, and I am willing to sacrifice something for that end.

As I understand, there is a committee, or will be a committee, in Harrisburg to lobby for such change in the law this season that will limit all shooting to but two months in the year—Oct. 1 to Dec. 1, or Oct. 15 to Dec. 15. That is the only thing in the bill they have drafted that I find to kick about, and I feel like kicking hard. It will not protect the game out of season any more than the present law does, and will only tend to keep law-abiding sportsmen from the pleasure of hunting; while the law-breaker will go on and kill all the game before the season opens, the same as he does now, and have more time to do it before the legitimate sportsman uncases his gun.

And more. The man who loves to hunt, but who can get a day off only once a month, will be confined to but two or three days' shooting in the whole year, while the rich man, who can go whenever he wants to, can take the whole season and kill what is left after the law-breaker gets through.

Give the poor man a chance. Shorten the season and make it universal, say from Oct. 1 to Jan. 1, if that will do any good; but don't cut it down to only two months in the year. What we need more than anything else is protection for the game out of season and a non-market law. Stop the sale of game and you stop two-thirds of the consumption of it and the inducement which takes thousands of men and boys afield, who care only for the revenue which their labor brings. Make friends of the farmers by making laws which will benefit them. Consult them and they will give you a great many pointers which will be beneficial to themselves and the sportsman.

They are fast becoming sportsmen themselves—at least where I go—and ought to have a share in the law-making business.

During the summer months thousands of camping parties spend a great deal of time in the woods and along the streams, and nearly all of them take guns. I can tell you of two places where squirrels were quite abundant until camps were established, and when the squirrel season opened, Sept. 1, there were none to be found; and a farmer friend told me last fall that a camping party near his place last summer killed young quail and grouse. It would not be a bad law that would prohibit the possession of guns in the woods or in camp out of the game season, for there can be no other use for them than the shooting of game, and I believe it would be well to make farmers deputy game wardens whenever they can be induced to act as such, and the laws should protect and support them.

Game has been very scarce wherever I have been this season. There have been no quail in this vicinity, and very few where I usually found them quite plenty in other sections.

The ferret law is a dead letter here; one-half or more of the rabbit hunters use them. In a little town seven miles from here one man told me of his knowledge of thirty ferrets, and said there were a great many more.

Law-breakers and game markets do more to exterminate the game than anything else. Stop them and the seasons are all right.

PENNSYLVANIA.

HUNTING WITH A CAMERA.

AFTER a restless night trying to kill skeets, and a very unsatisfactory hunt after midgets in the early morning, it was quite a relief to be awakened by a voice outside shouting "Great Scott! I guess an old hoss walked through the spring last night by the looks of things." And at the camp door stood Clif with a battered tin pail containing the remnant of the butter, which had been placed in the spring the night before. "Why, the water is all riled up yet."

Of cour e we were not long in turning out, and sure enough a moose had walked within 25ft. of camp and soused in the spring.

About half an hour after, Clif, Arthur and I were tramping over the bog toward the river, where we launched an old canoe, much the worse for service from a windfall that had dropped across the bow. After stuffing some moss in the opening, we started down stream stern first. Resting my elbows on the deck, ready to pull at the first sight of game, coming round the first bend, I caught a glimpse of two deer behind the alders feeding, but as they were not in full view we gave them the go by. As we entered the long, straight stretch, in the distance, midway in the stream, deliberately pulling the grass from the bed of the river, shaking the earth from the roots and enjoying her morning feed, stood the object of our search. Arthur quietly asked, "What shall we do?"

"Keep her straight in the current and drift down as near as we can," was the reply.

It was a real picture indeed, for on the opposite bank there was a fine, ruddy-colored buck feeding, the red-winged blackbirds twittering in the tamarack tops, and a chorus of frogs. The long, wagging ears of the moose brushing away the flies seemed quite comical to the otherwise grave, ungainly creature, now in full view. As the canoe swerved a little, from running into a side eddy, all this changed, and the ears became stationary and erect, with head turned toward us with an air of suspicion that something was wrong. The buck made a jump for cover and then Ma Moose started for shore, increasing her speed at each step. I pulled the instant she raised her foot to go, hoping to get a second shot; but gave it up and roared with laughter when she struck shore and started down through the open slash like a quarter-horse, knocking over the small tamaracks like pipe stems.

When she disappeared from view we drew up to the bank, emptied the surplus water out and started back, Arthur remarking: "Well, you are the coolest sportsman I ever had out with me before. When you laid your camera down you never reached out for the rifle, and it was on the seat right alongside of you."

Said I: "We have had all the fun of a hunt and you have no load to back over the bog four miles to camp."

And Arthur replied: "Well, that's the best way, as the old Injun said."

So we came into camp empty handed.

VAN.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

BIG GAME IN COLORADO.

MESA COUNTY, Dec. 13.—*Editor Forest and Stream:* I have just finished reading an article in the Dec. 5 FOREST AND STREAM, entitled "The Passing of Colorado." I cannot, in justice to the "boys," "horsemen" and grangers accused in the article, on account of one man or possibly more, let pass the assertion of an alarmist that everything is gone to the bad with the game and the game wardens. I have lived on the border of Colorado and Utah for ten years in the capacity of cow puncher, granger, and horseman, all of which classes are included in the article. I think I can show Mr. H. G. Dulog as much game as he used to see of all the different varieties he mentions, in spite of the amount that are killed by every one, including the dude hunters from away back East. Although there may be some good shots among them, as among any class of men, nevertheless I have found that they let more game get away wounded, to die by itself and furnish food for the coyotes, than the ones who are credited with the great killing. I am writing from my ranch in the Plateau Valley, on the north side of the Grand Mesa, in Mesa county, and only this morning some of my shepherd dogs ran a buck out of the feed yard with the cattle, which, strange to say, the grangers did not kill. Every day we do the same, and sometimes we run out as many as five or six. They eat up the orchards in this vicinity every year about this time till spring opens. We killed six bears last spring in less than a week without any dogs or traps, and there is still a bunch of elk of about fifty head in the upper end of this valley, not five miles from the edge of the settlements.

Over on Roan Creek, not more than twenty miles from here, I took up several parties of hunters from the town of Debeque, on the Rio Grande Junction Railroad, not over sixty miles from Newcastle, mentioned in Mr. Dulog's article. Every one of them got a buck apiece, and we saw as many as thirty or forty every day. I weighed some of them preparatory to shipping them home, and they weighed from 175lbs. as high as 230 with the heads cut off and most of the neck. Some of them were fine heads too, as big as they ever were and with as many points. None of these hunters stayed over two days. Many came up at midnight and the next night they went back, well satisfied with the country, and with a deer apiece killed by themselves in the morning. This does not look as if the game was all gone. We saw several in the road as we were going up to the ranch where they stopped to do their hunting, right in the midst of the settlements.

Now I don't want to say that there are not a good many deer killed illegally by all sorts of people, for there is no doubt of that; but I do say that the slaughter has been going on now for more than six years, and the effect is to make the deer wilder, so that they seek those places which are more safe from the great crowds of hunters. I know several parts of the country where one can see as many deer as there are trees for them to stand behind, and the country is not devoid of timber either. But no one goes in that part of the country except cow punchers, and they can all tell you about seeing deer and big bucks all summer long, right in and around camp. The Indians know this, however, and they frequently come over from Utah and kill off a few hundred; sometimes they save the meat and more frequently they do not. I have seen the carcass of a fine fat buck, with antlers in the velvet and fat 2in. thick, lying with the hide off in the sun, and moccasin tracks all round. I met one Ute who had 100 hides with his outfit, all the hair taken off and about half tanned; and the two squaws were busy at them then, all killed just before the season opened. I don't want to resurrect the Indian question again, as it is a little late now, and it does not excuse the white men's slaughter. We "boys" live in the midst of the game and hardly kill one a year, as we much prefer beef. What I am driving at is that the game is still with us, although the deer have changed their runways so that the pot-hunters get left frequently, and the old-timers can't find any bucks. They were a little late in coming down this year. Elk go clear up to the top and winter there.

Yours for the preservation of game and death to the market and pot-hunter, who are also with us.

H. K. BOGERT.

North Carolina Quail Netting.

Editor Forest and Stream:

As I have just returned from my annual quail hunt in North Carolina, I thought I would drop you a line and give you an idea as to what the natives are doing with that excellent little game bird, Bob White. I predict that in the course of a few years he will be exterminated by the means of netting. I write this in order to give you a faint outline of the method employed to capture them. It is as follows: The net is about 40ft. long and 4 or 5ft. wide, and so made that the hollow of the net will come in the center until a few feet from the ends. The next move is to get a horse and find the birds, and while on horseback locate the covey, and when located set the net in the best place to drive the birds, and the whole covey is captured, leaving none for seed. You can imagine how soon this kind of work will wipe them out of existence.

My hunt was not very successful, as the birds for most part were not to be found on account of this vile method of destroying them. We did find some birds where the marks of netting were not visible.

G. V. HUDSON, M.D.

Thrifty.

THE *Evening Gazette*, of Port Jervis, N. Y., recounts that recently a hunting party of three from Philadelphia and Scranton, Pa., had made Shohola Falls an annual visit for several years past, staying at Falls Cottage, where for a reasonable charge they enjoyed the comforts of a cozy home with the added privilege of hunting on 8,000 acres of land owned by their host. They arrived this year as usual, but with a radical change of procedure; for, instead of staying at the Cottage, as they had done in former years, they engaged two local guides and stealthily ensconced themselves in the hunting grounds of their former host and proceeded to enjoy gratis that which they had formerly considered worth paying for. Inferentially all the privileges could have been legitimately secured for a nominal consideration, yet to them, as to many other people, it seemed more direct and economical to help themselves to such things as they desire if such were loosely guarded.

It would seem as if men of otherwise good standing in the community would value more highly their own self-respect and the respect of their fellow men than to commit petty, sneaky depredations on the property of others, acts of petty meanness, particularly ones, as in this case, which embodied ingratitude for former favors accepted by the offenders, aside from the direct offense of surreptitiously taking privileges to which they had no claim.

The *Gazette* mildly relates the sequel of the thrifty adventurers as follows:

"Whether for economy, greater accessibility to their favorite grounds, or the persuasion of the local part of the party is of no moment, but this year the hunters sought the grounds from another direction and were comfortably quartered in camp before their presence in the county was made known to the owner of the premises. Any one who has ever hunted, fished or camped on the property of Mr. Hart knows that he is entirely liberal in respect to sportsmen; but when encroached upon stealthily, in an unsportsmanlike way, with preparations to depopulate his woods, he very justly felt incensed, and he acted promptly and in accord with his feelings. The party broke camp and decamped, and it is hopeful that they have learned that such privilege as they attempted to enjoy are at least worth asking for."

Were the offensive acts of those whose honesty and deportment are pursued and gauged as a matter of profitable policy to bring a just odium only on the real offenders, there would still be much to deplore, but the odium of those who have but a sneaky manhood is visited upon the true sportsman and casts a stigma on the guild.

Sea and River Fishing.

THE FRESH-WATER SHRIMP.

WASHINGTON, D. C., Dec. 22.—*Editor Forest and Stream:* When I cast my lot with fishculturists twenty years ago, the great problem was how many millions can we hatch. While the question of feeding did not then concern us, and need not now to any extent as relates to commercial fishes, it is pressing for discussion with the growth of angling clubs and fish ponds. Fishes of the predaceous kind are everywhere preferred, such as trout and bass, but how and where is natural food to be obtained for their bodily support? Where are suitable living forms at inconsiderable cost to come from? This was a problem to some extent when I began my studies, but a thousand are concerned now where one person was then. Many expedients have been resorted to, but the solution is yet to be forthcoming.

Well aimed suggestions being always in order, I modestly present some points with regard to an organism which may claim a place—at least experimentally—in well-ordered fishcultural establishments. I claim no superiority over other investigators in this line. But while behind many in actual experiments, I have nevertheless been an observer of the works of others, and a student of the subject myself. In order to make my suggestions as far-reaching as possible, I have gone to the expense to have two cuts made for purposes of illustration.

What I have to tell is the direct outgrowth of an investigation made by the Fish Commission last fall concerning the fresh-water shrimp, its relation to fishes as their food in a state of nature. The investigation was ordered by Commissioner Brice, and covered some weeks: from late in September till the middle of November. It will require time of course for the problem to be worked out, but it must be apparent that whether successful or not it is a step toward rational methods. He has procured living specimens of the fresh-water shrimp from the South, which are under observation to determine their rate of multiplication and climatic adaptability,

RIVER, OR FRESH-WATER SHRIMP.

hoping subsequently to be able to recommend their cultivation for game and other fishes.

Where the shrimp abounds fishing is good. When it is caught for bait numerous small fish are unavoidably brought in with it. They are feeding upon it. These are small bass, darters, sunfish, top minnows and catfish. It is found in the stomachs of all. Besides being a natural food, the shrimp is very abundant. There are evidences, too, that its range can be extended to nearly all parts of the United States.

What It Is.

The river shrimp is a fresh-water animal. Of the crawfish kind, it is yet more transparent, like the soft-shell crab. It is more than an inch long, being, however, the size of a finger in the waters of Arkansas. In North Carolina they run 2,000 to a pound. The two forward pair of the larger or anterior legs are provided with claws. The animal is a miniature of the salt-water shrimp or the prawn. It would be a mistake to confound it with the so-called fresh-water shrimp, about which so much was said in the year 1878 by the New York Fish Commission; for the latter is only a water flea. It has gradually become known by its true name, gammarus, and it is both abundant and valuable at Caledonia. Interested parties will not fail to note the distinction between the two. The shrimp is a compact mass of solid meat, though the body of a living specimen is as colo less as window glass, while the gammarus, comparativel speaking, is but a bundle of legs.

Home of the Shrimp.

The speedy appropriation of this bitherto neglected organism as a staple article of diet for fishes seems not improbable. It is apparently adapted to various kinds of water, even flourishing in shallow holes, such as mosquitoes breed in. In parts of North Carolina it is found in ponds, running streams, and in borrow pits alongside railroad tracks. In the latter it is landlocked, and obviously subject to an extreme high temperature, derived from the direct rays of the summer sun, and to an opposite low temperature such as accompanies occasional ice formation a foot or more thick. Its thermal limit remains to be determined by experimental trials, but it i known to already inhabit streams, and it may be inferred naturally, as far north as the Ohio River, and other southward to Arkansas.

Natural Abundance.

In its localities it is generally very abundant. Notwithstanding incessant attacks by its natural enemies, it seems to outbreed them all. With a small dip-net, 1ft. in diameter and 8ft. of handle, often a thousand can be dipped from the water grass without the operator moving from his tracks, and in a brief space of time at that. In the Connocanary, a tributary of the Roanoke River, 200 were taken at one dip. At the second dip 177, and at the third 164 were secured. It was found that the shrimp existed

GAMMARUS, OR WATER FLEA.

there at a rate as high as, and probably far exceeding, 600lbs. per acre, and in a wholly unprotected state. But this rate was maintained only in the shoal, grassy areas where conditions were tributary to their requirements. Under cultivation, however, where the entire space would be installed with reference to their feeding grounds, every square yard would support its proportionate number.

Conditions for Culture.

Enough is known of the shrimp to justify the belief that it is futile to introduce it into waters devoid of cover. It is an animal which does but little free swimming. It seeks food and shelter in thick growths of water plants, grasses and mosses, and is found around the shores or in shallow places among the plants, and sometimes on trunks of trees which, like the cypress, live out in the water. When frightened it darts out into deeper water, going backward a foot or more, and rests motionless there till danger seems past. It can, however, do free swimming, in which act it uses the swimming legs situated just forward of the tail. In winter it is believed not to burrow or enter a full state of hibernation; but some anglers, for convenience, make a practice of corralling them in field ditches for winter bait.

In Transportation.

Though quickly responsive to overcrowding, there is no difficulty in transporting the shrimp alive over long distances, with proper but simple precautions. In the fall months, with air temperature 50° to 55°, a four-quart tin pail half filled with water will safely carry 150 from North Carolina points to New York city, while seventy-five would go alive to St. Paul or St. Louis without change of water or application of ice. In captivity it becomes very nervous when there are too many in the vessel for the amount of water. They leap out, and sticking to the inner walls of the vessel or falling on the ground, perish. Also they hop around, several inches and very lively, when taken with the net. While crawfish, crabs and lobsters cannot withstand shipment in water, this animal appears to be clearly of the reverse type. Crawfish in winter, if kept from freezing, will survive two weeks or longer, simply held in barrels. The shrimp dies as quickly as do most fish when exposed to the atmosphere. But impaled on fish hooks it lives, in cool weather, two hours or more. It has a fishy smell only when its shell is broken.

Economic Application.

From partial observations made, it appears that the chief requirement of the river shrimp is profuse plant growth. This can with certainty be had only in shallow water which the sun's rays can penetrate. The water need not be as much as a foot deep. Therefore, springy, marshy bogs may be slightly dammed up and afford as good breeding grounds as any. In deep, treeless ponds no production may be relied on except along the shores, the middle area being wasted.

If the river shrimp can be successfully colonized in the greater portions of the country, it may be possible to produce it without cost other than the outlay attending installation of the simply-constructed breeding ponds, and in such quantities too as may feed vast numbers of market fish.

Should such a result attend the study of the shrimp, the question of commercial fishculture in the inland waters will be solved. As it is now, the food comes too high to admit of a general industry of profit.

S. G. WORTH.

FURTHER EXPERIENCE WITH RAINBOW TROUT.

IT is ten years since when by the kindness of Col. McDonald, of the United States Fish Commission, I had a quantity of this fish sent me to stock one of our rivers here, the picturesque and bright Cullasaga, which means in English sweet or sugar water. By a mistake the fish were sent wrong, and I was not on hand to receive them, so they were dumped into the Tuckaseege, a tributary of the Tennessee. They soon spread and stocked the waters, getting into the French Broad and the beautiful Swannanoa, near Asheville, where the natives soon discovered them, calling them salmon. To make up for this mistake I had another lot sent of 1,000, of which I got only 100, but since then I have had some thousands of eggs which I planted and which seemed to come to maturity without any loss, for the pond and the river below soon became stocked and gave the visitors here abundant and most excellent sport. The fingerlings were 10in. long the next year, and the third year one was taken in my pond by a young lady 20in. long and weighing 2½lbs. The fish was so lively when landed that the lady had to sit on it and call for assistance to secure it.

I soon found these fish crossing with the native trout, the *fontinalis*, and so reported to the Fish Commissioner, but my statement was derided by the scientists on the ground that the spawning season did not match with that of the *fontinalis*. But having caught a hybrid, a genuine *fontinalis* in part and having the scales of the *iridei*, I rested for confirmation, which in time came by the discovery that in this southern latitude the spawning season of these later fish was advanced to permit this cross breeding.

I have found that these fish will not stay in the headwaters of the streams, but make their way down the rivers, how far I have not yet discovered beyond the fact that they have got as far as the Tennessee; but there are a good many in my waters still, finding them in the deep pools among the rock of the rapids. They have been taken lately in these places in the lower Cullasaga, 30in. long and 7in. in depth. They far surpass the *fontinalis* in fighting qualities, affording work for an expert fisher to bring them to the net; often half an hour is required in the rough places to tire them out.

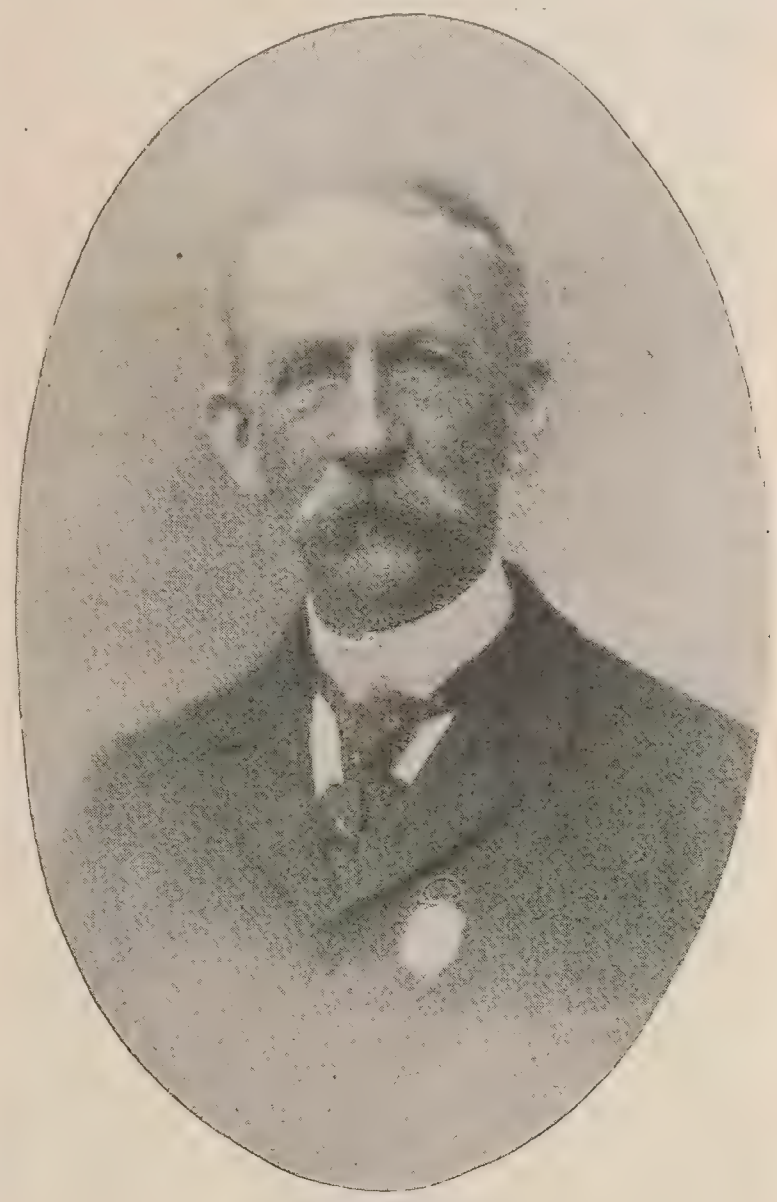
They are, I think, inferior to the *fontinalis* in eating quality, but they are good enough; their deep-red flesh and fatness making them very desirable for the table, as well as their good size. By catching a few and bringing them back to the pond, they still keep up the stock in spite of exhaustive fishing.

They have been charged with the crime of eating the smaller trout, but as I examine the stomach of every fish I take to study their feeding habits, and have never found a trace of fish in them, I fully acquit them of this charge. Their food consists of the minute animalculæ, the case worms, of frogs, and the abundant newts. I have seen them take a good-sized frog under several times, and they evidently eat a good many crawfish. They are exceedingly fond of the *emphemera*, the so-called May flies, which live so short a time and are very numerous here, almost covering the water when in full season. It is scarcely possible to get one then except with the white-miller. At other times I find the green-drake, the Montreal and the professor the best lures for them. They will take earthworms very freely, but the most taking bait I have found to be a piece of tin foil wrapped around the hook and a little above it. I don't think there is a more prolific fish existing, for with hard fishing of many visitors here every day in the season, from June to October, they still abound in the waters.

But this reminds me, now I am in the vein for fish stories, of an adventure which gave rise to a snake story, which, in spite of the risk of my reputation as a truthful person, I feel I ought to give as an unique experience with snakes as well as a contribution to natural history as to the feeding habits of the rattlesnake.

It was on a summer afternoon when my good wife thought she would like a mess of fish, so, as an obedient husband, I took my tackle and my little skiff and went up the pond in search of a trout or two. It was a charming day in the Indian summer, when the gorgeous coloring of the trees along the banks was reflected in the absolutely smooth, glassy surface, as if the trees belonged to another world below. Thinking more of the scenery as I rested my paddle than of fish, I heard a rise under an overhanging thicket of laurel. I threw my fly over the pool and it was instantly taken by a very small trout, which I let struggle to get off the hook, as I was not after fingerlings. Something glided from the edge of the water which I thought was a big fish, and seized the hook and the little fellow on it. I found I had hooked a snake of some kind, which was diving and wriggling to get away. But it was securely hooked and I drew it up and found I had a rattler fast. I tried every way to get him loose, but neglecting my rod, which was sprung considerably, the snake rushed to the boat and the spring of the rod lifted it over into it. Then there was something to pay, you may be sure. Such a tangle! the snake careering all over the boat and among my legs, finally getting loose, so that I had to rest my feet on the gunwales. By and by the fellow rested at full length, and I considered what was to be done next. I took my paddle to try and throw him out. That set him to careering all over again, until again he rested. Then I tried to lift him out with the paddle again, but in the effort the paddle flew out of my hand and he still kept in the boat, running all over as before. Then I watched a chance to crush him with my heel, as he rested almost under me. I made the attempt, but missed him, and he darted at my leg and struck into my overalls. Instinctively I seized him by the neck and got him safe, but my blood curdled and ran cold up and down my back, you may be sure. I tightened my grip and snatched him loose, tearing out the fangs from his mouth, these remaining in the strong cloth of the overalls. I got the fellow in my basket, stopped the hole in it with my handkerchief, and finding I was uninjured I cut the fangs from my overalls and went to fishing, first paddling with the end of my rod until I recovered my paddle. Meanwhile I kept thinking what I should do with the snake. I thought I would send him to the editor of FOREST AND STREAM to keep company with the Apache's scalp I once contributed to the office museum, a souvenir which was sent to me by an admiring friend from New Mexico years ago; but instead I took him home, and finding his fangs were gone I let him loose in my office to act as office cat and catch the mice, which fed too much on my papers and nested among my books. I kept him there until he became quite tame, and were it not that he scared my casual visitors too much for their comfort I took his skin, which now hangs in memoriam of this curious and I think unique adventure, and as a proof of the truth of this snake story; for is not that skin hanging there a sufficient support of my veracity?

H. STEWART.



MACON COUNTY, N. C.

P. S.—I would not have told this story, but it is an off time for such true narratives, and it may come in time to warn other fishermen to look out for snakes themselves. I might say in further corroboration, as I now think of it, that more than fifty of my young ducks were taken one year off my pond by snakes, one of which I know was a rattler, as I pursued him ashore and killed him with the duck in his mouth, and I have his skin too, so that I can truthfully aver the rattlesnake will take fish and young ducks in the water.

MEN I HAVE FISHED WITH.

XXVIII.—Charles Hallock.

JUST as you know your father and your brother Sam without ever having been introduced to them by any one or on any particular occasion, so there are men who must have cut into your orbit at some particular time and place, but who, like the intimate relatives above mentioned, seem always to have been within the circle of your limited range on this planet. Every man has many old friends whose acquaintances can't be marked down to date and place and I have tried in vain to recall where and when I first met Charles Hallock. In these sketches there has been an attempt to follow old chronos, and on

CHARLES HALLOCK.
From a photograph in 1896.

the back of a photo of Mr. Hallock, taken in 1896, is this: "To my esteemed friend of forty years' acquaintance, with blessing," etc. Taking the number forty, as biblical scholars do, to mean an indefinite number—such as the days in the wilderness and those when Jupiter Pluvius let loose the waters to drown all who did not seek shelter in the ark—the thing is plain. We have agreed, after passing many letters some years ago, to call it a draw; he fixing the date at a chance meeting on the woodcock grounds below Albany in 1854, which may have been true, but as I am telling this story on the basis of personal memory we will put it some years later. When he tells the tale he will not be contradicted.

That horrid liver of mine which had acquired bad habits in the West was resisting all efforts for its reformation, and in the spring of 1860 I went to the seashore on Long Island to see if the heavy salt-laden air wouldn't press the kinks out of that rebellious gland. The fishing in Jamaica Bay and the sea food were novelties and opened a new field of interest among strange fishes and their different modes of capture. The early spring fishing for the flat fishes was very interesting, and the stories of the bluefish and others which would come later in the season promised much health-giving sport as the fishermen's stories were heard. To walk the beach and pick up oysters and ruin a small pocket knife to open them and then—how delicious they were taken *au natural*.

A bayman said: "Mr. Hallock is up at the hotel and we were talking about you and he wants to see you." Just who Mr. Hallock might be gave me no concern. He might be the sheriff of the county or only a town constable, it made no difference; he couldn't lock me up for misdemeanors done here, but what about Kansas? With this in mind I put on a bold front and met a man whose face was strangely familiar, but who was so cordial and who knew my old friend Ken King and other fishing and shooting comrades that we were soon on the footing of old acquaintance. He must be right! No man could go into such detail unless he had been there, and we let it go at that. Something was said about trout fishing, and I asked if there were trout on Long Island.

Hallock looked up and asked: "Do mosquitoes live in New Jersey? Why, Long Island has more trout to the square foot than any other tract of its size on this continent. I've been down here for a few days to visit some friends, and have an invitation to fish Massapequa Lake from its owner, Mr. David R. Floyd-Jones, and the invitation includes a friend. Let's go to-morrow, what d' ye say?"

I agreed, with the consciousness of being a very greenhorn at trout fishing, but with a desire to find out just how those artificial flies were used which the fishing tackle dealers kept, but which no one bought, as far as I knew, and which Hallock had in a book. He showed them with an enthusiasm which was wasted, because it did not seem possible that any fish would nibble at such dry fodder as that, especially a trout, which I had been told was the most wary and the best of all game fishes. In boyhood days I had taken a few on one occasion when fishing with my older friend, George Dawson, but we used worms in a small stream, and I was not then so thoroughly impressed with the importance of the trout as the game fish *par excellence* as a more extended acquaintance with a higher class of anglers had now brought about. I was on the point of telling Hallock that I had not brought down my fly-rod and flies, when my better self came up and whispered to the effect that while I might know a great deal about bobbing for eels, shooting and spearing fish, and the use of most baits, it was certain that it would be best to tell the truth. We all have certain ideals which we may flatter ourselves we fill to perfection, and no class of men are more prone to this than sportsmen; but after a short mental struggle all feeling of this kind was banished, and I said:

"I don't know the first thing about fly-fishing for trout and I haven't any rods or tackle for it. I'm anxious to learn how to fish for them, and with this confession of ignorance if you are willing to take me with you I will esteem it a great honor."

That honest confession put me on a solid footing; I was an apprentice to a master hand. The flies that I switched off on the back cast and the awkward entanglements which a novice must make who has had no preliminary instruction before he essays casting for actual trout we will not dwell upon. Suffice it to say that the casting of my companions and the landing of their trout opened up a new vista in the field of angling pleasures. Often when casting the fly I think of that day on Massapequa Lake when I had that genial sportsman Charles Hallock for a preceptor. In 1863 I had a twenty-day furlough from the army, and I met Mr. Floyd-Jones in the Astor House. He was then Lieutenant-Governor of New York, and offered to get all sorts of extensions of leave if I would only go down to Massapequa. Some stories that partly lingered in his memory needed retelling; but there were sterner duties. Hallock was away, and Massapequa's waters were not disturbed by me until a quarter of a century later, when they were again fished with other companions.

While on Long Island the casting of the fly was practiced with an ash and lancewood rod, and the other necessities which Mr. John Conroy, then of Fulton street, New York, selected for me from his then most marvelous stock of fishing tackle; and in the intervals of crabbing, salt-water fishing and boating, the mystery was learned.

In one of my frequent visits to Conroy's to replace the flies, which had then a bad habit of snapping off just as they were somewhere in the rear and were suddenly sent forward, I met Mr. Hallock, who invited me to visit and fish in a trout pond owned by his cousin, Mr. William Hallock Seaman, near Ridgewood, on the south side of Long Island, some twenty-five miles east of New York. It was early in the season, and the trout were in a rising mood on a most perfect day for fly-fishing, slightly clouded, but warm, with just enough wind to ruffle the water lightly, and hide all glint of rod and fall of everything but the flies. I had mastered the art of keeping the leader from cracking like a whip behind me when giving it the forward stroke, and had paid for the education in dozens of lost flies. Mr. Hallock noted the fact, and rejoiced that his advice had been of service. We each took half a dozen trout and stopped fishing. This was my first fishing in strictly private waters, and to-day I am not sure that I was then sufficiently educated in the etiquette of private fishing waters to have stopped at just six when the fish were truly asking to be caught; and it was such glorious sport to see the rise and the strike, followed by a miss or a capture, that I realized the fact that I had in early life taken the degree of Entered Apprentice in the East, of Fellowcraft in the West, and was now a Master angler. Of course the trout served at the hospitable table of Mr. Seaman were several degrees better than any trout that had ever been eaten before, and I doubt if they have been equaled since.

The life of Charles Hallock has been an erratic one, full of change and adventure. A man of medium height, without an ounce of superfluous fat, he is to-day a tireless bundle of nerves and sinews; one of those men without apparent muscle who will tire out a muscular athlete in a day's rough tramp over hill and through meadow. He was trained for a journalist by his father, Mr. Gerard Hallock, who for thirty-four years was editor of the New York *Journal of Commerce*, and has followed literature as editor and author most of his life.

He was born March 13, 1834, and is a graduate of Amherst College. The cyclopedias say that his ancestor, Peter Hallock, came to America in 1640 and bought a large tract of land on Long Island near Moriches, part of which is still called Hallock's Neck. The family was distinguished in the War for Independence, and during the War of the Rebellion a near relative, Gen. Henry Wager Halleck, served with great distinction. His branch of the family had changed the spelling of the name, as often happens. Early in the 50s the spirit of adventure seized Charles and he crossed the great plains with a wagon train over the Santa Fe trail, and wrote up his observations of Indians and buffalo in *Harper's Magazine* for October, 1857, and next year took the old Red River trail from St. Paul to Pembina and wrote that up for the same magazine. It is recorded in my sketches that I was up there on that trail about the same time, but it was a large country, and my surveying party was off on the trail most of the time, and we did not meet. Charles was with C. C. Andrews, afterward major-general United States Volunteers, and in '69–'76 Minister to Sweden, and in '82 was Consul-general for Brazil.

I had a letter from him late in 1860, after he had taken Dr. Elliott Coues and a party to Labrador in a sailing vessel, and brought back the first photos of the interior of that country, as well as a large collection of birds and

curios for the Smithsonian Institution and the Long Island Historical Society. He wanted me to go to Maine or New Brunswick, but Albany was cold enough in winter to satisfy all desire to go further north, and then the war came on and we drifted apart, I to enter the Union army and he to run the blockade and become the editor of the Augusta (Ga.) *Chronicle and Sentinel*, and at the same time writing a book entitled "Sketches of Stonewall Jackson," for which he got one of the very few copyrights ever issued by the so-called Confederate Government, and which is now in the National Museum. His restless spirit impelled him to again run the blockade seven months later, and he labored for a whole month on the *Royal Gazette* at Hamilton, Bermuda, and then skipped to Halifax, where he corresponded for several New York papers while making a tour of the maritime provinces by land and water.

Canadian politics were as much mixed then as they are now, and promise to continue, and this tireless worker saw that the reciprocity treaty with the United States had expired and that the public was considering the confederation of all the British Provinces in North America, and he ran a series of articles in the Halifax *Citizen* entitled, "Joel Penman's Observations, or the Provinces Seen Through Yankee Spectacles." In 1864 Mr. Hallock became assistant editor of the St. John (N. F.) *Telegraph*, and simultaneously opened the first broker's office in the Province. Later he became editor of the St. John *Courier*, a Confederate organ, and at the same time published an opposition paper of his own called *The Humorist*, as a counterpoise. The latter was a financial success, but he only ran it a few months, when it stopped; he was tired of it.

Now I arise to say: The subject of this sketch is not only a gifted man, but a genius of a very high order. He has not piled up millions of dollars, as some more cold-blooded men have, but he has made his mark on the roll of fame and the world is the better for his having lived. His talents have not been used to accumulate money, although he has made and lost fortunes, but he has spent years in teaching the youth of America not to waste the heritage of game and not to slaughter for slaughter's sake. In the killing of fish I learned this from him and have preached and practiced it for many years.

Last August I received a letter from my old friend. Like all men of his temperament, he must be elated or despondent, and he was in the latter mood when he wrote: "Since then we have fought the battle of life for forty years, and it has had its sharp engagements; you coming out as a major and I more or less a minor; to which key shall we join in singing?" Thirty years ago he returned to New York and opened a broker's office in Beaver street, the firm being Ralph King & Hallock, and for a year was the financial editor of *Harper's Weekly*, and then his restless spirit asserted itself and he explored the Adirondacks and wrote up that region, which was not as well known as it is now. He visited me after I had gone into trout breeding in western New York, and we wet our lines in a little trout brook and spent much time in discussing old times and in comparing notes of adventure since we met. Portia says:

> "For in companions
> That do converse and waste the time together,
> Whose souls do bear an equal yoke of love,
> There must be needs a like proportion
> Of lineaments, of manners and of spirit."

In 1870 Mr. Hallock, with Messrs. E. R. Wilbur, Dudley Field, Genio C. Scott, S. D. Bruce and several others, founded Blooming Grove Park, in Pike county, Pa., and the next year it was incorporated. The park then covered 12,000 acres and was the first great game preserve in America. The Park Association has now many elegant buildings and also many members.

Among the many things which the sportsmen of the world, and of America in particular, owe to Charles Hallock is the founding of FOREST AND STREAM in 1873. He sent me a prospectus of the forthcoming journal and wrote me a most peremptory order to send him an article for the first issue, on pain of his displeasure. Relenting somewhat, he closed the letter with a request, saying: "Do this and I will love thee forever:

> "With a love that shall not die,
> Till the sun grows cold,
> And the stars are old,
> And the leaves of the Judgment Book unfold."

So it came to pass that when the first copy of FOREST AND STREAM saw the light of the August moon it contained a few lines from my pen; crude they seem to-day, but what fellow can resist an order that is modified into such a request? The genial Charles came again to see my little trout farm when the grayling eggs and the adult grayling were there in the first experiments with that new game fish, and we again wet our lines, and would have wet our whistles had we been boys and the year in its early youth; for when the sap goes up the willow, before the leaves put out, the bark on last year's wood will "wring," and whistles are then made; but the bark so wrung will dry if not cared for, but, you understand, we wet our lines and perhaps a foot.

In the early '70s Mr. Hallock turned his attention to the development of Florida and advocated draining Lake Okechobee. He put the first boat on that lake that had been there since the Seminole war in 1848; he called the boat "Forest and Stream," and put Mr. Fred A. Ober in charge of the expedition, and later he obtained the assistance of Prof. Spencer F. Baird and Mr. George N. Lawrence in fitting Ober out for natural history work in the Caribbean Sea.

Mr. Hallock continued his work as editor of FOREST AND STREAM until January, 1880. Meanwhile he had published "The Sportsman Tourist," "Camp Life in Florida" and that grand volume of 900 pages, "The Sportsman's Gazetteer." Then he took what he called "a rest." Without looking for the exact definition of the word in the big dictionaries, I will by their leave say that Hallock's idea of rest at that time was to attach himself to Maj. Wagner's United States revenue force in the mountains of East Tennessee and North Carolina to look up the "moonshiners," as the makers of illicit whisky are called, and to report the work for the New York *Herald*. Now just see the difference in an individual definition of the same word. To me that blessed word "rest" means freedom from not only manual labor, but also from thinking; it means what I can only express as "hog comfort," and its culmination a grand after-life of good living and sound sleeping. That sort of thing wouldn't suit Hallock for an hour. There is an ever-hungry maggot in his brain that continually impels him to do something, and while he loves a good dinner his brain works off its effect. You might as well try to fatten a threshing machine by running oats through it as to get an ounce of fat on Charlie Hallock by feeding him oceans of turtle soup and tons of possum; his brain would undo all the efforts of his stomach, even after he has passed the half century point which Victor Hugo called "the old age of youth and the youth of old age."

The fact that my dear old friend of nearly half a century and I are so dissimilar in mental and physical make-up is no doubt the reason that we are still friends. We were never rivals in anything, but we had that same bond of fellowship which cannot be described in words; a subtle something which draws some men of different natures into close companionship. The character of "rolling stones which gather no moss," and perhaps had no time to waste in that direction, is the only point of resemblance; but if Charles Hallock has not gathered much moss he has collected a mass of most extensive knowledge of the football which we call "the earth," which in his declining years will be a comfort to him if his nervous organization will ever allow him to sit down and take a few years off for contemplation of the past and indulgence in reverie of the future.

In 1878 Mr. Hallock again broke away from office work and founded the town of Hallock in northern Minnesota, in a grand hunting region on the old Red River trail which he had traveled some twenty years before. It is now the county seat of Kittson county. Three years later he went out to the Yellowstone country to attend and report an important council of Crow Indians which ceded the right of way through their reservation to the Northern Pacific Railway, and incidentally to hunt and fish in that newly opened region, and a year later he went out to the Sascatchewan country, on the Canadian Pacific Railway, and wrote it up for some of the magazines. In 1883 he worked up the natural history and resources of Texas for the Missouri Pacific management, crossing the Rio Grande into Mexico at El Paso and Laredo, and the following year was made superintendent of the Minnesota State frontier exhibit at the New Orleans world's fair and cotton exposition, and was highly complimented on the artistic manner in which his life-like groups were displayed. In 1885 he went to Manitoba to report the Riel rebellion, while it was practically winter in that frigid country, although the almanac said it was April.

In the summer of '85 he went to Alaska with the first governer of that territory, and on his return published his well-known book, "Our New Alaska," which has been called one of the masterpieces of English composition. He afterward went to Canada and wrote up the marble and phosphate deposits, as well as many sketches of the field sports to be had there. A few years later found him trying to repopulate the abandoned farms of New England with summer cottages, and then he worked up the mineral regions of Montana for the New York *Times* in the interest of the Great Northern Railway. In 1892 his attention was called to the mining region of British Columbia and the Pacific extension of the same railway. Since then he has been writing up the resources of the seaboard of North Carolina in many publications.

This brief sketch gives a fair idea of the restless, hard-working man who has accomplished so much field work and exploration in nearly every geographical division of the continent, coasted nearly the entire shores of both oceans, traversed the great inland waters and regions but little known, and whose work has been of great value to science as well as to the sportsman.

He is still hale and hearty, and when I met him in New York last month he spoke of my articles and I told him that I would soon write something of our old-time acquaintance.

"All right," said he, "I'll give you some dates when I get to St. Paul." And he did. He wrote me a funny yarn about a railway adventure where soap and towels were unknown, and wound up by giving me the dates of his birth and marriage. But the *University Magazine* for August, 1894, helped me out with facts and dates, or this could not have been written.

Sitting in my den and thinking of old friends, most of whom have crossed the styx, the words of Buckingham (Henry VIII.) come up as I think of Charles Hallock:

> "May he live
> Longer than I have time to tell his years!
> Ever beloved and loving may his rule be!
> And, when old time shall lead him to his end,
> Goodness and he fill up one monument!"

FRED MATHER.

The Poetry of Angling.

SHASTA MOUNTAINS, Cal.—*Editor Forest and Stream:* I would like to know whether any of your readers sniggle or not. I bethink me of reading in this journal some months ago about some guddlers. It seems to me that those who guddle should have an affinity, as it were, in those who sniggle.

Now, if there are any snigglers, I hope they will align up and drill with the guddlers, so we will know what they are up to nowadays.

I think both snigglers and guddlers are slighted and neglected in literature, and it is my intention to write an ode to snigglers and guddlers, and touch it off as soon as I have them identified. RANSACKER.

P. S.—As I am informed the sniggler is usually in pursuit of a wriggler, I perceive a rhyme thereby; while guddlers, with proper precautions, may be made to jingle as puddlers, hence these subjects may be odified in a very odible sort of a way. R.

[Also, if Ransacker's muse can handle snigglers and guddlers, she should turn her attention to the Connecticut wigwazzers.]

To FOREST AND STREAM,
New York City.

ANGLING NOTES.

New York Fish Hatcheries.

CALEDONIA CREEK, Livingston county, N. Y., has on its banks the oldest fish hatchery in the State. It was established by Seth Green as a private hatchery in 1864, and afterward came into the possession of the State of New York upon the creation of the Fish Commission in 1868, and it is the largest and best known hatchery now owned by the State. In fact, I have on a number of occasions found people who had an idea that the Caledonia hatchery was the only one in the State, and that all the fish hatched and distributed by the State Fisheries Commission came from the Caledonia Station. Soon after the organization of the Fisheries, Game and Forest Commission last year the water in a pond above the State property became poisoned with water mould during an exceedingly dry time, and when it was allowed to flow down the creek and through the stock ponds and the hatching troughs at the station it killed the fish, young and old, in spite of everything that was done to save them.

Writing of this disaster in FOREST AND STREAM at the time, I said it was a blessing in disguise. It seemed to the general public to be a severe blow to the work of the Commission that it should lose thousands of fingerling brook, brown, rainbow and lake trout, and other thousands of stock fish of the same species; but as the fish had in previous years been crossed and recrossed until pure-bred fish were the exception in the stock ponds, it was really a consummation devoutly to be hoped for, by those who knew the facts, that the entire outfit should go at "one fell swoop" and leave the stock ponds tenantless, to be filled later with fish of pure lineage that would produce strong, healthy, fruitful fry. To-day one will see that great changes have been wrought at the Caledonia hatching station since the foul water came down the stream, spreading devastation among the fish, and the changes are not all apparent to the eye of the observer.

The station has a capacity for hatching 5,000,000 trout fry, 10,000,000 whitefish and 20,000,000 pike-perch. In its rearing boxes and races 800,000 fingerling trout can be reared annually. With its present equipment it is probably second to no hatchery in the United States for the quality of the work performed.

It was in June of 1895 that the stock ponds and hatching troughs and rearing boxes were visited by the fatal water mould from the pond above, but to-day the station has the following fish on hand:

Brook trout, 5 to 8 years old	45
Brook trout, 2½ to 3½ years old	3,000
Brook trout, 1½ years old	5,000
Brown trout, 5 to 12 years old	1,500
Brown trout, 3 to 4 years old	300
Brown trout, 1 to 2 years old	300
Lake trout, 10 to 15 years old	25
Rainbow trout, 5 years old	40
Rainbow trout, 3 years old	500
Rainbow trout 1 to 2 years old	400
Red-throat trout, 1½ years old	1,900
Total	13,010
Brook trout, 8 months old	70,000
Brown trout, 8 months old	32,000
Lake trout, 8 months old	8,000
Landlocked salmon, 8 months old	2,500
Scotch Sea trout, 8 months old	750
Rainbow trout, 6 months old	14,000
Steelhead trout, 5 months old	650
Total	127,900

It has been necessary to bring stock fish from other hatching stations in the State, and to procure fish from outside sources; but all the stock fish are strong, active, healthy, pure-bred fish.

The Pleasant Valley hatchery, near Bath, Steuben county, is a new station of the Fisheries, Game and Forest Commission, and during the past season much work has been done to bring it into proper working condition, and to-day it is a model hatchery for one of its size. It is not an easy matter to create a hatchery, stock ponds, rearing boxes, and adjust the water supply so that it may be utilized to the utmost, and bring it up to its working capacity from a rough, swampy field and a stream of water to build upon within a limited time; but this practicallly has been done at Bath within little more than two years. Now there is a complete hatchery, with modern hatching troughs with a capacity for hatching 1,500,000 trout fry. The grounds have been graded and five stock ponds have been built, with rearing boxes to raise 150,000 fingerling trout annually. The water system is as perfect as it can be made, with guards against overflow or floods at all the ponds and rearing races. The water is aerated artificially for the fingerling fish, and is so distributed as to utilize every gallon of it in fish propagation. A new ice house containing meat room has been built, and the stock ponds now contain the following fish:

Brook trout, 3 years old	10
Brook trout, 20 months old	2,000
Brook trout, 6 months old	20,000
Red-throat trout, 1 year old	50
Brown trout, 3 years old	250
Brown trout, 6 months old	6,000
Rainbow trout, 3 years old	200
Rainbow trout, 4 months old	3,000
Rainbow trout, 4 to 12 years old	30
Lake trout, 6 months old	8,000
	39,540

It is worth a considerable journey to see the big rainbow trout, those put down at from four to twelve years old. They are fish that ran up the hatchery stream from Keuka Lake and were netted by the hatchery men to be used as stock fish. Within a few days I saw them in all their glory. The pond was drawn down and a net confined them in one end of it, and then with a dip net they were lifted one at a time over the net which held them. Some of the fish were 10lbs. in weight, and all were plump, well fed, with all the colors of the breeding season. I am not unfamiliar with the coloring of trout at the breeding season, but these big rainbows seemed brighter than any that I had previously seen. In giving the ages of the fish at Caledonia and Bath I have quoted from an inventory made on Oct. 1, and therefore at this date young fish are two months older than the figures I have given.

Vermont Fishing Rights.

Anything and everything about fishing and fishing rights in the State of Vermont is of interest to me, for I have enjoyed some good fishing in that State, which I always recall with pleasure, and the only time in my life that I was ordered away from a trout stream as a trespasser was in Vermont. At the time I was fishing from

a boat, and I continued to fish when ordered away by a farmer, who had the stream posted on both sides through his farm. My understanding of the law was that I had a right to fish from a boat or wade the stream, as the stream had been declared a highway for the purpose of running logs, in consequence of which the farmers had been obliged to take up what were called water bridges, which interfered with the passage of the logs. Afterward I learned that this particular farmer had had the bed of the stream surveyed out of his farm so he would have a less number of acres on which to pay taxes, and had afterward put his property out of his hands; so he did not even own the banks on which he stood when he gave orders to cease fishing on his property. I respect property rights, but I have never regretted casting a fly and catching a trout in front of this man while he was reading the riot act as to trespassing and trespassers. Ever since that time I have taken a keener interest in the fishing rights of the State. The Vermont courts have recently made a ruling on this subject of fishing rights, as I learn from a newspaper clipping sent to me by some unknown friend, who has not taken the trouble to indicate the paper the clipping is taken from:

"The Constitution of the State provides that the inhabitants have a right to fish in all 'boatable' waters at seasonable times, which are fixed by law. 'Boatable waters,' as defined by the Supreme Court, are waters capable of common passage as a highway and susceptible of a beneficial use for the purpose of transporting either people or merchandise. Acting on this definition, a County Court acquitted a man arrested for invading with a boat and fishing tackle a pond fenced, stocked and posted by a fishing club. As the Supreme Court's definition is a broad one, and in cases of invasion of fishing preserves must be tried before a jury, the odds are against the exclusive fishing clubs and in favor of the predatory angler."

That is the substance of the information conveyed by the clipping, but if the Supreme Court upholds such a ruling of the County Court in the case of a pond such as is described it will be strange indeed. No one can tell what a jury will do, not even a grand jury, and my interest in the matter will not wane until the Supreme Court, which is Vermont's Court of Appeals, passes upon the case, for surely it will be appealed to determine if a small fishing pond fenced in is "Capable of common passage as a highway and susceptible of a beneficent use for the purpose of transporting either people or merchandise." I am something of an angler myself, but I would not dare trespass under the circumstances.

Congratulations.

Hon. L. Z. Joncas, ex-Member of Parliament, has been appointed Superintendent-General of the Department of Fish and Game for the Province of Quebec, and both Mr. Joncas and the Province have my warmest congratulations. Mr. Joncas was the Canadian representative of the Fisheries Department of the World's Columbian Exposition in Chicago, in 1893, where he read a paper on "The Fisheries of Canada" before the World's Fisheries Congress; and also Canadian representative at the International Fisheries Exposition in London, in 1883. He is particularly well equipped to fill the position to which he has been appointed, as he has long been a close observer and student of the fish and game of the Dominion. Canada is remarkably rich in the number of her beautiful lakes filled with the choicest of game fish, and to parcel them out to fishing clubs will be one of the duties of Mr. Joncas, as the region in which many of them are situated is fit for little else. It is more than suspected that some of these interior lakes contain trout that are entirely new to ichthyology, and doubtless the new superintendent-general will do all in his power to make known to the world what they do contain, for his newspaper training will act as a spur in this direction.

Mr. Joncas is likely to have as an associate in his new field Count de Puyjalon, the naturalist, and altogether the work will be in the best of hands for all concerned.

Sunapee Trout in Maine.

Since the introduction of the sunapee trout into New York waters from Sunapee Lake, New Hampshire, more than one newspaper has stated that these fish are found only in Sunapee Lake, but this is not true. In my notes I have mentioned that the largest trout of this species known came from Dan Hole Pond, also in New Hampshire; but whether they are native or introduced into Dan Hole is a moot question. Soon after the discussion was opened in these columns regarding the identity of the Sunapee trout, it was reported that the same species of fish were to be found in Flood's Pond, in Maine; and when specimens were submitted to Prof. Samuel Garman, of the Museum of Comparative Zoölogy, Cambridge, Mass., he pronounced them identical with the Sunapee fish. So they are known to inhabit three different waters, two in New Hampshire and one in Maine. They have since been transplanted into other waters in New Hampshire, but so far as known it is not even claimed that they are native to other waters than the three named. The German saibling, which the Sunapee trout closely resembles, have been traced to New Hampshire a few years before the Sunapee trout or saibling were discovered in Sunapee Lake, but there is no record that the eggs of the German saibling were ever sent to Maine, and this is a strong point in favor of the claim that the fish are a new species aboriginal to the waters of New England.

Much is yet to be learned about the habits of this fish in confinement, for up to this time for breeding purposes they have been taken from the shoals in the fall and released when the spawn has been taken; for it is understood that if they are confined for any length of time in the breeding pens, in a similar manner to trout and salmon, they will not give up their eggs.

Mr. Arthur Merrill, of East Auburn, Me., writes a letter to Dr. John D. Quackenbos, from which I am permitted to make the following extract: "The Sunapee trout is attracting attention among the people interested in fish-culture in this State, and the Fish Commissioners will attempt its cultivation on quite a large scale next year. In answer to their request for information I have forwarded your pamphlet with other papers to their office in Augusta."

Early in November I went to Flood's Pond, where the U. S. Fish Commission has a collecting station, and secured twelve fine specimens to be kept at this hatchery for breeding purposes. The largest one that I got weighed 3lbs., but if I had gone a few days earlier I could have got some 2lbs. heavier.

I carried the fish 180 miles, but they stood the journey well and seem contented in their pond, and take the infertile eggs that are given them as their food readily. I do not know as I shall have the pleasure of taking any of these fish to the Sportsmen's Exposition next March, but they will be shown in several local exhibitions, as will some fine specimens of trout weighing 7lbs. that I have secured.

Mr. Race, superintendent of the Green Lake station of the U. S. Fish Commission, says that the saibling, or golden trout, as he prefers to call it, is easily cultivated; the eggs surpass in vigor any trout or landlocked salmon eggs, and the young fish are easily reared.

This is quite important, as it is the policy of the Commissioners of this State to rear their fish to the age of eight months before liberating them. A portion of the eggs taken at Flood's Pond are to be distributed among the State hatcheries (in Maine), and at Auburn and Monmouth the fry will be fed. I anticipate good results at these places, as the water supply is from springs, and is very cool and abundant.

In summer the Sunapee trout is the most delicate of fishes, the young being particularly sensitive to sudden changes of temperature; and when caught in 40 to 50ft. of water and drawn to the surface they are often killed by the sudden change from bottom temperature to surface temperature. Game and hard fighting as these fish are, they must be handled with the greatest care to avoid injuring them during the summer months, but in the autumn they are as hardy as any of the salmon family.

The adult fish at the Aquarium in New York (Dr. Bean writes me under date of Dec. 27 that they are alive and flourishing, and attract much attention from the visitors to the Aquarium) and at Caledonia hatchery, if they live, will be watched with interest when the breeding season approaches to discover if they can be handled like other trout, and spawned artificially when under restraint.

Black Bass in the Adirondacks.

Every little while some one wishes to plant black bass in Lower Adirondack Lake because the trout fishing is poor or pike have found their way into the lake, and black bass are deemed more desirable than pike, or "better than no fishing at all." The Fisheries, Forest and Game Commissioners reject all applications for black bass to be planted in Adirondack waters because section 130 of the Game Laws of New York provides that: "No fish, fish fry, spawn or milt, except speckled trout, brook trout, brown trout, salmon trout, rainbow trout, Adirondack frost fish or landlocked salmon, shall be placed in the waters of the Adirondack region, except under the immediate supervision and in pursuance of a resolution of the Commissioners of Fisheries. Whoever shall violate the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of four hundred dollars for each violation thereof." The Commissioners will not pass the necessary resolutions to admit the black bass, as they realize that it will be more difficult to get rid of the black bass than it is to get rid of the pike, and that bass will speed from the waters where they might be planted to other waters where even the advocates of the black bass would not wish to see them. Furthermore, it is the policy of the Commission to introduce yearling and other fish of the salmon family into the pike-infested waters to restore the trout fishing, if it is possible to do so, and it is possible, because it has been done elsewhere.

It has been reported to me that people who have been disappointed in getting black bass from the State for planting in Adirondack waters will apply to the U. S. Fish Commission for black bass to carry out their purpose. This will be utterly useless, for the U. S Fish Commission is familiar with the laws of New York and will not assign any black bass to the State without first consulting with the Commissioners of New York, and the messengers of the U. S. Fish Commission will be careful to see that the State laws are observed.

Apparently it would be wiser and cheaper to wait and see what the result of planting yearling trout in the pike waters will result in before black bass are planted to cure the evil. Pike can be controlled in a measure and black bass cannot.

"Susquehanna Salmon."

A writer in one of the New York daily newspapers says it is doubtful if greater success ever followed the transplanting of fish into alien waters than has resulted from the introduction of wall-eyed pike or Susquehanna salmon into the Delaware River.

He adds, very properly: "How the fish came to be called a salmon is one of the mysteries of piscatorial nomenclature, but that was the name it received (in the Susquehanna River) and by which it has been known ever since. * * * As a matter of fact it is no more a pike than it is a salmon." If he had put a Pike county period after the word salmon and stopped he would have been all right and within the truth, but he goes on to say, "It is of the bass family and might properly be called a yellow bass." In the last sentence he fell into a pit of his own digging, for the pike-perch is no more a bass than it is a salmon, and it does not belong to the bass family, and it would be improper and highly objectionable to call it a yellow bass or any other kind of colored bass. The pike-perch belongs, as the second part of the hyphenated name indicates, to the perch family, and that is what it is, and it would be as absurd to call it a bass as it is to call it a salmon. I beg that this fish shall not have another inappropriate and improper name attached to it. To set people right as to the names of our fishes is very commendable, but when the instructor goes deeper into the mud than the fishes previously were in the mire it is not to be commended.

Swiss Lake Trout.

"An innovation in Adirondack fishculture has just been inaugurated by the Adirondack League Club, which has released into Green Lake, one of the small ponds on its 100,000-acre preserve, 1,000 yearling Swiss lake trout from Lake Geneva, Switzerland."

That is the substance of a newspaper item which I have read in a number of different newspapers or had sent to me in the form of a clipping, and while it is all true enough, those fish are not the first of this species to be planted in New York waters.

In 1889 the U. S. Fish Commission received some Swiss lake trout eggs from the Swiss Government in exchange for some eggs of native fishes, and the next spring I obtained 5,000 of the fry and planted them in Lake George. Although it is six years since the plant was made, I do not know what the result of the planting has been, for so far as I personally know none of the fish have been caught, although I have heard of two fish being taken that were strange fish, and which were not lake trout such as are native to the lake.

This fall the Fisheries, Game and Forest Commission planted 1,000 yearling Swiss lake trout from the U. S. Fish Commission station at East Orland, Me., in Lake George, making the second planting of this specimen in the lake.

The Swiss lake trout (*Salmo lemanus, S. lacustris, S. rappii*, for it has been given a number of specific names) has been held to be a modified form of the brown trout, changed by environment, food, temperature, etc. In fact, one European writer suggests for it the specific name of *Salmo variabilis*.

A. N. CHENEY.

NEW YORK NETTING.

Editor Forest and Stream:

In relation to netting there is one main fact which it seems to me covers all the rest. So long as nets shall be permitted in inland waters, just so long will the money of the State spent in the propagation of fishes be wasted. The present provision of law for the licensing of netting is but a scapegoat. Licenses have been issued with such freedom as to give netters about all the liberties that could be asked, and applications have been signed by politicians, while protective associations have been completely ignored. Oneida Lake, twelve miles from Syracuse, for instance, has no superior and very few equals as a breeding ground, and during the time when local associations had some control over it, before licensed netting was authorized, there was a rapid increase of fish food, so that any angler could spend a day of recreation there and make a good catch. But the whole army of netters has spent most of the season in its old occupation of robbing the people at large and shipping frequent and large catches to Eastern markets, studiously avoiding the Syracuse market, which is mainly supplied by Buffalo, except the sea food. The question has come to this: If netting is to be allowed at any time of the year, then stop the waste of money spent in stocking streams and lakes almost solely for the benefit of netters. The people at large pay through taxation this money into the State treasury, but if the netters are to rob the waters, then let them pay the taxes, or wholly discontinue propagation and protection.

The State Commission is only a part of a political machine, though possibly there are one or two members of it whose impulses are better than their actions. There can be but very little hope of the faithful protection of fish, game and forest while this condition of things exists, so perhaps the best, most feasible action for the Legislature to take in relation to the matter would be to deny any appropriation to be wasted, as those in the past have mainly been.

It is just as useless to attempt to protect game against the avarice of cold storage interests and the political pulls which for money they can command. The season for killing game now practically covers 365 days every year, so while these "fences" for covering market killing at all times of the year exist, why continue the waste of maintaining a so-called Commission and it corps of caucus workers?

Unless the State Association at its coming meeting makes some provision for watching legislation this winter, and making itself felt at the Capitol constantly, it will be quite useless for it to spend any time in making "recommendations" to the Legislature. It must understand that there are so many political influences to be brought to bear by the "machine" which controls that body, that only by the most persistent, earnest attention can those citizens of the State, those tax-payers who would serve the people at large instead of a few influential politicians and fish exterminators, hope to inaugurate such protective measures as will give much hope of the future.

CENTRAL NEW YORK.

CENTRAL NEW YORK.

ITHACA, N. Y.—The ruffed grouse season closed to-day, Dec. 31, and it leaves a good many birds in the covers. In a cover within forty minutes' walk of the city at least fifty grouse are to be found, and what is true of the cover referred to is true, proportionately, of other well-known grounds about here. Men marvel that the ruffed grouse supply should continue to be so numerously maintained, in the face of such persistent and destructive shooting as has been carried on for the past decade, but when the almost inaccessible reaches of territory inhabited by the grouse family is considered the question no longer remains debatable. As for example, the cover alluded to as holding fifty grouse embraces a tremendously rough sweep of country which only the most rugged and finely conditioned pedestrians would care to tramp over. And in the wildest and most declivitous retreats, where shooting is to be done only under the most forbidding conditions, the elusive, but none the less magnetic, bird secludes itself. This explains why the grouse has been able, and continues to be able, to hold its own against all the forces of man, bird and beast committed to a common warfare upon it. Given adequate protection, such as now prevails, and the ruffed grouse supply of Central New York bids fair to baffle the minions of extermination for an indefinite period of time.

The early part of the present week Mr. William Bishop shot a young English pheasant within a mile of this city, and it is generally reported, although I know of no one who is actually prepared to prove the accuracy of this report, that a number of these beautiful birds are to be found in local covers. This is the first wild pheasant of any variety that I know to have been shot hereabouts. Local sportsmen are unaware of any pheasants having been brought to and turned out in this immediate part of the country.

The *Daily Journal* devotes considerable space to a consideration of the subject, but in common with the rest of us offers no testimony showing from whence this bird came or to what extent it is represented along the reaches of local territory.

A large flock of wild geese is again wintering on Cayuga Lake. The birds daily fly to some extensive buckwheat stubbles along the east side of the lake, some five

or six miles north of Ithaca, but are altogether too irregular in their feeding habits and too wary to invite easy or successful gunning. The flock originally numbered sixty birds. Dana Bush succeeded a few days ago in stalking the flock to within the range of a .45cal. rifle, and at a single shot was lucky enough to knock down two. Later he got two more of the bulky honkers. Every breechloader, flintlock and Zulu gun in the neighborhood is being put in shape to train on that little battalion of wildfowl bent on getting a daily ration of waste grain.

The recent reference to wild pigeons made in FOREST AND STREAM prompted me to institute some inquiries relative to the wild pigeon, as remembered by local observers, and I was pleased to learn that a few of these at one time very common birds have lately been seen in Tompkins county. Mr. Lafayette Krum, residing some seven or eight miles north of Ithaca, states that during the past year he has noted one or two small flocks of wild pigeons hovering about his section of country. He further assures a friend of mine that he has been reliably informed of several other small flocks having been seen in various parts of this and adjoining counties.

A pigeon roost at one time existed near Ithaca, where the birds congregated in vast array.

The last great flight of wild pigeons, as applied to this locality, occurred in the middle 70's, if the writer's memory be not at fault, and it lasted from an early hour in the morning until past midday. The writer, then a farm boy just learning to wield a long, lean, murderous-looking muzzleloading gun, exhausted his meager supply of powder and shot ripping holes in the atmosphere as the mighty host went by, but precious few birds came to his capacious pockets. The flight on that beautiful spring morning, so far as numbers were concerned, was extraordinary. The horizon was literally banked with birds, seemingly one vast, undetached sweep of wings whirling past into space. How the guns cracked on that morning of the long ago. But alas! the feathered multitude never came back.

Nov. 15.—Newton, N. C.—Eastern Field Trials Club annual trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

BEAGLES AS FIELD DOGS.

BOSTON, Mass.—*Editor Forest and Stream:* Admirers of the beagle are earnest in promoting its welfare, but their earnestness seems to have in it an unintentional exclusiveness. We hold trials, and we all concur in that they are excellent, afford good sport, rejoice at meeting our old friends, and we then return to our homes and remain silent till the next trials are due, when we meet the same people, say much the same things we said last year, have an enjoyable time and return home again.

Between the field trials, a period covering almost a whole year, the public hears nothing of sport with the beagle. The literature of this dog is nearly all confined to field trial reports, the history of the dogs in competition. The practical value of the dog in the field is left untouched. The public can only infer from this silence that either we have no writers in the ranks of the beagle fancy or that the beagle, as with the spaniel, is of value only as a means of juggling for prizes. Though the beagle admirers are free from talking spaniel nonsense, such as what is the correct type of spaniels for field work when they are used solely for bench show purposes. On this subject, Uncle Dick can rest assured that he is right, and each of the other wranglers can rest assured that he is right, though if they would hold a spaniel trial they might be convinced that they are all wrong; but it is much less trouble to describe and decide, each for himself and all the others, than it is to hold a trial and decide that talk does nothing toward making a field dog or his work.

But to return to the beagle. There is hardly a section in the older parts of the United States which is not adapted to the use of beagles. However much the birds or deer may vary in numbers in different parts of the country, the rabbits are sufficiently numerous for sport everywhere.

As a sport, it ranks with the best. And in many of its parts it is the best. In shooting birds, the work of the dog when the birds are found lasts but a moment. The work of the beagle, when its quarry is found, is only begun. There is then for many minutes the melody of the voices swelling sweet and full and dying away as the eager chase comes and goes in all the desperation of pursuit and the uncertainties of it, in which the actors are cunning and swift. The sportsman must be vigorous in changing from point to point, and his judgment in anticipating the course of the chase must be good, else he will find himself thrown out. To kill the rabbit while it is flitting through the brush or a narrow space in some hazy vista requires a degree of skill with the gun which but few possess, even though they may be most skillful in shooting on the wing. True it is that rabbit shooting is easy if one makes it easy, as bird shooting is easy if one sneaks up and takes pot shots; but rabbit shooting ahead of the beagle orchestra, the woods ringing with the fullness of importunate music, and the swiftness of the sport and the uncertainty of results, make a combination which must be experienced to be appreciated.

And yet this sport is within the reach of the masses of sportsmen, regardless of class or condition. The dog is small and easily maintained at a small expense for food and shelter. His training is much simpler than the training required for bird dogs, and it is so simple that anyone who knows the sport can accomplish it. A fair skill with the shotgun or rifle is necessary, but the gun itself may be any old thing in the shape of a gun, because rabbit shooting is short-range shooting. The man with a $500 gun is no better equipped for this sport than is the man whose gun cost $5. Rich and poor many gratify their love of the most perfect and beautiful according to their means, but for practical efficiency they are on the same footing.

And the lands of the people of the United States are open to all who wish to hunt rabbits. Land owners object to bird hunters, and much of the land in the States is closed against them. Big-game hunters encounter the same obstacle, with stringent game law restrictions added. But the rabbit hunter can roam free as the wind wherever he lists. His sport is simple, it is of the people, it takes nothing of special value from the owners of the land, and the merry music is a compensation to all who hear it, far and near. Rabbits multiply rapidly, so that keeping them within limits confers a public service.

With all the advantages of the sport with beagles, the interest in them spreads but slowly; for few know of the excellence of it, though many know of the beagles as field trial performers. Without the needed description for the public information the beagle as a sporting dog will gain popular favor but slowly. If the beagle does his work well he relies on his master to make it known. Let the brethren of the beagle family show more and broader energy in 1897—less about bone and more of work.

JOSIAH.

THE IRISH SETTER AS A FIELD DOG, PAST AND PRESENT.—IV.

LITTLE VALLEY, N. Y.—*Editor Forest and Stream:* About the time Irish setter trials were advocated there were a number of importations of these dogs made from both Ireland and England—notably of these Finglas, Coleraine, Blue Rock, Tearaway and others. But as subsequent events proved they were not superior to dogs of American breeding. Most of them came over with the prestige of having run at the trials on the other side, and as such were heralded far and wide. Of these Blue Rock and Tearaway were of Muskerry blood. Blue Rock impressed me altogether more favorably than did the others, although his work was not up to that of some of them. This I believe was accounted for because of his having chronic catarrh. He was a dog of good style and great courage, and with the right kind of bitches bred to him should have produced something better than himself.

Probably no better Irish setter all round has ever been imported than Coleraine, she being up to first-class show form and a good one afield. In her Derby form she made a strong competition, but was outclassed in the final for first honors by Nugget.

In the Irish setter field trials of 1891–92 some good dogs competed. In 1891 Sedan, who carried off first honors in the All-Age Stake, was a remarkably good one. She, being a fast, wide ranger, carried herself in good style and had a good nose. Her disposition and field qualities were such that had she been properly mated the results ought to have been splendid. In the Derby four competed for first honors, namely, Nugget, Coleraine, Elcho's Maid and Squaw. They were all of splendid merit.

Nugget was a small bitch, light red in color. She had her dam's great endurance, was a fast, snappy worker, and on single birds especially it took a good dog to defeat her. In the Derby of 1892 there was nothing remarkable produced.

In the All-Age Stake the competition was strong, there being I believe twenty-two dogs which started. The winner of this stake, Bedford, whom I had the pleasure of training and handling, was a fast, snappy and a very stylish dog. His nose was excellent and his work on game good. In disposition he was level-headed, with plenty of grit. His great individual quality should be much in demand by those breeders of Irish setters who wish to improve their field stock. Another dog in this stake who impressed me very much was Henmore Shamrock. He was another of the Muskerry blood. He was a fast, wide ranger, with plenty of grit and go, and in short a dog of superior merit in every respect.

There were other dogs in this stake of much merit also. Some of them were former field trial winners, but they were outclassed in this by Bedford and Elcho's Maid.

I have gone into the question of grit and endurance, and have laid much stress upon it because it is the weak point in the make-up of most Irish setters.

In conclusion, I do not now own, nor have I any interest in any Irish setter. I have written of them just as I found them, without trying to gloss over their imperfections. A breeder who fools himself will never produce good dogs. I believe the breed could be put on a footing with the English setter and pointer, but it must be put in the hands of men who at least shoot enough over their dogs to know all about their individual perfections and imperfections. Since commencing this I note with much pleasure that Dr. Davis has won the Members' Stake of the E. T. T. C. with his Irish setter bitch Lou in competition with pointers and English setters. May the doctor yet produce one that will sweep the fields.

DR H. B. ANDERSON.

Dogs and Taxation.

HORNELLSVILLE, N. Y.—*Editor Forest and Stream:* Last season the Midvale Kennels and I were assessed about $100 on our breeding stock and boarders. We asked the Board of Supervisors for relief, and while they admitted the tax was unjust, as we were breeders of thoroughbred stock, they could not change the State law.

We are having a bill prepared which will be introduced by our member of the Assembly, Mr. Joel Clark, and we earnestly invite the coöperation of all breeders, sportsmen and lovers of dogs throughout the State of New York. Send your petitions to your Assemblymen or to Mr. Clark, at Albany, and by a litte effort we can get this iniquitous law removed, and a State law made to license breeders; for surely it is just as honorable and legitimate a business to breed dogs as it is to breed horses, hogs, sheep, cattle, or poultry.

J OTIS FELLOWS, Hornell Harmony Kennels.
MRS. HARRY CHIVERS, Midvale Kennels.

How a Dog Conquered a Man.

ROSSVILLE, S. I.—*Editor Forest and Stream:* The name of the dog of a friend of mine is Beva. He is noted as the friend of little children. Out of pure love, with wagging tail and glowing eyes, he will follow a tot for blocks. But bristling hair and furious barking have revealed his violent hatred of larger boys and men. Until recently it was thought that this hatred was congenital.

Beva never bit man nor boy. But he got a bad reputation, and it was thought by every man and boy in the community that Beva might bite him. So everybody in long trousers went by the gate within which Beva always seemed to be lying in wait, on his guard, armed with stone or stick. But it has ultimated that Beva is not by birth an enemy of bipeds above a certain height and out of dresses and knickerbockers. He seemed to be the holder of a special enmity against the man-about-the-place of a well-to-do gentleman living at the further corner of the block in which his (Beva's) owner lives.

We will call this man Henry. He usually does his marketing when he goes for the mail to the village post-office and grocery in one. So his passing by Beva's watching place is at regular hours, morning and evening, daily. Beva came to know these hours, and was always in evidence when Henry appeared. What of Beva at these times was not bark was teeth, claws and bristles. Henry was always armed with one stone and generally with two.

Beva's mistress was in the habit of going to the front window for the show, and a good show it was. Beva had acquired quite an agility in dodging the stones which Henry hurled at him. He knew when Henry had only one stone or two. When Henry was unarmed Beva would make for him as if he would eat him, and Henry would move on with more speed than dignity. One day Henry was returning with both hands and arms full of bundles. Beva was in wait, as usual, and his mistress was on watch for the show. But the show did not come off. To the surprise of the mistress, Beva's teeth and claws did not appear, his hair did not rise, and he neither barked nor growled. Henry was surprised too. He stopped, faced Beva, and said: "And what are you going to do to me now?" Beva had evidently taken in the situation. He knew the difference between bundles and stones. He knew also that Henry's hands were engaged, so that he could not defend himself And what did Beva do? He made manifestation of his natural character. He approached Henry with undulating body and wagging tail, giving every evidence of the most friendly feelings, and as Henry walked on fell in at his heels and followed him home. Since then Henry has carried no more stones, and Beva does not bristle, nor show teeth nor claws, nor growl nor bark at him. The man and the dog are the best of friends.

Some one says, "Kill all the dogs!" I enter Beva's protest. Kindness is better than killing for both man and dog.

CHARLES JOSIAH ADAMS.

American Fox Terrier Club Stakes.

WELLESLEY, Mass., Jan. 2.—*Editor Forest and Stream:* At a meeting of the governors of the American Fox Terrier Club held Dec. 30, 1896, resolutions of congratulations were passed, and any help in our power was offered to the new fox terrier clubs just formed in Louisville, Nashville, Pittsburg, Detroit, the Pacific Coast and Canada.

The regular club stakes will be decided as usual, the Homebred Stakes at the N. E. K. C. show, the Stud Dog Stakes and the First Division of the Grand Produce at the W. K. C. show; final entries in the above stakes must be made with the secretary A. F. T. C. when made at their respective shows. The following specials will be offered by the club:

New England Kennel Club, Boston: $5 respectively for the best American-bred fox terrier in show (smooth and wire); in open and novice classes (smooth and wire); in puppy classes (smooth and wire).

Westminster Kennel Club: $10 for the best American-bred fox terrier in show (smooth and wire); $5 respectively for same in open and novice classes (smooth and wire); $10 for same in puppy classes (smooth and wire).

Mascoutah Kennel Club, Chicago: $5 respectively for the best American-bred fox terrier in the show (smooth and wire), and in puppy classes (smooth and wire).

St. Louis Kennel Club, St. Louis: $5 for the best American-bred fox terrier in the show (smooth and wire) respectively.

The Apollo, Tomboy, Yankee and second division of Grand Produce Stakes will be judged later in the year. Members are reminded that entries in all above stakes except the Yankee are due by Feb. 1, 1897.

Any one wishing any information regarding the American Fox Terrier Club, or wishing to become members, will kindly communicate with the secretary, who will gladly give them all the information he can.

H. H. HUNNEWELL, JR., Sec'y-Treas. A. F. T. C.

Brunswick Fur Club.

THE Brunswick Fur Club has sent out a circular letter cordially inviting its friends to its winter meet, to be held at Brunswick, Me., during the week of Jan. 10. The club's headquarters will be held at the Tontine Hotel, rates $2 per day for single rooms, $1.50 when two occupy same room. The annual meeting will be held on Monday evening, Jan. 11. A handsome prize is offered for the best story told during the meet, so that with such a profusion of talent there should be a good competition. Foxes are reported plentiful. Members and guests are invited to take their best hounds and aid in making the hunt the best in the club's history. Bradford S. Turpin, Secretary, Roxbury, Mass.

KENNEL NOTES.

NAMES CLAIMED.

Mr. C. L. Hopkins claims the name Mack H. for Irish setter dog whelped June 11, 1893, by Jack Option—Biddie G.

BRED.

Mr. P. H. Tannehill's Lula Furness, English setter bitch, Dec. 28, to Border Chief.

SALES.

Mr. J. C. Mahler has sold
Streatham Monarch, Jr., bull terrier dog, to Mr. Henry Allinder Triumph.
Raven Monarch, bull terrier dog, to Mr. C. W. Preston.
Dog puppy, same litter, to Mr. John Morehead, Jr.
Bitch puppy, same litter, to Mr. John Morehead, Jr.
Two bitch puppies, same litter, to Mr. Joe Hopkins.
Dog puppy, same litter, to Mr. Hugo Baum.
Dog puppy, same litter, to Mr. B. T. Kahle.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to t he sportsman is particularly desirable.

POSSIBILITIES OF WINTER CYCLING.

THE official organ of the League of American Wheelmen publishes a number of letters from correspondents on the subject of winter riding which are of so much interest that we quote from them at length.

We have always believed that the majority of riders are too ready to store away their wheels at the first approach of freezing weather, and thereby deprive themselves unnecessarily of much potential pleasure. Perhaps a better understanding of the possibilities of the sport will result in an increased esteem for cycling as a winter pastime.

A wheelman living in Ottawa, Ill., who has ridden his bicycle regularly during the last four winters, only missing a few days each year, says that under almost any circumstances he would rather ride a wheel than walk. "A bicycle," he writes, "will run very well through 2 or 3in. of undisturbed light snow. After the snow has been cut up and partially packed by other vehicles, steering becomes difficult for a time. As soon as the snow becomes packed hard and smooth, however, a wheel will run almost as well as in summer" When there is no snow and where there is sufficient travel, frozen roads quickly become ridable, and are often harder and smoother than ever in summer. A sandy road, for example, when frozen and worn smooth by travel is unsurpassed for cycling.

"Riding on smooth ice is one of the pleasantest of winter pastimes, and far ahead of skating, to my mind On very smooth ice the novice may experience some difficulty in mounting, and care is necessary in making turns, though one can ride straight ahead without any trouble on ice too slippery to walk on safely. After the ice has been roughened a little by skating or natural causes, there will be no trouble from slipping. A soft tire will slip less than a hard one, and a tire with a rough tread is better than a smooth one. As to speed, I have beaten our best skaters in 100yd. dashes, standing start, while for longer distances the skater is nowhere. I have always believed that the straightaway record would be made on the ice, though the latest combination of mountain side and Colorado zephyr makes it doubtful."

A doctor living at Ft. Dodge, Ia., writes:

"I rode all last winter, day and night, missing only three days. So far this winter, which set in very early, I've been at it, and expect to keep at it all winter"

The doctor finds little difficulty in riding through snow up to 4in. in depth, and, except for slipping, knows of no dangers in winter cycling that are not met with at other seasons.

On icy and slippery roads he experiences no trouble except in turning corners, and not then except when the surface is unusually glassy. For slippery riding he partly deflates his tires and rides them "a little soft."

The doctor says, "Those who ride in warm weather alone lose more than half the true enjoyment of cycling." He advises warm clothes and particularly hygienic underwear, recommending a kind made of "a heavy cloth fabric lined with unspun wool," which he says takes up perspiration speedily and deposits it in the outer fabric, leaving the surface of the body always comfortably dry. This underwear has the further advantage of not causing itching.

A Boston man has also something to say on the subject of wear. While advocating warm clothing, he warns against the danger of overheating and subsequent chill and advises moderation.

For the coldest weather he puts on a cap that pulls down around the ears, thick underclothes, two pairs of stockings and warm gloves, while a paper waistcoat, two heavy sweaters and a cycling coat add protection to his body.

The Boston man has had trouble from frozen snow and advises wheelmen to avoid it, but under favorable conditions he says that long runs can be made as easily as in summer.

A rider in Elgin, Ill., goes out when the thermometer is 20° below zero. He wears warm clothing, with large, loose arctic overshoes, a cap that protects the ears and a loose pair of dogskin gloves tanned with the hair on and fleece-lined. He does not suffer from the cold under such circumstances.

This man finds he can ride at times when walking is very difficult, and what he writes will be news to some. "I have ridden my wheel," he says, "the next morning after an ice storm, when it was utterly impossible for a pedestrian to keep his feet, but could ride up and down hills, and the only difficulty I experienced was in turning corners, which I could only do by running very slowly." He adds, however, that it is impossible to ride safely on the same surface after snow has fallen, as the wheel can then get no purchase on the ice and will "skate" around in it and spill the rider.

A Brooklyn wheelman remarks that 2 or 3in. of snow in his native city "expedites wheeling instead of retarding it," by forming a carpet over the uneven pavements. "Nothing is more exhilarating," he writes, "than a ride through the snow covered streets of the city. The 'crunch, crunch' of the tires as they speed over the smooth surface of the snow proves an innovation to those who have never as yet tasted of the pleasures of a snow ride." No doubt more wheelmen would like to taste of the innovation were it not for the icy mountain ranges in which the snow is piled in most Brooklyn streets once the householders begin shoveling it off their pavements.

A gentleman residing in Utica, N. Y., who states that he is past forty and weighs 200, rides over ice and through snow up to 4in. in depth, and only experiences difficulty when ruts are encountered or when the ice is cut up by horses' feet.

A Watertown, N. Y, rider who has had trouble in riding over wet snow and ice, advises to prevent slipping under such conditions the use of strong unbleached cotton cloth, which he tears in strips 3in. in width and wraps about his tires, putting it over and over between each spoke. He fastens the ends by sewing, and partially deflates the tires while putting on the band, so that it will fit snugly when the tires are blown up to their normal degree of hardness.

After riding in sloppy weather it is well to take the bicycle into a warm room to clean, and care should be taken to get the nickel plated parts thoroughly dry. Before going out these parts should be well greased, and a coat of varnish might be of benefit as a safeguard against rust.

Punctures are not greatly to be feared, though of course there is more chance of getting them at this season than in summer. Ice rarely if ever causes punctures.

From these extracts it is pretty clearly shown that winter weather itself does not necessarily check cycling. The only weather that absolutely puts a check to the sport is when ice and snow turn into water and frozen roads to mud.

THE past ten years have worked wonderful changes in New York harbor, and the center of yachting has practically been transferred from the Bay to the Sound. At the same time, in spite of the growing invasion of commerce and the pollution of its waters by garbage and sewerage, the Bay is the port of New York and can never be entirely abandoned by yachts The Larchmont Yacht Club builded better than it knew sixteen years ago, when it found a birthplace on the north shore of the Sound; the Seawanhaka Corinthian Yacht Club did a wise thing ten years ago, when, after a careful study of the entire situation, it permanently abandoned New York Bay and selected a site that, in spite of the difficult transportation, is both the best harbor on the Sound and the nearest on the south shore. The New York Yacht Club, after several failures in the effort to establish a station on New York Bay, has solved the question in a most satisfactory manner, so far as its peculiar conditions are concerned, by a number of small stations at the most important yachting points instead of one waterside club house.

The time has at last come when the other of the four great New York clubs, the Atlantic Yacht Club, must take some decisive step; and by good luck the conditions of the case have so changed by the course of development that a satisfactory solution is possible in its case as well. The recent improvements on the point of Coney Island, Norton's Point, promise to make it a most eligible site for a yachting station, as breakwaters will be built and regular means of transit provided in connection with other schemes. For about a year the club has been in negotiation with the Sea Gate Company, the founder of the enterprise, and it is probable that arrangements will soon be made to secure a permanent site for the club. A basin about 300 by 250ft. will be built for the smaller yachts, and the club house now at Bay Ridge will be moved down to the new site. With such a location, almost on the sea, well outside the Narrows, with its calms and tides, surrounded by clean, deep water and reasonably convenient to the city, the Atlantic Yacht Club will be most admirably situated, and the whole problem that has vexed the large clubs for years may be considered as finally disposed of.

THE Massachusetts Y. R. A. at a special meeting on Dec. 21 made an important change in one of its classes, which is creating much discussion and opposition. The officers of the Association are desirous of keeping as closely as possible in touch with the Sound Y. R. U., though the Eastern men are unwilling to use the sail area as a factor in the rule. By changing the limit of the "4th Class" from 17ft. l.w.l. to 18ft., it will be possible to build a boat for the M. Y. R. A. class in Boston, and if she should prove successful to race her in the 20ft r. l. class on the Sound, including the Seawanhaka trial races. This of course is desirable, but it is claimed that the change to 18ft., as made at the special meeting, is against the wishes and interests of many Boston yachtsmen of the two classes affected by it. We are not fully conversant with all the details of the question, which is purely a local one, but it has been very thoroughly discussed by the Boston *Globe*, Mr. Robinson favoring the old limit, 17ft.

IT is unfortunate, and it seems to us entirely unnecessary, that such a radical difference in measurement rule and class limits should exist between the two important yachting centers, Boston and New York. Granted that the Seawanhaka rule does not produce a racing yacht of adequate accommodation, substantial and durable construction, and capable of all the diverse uses of yachting, it at least comes as near to this end as the Massachusetts Y. R A. rule of simple waterline measurement; and as against the other it can claim to be practically the universal rule in American yachting.

Pending an entirely new formula or the extension of the Seawanhaka rule by the addition of new factors, it seems to us that much good may be done by a common effort on the part of all clubs and associations to eliminate the existing differences of detail in the rule as used in various localities, and to use it for the present in exactly the same wording and with the same class limits.

The action of the Massachusetts Y. R. A. in adopting the waterline without the sail area, and with different class limits, is a step in the opposite direction, as is also the adoption by the new Lake Yacht Racing Union of the method of sail measurement and the class limits of Lake Ontario. The present time seems peculiarly propitious for making changes toward instead of away from uniformity, as in most clubs the existing classes are well run out and vested interests count for comparatively little, while there is good reason to hope that the present year will inaugurate a new era of building.

Even if there were any evidence to show that length alone in a formula is better than length and sail, it would be a very difficult matter to induce the large number of clubs now racing under the Seawanhaka rule to abandon it in favor of the waterline rule of the Massachusetts Y R. A. On the other hand, if the Eastern men once made up their minds that the change would be advantageous, it could be made with comparatively little difficulty, possibly not all at once, but with special exceptions that would make it more gradual and easier to existing yachts.

ONE possible outcome of the waterline measurement is indicated in the 17-footer Ripple, which we describe this week. This yacht is provided with a sprit topsail, which will doubtless be a material advantage at times over all yachts with the usual main and jib only. There is certainly nothing gained by the carrying of a topsail in a 15 or a 20-footer when all carry them alike; but if one boat can do so under the rule and win from the others, they will be forced to follow her example, the result being a very undesirable rig. Of course this would not be possible under a length and sail area rule.

THE new year, which in many ways opened so auspiciously for yachting, finds the Boston *Herald* in its accustomed attitude—casting anchors over the stern in the vain hope of kedging yachting backward into the era of the "has been." It is not often that the *Herald* is consistent, but we must do it the justice to admit that it is so in two things: its exaltation of the third Deed of Gift and its abuse of small yachts in general and the Seawanhaka C. Y. C. in particular as responsible for the affliction of good racing in the smaller classes at a time when there is none in the larger; for bringing out a fleet of thirty new boats in the 15ft. class in a season when the famous 90ft. class was represented by Defender, moored at New Rochelle, and Vigilant, hauled up at City Island.

These two themes, with the proposed new league, form the *Herald's* text for the new year

The proposal to put the New York Y. C. at the head of the movement for a national association, which already has practically the indorsement of the other larger clubs, is misrepresented and abused as "a motion to affiliate the club with small boat associations," and "the coming down of the New York Y. C. to small boat clubs." Secure in its ostrich-like blindness, the *Herald* fails to estimate the strength and extent of the modern movement toward union and uniformity, or of the favor this last proposal has met with within the New York as well as other large clubs. Looking back to the few 90 footers that *were*, it cannot see the hundreds of smaller yachts that *are*, and whose interests are all that keep alive yacht racing in America to-day. Where would the sport be now if all building and racing ceased until the New York Y. C could find another yachtsman of the stamp of Lord Dunraven who would challenge under the new deed?

There is nothing of moment in the *Herald's* comments on the rules for the Seawanhaka cup, everything is garbled and misrepresented in the usual way; but there is one novel suggestion that we commend to the club in view of the high standing of its maker—that the Seawanhaka Y. C should "change its deed of gift according to the terms of the America's cup" This quite exceeds anything we have yet seen, even from the Boston *Herald;* certainly no one else could have conceived such a piece of *opera bouffe*, that any American yacht club would willingly and knowingly assume the burden that the New York Y. C. has so long sought in vain to rid itself of.

WE publish this week a short list of fixtures for the season of 1897, all that we have thus far been able to collect. We would call the attention of the clubs to the desirability of arranging dates at the earliest possible moment.

A BLOW ON CAYUGA LAKE.

OUR home was situated near the village of Seneca Falls, N. Y., and we had been talking for more than a month of visiting some friends at Ithaca, three young men, students at Cornell University. My family, which included my wife, two boys and a girl—the boys, Cecil and Thornton, aged respectively eighteen and fourteen, and the girl, little Ruth, the pet of the family, aged ten—had been looking forward to this visit for a long time, as we intended going by way of the canals and lake in our steam launch, the Ruth We purposed going up there one day, staying over night with our friends, going through the University buildings and coming home the next day.

Our launch, the Ruth, was a staunch little boat 25ft. long and 5ft. wide, fitted with an oil-burning boiler and Shipman engine. She was capable of carrying sixteen people and could make in still water eight miles an hour, so we expected if the weather was fine to reach Ithaca in six to seven hours from time of starting, according as we were delayed or not at the canal locks.

The canal locks frequently make much difference in a day's journey, as at times there will be a number of boats at the lock ahead of one, and as each boat takes from fifteen to twenty minutes in locking through, you are apt to be delayed an hour or more on this account. When taking a day's outing in the boat we always had to make allowance for waste time at locks. The locks are also a good place to study human nature, it being in the power of a lock tender to make it very unpleasant for the owner of a small yacht, as by letting the water in too fast he is liable not only to injure the boat, but also to endanger the occupants. I will here say, however, that although we passed through many locks many times on the different canals, with one exception we have found the lock tenders very kind, gentlemanly and obliging.

We finally decided that on Wednesday of the following week we would make our start, and in the meanwhile the boys made use of all their spare time getting everything ready, and as there really was considerable to do Tuesday afternoon found us with much left undone, as the oil was yet to be put into the tank, the engine looked over to see that everything was in running order, and everything had to be generally cleaned up and wiped off. Cecil also intended carrying his camera, as he expected to take a picture of the University buildings and snap shots at anything else interesting that he should see.

As a family we were all very fond of boating and the water. The early years of my life were spent on the shores of Long Island, and my wife's childhood was spent by Lake Ontario not far from Charlotte, so it was very natural that

the water should have charms for both of us, and as a consequence our children took like ducks to the water and everything connected with it; so at any time if on coming home from business I was to say "I think the Ruth wants a little exercise to-morrow," it would be hailed with a shout of delight from the children and a pleased smile from my wife.

Well, Wednesday morning came at last, and with it a bright sky and a light south wind. The wind had been south on the day before and blew quite fresh, but now it had moderated to a light breeze and there was every promise of a beautiful summer day. The delight of the children began to express itself about 5 o'clock, and by 5:30 they were out of bed, dressed and eager to help at anything that would hasten the time of getting into the boat; so after a hurried breakfast I called Tim, our hired man, and a pretty good jack-of-all-trades besides, told him to go down to the boat house, which was situated about forty rods from the house, clean up the boat, get up steam, back out and get everything ready for a start, and to blow the whistle as soon as he had steam enough for that purpose.

By 7 o'clock my wife, with the children's help—though whether they did not delay matters more than they advanced them was a question with me—had everything necessary for the voyage packed. The supplies included various eatables for dinner, as we expected to dine *en route* on the lake, and plenty of wraps, as although it was the middle of summer yet with a cold wind from the north or northwest and plenty of spray flying wraps are very acceptable.

The boys were so excited that they were entirely unconcerned about so unimportant a matter as wraps; Cecil, however was careful to have his photographic apparatus all right, he being much interested in picture taking, and as in all our journeying in the Ruth we had never been further south on Cayuga Lake than Aurora, he expected to see many pretty bits of scenery, which with the aid of his camera he intended to take home with him.

We had just finished carrying the baskets, wraps, etc., out on the stoop preparatory to starting when the shrill whistle of the Ruth announced that Tim was ready, so off the boys started, followed more quietly by my wife, Ruth and myself. We found our little craft headed to the east blowing off steam as if she was as impatient as the boys, so in a few minutes we were snugly ensconced, with Tim acting as engineer, Cecil at the wheel, and Thornton, my wife, Ruth and I as passengers.

A run of a few miles brought us to Mud Lock, where we ocked down into the Seneca River, after crossing which we ocked up again into the Cayuga Canal; two miles more and Cayuga Lock was reached, from which it is only a distance of a few rods to the lake, one of the most beautiful sheets of water in the world. Cayuga Lake is 40 miles long and from to 3½ miles wide; it lies almost north and south. The Cayuga bridge, built in 1800, and for some years after looked upon as one of the greatest public improvements of the State, crossed the lake just outside of the present breakwater, though there is now nothing left of it but rows of piles. This used to be considered the connecting link between civilization and the wild West. West of "The Bridge" was esteemed in those days an indefinite location, a vague somewhere full of bears, Indians, scouts, and trappers.

A whistle from the Ruth now notified the keepers of the N. Y. C. drawbridge that we wanted room to pass under, and in another minute we were passing the breakwater, built to protect canal boats while waiting for a steamer to tow them up the lake.

The Ruth now commenced to lift her nose a little as the strong south wind of yesterday, helped by the present light south breeze, was sending down long swells, so by the time we were well out in the middle of the lake we were dancing up and down in very nice shape. This dancing was just what pleased the whole family, as we always wished for a breeze when we were on the water, smooth sailing not having sufficient excitement. We were by this time well out in the middle and about two miles up the lake, so I now told Cecil to steer straight on that course, and after cautioning Tim to be careful and watch the glass I settled myself down to enjoy the scenery.

A few words here in regard to our boat; she was designed after a very fine model, was light and rode the water like a cork Her forward deck was 6ft. long, much longer than is usual in a boat of her size; her after deck was 4ft. long. On account of burning oil for fuel there was no stoking to do, as after the fires were once adjusted she would run one hour or ten without further attention in that direction We had only to be careful of the pump and injector, to see that a proper quantity of water was in the boiler. Her machinery developed 3 horse power. In regard to fittings, we had a good anchor, also a sea anchor or drag, made to hold the boat head to wind in case of a storm, or in the event of machinery giving out while in rough water.

This sea anchor we had never had occasion to use, though I never felt at ease unless we had it with us I felt very different on the subject of sea anchors from a friend of mine. Meeting him on Seneca Lake in his yacht and questioning him in regard to a sea anchor that he had been at great pains through my advice to have made, he replied that he kept the anchor in his boat house. I quietly suggested to him that the boat house would be a rather poor place for it in case he was caught in a storm. Well, I kept mine in the boat, and, as circumstances turned out, it was well I did.

We were now six miles from Cayuga, well out in the center of the lake and about opposite to Union Springs. Frontenac Island, the only island in any of this chain of lakes, was directly to port of us. This island is about one-half mile from the shore, due west of Union Springs, and as a little bay runs into the town behind or east of the island the lee is well protected, and even in heavy weather the water is smooth and quiet. We were all enjoying the trip immensely, and as the little Ruth would bravely mount one side of a swell and go down the other the youngsters would shout with delight.

However, I had been noticing that the swells were rather increasing in size as we neared the widest part of the lake, and looking out ahead I saw once in a while a white cap break over, and on the Ruth's climbing up and tumbling down a rather larger wave than we had been meeting, Tim, after looking at the sky, obseved to me: "I should not be surprised if we got a little weather before we see Ithaca; don't you suppose we had better run into Union Springs and wait a while?" I answered, "No; the sky is clear, we will make Ithaca in four hours, and no storm will come up in that time?" On looking at my watch I found it was now 11 o'clock, and as Thornton and Ruth had said several times in the last half hour that they were as hungry as bears, my wife and I made up our minds that we might as well eat our dinner. I was the more ready to do so as I noticed considerable increase of wind and white caps getting more numerous. I thought, therefore, that at least it would be more convenient to eat before the water got rough, if it was going to do so. We had, however, been driving along as fast as we could go, 125lbs. of steam on our boiler, with the wheel making 600 revolutions, which in smooth water would have given us over eight miles an hour, but was at the time doing about seven; so I called to Cecil to pass down the dinner basket, and taking out a large fruit can filled with coffee I put it in a can we had for that purpose, and on turning on some steam from the overflow of the injector in three minutes the coffee was hot and dinner ready.

Eating dinner on the boat was always as good as a picnic for the children, the novelty was agreeable to them and the inconvenience a pleasure. Cecil never wanted to steer while eating, and as Tim would just as soon do both, especially the eating, he relieved Cecil; Thornton took charge of the engine, and we were soon hard at work eating and chattering as fast as tongues and teeth would go.

I observed, however, that the wind was fast and steadily increasing, the swells getting larger, and more white caps breaking up, so much so that on striking one of them Tim received about a quart of water in his lap, at which he turned round with a laugh and called back to us, "We shall have some weather before we see Ithaca." The Ruth now began to kick up her heels, so to speak, as the propeller would sometimes throw clear of the water, allowing the engine to race; so I told Thornton to "cut her off a couple of notches," thus slowing the engine down and consequently detracting somewhat from our speed.

We were now through dinner and had put up our baskets, "cleared up the wreck," the boys called it, so that we were again at liberty to enjoy the scenery; but as another big swell came along crowned by a "white horse," which we took with the bow of the Ruth dipped toward it, the spray flying aft as far as the after deck, we began to be of Tim's opinion that we were going to have "a little weather."

The wind was now blowing quite stiff and rapidly increasing, and although the sky was clear it was so hot that I began to think we might have a gale before we were through. My wife also, I could see, was getting a little nervous, and, although she is a good sailor and not scared at a trifle, she said, "John, I don't like the looks of the sky; don't you think we had better run in somewhere and wait till the wind is over?" I nodded an acquiescence and began to look ahead for some bay to run into. The lake where we were is rather over three miles wide, and the wind was now blowing a gale. Tim was wet through, and the spray was beginning to fly pretty thick as far aft as the length of the boat. It was altogether too rough to risk steering either due east or due west, and far too rough to think of turning around Our only plan was, as the lake here bends slightly to the east, to steer diagonally to the west, thus making a weather shore for us. I called to Tim and told him to steer as near west as the Ruth would stand, and on his heading her off from due south we began to take it

Going diagonally across the waves was very different from going straight into them, as the little Ruth began to roll as well as pitch, making bad weather of it. We were very shortly all as wet as rats, and so much water was coming into the boat that I told Thornton to start the syphon. This would throw out about a pail of water a minute, and was sufficient under ordinary circumstances to take care of all the water that would come in, but with the gale increasing every minute there soon ceased to be ordinary circumstances; in fact it was the worst storm the Ruth had ever been in, as we were now shipping water by the pailful, so I hastened to get out cans which we had for the purpose, and busied myself throwing out water. On account of the rolling and pitching Thornton was obliged to run his engine so slow to avoid racing that we were not making more than four miles an hour, so in consequence of not being able to steer straight for the shore we would have to go over two miles to reach land. It would therefore take a half an hour, and I began to wonder if we could keep afloat for that time.

A new danger now presented itself; our fires were only 5in. above the bottom of the boat, the water was coming in too fast for the syphon to throw it out, and if we allowed it to get much over 3in. deep, the rolling would make it cover the fires. With this danger in my mind, I yelled to Cecil, who was also bailing out water for dear life, to clear away and make ready the drag; and I had no sooner given this command than I noticed the engine racing like mad, and at a glance saw that the shaft coupling was loose. Thornton seeing also that something was wrong, though he did not know what, shut off steam and the engine was stopped.

Tim, as a general thing, is slow and very deliberate; whether it was the wetting he had received, or whether he realized it was a good time to brace up, I do not know; however he proved himself the right man for the right place in this predicament, as he no sooner realized that the engine was stopped than he steered the Ruth square into the wind, and jumping back to the boiler, where the drag was kept, he threw it overboard. In less than a quarter of a minute we had drifted back and were beginning to fall off to the west, then we reached the end of the line, tightened up on the drag, and we were riding head to wind as comfortable as could be. The Ruth now made good weather of it again, shipping little or no water, so I began to look around to see what was the trouble with our shaft. As far as I could see, the jar of the engine racing had loosened the key, which having fallen out left nothing to hold the shaft. By this time the syphon had drawn all the water out of the boat, so down I got on my hands and knees to find that key, but find it I could not; and I was startled from my occupation by a sharp clap of thunder, apparently right overhead. Jumping up as quick as I could, I found that while we had all been engrossed with the storm coming from the south, there was apparently a much worse one coming from the west, and we were just far enough out in the lake to get the full benefit of it. The west was as black as ink, and the cloud was coming toward us at a rapid speed. Almost as suddenly the wind from the south ceased, the white caps all went down, and there was nothing but the long, heavy waves left. I had just time to call to the boys to sit in the bottom of the boat—my wife, holding little Ruth, following their example—and to Tim to take a paddle and head her to the west, at the same time catching a paddle and working the stern to the east myself. We barely managed to get her headed around when the storm was on us.

What thunder! what lightning! and what a wind! Our previous experience was a calm compared to it. Inside of two minutes it was almost dark, the wind, now a hurricane, meeting the heavy swells from the south, cut off their tops and threw them in blinding and drenching showers over the boat. The roar was as if the last day had come, and I confess I thought another day would never dawn for me or mine. Talking or in fact doing anything was entirely out of the question, we could only hold on and wait.

Poor little Ruth, our pet, after whom our little boat was named, lay in the bottom with her head in her mother's lap, the picture of misery. The boys looked scared, but sat square on the floor, knowing that by so doing they made good ballast and helped keep the boat right side up. Tim was on his knees holding on to the gunwale with one hand and bailing like a good fellow with the other. The thought flashed through my mind that if we got out of this scrape alive I would never call Tim slow again.

By this time the waves began to heave up from the west, and such waves as they soon became I never want to see again. However, riding to the drag was very different from being anchored, as the drag being only large enough to hold us head to wind, it allowed us to drift considerably, so that the force of the waves were diminished by the speed of our drift. The water, however, still came aboard so fast that we saw plainly it was bail or go down, so to bailing we all went, and as we now had only to contend with pitching by holding firmly to the gunwale with one hand we were enabled to do pretty good execution with the other. Tim being in the bow, where all the water now came in, was drenched from head to foot by every wave which struck us; but he never wavered, he just kneeled on the bottom, faced the music and bailed like a major.

The water was now some 5 or 6in. over the floor of the boat, and as the Ruth would rise and fall it would slash from one end to the other like a mill race; the fires were out, and we were simply working and waiting, expecting every big comber that came along would sweep completely over and swamp us. It was, however, just grand the way the little launch would ride those waves; she would bury her bow almost the whole length of the deck, and just as we would think the green water was coming aboard she would rise again, and with the exception of shipping two or three pailfuls the water would fall off her deck and roll by.

How long this continued I could not say; it seemed a day, but was probably about twenty minutes, when to my delight a break in the sky and a light streak clear across the west proclaimed that the worst was over, and though the wind was still blowing as if it would tear everything loose, I foresaw an abatement of its force and felt we were safe Oh, what a relief! Never did bright sky look so good or so pleasant, and to give way to my feelings and encourage the rest I hurrahed at the top of my voice and pointed west. My enthusiasm was contagious, for all three of the boys, hearing me, instinctively looked west, and seeing the now large and increasing bright space, yelled with delight, and worked their bailing cans with tremendous effectiveness.

We now all felt as happy as if we were on land, and though the danger was far from being over, we felt as safe and secure as could be. My wife, hearing our shouts and seeing smiles on our faces, threw off her anxious look and began to busy herself cheering up Ruth. The wind now abated very fast, the bright sky increased in size, and in less than ten minutes the sun was shining and nothing of the wind was left but a fairly stiff breeze, so as no more water came aboard we straightened ourselves up and began to make preparations for getting up steam.

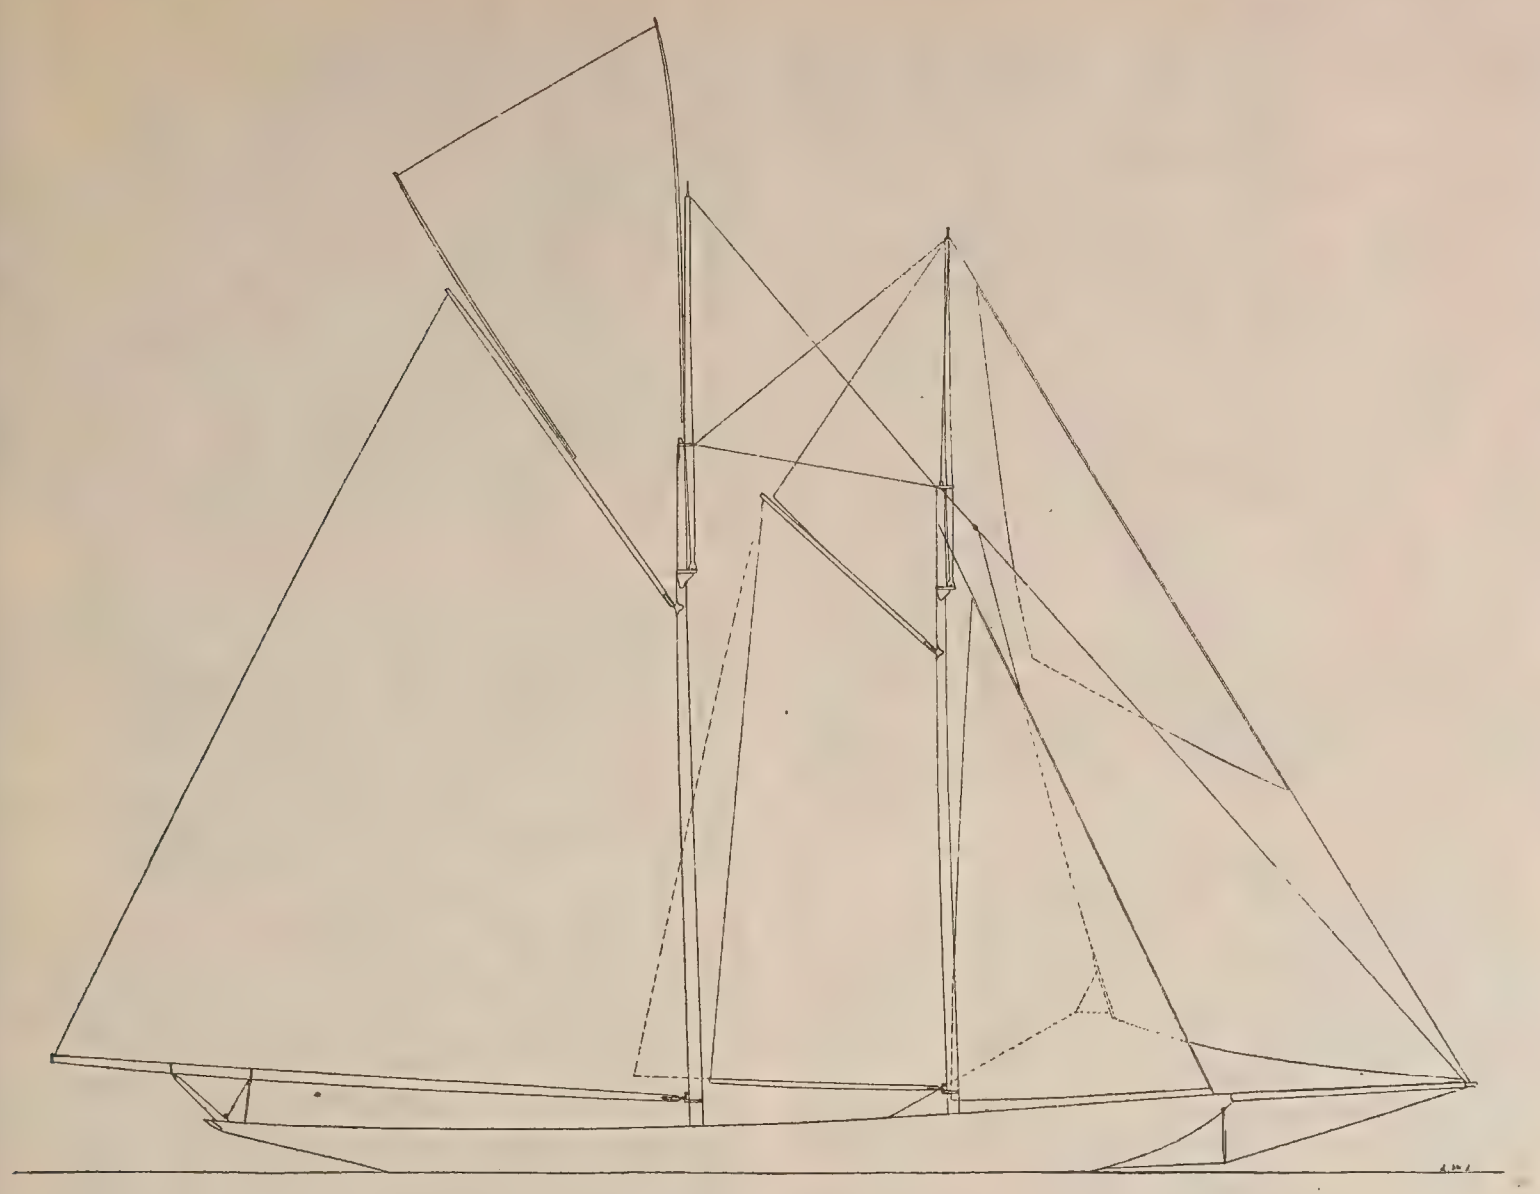
On looking out over the lake we found we had drifted to within half a mile of the east shore and were but a short distance south of Frontenac Island. Tim and Thornton now busied themselves getting up steam, while Cecil and myself began hunting for the key; but hunt as we would, we could not find it. Whether it flew overboard, or whether it had washed up under the floor, we could not and did not find it.

As we could make steam from cold water in our boiler in five minutes, the cheerful whistle of the Ruth was soon blowing, but as the key necessary for our progress was still wanting Tim suggested that perhaps one made out of wood would last long enough to run us in to Union Springs. I somewhat doubted its working, but as there was no harm in trying Tim split a piece off a stick that we had a fish line wound on, whittled it to the right size and drove it into the key seat. The lake was now comparatively quiet—the white caps all gone—so I told Cecil to haul aboard the drag, on his doing which Thornton slowly started the engine and Tim headed our little craft for Union Springs.

Everything went well till we got inside the island, not more than forty rods from the dock, when the engine began racing again, a sign that our wooden key had given out; but another being made and driven in we started slowly, and in a few minutes were in the slip, lying alongside of the Sanatorium, Dr. Pierce's yacht, of that place. It was now 3 o'clock P. M., and as we all needed dry clothes, and a key had to be made for the shaft, we decided to stay over night in the village and continue our journey the next day.

The storm, as it proved, had been the most severe known for years, several barns in the path of it being unroofed, and one very large one being completely blown down; we therefore made up our minds that we had been through a pretty good blow on Cayuga Lake. SEMPER FIDELIS.

A Novel Experiment.



We quote from the Brooklyn *Eagle* the following account of a novel and interesting experiment which the American Model Y. C. is about to undertake.

Despite the reluctance of the club as a whole to officially encourage the project, several members of the American Model Y. C. have decided to build, some time within the coming year, a practical 20-footer from designs which they themselves will shortly originate. The members actively interested in the idea are six in number; George F. Pigott, George W. Townley, J. D. Casey, J. C. Meyer, O. L. Grey and Frank Nichols. The latter is the measurer of the organization, and prime mover in the proposed plan of constructing a 20-footer, a representative of a class of racing craft that is certain to prove extremely popular when the next yachting season is inaugurated

Each yachtsman proposes to construct, according to a 1in. scale, a half model of a 20-footer, ranging from 18 to 20ft. on the waterline. No attempt at rigging these designs will be made, but when the entire complement is complete the models will be submitted to some eminent builder of racing craft, probably A. Cary Smith, by whom the three most promising will be selected. It is the intention of the members to then build perfect models, fully rigged, of the three designs chosen, and upon their completion sail a series of trial races for final supremacy. These yachts will be constructed according to a 2in. scale, which will give them a racing length of either 36 or 40in., as determined by the original dimensions.

Having decided by actual competition which of the trio of models is the fastest, it is proposed to build the 20-footer exactly in accordance with and on the identical lines of the successful craft. If the boat is satisfactory as a sailor and racer, its prowess will demonstrate conclusively the value and adequacy of model yacht construction as a means of obtaining a practical knowledge of boat building.

With reference to the approaching season, it may be said that the American Model yachtsmen will leave untried no course that may enable them to win back from the Wave Crest M. Y. C. the Eagle trophy. George W. Townley's second class sloop Star will be considerably lightened before spring. The changes are to be made mainly in her spars and rigging, and when sailed again she will appear in class three, and may later act as challenger in the race for the coveted cup.

QUISSETTA—SAIL PLAN.

LEAGUE OF AMERICAN YACHTSMEN.

THE following interview, from the New York *Herald* of Jan. 2, is evidently directed at our remarks of last week on the proposed league of yachtsmen.

"I have observed," said an old yachtsman on Thursday, "that the few advocates of the proposed new Yacht Racing League are energetically pointing to the racing associations already existing as an example of what may be done in that way for the good of the sport. Great stress is laid upon the fact that there is a big union in Massachusetts and another in New York which have done wonders.

"Let me quote you article 2 of the by-laws of the Yacht Racing Association of Massachusetts, and yachtsmen may better understand the nature and scope of the big union at the eastward;

"Article 2—Objects.—The objects of this Association shall be: To encourage yacht racing and yacht building; to establish and enforce uniform rules for the government of open races for all yachts under 30ft. sailing length.

"Now, after digesting the fact that the Yacht Racing Association of Massachusetts—this big union at the eastward—has no yachts under its jurisdiction of 30ft. or over sailing length, let me call your attention to Article 3 of the same by-laws:

"Article 3—Membership.—Any yacht club located in the State of Massachusetts, in good standing, having twenty-five members and ten yachts measuring more than 12ft. on the waterline, shall be eligible to membership.

"So please remember that boats of the waterline of 12ft. may be admitted to all the rights and privileges of this Association, and any club having ten of these so-called yachts may become a member.

"This, then, is one of the racing associations held up to the view of the New York Y. C. as having achieved wonders in the yachting line, and whose influence has been eloquently and otherwise touched upon as an example worthy of imitation on the part of the leading club in America.

"It may also be mentioned that the Yacht Racing Association of Massachusetts takes no account of sail area in the matter of measurement. Yachts are measured 3in. above and parallel with the l.w.l. length without crews on board and centerboard up, and only that for time allowance."

[This is incorrect.—ED.]

"This Association has done well for its members, but have the advocates of the proposed new league ever told that its laws and objects seemed about worthless where clubs having large boats on their list are concerned?

"The Yacht Racing Union of Long Island Sound is the New York association. The Larchmont Club has never joined it, and the old arguments advanced by its leaders were: 'What do we want to do with a union? We want to make our own laws, have our own racing dates—in fact, want to govern ourselves.' And the Larchmonts have done that selfsame thing all along. They have made laws as they deemed best for their club, and appointed their own racing dates, irrespective of the wishes of any other club on the Sound.

"If the Larchmont people want this new league scheme, as has been said, what change then has come over the spirit of their dreams?

"The Yacht Racing Union of the Sound is an admirable body. The leading club on its list, the Seawanhaka, has borne the brunt of the battle that has been fought, and through its far-seeing and very intelligent members accomplished much good. But the Union cannot wisely be held up to the New York Y. C. as a shining example to be followed in the formation of the proposed league any more than can the Association of Massachusetts.

"Thus, the New York Y. C., in my opinion, will exist, as it has existed for more than half a century, without the help of racing associations or leagues. It has lived and will live without aid. It does not want, nor will it have, anything to do with a matter that may bring about dissension in its ranks, and it does not care to be governed by men coming from clubs which have been quoted as making up the existing racing associations. The New York Y. C., in a word, is able, fully able, to conduct its own affairs in the future as it has done in the past, and while it does not discourage the union of the smaller clubs those of 30ft sailing length and so on it will always be found opposed to revolutionary methods in home affairs."

If this is the strongest argument which the opposition to the scheme can produce, it will do well to abandon all public discussion of the question, and to confine its efforts to the smothering of the scheme in the committee or to voting it down when the committee shall present its report to the club. The whole statement of the case is based on utterly false premises, in that it considers and criticises the Massachusetts Y. R. A. rules as though it were proposed to force the New York Y. C to join this Association, or even the Sound Y. R. U. If this "old yachtsman" was present at the special meeting and heard the details of the proposed scheme, as so fully presented by Mr Lovejoy, he must know that the rules of the two local associations have nothing whatever to do with the proposed league. The reports of the meeting, as given out at the time to the daily press, curiously enough omitted all allusion to the really important business of the evening, mentioning only the points relating to the opposition. The proposal to form the new league was placed before the club not in a general and indefinite way, but in the shape of a practically complete scheme, down to the smallest details. After having recently enjoyed the opportunity of reading the entire paper, we can commend it as most comprehensive and liberal in its scope and treatment, and perfect in its minor details. It not only offers the fullest possible thesis for the thorough discussion of the advisability and practicability of the plan, but it is capable of immediate adoption, with very few changes in the event of the inauguration of the enterprise.

Naturally such a national body would have to include the smallest class of yacht, at least down to 15ft., but it does not follow that the New York Y. C. will be compelled to adopt for its large yachts a rule made exclusively for these small ones; not that the club will be any more contaminated by association with clubs racing the small boats than it now is in racing under the Seawanhaka rule It is too early yet to touch upon details, but we are inclined to the opinion that sooner or later in any case it may be found necessary in this country to adopt special rules for the classes under 30ft.

It is quite true that in any national union small clubs as well as large would be admitted, but an objection on this score alone is mere snobbishness, and has no substantial foundation. If the New York Y. C. wishes to come out squarely with the declaration that it is so much bigger and better than all other clubs in the country that it cannot be associated with them in any way, then this point may hold; if it is not prepared to go so far, then there is no good ground for the objection to the limit actually proposed at the meeting, of fifty members to a club as the minimum qualification for membership.

The real point about the two associations mentioned is plain enough to any one who cares to see it—the great success which has attended both in but two years shows what may fairly be expected of them in four or five years more, especially if they should combine and the same work should go on, as is now promised, in other localities In this not improbable event, the New York Y. C. may awaken, when it is too late, to the fact that the building and racing of yachts in America is in the hands of a union not so ancient nor so wealthy as itself, but very much stronger, in that it has the confidence and support of the great body of racing yachtsmen. In this case there are two possibilities: one that the New York Y C. may not want to join the union after opposing the schemes now before it; the other, that the union, whatever its name and nature, may not want the New York Y. C., great as it is.

It matters not now what have been the factors of a club's prestige in the past, the fact is self-evident that in the future the power in yachting is going to those clubs or associations which do the most for the encouragement of racing, and especially in the direction of wise legislation.

The history of the New York Y. C. shows that it has never been a leader in the introduction of rules and similar racing legislation, and it has no future before it now in this direction. If there are any of its members who dispute this and consider that the club is competent of itself to make rules for yachting, they may prove it by producing in the name of the club what yachtsmen are now looking for, a practical new rule of measurement.

"An old yachtsman" is right in his surmise that the Larchmont Y. C. has been acute enough to appreciate the situation so rapidly developing, but his other points are at best but side issues, and have no bearing on the real question. The racing interests of the country, both individually and collectively as clubs, have within a couple of years given indisputable evidence of a desire for improved legislation and closer association, and an attempt is now about to be made to meet this demand. The leadership in this attempt has been offered, practically by common consent, to the New York Y. C., the oldest and largest club in the country. The only question now is whether the club will recognize the condition of affairs and declare itself on one side or the other, preferably in the affirmative. When once the decision of the New York Y. C. is known, the work can go on in one way or another, according to that decision.

To sit down now and discuss whether a local body, formed under different conditions and for a different end, should limit its yachts to 12ft. or 15ft. or 30ft. is simply childish

YACHTING NEWS NOTES.

Ripple is the name of a new racing yacht for the 18ft. class of the Massachusetts Y. R. A., designed by J. F. Small, the amateur designer, of Dorchester. She was built for C. B. Pear by H. A. Davidson, of Calais, Me., being completed in the fall and shipped to Boston by schooner, where she is stored for the winter. She is 25ft. over all, 17ft. l.w.l., 7ft. 6in. beam, and 7in. draft; fitted with a wooden centerboard and a balanced rudder with a small metal scag just forward of it. The sail plan will be about 600sq.ft., pole-masted rig, with jib and mainsail and a small sprit topsail. The construction is light, the frames being ¾ by ¾in., spaced 10in., planking ⅝in. and deck ½in., the latter covered with canvas; the mast is hollow. The ends are well carried out and the topsides flare. Though intended for a crew of four, as allowed under the M. Y. R. A. rules, this yacht might be brought within the limits of the Seawanhaka 20ft. class, and if she proves as speedy as her designer's reputation warrants us to expect, it would be very gratifying to have her in the trial races at Oyster Bay.

A short time ago it seemed probable that Boston would be represented in the Seawanhaka races by a 20-footer specially designed for the class by Herreshoff, as C. H. Eaton, of Marblehead, late owner of Cock Robin, and previously of the 30-footer Rosalind and the steam yacht Melissa, was in negotiation with the Herreshoffs for such a yacht. The intention was that the boat should be handled by W. P. Fowle, of the Marblehead Corinthian Y. C., former owner of the different Saracens and the helmsman of Cock Robin in the past season. It is now probable that Mr. Eaton has changed his plans; the Boston *Globe* says: "Yachtsmen who may be inclined to make wagers can safely give odds, if necessary, that C. S. Eaton will not order a 20-footer from the Herreshoffs for the Seawanhaka international trials, but will be found in the knockabout class with an improved Cock Robin, in so far as the Herreshoffs are able to make an improvement on last year's champion. It is understood that Mr Eaton's principal reason for not trying for international honors was the time it would take from business and the doubt if he could induce ex-Com. Fowle, of the Corinthians, to be his right-hand man again, since the latter also expected to be specially deep in business the coming summer. It would have been vastly interesting to Boston yachtsmen to have had Mr. Eaton build a 20-footer, but what is a loss in one class will be a gain in another, and a new Cock Robin will still further assure some lively knockabout racing." [It has since been announced that Mr. Eaton has placed the order as above indicated.]

Well back in the days of the tonnage rule and the narrow cutters, 1884, Will Fife, Jr., then at the head of the Culzean Shipbuilding Co., designed and built one of the handsomest little cutters that has ever been floated. Bedouin, as she was named, was a very wide boat for her day, with 7ft. 3in. beam and 25ft. l.w.l., as compared with the 4ft. 10in. beam of the old 3-tonner of 28ft. l.w.l. With a long, graceful counter, a waterline with but a trace of hollow in the bows, and a beautifully moulded form, she is still handsome, even beside more *fin-de-siècle* cracks. She was built for a special class of the Bangor Corinthian Y. C., of Belfast Lough, Ireland. With the beginning of the present year of grace Mr. Fife is sending to the same locality, for the Royal Ulster Y. C., a fleet of one-design boats of similar dimensions, 38ft. 6in. over all, 25ft. l.w.l., 8ft. 7½in. beam, 6ft. 3in. draft. They are cutter-rigged, fitted with a cabin trunk which gives a good cabin, with accommodation for three or four, and they are intended for both racing and all-round work. It will be interesting to compare the new boats with the old, after an interval of thirteen years, as the two are built for much the same purpose and without regard to the existing general racing rules.

The Cleveland Y. C. is discussing the proposition to build a much needed breakwater in front of the new club house, there being no prospect at present of such an extension of the Government breakwater as will afford protection to the house and make it possible to launch or land small boats. It is estimated that for an outlay of $7,000 to $8,000 a breakwater 200ft. long and 500ft. from the club house could be built, and it is proposed to raise the money in the club.

The Beverly Y. C. has elected the following officers: Com., George H. Richards; Vice-Com., Lewis F. Dabney; Sec'y-Treas., F. L. Dabney; Meas., A. S. Hardy. After discussion the club decided not to join the Mass. Y. R. A., for the reason that such action would involve radical changes in the club's rules and the abandonment of the Seawanhaka rule, under which it has raced for years. A proposition to establish a 21ft. knockabout class for Buzzard's Bay, similar to the Boston class, was favorably received and a committee was appointed to draw up regulations and submit them at the January meeting.

The *Wassersport* announces the coming publication of a second and enlarged edition of the *Segler's Handbuch*, the revision being by George Balitz, editor of the *Wassersport*. The original work, published some ten years since, has been of the greatest value to German yachtsmen and to the sport in Germany. The new book will be greatly enlarged and modernized. In this connection we note with sincere regret the death of the author of the book, Capt. Alfred Muchall-Viebrock, German Naval Reserve, which took place in Berlin on Dec. 3, his age being but forty-two. A born yachtsman, he was devoted through life to the sport as a means of personal enjoyment, and in a no less degree to the advancement of yachting in Germany. His cruises in the 40-ton schooner Hela, and his writings on all departments of yachting, are familiar through the pages of the *Wassersport*. He was always an active member of the German Sailing Union.

Mr. Frank Cowper, the English yachtsman whose cruises are already well known to our readers, will have afloat next season a new single hander, now building by Thos. Martin, at Chiswick, on the Thames. The yacht, which will be ketch rigged, has very liberal dimensions for her type: 46ft. o.a., 24ft. l.w.l., 10ft. 6in. beam, 4ft. 9in. draft. She will have excellent room below, with 6ft. 2in. headroom in the cabins. The sail plan will be small, and all sheets and halyards will lead to the cockpit. Mr. Cowper will extend his cruising beyond its previous range, going through the French canals and into the Mediterranean. The result will doubtless be another useful and interesting book, such as he so well knows how to write.

The *Yachting World* celebrates the holidays as usual by a special "Xmas and Mediterranean Number" in addition to its regular weekly issue. The special number has a handsome cover in colors, and contains a great deal of interesting reading, with numerous illustrations, small and large. The history of the origin of the Y. R. A. is told by Dixon Kemp, yachting editor of the *Field*; Sir George Baden-Powell tells of the Arctic cruise made by him in the steam yacht Otaria, and there is an interesting article on "Yachts of the XVIIIth and XIXth Centuries." Mr. C. N. Boyn, editor of *Le Yacht*, contributes an article on the development of yachting in the Mediterranean. There are other descriptive articles, one on French yachting, and one or two pieces of fiction. The illustrations, in the way of full-page supplemental plates and small reproductions scattered through the text, are excellent, but entirely too numerous to mention in detail. The whole number is worth reading now and keeping for future reference.

We have received a copy of the third issue of the *Australian Yachtsman and Canoeist*, published in Sydney, Australia, a neat little paper of the size and general style of the *English Yachtsman*. The young journal has our best wishes for a happy new year and permanent success.

The *Wassersport* pays us the compliment, in several recent issues, of quoting very fully from the descriptions of El Heirie and Ethelwynn, and reproducing the designs which originally appeared in the FOREST AND STREAM.

The Christmas "double" number of *The Yachtsman* is of nearly four times the size of the regular issue, with a special cover in a rather striking red, and contains a varied assortment of good reading matter, light and heavy, all liberally illustrated. The more practical side of yachting is dealt with in the designs of the prize winner in the designing competition of the London Sailing Club last winter, a fin-keel of 18ft. linear rating, 25ft. 10in. o.a., 16ft. 7¼in. l.w.l., 5ft. beam and 8¾in. draft of hull; the total draft being 2ft. 11in., with a displacement of 1,246lbs., the fin and bulb weighing 2x6lbs. The sail area is 200sq. ft. Another design is of a sort of American sharpie, designed by her owner, H. Wilmer, and termed a "barge-yacht." There are also designs of a small cruising steam yacht, of the canoe Prucas III., and the sail and interior plans of the yawl Julnar, designed by A. Cary Smith, with an account of the yacht. There are some excellent photogravure plates, one of them showing Mr. Brand's new Spruce IIIII., designed and built by Sibbick, evidently a very handsome model. She is shown under way at a strong angle of heel, with Mr Brand and Tom on the weather rail; the centerboard, and even the keel to leeward of it, being visible. The lines are evidently far cleaner and fairer than in Spruce IIII. The rig shows a simple lug with no reefing gear, and she does not carry a roller jib. Some interesting views of the British Canoe Association meet of 1896 form a supplemental plate.

Quissetta.

THE schooner Quissetta, whose sail plan is here given, was designed last winter by Gardner & Cox, and built by Marvel & Co. for H. W. Harris, Larchmont Y. C. She is a steel yacht of the semi-fin type, her dimensions being: Over all, 96ft.; l.w.l., 66ft. 6in.; beam, 18ft.; draft, 10ft. 6in; racing length, 71.29ft. She is a very handsome craft, and as her racing shows, a very speedy one.

Canoeing.

American Canoe Association.

ATLANTIC DIVISION. PURSER'S REPORT.

Oct. 1, 1895, to Oct. 1, 1896.

Receipts.

Balance from Purser, Thomas Hale, Jr.	$192 85
Dues for 1894	4 00
Dues for 1895	18 00
Dues for 1896	230 00
Entrance fees for 1896	31 00
Transferred from Eastern Division	1 00
E. E. Mercelis to account of Thomas Hale, Jr.	1 00
Sale of Code Signal books	2 80
	$480 65

Expenditures.

Regatta Committee	$27 85
Expenses of Division Meet, 1896	31 60
Office expenses	25 00
Postage A. C. A. Year Book	12 08
Sec'y-Treas. Stryker, 30% dues, etc.	85 50
Collection charges	14 00
Balance	284 62

HENRY M. DATER, Purser.

Audited and found correct.
FRANK L. DUNNELL, } Auditors.
ROBERT J. WILKIN, }
DEC. 26, 1896.

1871—N. Y. C. C.—1896.

IT happened somewhere uptown and far over on the west side, and though they all got there in time and got away again safely in good season, no one of the party yet knows just where it was or what the place would look like by daylight. Wherever it was, Col. Waring's "White Wings" had evidently long since grown weary of the struggle with the filthy grease which follows a snowstorm in New York; the cross streets declining to the North River were worse than toboggan slides.

Outside, so far as it was visible at 7 o'clock on a winter's night, the place was an ordinary beer saloon, the idea being further strengthened on entering by the usual bar on the left side of the room. Opposite to the bar, however, was a large curtained doorway, and passing through this one stood at the head of four steps leading down to a plain one-story shed about 60 by 25ft., running with the street, the far end and the street side being inclosed with boards, and the inner side, evidently opening on a "summer garden," with glass. In the left corner near the stairs stood an upright piano; on the right were two big casks of XXX ale on skids, and not far from the piano was an odd-looking stove of cast iron, about 3ft. by 18in. at the bottom and tapering as it rose, the height being about 4ft. Back of the stove was a big pile of hickory, cut in lengths, and beside it lay a gridiron about 3ft. long and 1ft. wide, on high legs. At the bottom of the stove was a door just large enough to admit the gridiron.

The furniture of the room was simplicity itself; arranged in an oval were some sixty common chairs, and in front of each pair of chairs stood an empty champagne box, on end. On each box stood two small salt cellars, and on each chair lay neatly folded a big thick white towel. Beside the stove stood a table piled high with loaves of bread, and next to the gridiron stood a large butcher's basket piled with steaks; such steaks as are never seen in the best shops, nor even the most noted of the city chop houses. Each was about two inches thick, the bone sirloin trimmed clean of every vestige of fat; the white-aproned cook who proudly tended them, armed with a fork about 2ft. long, volunteered the information that they were not only specially prepared for such occasions, but were seasoned in the cold storage for six weeks.

They began to come in about 6:30, the dinner being set for 7 o'clock; Vaux was there, Whitlock and Stephens (W. P.), Stevens (C. J.), Tramp and Delevan, representing the old timers of the early Staten Island days; with Downing Vaux, an old ex-member. The new men, who have been active in the club since its removal across the Bay, turned out in goodly numbers; and then there were the guests, Zerega and Sherman, of the Seawanhaka C. Y. C.; Stayton and Ford, of the Naval Reserve; Vernon, of the Brooklyn C. C. and others, in all some sixty hungry sailor men.

As the first of them came in, the cook looked to his fire, now burned down to a hot bed of embers, and loaded up the big gridiron with nearly a dozen of the steaks; while one of his assistants manned a sort of guillotine and began an onslaught on the pile of loaves beside him, rapidly reducing them to slices. Each slice, about four inches square, was then cut in half.

By the time that greetings had been exchanged and hats and coats stowed a waiter appeared at the head of the steps with a big tray of sherry glasses, Mr. Delevan sounded the assembly on his cornet, and the party formed in lock-step for a march around the room, each receiving his ration of "grog" as he passed the steps. The march continued until the full circuit of the room had been made, and then all found places in the oval of chairs, each tucking his towel around his neck until he was well covered in front. Now the first batch of steaming steaks was ready, and as it was withdrawn each steak was lifted with the big fork and dipped in a pan of melted butter, then it was passed to an assistant who deftly carved it into slices, each about half an inch thick, the cuts running at right angles to the long central bone. The bones were laid aside and were to be had on special application to the head cook by those who wished them. Now a big platter was covered with the half slices of bread and on each slice was laid a piece of the steaming beef, done to a turn, just the right shade of red, without the blue tinge, and appealing at once to eye, nose and mouth.

As the platter started on its way down the room it was followed by a second waiter with a big dish of celery, and a third with a tray of ale glasses. The merry conversation back and forth across the room in the most informal manner was temporarily interrupted as each in turn helped himself to his portion of bread and meat, to say nothing of the ale, and was resumed in the interval while the next round was preparing. How many times the procession of waiters went round the room we cannot say, but the feast lasted from a little after 7 until 10 o'clock before the last platter, this time loaded with savory mutton chops, passed around untouched, all having eaten their fill. Limited as the bill of fare was—steak, chop, bread, celery, salt, ale—the utter novelty of the repast and the surroundings relieved it of all monotony; and then the tongues wagged industriously whenever the jaws were temporarily out of employment.

Vaux, by virtue of long established custom, as well as his office of president of the club, up to midnight, was master of ceremonies; and equally active with him in keeping the fun going was the new president, Louis Boury. The absence of tables, dishes and claw-hammer coats helped to drive away the formality of the usual club dinner and to improve the quality of the speeches, of which there were a number, as well as songs and recitations. At one stage of the proceedings the door was opened in answer to an imperative knock and a burly bluecoat forced his way in. Just what his mission was nobody seemed to know, but his visit gave rise to no end of fun. While some of the guests vigorously chanted the "Couchee-couchee dance," others implored the "cop" to let them go this time; even tempting him with ale, which he refused with a tear in his eye. Fortunately the visit disclosed nothing of an "altogether" nature; there were no vaudeville artistes behind the ale casks and no Cairo dancers in the woodpile, so the revels were allowed to proceed. Before 11 o'clock the last speech was made, the last song sung, the fire was out in the big stove, and the party broke up with wishes all around for a Happy New Year, and another quarter of a century of prosperity to the oldest American canoe club, the New York.

The mosquito sailor of to-day, who can buy ready to hand almost any sort of small craft he may chance to fancy, any type or model of canoe or single-hand cruiser, and so on up to the most elaborate 15 or 20 footer of special design, and who has only to make a choice between half a dozen different clubs, can have but an inadequate idea of the advantages he enjoys over we old fellows of what is getting to be close upon a generation ago. At the time when the New York C. C. was organized, in 1871, there was nothing in the shape of either a boat or a club that was suited for the uses of the small boat sailor. Rowing was then in its prime; there was good sport in the colleges and in the many big city clubs—in fact, even the smaller cities with any sort of water near at hand usually boasted a rowing club. Rowing boats of all kinds for mere pleasure rowing, practice, training and racing, were to be had of good design and construction, and the many clubs offered house facilities and social intercourse to rowing men.

In yachting there was nothing better in the smaller classes than the centerboard catboat of the day, a case where "the best was but the worst," as many an aspiring novice soon discovered. This craft and her mate, the small centerboard cabin sloop, were both poorly adapted to the uses of the young tyro and would-be single-hander. Between the rowing boats and the sailboats there was the ordinary working rowboat, such as the famous "Whitehall boat" of New York, a craft that could be sailed fairly well, and which, for want of something better, was used to a certain extent for boat cruising.

Those who had no special taste for rowing racing—and the "revolver" and sham amateur were even then beginning to bring the noble sport into disrepute—found little to attract them in the rowing clubs; and those who essayed to cruise in the open catboat were usually satisfied after a few narrow escapes.

The first suggestion of anything better suited to the wants of the young Corinthian came in the form of an article in *Harper's Magazine*, in 1866, a brief but interesting compilation from the first of Capt John MacGregor's cruises, then just reprinted from the English edition by Harper & Bros. To us, as well as to many others, this first glimpse at "A Thousand Miles in the Rob Roy Canoe" opened a fairyland that even thirty years has not quite obliterated. The initial cruise of the New York C. C. was made in 1869 or '70, and in such a "Whitehall boat" as we have already mentioned, the leading spirit of the party of three or four being W. L. Alden, then a young newspaper man. The cruise began at New York, and if we are not mistaken ended in a lumber yard at Troy, where the party narrowly escaped arrest as either pirates or lunatics of no harmless kind. It was not the New York C. C. *then*, but it was this cruise which turned Mr. Alden to the idea of canoeing and the formation of a club. His first missionary work was among some fellow newspaper men and some New York yachtsmen—Montgomery Schuyler, the well known writer; his cousin, M. Roosevelt Schuyler, later noted as the most extreme of the "cutter cranks;" Dr. J. S. Mosher, G. Livingston Morse, of the New York *Observer;* the late Capt. Timmerman, of the Alexandre Line of Havana steamers; Capt. S Grosvenor Porter, of the Pacific Mail; Charles Ledyard Norton, the writer; and a Baltimore canoeist, W. O'Sullivan Dimpiel. Mr. A Cary Smith, the designer, was also a member, sailing in one of the few races held in the early years of the club. The first canoes were Rob Roys, built from the designs in MacGregor's books or imported from England, the original canoe of the club being a Rob Roy built by William Everson, then noted as a builder of Whitehall boats. The young club began a correspondence with the Royal C. C., especially with Capt. MacGregor and Mr. W. Baden-Powell, and the latter very kindly sent out the complete working plans of his No. 4 Nautilus Mr. Montgomery Schuyler imported a handsome mahogany Nautilus of Messenger's build, more of a sailing canoe than the first craft. There was at the time an English boat builder, Jarvis, in Ithaca, N. Y., who had built canoes at home, and who, when called on by the club, turned out some very fine craft, among them the famous old Psyche, so long owned by Kirk Munroe.

At the outset the club had no house; in fact, apart from an occasional rendezvous at the Hotel Hungaria, in Union Square, its members were widely scattered. A couple of regattas were held in the early days, one in Flushing Bay, where some of the canoes were kept; and another, in 1874, on New York Bay, off Bayonne, some of the canoes being kept along the Bayonne and Pamrapo shore and others on Staten Island. At the same time the club did a good deal of cruising between New York and Montreal, and on other waters.

Meanwhile canoeing had been growing slowly outside of the club, and about 1879 it received some important accessions—Vaux, Whitlock, Kirk Munroe, Wm. M. Cooke, L. F. d'Oremieulx and W. P. Stephens. In 1879, through the efforts of the new men, a very successful sailing regatta was held off Staten Island, and in the same summer, mainly through the labor of Mr. Whitlock, a club house was built at the same point, where the St. George ferry now is.

The next six years were the most successful that the club has ever known; added to the club house at New Brighton was "Marmalade Lodge," of blessed memory, up the Kills; smoky, dirty and disreputable on the outside, but for a time the Mecca of canoeing. From fall until spring, when the float was on the beach at the real club house, and in fact all the year around, the members squatted on the hospitable landlord of the "Ranche," their boats on the racks down stairs and their dunnage in the bunks in the second story. The one aim and object of the whole party was canoeing, and it is safe to say that with the constant work of planning, building, altering and rigging that went on through five years as much was done for the improvement of the canoe as was accomplished in all the rest of the country.

With the year 1886 came a change of luck. The encroachments of the railroad that has since ruined Staten Island for the yachtsman and canoeist drove the club from its old home and forced it to begin the long series of wanderings which landed it finally on the other shore of the Bay, at Bensonhurst. To tell all this in detail would be too long a story, and we can only give space to the New York C. C of to-day, as it begins its second quarter century.

As most canoeists know, the club has been established for half a dozen years on Gravesend Bay, at Bensonhurst, and in this time it has more than once been in serious trouble through the sinking of its house and similar mishaps. For two years past it has been in occupation of permanent quarters on the shore, having leased the property with option of purchase. In its new station it has at last found a fitting home, and the troubles it has gone through have brought some compensation in that they have called forth the best efforts of all the members in behalf of the old club, so that both in numbers and *personnel* the membership was never stronger than it is to-day. The grounds of the club have a fine frontage on the water, with a broad outlook over Gravesend Bay and the Lower Bay. An old mansion of the comfortable kind makes an excellent home for many of the members, who occupy it throughout the year, and it has been found possible to maintain a very satisfactory *cuisine* at a reasonable price. The large boat house once used as a floating house is now securely established on a pier, a long gangway leading out to it. In front of this house is fairly deep water for yachts and a good anchorage. The house itself gives storage room for the canoe division of the fleet, and in front of it are moored the "one-design" 15-footers of last year to the number of a dozen, with many other small yachts. Outside the moorings is the breadth of Gravesend Bay, the club's home sailing waters and racing course, and further off is New York Bay, with the Shrewsbury and Raritan Bay beyond.

Thus located, the club at last offers what has so long been needed about New York, a club for the men who sail small boats of all types.

We are reluctant to admit the fact that the canoe is not as popular to-day and will not be as popular in the future as it was in the past; one very good reason for this indisputable fact lies in the multiplication of types of small craft, all derived originally from the canoe, but now, as in the racing 20-footer, with none of its distinctive features. With such a wide range to choose from, the men who once took to the canoe because there was nothing that could at all compare with it in model, construction and general adaptability, to-day divide their preference among a dozen allied types.

While the New York C. C. must always continue to be a canoe club, at the same time there is no disguising the fact that its future lies mainly in a new and far broader field, as *the* club for the small boat sailors, both cruisers and racers, of Greater New York.

In starting its second quarter century on this new course, it has an able hand at the helm. Its new president, Louis Boury, though a new member compared with such ancient patriarchs as Whitlock and Vaux, has enjoyed a wide experience in different yachting and boating clubs and in all sorts of small craft, from the 25-footer Smuggler, which he built as the first of the class and raced so successfully in 1891, down to canoes This experience, with his reputation as a worker in all branches of club management, and his wide acquaintance among yachting and boating men, leaves little room for doubt as to the success of the New York C. C. in 1897.

The Paddling Trophy.

OTTAWA, Dec. 26.—*Editor Forest and Stream:* At the annual meeting of the executive committee of the American Canoe Association, held at Toronto on Nov. 21, I submitted a resolution recommending the abolition of the racing machine and the establishment of a standard paddling canoe for all paddling races; the resolution being referred to the regatta committee. It is now my desire to lay my views on the matter, through the medium of your valuable paper, before the members of the A. C. A., or in fact any one who has the interests of canoe paddling at heart

Under the racing regulation and regatta programme in the Year Book for 1896, if a man wishes to enter in (1) the trophy paddling, (2) the single blade open canoe, (3) the tandem open canoe, or (4) the club fours, unless he is content to paddle at a disadvantage, he must have four different canoes. In (1) his canoe may be 16ft. by 28in., and as light as he pleases to make it; in (2) his canoe may be of the same dimensions as above, but it must weigh 50lbs.; in (3) the canoe must have a beam of 30in. and must weigh 55lbs.; and in (4) a canoe can be of any length, weight or beam, provided that it is not narrower than 28in. or shorter than 16ft These regulations are, in my humble opinion, absurd, and are enough to kill paddling racing at A. C. A. meets until proper regulations are made.

The four paddling events named are just the ones that every paddler wishes to enter. But is he to be put to the expense and inconvenience of building and maintaining four different canoes, and, like the owners of race horses, bring a "string" with him to the meets? I am strongly of the opinion that if we had one standard canoe for all paddling events, and let that canoe be a general purpose canoe as well, it would materially increase and strengthen the racing spirit not only in the Association, but also among canoeists generally. Nearly all club regattas are held under A. C. A. rules, and very often local regatta committees in this part of the world at any rate find great difficulty in arranging events owing to the different varieties of canoes allowed by the present rules. After all, the object of competition is to decide on the best man, not the best builder or the lightest or fastest canoe.

In order to arrive at the proper dimensions for a standard canoe, one that would not be clumsy for racing, and still would be perfectly safe for cruising and general purpose use, I have discussed the matter with canoeists from Montreal, Toronto, Kingston and Ottawa. The consensus of opinion

is that a canoe 16ft. long, 30in. beam, 12in. deep and weighing not less than 50lbs. would be a suitable standard for the Association to adopt. I would suggest that all paddling races, except of course war canoe races, be limited to the standard canoe. If this were done I feel confident that the number of entries for the paddling races at the meets would at least double, and the interest and competition be much keener. Some may be of the opinion that the trophy paddling should not be included in this limitation, but it to my mind is the very race that should be open to all. Every inducement should be offered to increase competition in what ought to be the most important event of the meet. I have been in this race at each meet for the past five years, and with the exception of last year, when it was won on its merits, it has usually been a competition of canoes and not men. Not only that, but the number of entries in each year has been absurdly small. In 1895 Mr. R. O. King was the only member who had a canoe in ca np, and his was consequently the only entry up till the last moment, when other arrangements were made to prevent the event being declared off for the year.

A race for a mile with canoes of the above description, with double blades, would be a splendid contest and would be an event which would have many competitors at an A. C. A. meet. I think it must be admitted that the paddling races at the meets have not been what they should be, and I therefore suggest this change as a remedy.

D'ARCY SCOTT.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

OUR San Francisco correspondent—Roeel—under date of Dec. 14 sends us the following clipping from a local paper, giving the details of the year's work of the Columbia Pistol and Rifle Club, of that city:

"Nearly all of the prominent rifle shooters in this vicinity were at the Shell Mound Range yesterday. With them were dozens who are not in the front row, but who are nevertheless enthusiasts in this line of sport, and the five rifle, pistol and military targets were kept on the move all day.

"The Columbia Pistol and Rifle Club held its last contest of the year for the club's class medals, but there will be one more contest on the 27th inst. for the re entry or all-comers' medals On that date the season's sport will conclude with a team shoot, rifle and pistol, in which all members will participate, to be followed by a banquet at Capt. Siebe's, at which all the prizes will be distributed. As stated, the winners of the class medals were decided at the contests yesterday. D. W. McLaughlin won the champion class rifle pr ze, his best four scores for the year being (Columbia target): 52 52 56 56 - 216, F. O. Young missed by 2 points, his total score being 218. In the first class F. E Mason captured the medal with 76 74 86 82 308 He was closely followed by H. R. Crane with 311 and A. B. Dorrell with 318. E Jacobson won the second class medal with 70 72 76 79—297. His closest competitor was J. E. Gorman with 320.

Mr. Gorman, however, consoled himself, for he won the champion pistol medal with 37 39 42 45—163. A. H. Pape was only 10 points behind, or 173, and F. O. Young made 186. To a score of 30 in 10 shots made four months ago, A. B. Dorrell is indebted for the first class pistol prize. His best four scores were 30 49 55 59—193. It was expected that Dr. L. O. Rodgers would secure that prize with 45 50 50 50—195, but Dorrell's 30 put the latter too far ahead. E. Jacobson was the fortunate winner of the second class pistol medal with 55 59 66 65—245. G. M. Bailey for a time had a chance to win on 262

All day yesterday there was a red hot fight on for the Unfred diamond medal. As it stands at present, Adolph Strecker leads with 95 points in ten 3-shot scores. D. W. McLaughlin stands 98, having reduced his total 8 points. F. O. Young is 99; he reduced his total 7 points. In the Glindemann military musket contest Young leads with 456 points (Creedmoor count) in 10 scores of 10 shots each; he gained 3 points yesterday. E. Hovey follows with 451, having gained 1 point on a score of 46.

The race in the .22cal. rifle 5-shot contest on the 50yds. range lies between E. Jacobson and Hovey. Jacobson forged ahead for awhile yesterday on 2 points, but Hovey brought the situation back to 2 points in his favor on an 8. His total is 90, and Jacobson's 92. A hard fight is being made for the all-round medal for pistol, rifle and musket presented by Capt. L. Siebe, In this Young is in the lead by several points, but it is nobody's victory yet.

Cincinnati Rifle Association.

CINCINNATI, O , Dec. 27.—The following scores were made by members of the Cincinnati Rifle Association to-day. Conditions: 200yds., off-hand, at the standard target, 7-ring black. Capt. Gindele still continues to make some remarkable scores with his Zischang barrel. Hasenzahl and Payne shot a match of 50 shots to-day, the former making 376, the latter 333 points, Payne leading by 17 points:

Gindele.

10 9 9 9 10 8 8 9 9 10 91 — 9 10 8 6 9 10 9 10 0 9—90

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 9-10.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

Jan. 11-14.—BUFFALO, N. Y.—Audubon Park first annual midwinter tournament. First three days, targets; last day, live birds.

Jan. 12-14.—ERIE Pa.—Clover and Pope's midwinter tournament at Massassauga Point. Live birds and targets. Added money and merchandise prizes. For programmes address Seth Clover or A. P. Pope, Erie, Pa.

Jan. 16.—RUTHERFORD, N. J.—Testimonial shoot to Neaf Apgar. Targets. Shoot commences at 9:30 A. M.

Jan. 20-21.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club. Sparrows. Royal Robinson, Sec'y.

Jan. 23 —HACKENSACK, N. J.—Shoot for the E. C. cup. C. O. Gardner, Sec'y.

Jan. 25-29.—SAN ANTONIO, Tex.—Second Texas Midwinter tournament. Targets and magautraps. $2,000 added. Under the management of J. M. George, Albert Steves and O. C. Guessaz, at San Pedro Springs grounds. Open to the world.

Feb. 8-20.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live-bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Feb. 10.—HACKENSACK, N. J.—Second contest for the *Recreation* cup, under the auspices of the Bergen County Gun Club. C. O. Gardner, Sec'y.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week) —CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man. $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

The Boiling Springs Gun Club, of Rutherford, N. J., at its monthly business meeting, held in the club house on Saturday last, Jan. 2, decided to give a testimonial to Neaf Apgar as a send-off in his new career as a representative of the Austin Cartridge Company, and as some return for the work done in behalf of the club by Neaf in past years After a short discussion the club decided that the testimonial should take the following form: The clubhouse, traps and targets of the Boiling Springs Gun Club to be tendered to Neaf, free of all charge, for the purpose of holding an all-day open-to-all shoot on those grounds. The date selected for the shoot was Jan. 16. It is hoped by the club that all Neaf's many friends in the neighboring clubs will respond by putting in an appearance, thus helping to make the affair the success it should be. A popular programme will be gotten up, but all sweeps will be optional, anybody that wants to do so being permitted to shoot along "for the birds." Remember the date—Saturday, Jan. 16.

Louis Schortemeier was the victim of an accident on New Year's Day that might have resulted very seriously. He was shooting live birds at Dexter Park when the right barrel of his gun burst a few inches beyond the end of the chamber. The barrel burst on the inner side, next to the rib, breaking the fore end into several pieces and tearing the rib off bodily, throwing it high in the air and depositing it in the snow about 45ft. away from the score. The force of the explosion jarred off the second barrel. A pretty long scratch on his left wrist, evidently caused by a splintered piece of the fore end, and several measle-like spots on the same wrist and on the ball of the thumb, due to powder blown into the flesh, show what a narrow escape he had. From the nature of the explosion and the location of the fracture, Schorty says he is satisfied that there was an obstruction in the right barrel at the time the gun was fired.

In addition to running the big shoot at Hot Springs, Feb. 8-20, John J. Sumpter, Jr., will have something to do with the running of Hot Springs township for a short time at least, judging from the following from the Hot Springs *Morning Sentinel* of Dec. 16: "Gov. Clark yesterday appointed John J. Sumpter, Jr., to fill the office of constable of Hot Springs township for the unexpired term, which vacancy was caused by the death of Allen P. Davis. Mr. Sumpter is well qualified to fill the position, and there is no doubt but that his appointment will meet with hearty approval. The new constable feels highly honored by the appointment, as there were a number of aspirants to the office who were good men and had strong influences to back them up. Mr. Sumpter will enter on his duties as soon as he receives his commission from the county judge."

"A chip of the old block." Elmer Shaner's father—we know him best under his title of Pap Shaner—is a man that is as fond of a gun as anybody among the shooting fraternity of Pittsburg, Pa. Then comes Elmer himself; a few years ago there were very few men who could down him at the "one-man-up" style of shooting. And now comes the third generation—Reed Shaner, Elmer's son, a boy of fifteen, who made his debut at the traps the other day, firing at targets for the first time, and using his father's gun. He didn't disgrace the name, as he broke somewhere in the neighborhood of 60 or 65 per cent.

Frank Butler says that while hunting quail in Arkansas he learned a new name for a hammerless gun. It happened that while he, Mrs. Butler (Annie Oakley) and a party of friends from Hot Springs were out after quail, a sudden thirst overtook them. To quench it the party stopped at a negro's cabin and asked for a drink of spring water. When the water was brought, Mrs. Oakley laid her gun on the ground the better to manipulate the drinking gourd. A little colored boy who came out of the cabin walked around the gun twice, and then called out: "Pop, see! Dis yer lady's got one of dem unseenless hammer guns!"

Jack Winston is in the city again and will make things lively for a week or two, prior to starting South for San Antonio and Hot Springs. His match with George Mosher for the Du Pont trophy was to have come off on Saturday, Jan. 16, at Charlie Zwirlein's; owing to the shoot at Boiling Springs on that date (the Apgar shoot), the match will be shot early the succeeding week. George Mosher, who was in town on Monday, says that he intends to be present at Clover & Pope's tournament at Massassauga Point, Erie, Pa., and also at the Audubon Gun Club's shoot, in Buffalo.

Justus von Lengerke has gotten back from England, where he has been for a few weeks on business. While there he managed to mix in a little pleasure with business, and had a taste of some of the good game shooting to be found in the British Isles. He brought back some specimens of the game he killed, among them some of the English woodcock. Although they had been on the ice about a fortnight, they weighed close on to a pound apiece when tried on the scales in the Murray street store. As for the shooting itself—he wants more of it.

Ben O. Bush, of Kalamazoo, Mich., is in the city for a few days. He has just patented a new kind of shell, the special features of which may be of interest to those who shoot ducks and geese in damp weather. As we understand it, Bush deposits a sort of metal covering over the paper shell, thus making it to all intents one of the old brass shells; the beauty of the whole thing is that this "brass shell" will crimp as perfectly and as smoothly as one of the ordinary paper shells.

The Garden City Gun Club, of Long Island, shot a race at targets on New Year's Day with a team of six men from the Crescent Athletic Club, of Brooklyn. The shoot took place at Garden City, the home team winning by 6 targets. The teams were: Garden City Gun Club—Nicoll Floyd, Jr., G. L. Hubbell, D. D. Breck, Newhall Lawrence, Alfred Lewis and J. R. Wood; Crescent—D. Geddes, C. White, G. Notman, W. F. Sykes, A. B. Fish and G. Hegeman.

The victory of Col. Butler and W. H. Stafford over George Work and J. P. Knapp on Saturday last, Jan. 2, on the Westminster Kennel Club's grounds, is one of the great surprises of a year that is very young as yet. Work and Knapp shot from the 30yds. mark, conceding their opponents 2yds. handicap.

George S. McAlpin is keeping up his good work on live birds, and is not jeopardizing his chances at targets. McAlpin is probably the best amateur live-bird shot in this part of the country just now, having come to the front very quickly.

Charlie Floyd, the member of the New Utrecht Gun Club who won the Holiday cup for the third and last time on New Year's Day, is one of the most consistently good shots the club can boast of. He hasn't as much time to practice as many men have, but he can give a good rustle to many a man who shoots 100 pigeons to his 1.

Wallace Miller, of Austin, Tex., has taken a leaf out of Capt. Bartlett's book and has been showing the boys down in the Lone Star State how to handle a Winchester repeating shotgun. Judging from what some of the local reporters down there have said about him, Wallace is nothing less than a crackerjack at the exhibition business.

Col. T. A. Divine is reported to be hard at work practicing on live birds, preparatory to coming North next March and carrying off the first prize in the Grand American Handicap. Noel Money is our authority for stating that Col. Divine has had his eye with him lately; pigeons that got away from him being few and far between.

Seth Clover and A. P. Pope have gotten out a popular programme for their shoot at Massassaugua Point, Erie, Pa., Jan. 12-14. The shoot will be held under the auspices of the Erie Gun Club, but will be managed by the two shooters mentioned above. Both live birds and targets will be trapped.

It has long been customary to refer to Ed Taylor, of the Laflin & Rand Powder Company, as "The Old Reliable." Tom Keller denies Mr. Taylor's right to the above title on the grounds that he is now merely "A Peradventure."

On Saturday next, Jan. 9, the second match of the Endeavor-Boiling Springs series will be shot on the grounds of the latter club, at Rutherford, N. J. The first match was shot at Marion, N. J., the Endeavorers losing the match on their own grounds.

Jim Elliott has taken his flight South, and the next we shall hear from him, after a brief stay at Kansas City, will be when he meets J. D. Gay at Louisville, Ky. Mr. Gay has a big contract on hand, notwithstanding his 2yds. the best of Elliott; Jim will stand at 31yds., Gay on the 29yds. mark.

Nearly every letter we get from our personal correspondents contains an item in regard to somebody or another going down to the Texas Midwinter. If half the people who say now that they will be there should show up at San Antonio on the 25th of January, Joe George, Albert Steves and Oscar Guessaz will have their hands full.

The classification and tournament committee of the Interstate Association will visit Dwyer's track at Elizabeth, N. J., and Daly's grounds at Elkwood Park on Thursday of this week (Jan. 7) for the purpose of choosing a location for the Grand American Handicap of 1897.

W. S. King, of Pittsburg, Pa., is shooting a very hot gait for an amateur. Last week he shot a race with W. G. Clark, late of Altoona, Pa., and won easily, his winning score being 94 out of 100. Clark scored 86. Out of the last 800 birds shot at by King he has scored something like 91 per cent.!

Annie Oakley was an interested spectator at the Elliott-Fulford match on Dec. 31. Mrs. Butler is looking remarkebly well, her sojourn in the South having driven away all traces of the severe strain she has been running under while with the Wild West show.

Sandy McPherson, of Pittsburg, Pa., is another entry for the Grand American Handicap. Pittsburg has the shooting fever very severely, and will be represented in the big event by the largest number of shooters that ever came East from that city.

Don't forget that the Neaf Apgar testimonial shoot at Boiling Springs takes place on Saturday week, Jan. 16. Bring plenty of shells, as there will be lots of shooting for everybody.

JAN. 5. EDWARD EANKS.

Programme for San Antonio.

THE programme for the second Midwinter tournament at San Antonio, Texas, came to hand too late this week for an extended notice. Such an event, however, as the "Big 3's" tournament does not need much heralding. The reputation made in '96 is certain to be sustained in '97 because—the "Big 3" say so. That's the gist of the whole programme. In brief it reads thus:

"A dead square shoot, $2,000 added to the entries. More game than you ever saw. Southwest Texas hospitality."

Magautraps will be used, and all targets will be thrown at unknown angles. Purses will be divided 30, 25, 20, 15 and 10 per cent. Shooting commences at 8:30 each day. Shells and guns may be shipped to Fred W. Stone, San Antonio, Texas, who will deliver same at the shooting grounds free of charge. The Menger Hotel will be headquarters.

On the first and third days there will be 8 events at 20 targets, $2.50 entrance, $50 added. On the fifth day there will be 10 events of the same class. On the second day, in addition to five 20-target events, same as above, there will be a race at 100 bluerocks for a trophy that bears the following title: "Schmelzer's World's Inanimate Target Championship Trophy." The fourth day's programme consists of six 20 target events, same as above, and a 50-target for a cup presented by the American E. C. Powder Company, entrance $2.50.

Peekskill Gun Club.

PEEKSKILL, N. Y., Dec. 25.—The Peekskill Gun Club held its usual holiday shoot to-day. The day was a beautiful one so for as weather was concerned, about a foot of snow on the ground and a smart northerly breeze that, together with the reflection of light from the snow, made the shooting rather difficult. Among other events was a contest for a silver powder can containing 6lbs. of W-A smokeless powder, presented to the club by the Laflin & Rand Co. It was shot for under the new FOREST AND STREAM rules as published week before last, and governed by the regular club handicap at unknown angles. The referee in this close and interesting event was Major W. H. Pierce, of red Irish setter fame, than whom there is no better nor more successful ruffed grouse hunter in the State of New York. Dr. Mason won the can by the smallest margin, as the following scores will show:

Dam (59).....1110011111111011111111111111111001111001110110110011—39

L. D.

Ironton Gun Club.

IRONTON, O., Dec. 25.—One of the most enjoyable shoots I ever attended was held on the grounds of the Ironton Gun Club to-day. Only a few shooters were out there, but those few had lots of fun. The members of the Ironton Gun Club object as a rule to shooting for money, and in consequence have no more sport. Dupuy's shooting was remarkably good, considering his condition; he has been sick for two years, and has fallen off from 175lbs. to 126lbs. Nigh did much the best work as regards quickness, the first barrel doing the work, the second not being really needed when used. The scores made were as below.

	No. 1.	No. 2.	No. 3.
Austin	1001010010— 4	1000011000— 3	1110111101— 8
Nigh	1110111011— 8	1111111111—10	1101101111— 8

G. W. CLAY.

Trap at Toronto.

TORONTO, Can., Dec. 23.—Below is the score of a match shot here to-day between Collie Cockburn, of this city, and Chas. Wilmott, of Port Hope. The match was shot under Dominion rules, $200 a side. Cockburn's 5th, 13th, 20th and 29th birds fell dead out of bounds, only two out of his 100 getting away from him.

ONLOOKER.

Winston and Mosher.

SYRACUSE, N. Y., Jan. 5.—*Special to Forest and Stream.* I accept Mosher's challenge conditional upon being regular 100 birds, Zwirlein's, Saturday, Jan. 16. JNO. L. WINSTON.

Trap Around Pittsburg.

HERRON HILL GUN CLUB.

PITTSBURG, Pa., Dec. 26.—An interesting shoot took place to-day on the grounds of the Herron Hill Gun Club, at Davis Island. The match at 50 birds per man between Strong and Fargo resulted in a tie; this match will be re-shot at some future date. Both men to-day shot very well. Strong shot at 66, scoring 62; Fargo scored 61 out of the same number. Scores of the match were:

Strong.....1121121212111112121102222002222122121220222122222212—46
Fargo.....0221220122211222221221221120220122221222122222222 - 46

Two sweepstakes were also shot off. The first was at 10 live birds; the second was a miss-and-out. Scores:

EAST PITTSBURG GUN CLUB.

Dec 26.—Below are the scores made to-day in the E. C. cup shoot of the East Pittsburg Gun Club. Mr. Gurbates, the winner, is only a beginner at trap-shooting, and has until recently been shooting only a poor gait; he has now, however, improved very much and made the highest possible at this shoot. Hamilton shot well and very regularly, despite the cold weather and raw wind. Rambo has only been shooting bluerocks five months, but he is able to run 25 straight, as shown by this score. Full scores below:

Gurbates (23).....1111101011101111111110111101111111010111101111110 41

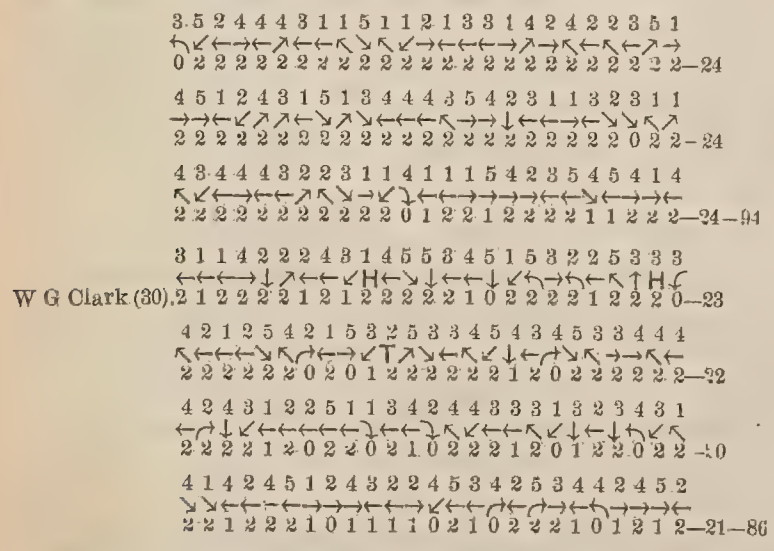
KING DEFEATS CLARK.

Dec. 31.—The postponed match between W. S. King and W. G. Clark was brought off yesterday, King winning easily by the great score of 94 to 86. A Pittsburg, Pa., daily newspaper describes the match in the following terms:

"Will King yesterday made a remarkable record against W. G. Clark in their match at 100 live birds. He won by making a strong finish, killing 94 to Clark's 86. King's record is one of the best in this section; the only man to beat it was Clark, his opponent yesterday. Nearly a year ago Clark defeated W. M. C. Jones by a score of 93 to 81 on the Country Club grounds. The match yesterday was for $100 a side, the loser to pay for the birds. All the prominent shooters of this end of the State were there, including Dr. Cundal, of Washington, Pa., who not long ago was mentioned in connection with a match with Will King. Clark was the favorite in the betting and his money went begging. Elmer Shaner was referee, and this fact gave the affair a business like appearance. Elmer is at home in every branch of the sport, from popping pigeons to setting a trap, and the whole country is aware of his sterling qualities. Louis Lautenslager, secretary of the Herron Hill Gun Club, had charge of the birds. The birds were a poor lot, and the damp weather made them rather sluggish, and this was in favor of the shooters.



"Clark justified the confidence placed in him by bringing down 15 birds in succession in the go-off. King missed two of his first 15, and this gave the ex-Altoona man a good lead. Of the next 10 birds Clark missed 2 and King 1, making the score 23 to 22 in favor of Clark on the first round of 25 birds.

"Now King began a glorious march, and dampened the ardent admirers of Clark. He missed his 26th bird, and then killed 46 in succession. It was a great performance, and at once placed Will at the head of the local trap shooters. He passed Clark, went to the front, and stayed there to the end. While King was bringing down his 46 birds without a miss Clark failed to kill 7. When both men had shot at 75 birds King led by 5, having killed 70 to Clark's 65.

"On the home stretch King showed up particularly strong, which shows him to be a nervy, plucky shooter. He killed 24 out of his last 25, while Clark missed 4. The friends of Clark maintained that he had not recovered from his late illness, and this caused his poor shooting at the end. King missed 4 out of his first 50, and only 2 out of the last 50; whereas Clark missed 5 out of his first 50, and 9 out of his last 50. King was in tip-top condition, and he chatted and joked as is his wont. The Pittsburg shooters were highly elated over the victory, and are ready to place Will at the head of any shooter in the State. Clark took his defeat manfully, but had no kick coming. Contrary to expectations, there was no talk of another match.

The full score furnished by our Pittsburg correspondent shows trap, flight of bird and result of each shoot:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

MAY AND STRONG VS. KING AND ANSON.

Jan. 1.—A close race was shot to-day at Davis Island, on the grounds of the Herron Hill Gun Club. C. A. May and Strong shot as a team against W. S. King and Anson, and defeated them by 1 bird, the totals showing: May 47, Strong 45—92; King 48, Anson 43—91. Will King is keeping up his strong gait and seems likely to remain on top for some time to come. Scores:

GOOD SPORT ON NEW YEAR'S DAY.

Jan. 1.—Some good sport was had on the Negley avenue grounds to-day. Bill McCrickart had some excellent birds on hand. Eleven shooters took part in the sweeps, three of which (Nos. 3, 4 and 5) were divided under the Rose system. Will King did the best work with two straights and three 9s out of 5 events. Six events, all at 10 birds, were shot during the day. Scores were:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
W S King	10	..	9	10	9	9	Humphrey	..	9	..	..	..	..
McPherson	9	5	7	9	8	10	Anson	..	8	8	8	9	9

Farmer	7	6	10	7	..	..	Scott	..	..	..	..	..	8
Burgoon	4	..	..	..	..	..							

Two miss-and outs were also shot, Alex King dividing both of them.

THE WILKINSBURG SHOOT.

Jan. 1.—To-day's shoot of the Wilkinsburg Gun Club was quite a success, 19 shooters entering for the 100-target race. John Eyler won the silver medal emblematic of the club championship with the score of 76. The scores were all low, as will be seen from the following figures:

John Eyler 76, Nimrod 74, R. Anderson 68, Oliver 64, C. D. Turner 64, J. K. Jack 63, H. T. Brown 62, R. Lovett 61, R. J. Steele 56, H. Rambo 54, O. Johnston 52, W. H. Morrison 44, C. Repp 34, G. W. Prather 33, Davis 33, A. Lovett 33, S. B. Hughes 30, W. Smith 28. Capt. Reed shot at 25 targets and broke 5.

Lockport Gun Club.

LOCKPORT, N. Y., Dec. 24.—A rifle shoot was held at Watson's Quarry to-day under the auspices of the Lockport Gun Club, resulting as follows, with turkeys as prizes:

No. 1, 50yds., 5 shots: C. Freeman first, J. Jackson second.
No 2, 25yds., 3 shots: Freeman first, Ward second.
No. 3, 75yds., 3 shots: Covert first, Ward second.
No. 4, 75yds., at bluerocks, 5 shots (club event): Ward first, Covert second.
No. 5, 50yds., 5 shots: Ward first, Jackson second.
No. 6, 25yds., 1 shot: Rogers first, Jackson second.
No. 7, 50yds., 3 shots: C. Ward first, Covert second.
No. 8, 50yds., 3 shots: Mann first, Covert second.
No. 9, 50yds., 3 shots: Ward first, Barnes second.

CHRISTMAS DAY SHOOT.

Dec. 25.—A good-sized crowd attended the Christmas shoot of the Lockport Gun Club at its shooting box at the Fair Grounds. The chief interest in the shoot centered in the contest for the prize donated by the Laflin & Rand Powder Company. Following are the scores:

No. 1, 10 targets:

Ward	1111101111— 9	Stockwell	0110011011— 6
G Mann	1011001100— 5	Jackson	1000000100— 2
Freeman	0100000001— 2	Atwater	0001101111— 5

Henry	2221—4	2120—3	....	McDaniel	....	20 —1	....

Re-entries: In No. 1 Wilson and Johnson missed their first birds and re-entered, both losing their birds again. Stevenson, who also missed his first bird, re-entered and divided the purse. In No. 3 Landis lost his first bird dead out of bounds, and re-entered, with the result shown above.

Target sweeps were shot as below. No. 1 was a 25-target race for the silver set won by the club at Stone Harbor, N. J., last summer. No. 2 was the shoot off of the tie in that event, Landis winning the set. All target events were at unknown angles. Scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

* Wolstencroft retired at the end of the 18th round with 11 out of 18.

J. K. S.

Omaha Gun Club.

OMAHA, Neb., Dec. 25.—The shoot to day for the trophy presented by the Laflin & Rand Powder Company called out a large number of the members of the Omaha Gun Club. With beautiful weather and with plenty of live birds on hand, the meeting was a success. The birds were an unusually speedy lot, and many, with a breeze off the traps to aid them, went over the boundary too fast for most of the shooters. The trophy contest was at 15 live birds, ties shot off on 5 birds, then miss-and out. Johannes won, as shown by the following scores:

	Trophy Shoot.	Ties.	Sweep.

W. D. KENYON, Sec'y.

South End Gun Club, of Troy.

TROY, N. Y., Dec. 25.—The South End Gun Club, of this city, held a shoot to day on Carroll's hill. The conditions of the main event were: 10 live birds per man, $1 25 entrance, the prize being a gold medal for the nigh man. Unfortunately there were not enough birds to go around, owing to the practice work before the match, so the race had to be reduced to one at 8 birds per man. Jeremiah Costello was the winner of the medal with a score of 7 out of 8. Scores were:

J C Costello (29)	0211121—7	W H Jackson (28)	2•0•2210—4
W B Christopher (27)	11221002 6	J P Coughlin (25)	120•0220 -4

D J Morey (26)	1220•220—5	Jos Potts (28)	21002020—4
J L Sherry (27)	213•0022—5		

W. B. CHRISTOPHER, Sec'y.

Trap in the South.

TEXAS MIDWINTER TOURNAMENT.

LITTLE ROCK, Ark., Dec. 25.—In a letter received to-day Oscar Guessaz writes me that all the details for the second annual tournament have been completed, and that nothing now remained to be done but printing the programme, adding that the same would be ready by the day after Christmas. While the added money will be the same as last year, $1,000, there will be several new features at this shoot. One of these features will be a trophy contest each day. The principal contest will be for the Midwinter trophy. These contests will be decided at 100 targets each, and will be shot under varying conditions.

Everyone who was fortunate enough to attend the first annual tournament will vividly recall the great reception accorded the visiting sportsmen, not only by the local shooters, but by the citizens in general. Hospitable and generous as was this reception, efforts will be made to surpass it this time; and, as Guessaz enthusiastically puts it, "Our former efforts will pale into insignificance." Thus, those who attend are assured of a royal welcome, and the Northern sportsmen will get a taste of genuine Southern hospitality.

These are not the only attractions to induce sportsmen to visit San Antonio; an extremely low railroad rate has been secured. On or about Jan. 19 the railroads of the country will have on sale what will be known as the "Landseeker's Excursion" ticket. This will enable any one to go to San Antonio and return for one fare and $2 additional.

The fact that all kinds of game has rarely been more abundant in Texas than at the present season (and this is especially applicable to the wildfowl shooting on the coast) should prove of great interest to a great many who intend to visit San Antonio, and take part in the Midwinter.

THE HOT SPRINGS TOURNAMENT.

At Hot Springs affairs have now assumed such proportions as to insure the success of this tournament also. The advancing of dates, so that this tournament will be held two weeks earlier than as first announced, will meet with the approval of all who go to San Antonio. The dates selected are Feb. 8 to 20. This will enable those who desire it to spend a week or ten days in Texas hunting, and then come on for the shoot. Steps will also be taken to have the railroads grant stop-overs to those returning from San Antonio, thereby enabling those who wish to attend this shoot as well as to visit the Springs to do so for virtually one fare, as the Springs are only 22 miles off the main line, by which all shooters from the North, South and East will have to go to San Antonio—the Iron Mountain Route.

Just how much added money there will be at this shoot I am unable to say definitely at present, but $600 are now assured, and efforts are being made to bring it up to $1,000. This much I can say, however, that the feature of the shoot will be a 25-bird handicap, $25 entrance, birds extra, with $500 added. This should be a popular event. From letters that John Sumpter has shown me I am led to believe that there will not be less than 100 entries, probably more. Should the century mark be reached this would make a purse of $3,000 in this one event, an amount that has never been equaled in any similar event. There are to be five moneys in this event, and on the above basis first money would be $900, second $750, third $600, fourth $450, and fifth $300.

There will be added money in several other events, and everything will be conducted on a thoroughly modern principle.

The souvenir programme of this event will be out not later than Jan. 15.

PAUL R. LITZKE.

A Shooter's Right to Gather his Bird.

At the Fulford-Elliott match, shot at Dexter Park, L. I., on Dec. 31 the following little incident occurred:

In the 17th round Fulford drew an incomer from No. 1 trap. He slobbered it with both barrels, the bird coming in toward him, flying low over the ground. Fulford laid down his gun and ran to catch it. Elliott called out: "You can't do that, Ed." Whether the remark stopped Fulford or not, we were unable to judge, our position in the scoring box being such that we could not see him, although we could hear what was said. The bird fell just over the dead line—out of bounds.

A short discussion on the merits of the case took place. It came to light that the shooters had agreed to have the trappers do the retrieving, but reserved the right to retrieve their own birds if they so wished.

The match was shot under A. S. A. rules, which state (Rule 9): "A bird to be scored dead must be gathered within bounds * * * by a dog or shooter, or person appointed by the shooter for that purpose. No extraneous means shall be used, and no other person shall be allowed to assist in gathering."

We did not hear the referee say anything as to what would have been his decision had Fulford retrieved the bird in bounds; we do not know whether such a question was put to him. It was put to us, not once, but several times, showing that there is considerable doubt upon that point, even among shooters. It may not be amiss therefore to state what our interpretation of the rule would be under similar circumstances, promising also not to get mad if we are jumped upon for such a decision:

It would be a dead bird.

We argue this way: Fulford by his action in laying down his gun and running to catch the bird, which was flying almost toward him, was sufficient proof that he had elected to gather his own bird, as he had a right to do under the rules. The rule says: "* * * or shooter * * *" He laid down his gun out of deference to that phrase, "No extraneous means shall be used." Billy Mills did not go to his assistance and "no other person" tried to assist him in gathering the bird.

In connection with this little discussion, the following amusing incident will not be out of place: A match was being shot, and Louis Schortemeier was refereeing. He was standing well within bounds at the time. A man at the score fired at a bird and hit it; the pigeon was an incomer, and kept straight on, finally alighting on Schorty's hat (Schorty stands about 6ft. 1in. or 2in in his stockings!). The shooter asked him to retrieve the bird, thus "appointing him for that purpose." Schorty retrieved it in good style, and gave it as a dead bird. And why shouldn't he do so? A. S. A. rules don't say anything about a referee not being allowed to retrieve birds when so appointed; they also say nothing about a bird perching, whether on the fence or on something higher than the fence (like Schorty), but within the boundary. The case was a peculiar one, but the bird's actions were rather irregular.

[Since writing the above we have had a talk with the referee, Mr. Ed Taylor, on the subject. We asked him what would have been his decision had Fulford retrieved the bird within bounds. Mr. Taylor said promptly: "A dead bird, of course." We then asked whether Fulford had stopped when Elliott called out to him, as related above; he replied that Fulford was undoubtedly stopped by the remark. In reply to our next question Mr. Taylor stated that had Fulford applied for a balk under Rule 23 ("If a contestant be balked or interfered with, * * * the referee shall allow him another bird") he would most certainly have allowed the claim.]

Boston Team Won the Trophy.

BOSTON, Mass., Dec. 30.—The team representing the Boston Shooting Association has again won the shoot for the 5-men team championship of the State of Massachusetts, and the trophy representing that championship. The match took place to day on the Boston Shooting Association's grounds at Wellington, the challenging team being 5 members of the Worcester Sportsmen's Club. The trophy was won by the Boston team in 1892, the first contest for the same, and has ever since been successfully defended by the club.

The conditions of the race are 30 singles, expert rules, and 10 pairs:

BOSTON SHOOTING ASSOCIATION.	Singles.	Pairs.	Total.	WORCESTER SPORTSMEN'S CLUB.	Singles.	Pairs.	Total.
O R Dickey	26	17	43	A W Walls	26	12	38
Puck	23	16	39	V D Kenerson	23	14	37

No. 4 was at 5 pairs.

IN NEW JERSEY.

ARLINGTON SHOOTING ASSOCIATION.

Dec. 25.—Fourteen members of the Arlington Shooting Association shot to-day on the club's grounds for the handsome trophy offered for competition by the Laflin & Rand Powder Company. The contest was at 25 targets, handicap allowance of extra targets to shoot at. The winner of trophy was Mr. Fletcher Walters, who has long been an advocate of Laflin & Rand's W-A powder, using it as usual on this occasion. The scores made were as follows:

Fletcher Walters (25)	1110111111101111111111111—23
M Herrington (25)	1111110111100111111111111—22

H. FRAPWELL, Sec'y.

WALSRODE GUN CLUB, OF NEWARK.

Dec. 25.—The Christmas shoot of the Walsrode Gun Club, held to-day on the grounds of the club, Varnum street, foot of Chestnut street, was well attended by members of the club, as well as by many members of the East Side Gun Club, of Newark. The shoot was the best attended of any given by this club. The live birds were an exceptionally strong lot. Scores in all the events were:

	No. 1, club shoot.	No. 2.

H. REINHARDT, Sec'y.

NEW YEAR'S DAY AT HACKENSACK.

Jan 1.—The New Year's Day shoot at Hackensack on the grounds of the Bergen County Gun Club was an enjoyable affair. There was a good attendance, not only of club members, but also of visiting shooters. Among those present were N. E. Money, of the American E. C. Powder Company; Ed Taylor and M. Herrington, both representatives of W-A powder; Jim Hildreth and Ferd Van Dyke, of the W. R. A. Company; Captain G. H Piercy, of the Endeavor Gun Club, and his son Louis; A. R. Strader, acting secretary of the same club; Harry Craft, an old-time Jersey shooter who has no longer time enough to practice at the trap; Tom Morfey, of Paterson, and W. Dutcher, of the same city; W. M. Harding, of New York; etc. In short, there were plenty of shooters and lots of shooting.

The Bergen county boys are comparatively new at the business of tournament running, but to day they got things off in good shape, and entertained their guests in a truly hospitable manner, the hot roast turkey making many friends during the noon hour.

There were two special events on the day's card. The first was a 30 target race, unknown angles, handicap of misses as breaks. The entrance fee in this event was $2; there were three prizes: first, a Winchester repeating shotgun; second $5, and third $2. Herrington and Van Keuren, the latter one of the home club, tied for the gun on 28 each. They shot off the tie at 30 targets, handicap added again. The race was a close one, the issue being in doubt until the finish, when it was found that Herrington had won by a single break. Their scores were: Herrington 23+2=25; Van Keuren 14+10=24. Second money—$5 was divided between Hildreth and Edwards; third money went to Strader and Louis Piercy.

The second special event was a match race between two-men teams. The original contract was for three two-men teams, as follows: Ed Taylor and Ferd Van Dyke; Tom Keller and Neaf Apgar; J. S. S. Remsen and F. S. Edwards. Of the three teams above named only one turned up intact, viz.: Taylor and Van Dyke, but Van was minus his gun and shells. (Somehow or another Van's dates got mixed and he forgot that Jan. 1 was a holiday in New York city. His gun and shells, therefore, reposed safely in the locked-up store of the W. R. A. Co., 312 Broadway!) The second team was wholly unrepresented, the reason being understood to be an affection of Tom's off foreleg, an affection he terms rheumatism, but which is popularly supposed to be gout. Of the third team Edwards was on deck, his partner Remsen having had a little misunderstanding with the pavement of Broadway, when he fell from a cable car platform on Dec. 29. Taylor and Van Dyke being willing to allow Piercy to take Remsen's place, it was only necessary to supply Van with a gun and shells. He shot Hildreth's Winchester and any ammunition he could beg, borrow or otherwise annex. (That he annexed some that did not suit him is shown by his score of 38 out of his first 50.) Under the circumstances he shot remarkably well in the last 50, scoring 47 of them. The scores given below show which team won.

The weather was favorable for good scores, although the poor background was against anything phenomenal, while the targets were by no means regular in flight, some soaring skyward and others diving into the ice and reeds of the Hackensack meadows. Two sets of traps were kept pretty constantly in use, and everybody had all the shooting they wanted. Lack of shells caused an earlier abandonment of the grounds than would otherwise have been the case. The refereeing was very satisfactory, the referee being very painstaking and being possessed of a keen eye, something entirely necessary when it comes to judging breaks and misses on the grounds of the Bergen County Gun Club.

The scores of the main events are given below in detail:

Handicap: 30 targets, unknown angles, handicap allowance of misses as breaks:

M Herrington (2)	1110111111110110110111111111111—26+2—28

EDWARD BANKS.

PASSAIC CITY GUN CLUB.

Jan. 1.—The New Year's Day shoot of the Passaic City Gun Club was a most successful affair. Not only was the attendance good, but the day was a delightful one for a day's trap-shooting. A couple of events at live birds and seven events at targets completed the programme. It had been intended to shoot a friendly team race with the Boiling Springs Gun Club at live birds, but the Rutherford Club was unable to get a team together owing to previous engagements. The scores made to-day are given below, Wise's record being far superior to that made by any other shooter.

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	15	15	15	10	10	10	Targets:	10	15	15	15	10	10	10

SOUTH SIDE'S ANNUAL.

Jan. 1.—The sixteenth annual New Year's tournament of the South Side Gun Club, of Newark, was held to-day on the club's grounds. The governing committee of the club consists of President Breintnall, Secretary Hobart and Manager I. H. Terrill. The weather was all that could be desired, but the attendance was small, owing to the number of other shoots held in the vicinity of New York. Scores in to-day's events are given below, all events being at unknown angles except Nos 3, 5 and 6. No. 3 was at reversed order, No. 5 expert rules, and No. 6 at 5 pairs. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

W. R. HOBART.

BOILING SPRINGS GUN CLUB.

Jan. 2.—The first regular monthly shoot for the season of 1897 was held on the Boiling Springs Gun Club's grounds, Rutherford, to-day. There was a good attendance of members, notwithstanding the fact that there had been a lot of shooting the previous day.

The main event, of course, was the club shoot at 50 targets (25 known and 25 unknown). In this event W. H. Huck, secretary of the club, scored his third win, his total of 48 being made up of two 24s. Van Dyke broke 47, made up of a 24 and a 23. Baron, who has a handicap allowance of 5 extras to shoot at, was close up with another 47. (The copy of the scores furnished us is so indistinct and incomplete, several scores having failed to be copied, that we are unable to give the scores in detail.) There were 15 entries in this event, and as far as we can make out the scores were as below:

Huck (50) 48, Van Dyke (50) and Baron (55) 47, Wise (50) 43, Edwards (50) 41, Greiff (50) and Paul (50) 40, Adams (53) and E. Jeanneret (56) 37, Frank (50) 36, Brown (65) 18; Marvin, Hegeman and Harding also shot, but their totals are perfectly illegible.

Van Dyke, Adams, Hegeman and Edwards were on hand early and shot a few practice targets at expert rules and doubles. The scores were as below:

Twenty-five singles, expert rule, and 5 pairs:

Van Dyke	1101111100111111111111111—22	10 11 11 00 11—7—29		
Edwards	0111111111101111111111101011—21	00 11 11 01 11—7—28		
Hegeman*	1011110110101111011101110—18	.. ..	—18	
Adams	0111000110011000011111111—15	00 00 11 11 11—6—21		

Several sweeps, all at unknown angles, were also shot during the afternoon as below. Huck's work is specially noticeable, as he only lost 9 targets all day out of 125 shot at:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
Targets:	10	15	10	10	10	10	10	25	Targets:	10	15	10	10	10	10	10	25
Edwards	8	10	6	4	10	9	8	21	Wise	8	15	8	5	8	8	7	16

Harding	9	9	3	6	7	5	..	..									

OCEAN COUNTY COUNTRY CLUB.

Jan. 2.—There was some good shooting at the grounds of the Ocean County Country Club, Lakewood, N. J. The first event was a handicap sweep at 15 live birds for a silver cup presented by the club. Those who shot for the cup were: Fred Hoey (31), W. G. Brokaw (29), D. W. Harris (27), D. H. Fanning (27), and F. A. Walthew (27). In addition to their handicaps in the matter of "yards rise," Harris received an additional handicap of two misses as kills; Fanning and Walthew received respectively 3 and 4 misses as kills. Hoey retired at the end of the ninth round with a score of 6 kills. Brokaw lost 2 birds out of his 15 and also retired, as the other three with their handicaps were straight at the end of the race. It was agreed to shoot off the ties at five birds; Harris shooting from scratch, while Fanning and Walthew received a miss as a kill. In the end Harris won after shooting at 10 tie birds.

Fred Hoey and W. G. Brokaw shot a race at 100 live birds, Hoey winning easily with a score of 88 to 81, as below:

Fred Hoey (31)	1122211021222•2221111221•1—22	
	1222211102•1120202002212O—18

RAVELRIGG.

Trap Shooters of Buffalo.

AUDUBON GUN CLUB.

BUFFALO, N. Y. Dec. 26.—There was a good attendance of members of the Audubon Gun Club, of this city, to-day, at the regular weekly club shoot held at Audubon Park. Event No. 3 was the trophy shoot, a handicap event with 25 breaks as a highest possible score. E. C. Burkhardt, F. D. Kelsey, Hines and B. Talsma tied for first place on highest possibles. On the shoot off Burkhardt, who shot well during the afternoon, was the winner. No. 4 was the club badge shoot; in this event Stacy won the badge in class A, Sandy in class B, and Zoeller in class C. Below are the scores made:

LIMESTONE HILL GUN CLUB.

Dec. 26.—The Limestone Hill Gun Club's shoot, held to-day, resulted as follows, all events being at live birds:

No. 1, club shoot, 6 live birds: George Twist 6, R. H. Reed 5, A. Reed, J. Mulqueen and F. M. Lyman 4, G. N. Reed 3.

No. 2, 10 live birds, cash prize of $10: A. Reed and R. H. Reed 9, Twist 7, H. Radcliffe 5

Pawtuxet Gun Club.

PAWTUXET, R. I., Dec. 25.—The Pawtuxet Gun Club held a shoot to-day at its grounds, Fair street. The attendance was very good. Fourteen shooters took part in the main event, which was a handicap race, allowance of extra targets to shoot at. Sheldon, one of the scratch men, was high with 21 out of 25. The weather was bitterly cold, and there was a bright sun shining that made the snow dazzlingly white, throwing off a glare that was quite painful to the eyes. Scores were as follows:

Sheldon (0)	1111111111010111101110101	—20
Hammond (0)	0110110111111100011111111	—19

ON LONG ISLAND.

WORK AND KNAPP TIED.

Dec 30.—George Work and J. P. Knapp shot a tie race to-day on the grounds of the Westminster Kennel Club, at Babylon. These two prominent amateurs have met many times during the past two seasons, and the honors have more frequently fallen to Knapp than to Work. Work, however, has been doing some great shooting of late, and was the favorite in to-day's race. The scores made were not phenomenal, but it must be remembered that the boundary was only 30yds., the old Westminster Kennel Club's boundary of 50yds. having been brought in 20yds. There was no wind to help the birds, so naturally one would have looked for the 90 mark to have been reached, notwithstanding the small boundary. As it was, the best the shooters could do was 87 each, both losing their birds in the 87th round and then running out with "13 unfinished." Work had 6 birds fall dead out of bounds; Knapp is credited with 3. At the end of the 50th round Knapp was leading by 2 birds, but at the end of the 56th round the totals were a tie. Out of the next 19 rounds each man lost 2, the totals being still a tie at the three-quarter mark. Eleven straight was then recorded for each shooter. In the next round, the 87th, Work's bird fell dead out of bounds; Knapp did not take advantage of the slip, as he also lost his bird in the same round. Both then killed straight to the end, the race resulting in a tie, as stated above. The high runs were: Work 24, 13, 12, 12 and 10; Knapp 18, 14, 13. Scores were.

THE ELLIOTT FULFORD MATCH.

Dec. 31.—The season of 1896 was brought to a fitting close at Dexter Park to-day. Elliott and Fulford, two old-time rivals at the trap, and both of them corking good shots, shot a race to-day on the above grounds for $100 a side and the Kansas City *Star* cup, won recently by Elliott from J. C Riley, of Kansas City. Everybody knows Jim Elliott, and everybody knows E. D. Fulford, and as a natural consequence there was more than the usual amount of interest evinced in the outcome of this match. There was no betting—there very seldom is nowadays—and so much the better for the sport. There was, however, that comfortable feeling that both men were trying to win.

The day was as lovely a day as we have ever experienced at this time of the year. It was cloudless overhead, a bright sun shining, with the thermometer somewhere in the neighborhood of the 40 mark. With 3 or 4in. of snow on the ground, it is unnecessary to state that under foot things were decidedly sloppy. Scarcely a breath of wind stirred the flag that hung limply from the flagstaff at Dexter Park; occasionally it would try to straighten out, but when it did so the breeze did not come from the right direction; what there was of it came from the northeast, but there was not enough to take into account when figuring on the quality of the birds. Of the birds, we can only say that they were a clean lot to look at; the big majority of them were all blue, and small of size and clean of wing. It seemed to us that their tails were trimmed decidedly too close to make them feel all right when trying to rise quickly from the ground. In damp weather, and when a bird's tail is wet and dirty, it is all very well to trim them a bit, but bobtailed birds can't fly like birds that have a good portion of their tails to guide them. As flyers, to-day's lot were more than fair, when it is taken into consideration that there was no wind to aid them. Many of them were excellent birds, but it is no discredit to Mr. Lippack to say that we have seen far faster birds on his grounds. He did his best, and had procured good birds, but everything was against them. As a matter of fact, Elliott had only 18 that showed any incoming tendency, while Fulford's score shows just 23.

With two such men at the score it does not take long to arrange preliminaries. Ed Taylor, of Laflin & Rand Powder Company, was chosen referee, while Aaron Woodruff, of Elizabeth, acted as trap-puller. Major J. M. Taylor, of the *American Field*, and the representative of FOREST AND STREAM acted as official scorers. Ferd. Van Dyke looked after his side partner, Jim Elliott; Gus. E. Greiff, of the firm of Von Lengerke & Detmold, watched Fulford's interests.

HOW THE MATCH WAS SHOT.

The match was set for 1 P. M. prompt, and it was only thirteen minutes after that hour when Elliott stepped to the score, having won the toss, and killed his bird, a good one from No. 4 trap and an exact counterpart of the bird he lost in the first round at Trenton, N. J., on Dec. 3. After killing his bird Jim remarked, "There's one first bird I haven't lost," referring to a very usual habit of his of losing his first bird in a match. Fulford drew an easy one for his 1st, but lost his 2d bird, dead just halfway between the 50yds. and 80yds. boundary stakes. Elliott's 5th bird had to be flagged to make it get up and scoot. Fulford in the same round had a flipper from No. 2 trap that circled to the right, being apparently untouched with the first, lighting on the ground near No. 5 trap; the second shell did its work. Elliott's 7th was a good fast twister, not fast enough, however, to get away. Fulford's 9th was a chocolate-colored bird that loitered on the trap, but did not need the scare rope. When it started there was nothing hard about it; at least E. D. didn't let it get hard. Fulford's 15th was an extra fast bird, well killed. In the 16th round Elliott had to shoot at two birds, his first being shot on the ground. In the 17th round Fulford lost another bird dead out of bounds; it was an incomer that fell just over the dead line. Elliott's 2 'd bird was scored with an excellent shot with the second shell, the kill calling forth the first applause from the spectators. At the end of the 25th round the scores stood: Elliott 25 Fulford 23.

THE SECOND TWENTY-FIVE.

The second 25 saw Fulford fall still further in the rear, Elliott losing only one bird to his three. Elliott's 26th and 27th were both fast birds, the 27th being a right-quartering driver that towered, the second shell again doing good work in closing up the bird when it looked likely to get away altogether. In the 28th round each man drew an exactly similar bird from the same trap, No. 2, both fast drivers. Fulford's 29th was a fast, low-flying bird that was neatly centered with both barrels. In the 30th round Elliott scored his first loss; the bird was an easy one, and it seemed almost unaccountable how it came to go out of bounds; it just reached the roof of the club house and fell over stone dead. This loss put Fulford only one behind, and his stock took a rise when he made a great second-barrel stop of a chocolate-colored bird that went straight away from the traps, towering as it gained speed. His kill of this bird was generously applauded.

Fulford lost another bird in the 34th round, just such a bird as anyone is likely to miss. The pigeon was a white one with lots of slate color about it; it left No. 2 trap slowly, then flipped to the right just as the first barrel was fired, jumping clear out of the load, and straightened out for the fence; Fulford seemed a long time in locating it again, and the second did it no harm apparently. Elliott's 35th was a right quarterer from No. 4 that seemed to be missed clean with the first; the second shell made up for all deficiencies, the charge of shot centering it and causing the bird to fall in a heap. In the 38th round Elliott drew No. 2 trap and the bird sat for awhile; Jim had just gotten the word "No—" out of his lips, intending to call no bird, the bird jumping as he started to call it. He scored it all right and saved the referee any trouble that might have arisen over his not shooting at it. In the 40th round he had another no bird, called this time by the referee, who saw that the bird could not fly (Billy Mills caught it when he went out to put another in the empty trap). After this "no bird" Jim drew a rattling good one from No. 5 trap. Fulford in the 43d round shot a bird on the ground and had to take another, scoring it. In the next round he lost a towering right-quartering driver from No. 2 trap; the bird was not hit very hard with the first barrel; the second centered it nicely, but the bird drifted out of bounds before reaching the ground. This piece of ill luck again befell him in the 46th round, Fulford waiting a long time with his second on a fast bird. In the 48th round both men scored good kills; Elliott's bird was a towering right-quartering driver from No. 4, he hit it lightly with his first load, but centered it well with the second. The score at the halfway mark was Elliott 49, Fulford 45.

THE THIRD TWENTY-FIVE.

In the third series of 25 birds Elliott gained three birds on Fulford, making his total 73 to 66 at the end of the 75th round, a great gait and a commanding lead. In the 54th and 58th rounds Elliott experienced a couple of slices of good luck. In the 54th round he hit his bird, a circling right-quarterer from No. 3, with both loads, but the pigeon would never have been scored had it not been for the 2ft. wire fence that marked the boundary; the bird flew wobbling over the ground, bringing up against the fence; with an open boundary it would surely have gone over. His 58th, a chocolate-colored bird, performed an almost similar feat, the wire alone stopping it from going out. His 70th was a fast bird; it was hit hard with both loads, coming almost to the ground; it then flew for the boundary, just clearing the fence. At the end of the 75th round Elliott had made the great record of 73 kills, with two dead out. And these 75 birds were not all duffers by any means.

Fulford lost his 52d bird, a strong bluerock, that carried away enough of the shot sent after it to cause it to come to the ground over the boundary fence. His 59th bird was from No. 2 trap, and is marked on the score as a hoverer; the decision of the referee on this bird was eminently proper judging from the position we saw the bird in from where we were doing the scoring. His 67th was an extra fast bird, well killed. His 71st was also a fast bird and was an excusable miss. It was on his 72d bird that we think he made the poorest shot of the day; this bird was a big blue one that left No. 1 trap quite fast, quartered directly across the traps, and was allowed to go scot free, Fulford palpably failing to appreciate the bird's speed and shooting behind it both times. These two consecutive misses, with the loss of another easy bird in the 75th round, placed the issue of the match beyond all doubt.

THE LAST QUARTER.

In the last series of 25 birds Fulford did some good work, accounting for 24 of them, his single lost bird, his 89th, falling dead out of bounds. His 91st was scored with a great second-barrel kill that called forth applause; his 97th was also a good piece of work, the second barrel being used very effectively on a fast bird that circled out to the left from No. 2 trap. Elliott had some good birds in his last 25. The 86th was a fast driver that was hit hard with both barrels; on receiving the second barrel it turned and came back to the score, falling on the roof of a house outside the grounds, a boy retrieving it a few minutes later. His 91st and 94th both fell dead out of bounds, the 94th actually breaking its wing while flying, and coming down just outside the 50yds. boundary. On both these birds, and also on his 93d (another lost bird), he seemed to dwell a long time with his second load, apparently trying to show what long "second-barrel kills he could make with his pump!" With four single shells he scored his 96th-99th birds inclusive—just to show that he did not need his second all the time. The double figure runs were: Elliott 39, 29 and 15; Fulford 18, 16, 14, 13 and 11.

The match was brought to a close at 3:12, one minute less than two hours for the 200 birds. The times per 50 birds were: 1st, 27 minutes; 2d, 30 minutes; 3d, 30 minutes; 4th, 32 minutes.

HOW THE TRAPS WERE PULLED.

The way the traps fell to each shooter was as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Elliott	18	23	17	23	19	100
Fulford	22	25	21	25	7	100
	40	48	38	48	26	200

The failure of No. 5 trap to turn up for Fulford is something unusual. He shot at 39 birds before he got a single bird from No. 5 trap. He had No. 5 trap again in the 48th round; he then shot at 42 more birds before No. 5 trap was once more sprung for him. Thus out of ninety times that he went to the score and called "Pull" No. 5 came to him just twice.

GUNS AND LOADS.

Elliott shot his Winchester repeating shotgun, Winchester factory-loaded ammunition, Leader shell, 4½grs. E. C. powder, 1¼oz. of 7½ chilled.

Fulford shot his new Greener, U. M. C. trap shells, with 50grs. Schultze and 1¼oz. of 7 chilled (his shells were loaded by himself). In regard to Fulford's load it did not seem to us as if the load suited his gun; some of the patterns made by the shot on the snow when the birds fell anywhere over 35yds. from the score were frequently wild.

Billy Mills and his brother did the trapping; that their work was done speedily is shown by the time taken to shoot the match. In regard to the referee's work, it was all as it should have been. We prefer a referee who makes a man shoot at another bird unless there is no question as to its being in the air at the time the shot was fired. Mr. Taylor may have seemed to be a little severe at times, but we think his decisions were entirely just and proper; in short, his work was refreshing.

SCORES IN DETAIL.

The scores in detail, showing trap, flight of bird and result of each shot follow:

EDWARD BANKS.

NEW UTRECHT GUN CLUB.

Jan. 1.—The New Utrecht Gun Club's Holiday cup is now the property of C. W. Floyd, a member of that club. Up to to-day Floyd and T. W. Morfey each had two wins to his credit. The late C. W. Coulston had also been a winner twice. Morfey did not put in an appearance this afternoon at Dexter Park, and Floyd scoring the only 10 straight made his wins three in number, this entitling him to the ownership of the cup. The list of shooters who shot along as guests of the club was a large one; among the number was Jim Elliott, who yesterday defeated Fulford in a 100-bird race on these grounds.

Holiday cup:

C W Floyd (A, 29)	2222222222—10	J A R Elliott	2222•22222— 9
Schortemeier (A. 29)	22222022 2— 9	H Otten	2111111022— 9

D Ma zen	2111222212—10	E Kuhneman	2202002222— 5

Sweeps were shot as below, the Rose system being used in dividing the purses:

No. 1, 5 birds, $3 entrance; all 30yds.—Steffens 5, Lewis 4, Floyd 4, F. A. Thompson 3, Otten 3, Bennett 3, Packard 2

No. 2, same conditions—Lewis 5, Bennett 5, Thompson 4, Otten 4, Clark 4, Steffens 3, Floyd 3, Packard 3, Sands 3, Bassford 3.

No. 3, same conditions—Lewis 5, Steffens 5, Clark 5, F. A. Thompson 4, Floyd 4, Packard 4, Bennett 4, Sands 4, W. H. Thompson 4, Dr. Hudson 4, Otten 3, Fessenden 3, Bassford 2.

Jan. 2.—The target season for 1897 was opened by the New Utrecht Gun Club at its Dyker Meadow grounds this afternoon. The club handicaps not being ready, everybody shot from scratch. Donley Deacon was top scorer in the club event, with 23 out of 25 at known traps and angles. Scores:

D Deacon	1111101111111111111111101 -23

NEW YEAR'S DAY AT THE KENNEL CLUB.

Jan. 1.—The Westminster Kennel Club's annual shoot on New Year's Day has always been one of the shooting features in the vicinity of New York. To-day's shoot was probably the largest ever held on these grounds. There were 34 entries in the main event, a large number to handle on any grounds, but the Kennel Club is so well fixed in the matter of accommodation that, although the shooting house was a little crowded, it was never uncomfortably so. The conditions of the main event were as follows: Unlimited number of birds, $10 entrance, handicap rise from 26 to 31yds.; 29yds. and back, miss-and-out; 27 and 28yds., two misses out; 26yds. and forward, three misses out. In addition to the purse the club gave a cup valued at $250.

The shoot was an invitation one, and invitations were extended to the members of the following clubs: Westchester Country Club, Larchmont Yacht Club, Philadelphia Gun Club, Riverton Gun Club, Carteret, Tuxedo and Morristown Country Club.

The result of the shoot was a popular win for H. S. Edey at the end of the 24th round. Mr. Edey lost his 16th bird, and then had to shoot out on even terms with G. S. McAlpin, one of the scratch men who is shooting just now in excellent form. McAlpin ran 23 straight before he dropped one, and lost the cup to Edey. The purse was said to have been divided at the end of the 9th round, the five men left in each taking an equal portion. After the cup race, a miss-and-out, $5 entrance, was shot. This event had 24 entries; the purse was divided between George Work and R. Toland, both of whom killed 11 straight. Col. Butler, who shot well up in the cup race, stayed in the miss-and-out until the 11th round, while H. K. Knapp ran 9 straight before falling out. Scores in these two events were as below:

BUTLER AND STAFFORD DEFEAT WORK AND KNAPP.

Jan. 2.—After a dark horse had won the cup on New Year's Day at the Westminster Kennel Club's grounds, a second surprise was sprung on the local amateurs by the victory of Butler and Stafford in a team race against the cracks, Work and Knapp.

The conditions of the race were: 100 birds per man; Work and Knapp at 30yds.; Butler and Stafford at 28yds. Butler shot well all through the race and made the high score of the match—86. At no time was his work ragged, although he lost his 91st, 93d and 95th birds in rapid succession at the finish of the match. At one time the non-favorites led by 11 birds, but the match was finally only won by two birds. Stafford's best work was done in the third string of 25; after losing his 29th and 30th birds, he pulled himself together and scored 19 straight. Work and Knapp were both out of all form, and neither could make more than 39 out of their first 50 birds. Knapp managed to score 44 out of his last 50, but 42 was the best Work could do.

The double-figure runs were as follows: Butler 21 and 11, Stafford 19 and 10, Knapp 19, 18 and 12, Work 14, 12, 12 and 11. The scores were:

Col Butler (28)	12222211112212112212201 02—23

PUBLISHERS' DEPARTMENT.

Its Limited Train Service South.

IN private life one would be considered egotistical, or perhaps a little daft, to exploit one's beautiful home, its trimmings and adornments, its private suits and perfect lavatory and toilet accompaniments, its handsome parlors and drawing-rooms, or the exquisite completeness of its culinary department. Among the polite set such would indeed be thought vulgar, but with hotels or railway trains, which are public conveniences, the restriction is quite removed. In fact, when one is to select a hotel or apartments for several hours' continued occupancy, sharp discrimination is not only excusable, but essential; and for this reason the railways endeavor in their descriptive literature to furnish the opportunity for such discrimination. Preparatory to a trip, those are the conditions to be considered, and the Southern Railway, "Piedmont Air Line," enjoy the opportunity of presenting the faultless attainments of their "Flying Caravansaries," the Washington and Southwestern vestibuled limited trains between New York, Atlanta, New Orleans, Memphis, Augusta, Asheville, St. Augustine, Tampa, Savannah, Jacksonville, as possessing every requisite.

They are indeed palace hotels on wheels. Commencing Jan. 18, another limited train known as the New York and Florida Limited will be resumed, and will leave New York daily, except Sunday, at 12:10 noon, reaching Jacksonville following afternoon at 3:30 P. M., and St. Augustine one hour later, 4:30 P. M.

The new Limited to Florida will represent the Pennsylvania, Southern Railway, F. C. & P., and Florida East Coast Line. It is beyond comparison what tyifies speed on land or water. The train is strictly Pullman Vestibuled, composed of composite dining, compartment, drawing-room, sleeping car and observation car. Those who contemplate visiting the Sunny South can get complete information by addressing New York Office of the Southern Railway, 271 Broadway. —*Adv.*

TAKE the magnificent North Shore Limited of the New York Central for Chicago and the West.—*Adv.*

THE Empire State Express of the New York Central is the fastest and most famous train in the world.—*Adv.*

Calendars.

MARINE engineers can obtain one of the handsomest calendars ever published by addressing the Roberts Safety Water Tube Boiler Co., 41 Cortlandt street, New York, and giving their full names and addresses, together with the name of the last vessel on which they were employed.—*Adv.*

THE PETERS CARTRIDGE Co., Cincinnati, O., publish a striking calendar, 14×26in in size, illustrating "A Portage in the Adirondacks," which will be sent on receipt of 20 cents for postage and mailing. The game laws for the various States are given on this calendar.—*Adv.*

THE WINCHESTER CALENDAR for 1897 has two good hunting pictures by Frost, one an Eastern and the other a Western subject. The first shows a bob cat that has been surprised by a sportsman while feeding on a rabbit, and is entitled "An Interrupted Meal;" while the other, called "A Chance Shot," depicts a dismounted horseman in the act of firing at one of two deer whose heads just appear above the hillside.—*Adv.*

SPRATTS PATENT, Ltd., 245 East Fifty-sixth street, New York, send for a 2-cent stamp an annual calendar with pictures and points about dogs, birds, etc. Mention FOREST AND STREAM.—*Adv.*

THE UNION METALLIC CARTRIDGE Co. publishes its usual artistic calendar. This year the subject of the illustration is a scout's dash for life from the redskins, and is entitled "Saving his Scalp."—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 16, 1897.

VOL. XLVIII.—No. 3. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

It has so happened that all the public services that I have rendered in the world in my day and generation have been connected with the general government. I think I ought to make an exception. I was ten days a member of the Massachusetts Legislature, and I turned my thoughts to the search of some good object in which I could be useful in that position, and after much reflection I introduced a bill which, with the consent of both houses of the Legislature, passed into a law and is now a law of the State, which enacts that no man in the State shall catch trout in any manner than in the old way, with an ordinary hook and line.

Daniel Webster.

FAILURE OF THE SHAFROTH BILL.

THE failure of the Shafroth bill to pass the House of Representatives need not greatly discourage any friend of forest preservation, and indeed will gratify those who are familiar with the conditions which prevail in the forests of the West.

The measure, though introduced from the best of motives, was hopelessly inadequate for two reasons. It carried no appropriation, and so its provisions could not have been enforced; while even if they had been enforced, the lanes authorized to be cut through the forest would prove no barrier to the advance of a fire raging in pine timber and carried forward by the wind.

The bill authorized the Secretary of the Interior to have lanes about 1,000 feet in width cut through any forests on the public domain, at intervals of from five to ten miles. The timber on these lanes the Secretary was to offer for sale at public auction, the buyer to agree to clear the lanes and remove the timber. If the value of the timber was not sufficient to pay for the clearing of the lane, bids for clearing it might be accepted by the Secretary.

Much has been written concerning the fierceness and swiftness with which fire burns and runs in pine timber, for to say nothing of the forest fires in the far West, there have been of late years frequent and appalling examples of their terrible destructiveness in the forests of Michigan, Minnesota and Wisconsin. It is perfectly well known that such fires often proceed by long leaps, that the air is filled with burning brands, cinders and sparks, which are carried for miles, and that the actual flames are preceded by gusts of air so fiercely hot that they utterly blast and destroy every living thing in their path and cause dry wood or vegetation at once to burst into flame. To such fires a lane 1,000 feet wide would prove no barrier.

But even if such a lane should stop the progress of a fire raging among standing timbers, there are other things to be taken into account. In such a lane, after the timber had been removed, there would be left a mass of twigs, branches and tops of trees which would soon dry out and would carry the fire along the ground, not quite so rapidly as it would travel among the tree tops, but not less certainly. This great brush pile, dry, resinous and intertwined with the dead weeds, grass and vines which would at once spring up in it, would be a constant menace to the forests. It would be impossible to clear away all this material, and to keep it cleared, without the continued employment of a large force of men.

Even if it were kept clear, the underlying forest floor itself carries the fire, not only on its surface, but also by devious and hidden ways. This forest floor is made up of the decayed and decaying leaves, cones, branches, stumps and roots of the pine, all these full of resin, and waiting only the touch of a spark to burn. Sometimes a root fiber, ignited, may smoulder for days, traveling underground, unseen and unsuspected, until it again reaches the surface many feet away. Now, if by a breeze it is blown into flame, it soon gathers headway and a fire is started.

Lanes such as proposed might in certain localities be useful aids in fire fighting, but of themselves they can accomplish nothing. To receive public approval some more comprehensive scheme of forest protection than this must be devised. Such a plan may be hoped for from the forestry commission nominated last year by the National Academy of Science at the request of the President. Pending the advancement of such a plan and the legislation required to put it in operation, authority should be given to the Secretary of the Interior to call on the War Department for details of troops to do police duty in the various forest reservations. Such duty is now performed by United States troops in some of the national parks, and the success in protecting the forests achieved by Capt. George I. Anderson, Superintendent of the Yellowstone Park, and by other officers in other localities, furnishes evidence of what may be done by this method of protection, which certainly ought to be considered by the Government authorities.

The one discouraging matter connected with the vote on this bill is the small attendance and lack of apparent interest in the subject. Only fifty-three persons voted on the bill. This shows an apathy among Congressmen on an important subject which does not promise much for wise forestry legislation in the near future.

STOP THE SALE OF GAME.

THE sale of game should be forbidden at all seasons.—*Forest and Stream Platform Plank.*

In that declaration we may have been in advance of public conviction in this country, but every day is bringing renewed evidence that sentiment is rapidly making in support of the principle involved. It is recognized more and more clearly that the one great agency that is depleting our game supply and making barren the covers is the continued and relentless industry of the market shooter. The tendency of new legislation is in the direction of limiting traffic in game, and thus it is approaching more or less closely to what must be the ultimate expedient, the absolute prohibition of the sale of game at all times.

In Michigan it is proposed to change the law this session to prohibit absolutely the sale of game. In Tennessee an effort is making to incorporate into the law a provision which forbids the export of game to market. We published last week a note from Broome county in this State, proposing an organization of a five-county league for the purpose of furthering the enforcement of the law which now prevails against the transportation of ruffed grouse, and it was pointed out that the law as it now stands is ineffectual because it permits the transportation of an unlimited number of birds if they are accompanied by the owner. The way is thus opened for dealers to gather immense quantities of ruffed grouse, which because of the size of the shipment they can afford to accompany to market, yet thus comply with the letter of the statute. A remedy for this abuse might be easily found by adopting such a limitation as that one which is found in the laws of some States restricting the number of birds which any one individual may transport at one time. It is generally recognized in the counties named that the great bulk of the game is killed by a few individuals who pursue it incessantly in season for sale. A provision limiting the number one person could accompany would effectually cut off this traffic.

We believe that the State Association of New York can do no more important service this winter than to strive for the making of a public sentiment which shall compel the Legislature to rescind section 349 of the game law, which now permits the sale of game at all seasons. So long as the New York market is open for the reception of game the game will come to it, both in season and out of season, and not only from other States, but from New York covers as well.

At a meeting in St. Paul the other day, attended by the fish and game wardens of Wisconsin, Michigan and Minnesota, plans were discussed for providing for the States of Minnesota, Wisconsin, Michigan, and possibly North and South Dakota, a uniform code of laws. The purpose of the meeting, as declared by Mr. Chase S. Osborn, State Game and Fish Warden of Michigan, was to consider the protection of game purely from the economic standpoint. The sooner the economic aspect of game has full recognition, the sooner shall we have efficient laws to secure to the community the economic advantages which come from wise game laws honestly enforced. As we have pointed out, the game laws properly have nothing to do with sentiment; their purpose is to maintain the supply. Any community, whether it be a village or a commonwealth, which in this age of the world ignores the economic value of its game and fish resources, is either careless or benighted, and of the two conditions there is small choice.

This is true in Massachusetts, and it is quite as true in Texas. The Massachusetts Legislature has repeatedly been bamboozled by spurious pleas in behalf of the "farmer's boy" who ought to have the paltry privilege of trapping partridges on the old farm. The real "farmer's boy" who wants to trap partridges is a husky youth of forty years, who, though living in a civilized community, is averse to earning his living by civilized methods, but prefers the less arduous recourse of snaring birds to sell. Multiply the individual Massachusetts snarer into a horde and we have the Texas contingent of quail netters, who have been scooping in the game by the barrelful and carload, until at last the citizens of the State have come to a realizing sense of the ruin which has been wrought, and now in the person of the members of the State Sportsmen's Association are determined upon a reform. It all ends in the one and only effectual system: Stop the sale of game.

SOCKEYES, AUHUHU AND TROUSERS.

AMERICAN species of fish for stocking foreign waters have been carried successfully as far as New Zealand; and there appears to be in the distance involved no obstacle to the success of the enterprise now making of introducing fish from this continent into the waters of the Sandwich Islands. A press dispatch from Montreal to the *Evening Post*, of this city, last Monday, reported that on the steamship Miowera, which left Vancouver, B. C., on Saturday for Honolulu, 80,000 young sockeye salmon were shipped from the Dominion Government hatchery at Bonaccord, on the Fraser River, in response to a request from the Hawaiian Government, backed by the personal application of Mr. Armstrong, of Honolulu, to the Minister of Fisheries at Ottawa The shipment is made with a view of ascertaining whether British Columbian salmon can be acclimatized in the rivers of the Hawaiian Islands.

If the sockeye shall be established, it is to be hoped that such of the native fishermen as come of old Island family may not feel obliged to take their fish in the American fashion, for the way of their fathers was much more picturesque and exciting, and therefore vastly more sportsmanlike. When a Hawaiian was bent on having fish for supper, he dived down into the depths of the sea and placed among the stones of the bottom a plant called *auhuhu*, which possesses the property of intoxicating fish. Then as his victim floundered about and pursued the aimless, erratic and stupid course of a fish full of *auhuhu*, the fisherman swam and dived after it; and witless of bob, hook or sinker, took his fish by hand, and if it was a big one wrestled with it manfully until he got it ashore. But this was in the good old days when the Islanders, untrammeled by dress, were famous experts in diving and swimming. They were then in fact amphibious, equally at home on the land or in the surf. The Hawaiians of the present generation, being hampered by clothing, are less given to exercise in the natatorial art; they have lost that marvelous dexterity in the water at which the visiting white men used to wonder; and it may be that even if they should be ambitious to pursue the sockeye in its own element, after the fashion of their grandfathers, they would lack the skill were they never so lavish of the fish befuddling *auhuhu*. It may even come to pass as a phenomenon of the civilized Hawaiian Islands that a degenerate scion of this dusky race—whose agile ancestor thought nothing of casting himself from a rocky height into the sea, pouncing upon his prey as a fish hawk out of the air—may rig himself out in waterproof wading trousers to keep himself dry while he fishes. And in the Hawaiian sportsmen's journals—for no race is ever truly civilized until it has its literature of the forests and the streams—the "rubber pants" angler may deride the naked fishermen of old and inveigh against their ancient diving and grabbing exploits as the ignoble and pot-fishing expedients of an untutored, untrousered and unsportsmanlike race of barbarians. In such wise does the pernicious custom of wearing clothes beget at once irreverence for ancestral ways and degeneracy of fishing methods.

The Sportsman Tourist.

DUCKING IN GREAT SOUTH BAY.

ALTHOUGH the aristocratic canvasback and redhead are now rarely, if ever, found in Great South Bay, the average sportsman, if he be enthusiastic and not too fastidious, can secure good sport there. When the conditions are favorable, which means, in the bayman's vernacular, "whan ther win' 's p'intin' right," broadbill and brant swarm on the flats and the festive coot and "old mammy" are at their juiciest in its waters. Doubtless I have seen wildfowlers who, after bagging dozens of the two last-mentioned tidbits of the wave, have turned up their noses and called their luck "tough." But let us be reasonable. There is an old English saying, "When all fruit fails welcome haws." Besides, can there be a more appropriate gift for an over-importunate rural family, with insatiable palates for anything gamy, than a brace of succulent "old mammies"? If they look dark and doubtful afterward (I mean, of course, the family), let the giver look puzzled in return, shake his head, and say it was "all in the cookin'," which is sometimes the trouble with woodcock.

The fall of '95 was, as is well known, a banner one for sportsmen in Great South Bay. And so it came to pass that a party of four of us went down in November to try our luck. My friend Harold was one—as fine, generous and whole-souled a fellow as ever walked on corns or missed a ruffed grouse. He was then and is now deeply interested in foreign missions, and has since, because of his eminent fitness for the position, been appointed chaplain of his lodge. Only one unpardonable sin has he been guilty of to my knowledge. He went forth on the trail of the ruffed grouse in Sullivan county, New York, on a memorable day in '94, dressed in patent leathers, a fashionable dark blue overcoat reaching to his heels, and a canary-colored yachting cap. But, as Rudyard is fond of putting it, that is another story. Many a jolly trip we've made together, and long may he live to win his traveling expenses from the writer at penny ante.

Then there was Frank, an all-round good fellow and excellent shot, who knew more about wildfowling than all the rest of us put together. Frank's great weakness was potatoes. He was never seen to eat a meal without them. Give him half a bushel of 'em, a peck of Spanish onions, and all the fat pork he could get his hands on, and he 'd cook you a dish that would leave your stomach on your hands, and *vice versa*, for a week. The third member of our party was Schnupps, a protuberant Dutchman. Schnupps had evidently been brought up on the bottle, and retained a lingering fondness which gave grave cause to doubt he had ever been weaned. As we had picked him up merely to round out the party, he was not in touch with us, so to speak. He was, in fact, a dummy; or to be exact, considering his favorite posture during the trip, a lay figure who paid one-fourth of the expenses. Fourth and last came the writer, whose faults and peculiarities, if indeed he have any, shall be carefully concealed in this narrative.

Captain Funk, our good skipper, who knew Frank, and Sart, his mate and cook and crew all rolled into one, were standing on the dock to receive us, and a phosphorescent gleam stole into their weather eyes as a case of beer and some other bottled combustibles were trundled aboard. Funk was a typical bayman, rotund and ruddy, opinionated to the last ditch, and when crossed in his professional duties as unmanageable and hard to handle as a grand opera prima donna. Tnere was a waggish look in his eye, and he had an astonishing relish for a good joke —on somebody else.

"Waal, I swan! An' har' y' be!" howled the Captain, as if he were matched against a gale. "Glad ter see y' enny haow! Laow bridge!" he added warningly, as we huddled down the companionway of the Marie Louise. "Look aout fer yer heads, an' sit daown forrard. Saat!" he shouted to the mate, "put on Frank's 'taters, an' git the supper good 'n quick!"

"Yes, yes!" answered Sart, and he proceeded to pile up the narrow table that ran along the centerboard with steak and onions, fried potatoes, coffee, bread and butter, and "home-made" pie, of which we partook heartily, topping it all off with a rousing jorum of Arizona punch. A mild game of poker was then begun, after we had got into our shooting togs and made our traps ready for the morrow. We were happy, and we showed it. We were already bending to the breeze on our way to the shooting grounds and leaving the "madding crowd" behind. In imagination, at least, we could hear the ducks quacking outside, obligingly waiting to be shot, and our spirits rose with the ante. Schnupps had been taken immediately after supper with an attack of what he feelingly alluded to as "Gott! gramp golic," and it must be stated in justice that he gave a choice bottle of painkiller, which stood at his elbow, a fair and impartial trial. The medicinal properties of this palliative manifested themselves in so remarkable a manner that Schnupps soon had one leg over the centerboard and the other coiled lovingly about the mate's neck; and when he slapped the ace of diamonds on the table and insisted it was the deuce of hearts, our honorable instincts asserted themselves and we threw up our hands and turned in for the night.

But not for long. What with the continual glug, glug of the water against the boat, and the strangeness of the surroundings, we were all soon up again, except the Captain, swapping stories, looking for comets, and singing salt sea songs. The skipper's nasal solo disturbed our harmony, and we determined to have him out at any risk. Harold, who was assisting Frank peeling potatoes, jumped up and put the ship's chronometer forward from 1 to 3:30, and a well-aimed rubber boot did the rest, combined with our chorus of yells that it was past time to "fix out." The old sea dog crawled out of his bunk, growling like a mastiff. "Seems ter me I ain't had no nat'ral amaount er sleep yit. Half-past three, eh?" as he glanced at the clock. "Wal, haow's the win' a-pintin'?" and he floundered up on deck. The moment he stuck his nose among the stars he saw through it all.

"Be gol darned! I daon't see no sense inter bein' a pack er growed-up fools, nohaow!" he bellowed, after jumping down among us. "Saat, who sot thet clock forrard? Whan yer git me aout ag'in ter fix aout ducks 'll be rainin' laike blizzard!" and he tumbled into his cubby-hole in the bow.

But we did get him out nevertheless, about 4 o'clock, corrected time, and he and Sart set to work after a preliminary skirmish with Frank as to choice of locality. Frank wanted to anchor on Yellow Flats. "Yaller Flaats! Not by er jugful! Thar ain't er bird on Great South Bay as knaows enuff ter fly baoth wings ter onc't what ain't on Eel Pot Flaats right naow!"

There was no appeal from this and the Eel Pot Flats had the call. The battery, with its twin sink-boxes, is now got out, anchored in shallow water, and weighted down with pigs of lead and iron decoys until its overhanging leaves float horizontal on the surface. The stools are grouped about it and make a brave show as they dance and courtesy to the whistling of the morning breeze, which soon grows to a cutting wind, whipping and chopping the bay into spiteful little waves. The Fire Island light still blinks drowsily in the gray dawn, and the great round sun, a prophetic blood-red, rolls slowly and majestically above the horizon. Away toward the Fire Island shore a mighty sound, as of a million rustling wings, greets our ears. Look! a vast cloud rises from the bay and circles and wheels and circles again. The feathered denizens of the waves have left their watery beds, and as the god of day shoots his rays in among them, catching them on wing and breast, the black mass quickens and lightens into white and gold. Now and again a shot from a distant battery tells that the battle has already begun. After a sleepless night, warmly clothed though we were, we shook like the palsied parent in a Bowery melodrama; and our noses and gills were a pronounced duck-hunter's blue. Our indulgent friends, therefore, on both sides of the Atlantic, will not consider it an unpardonable breach of etiquette that Harold and I, when we stepped into our boxes to open the ball, proceeded first to open a modest flask which I accidentally found in my pistol pocket. Not so the Captain. He pounced upon the vial after the manner of an alderman upon a franchise.

"Yer daont take no demijohn aboard this baatry ef I knaow it! Yer can't shoot no ducks on rum!" and with that he tossed the flask 25yds. distant into the bay, and busied himself, head down, putting the finishing touches to the stools. Now, Harold has a wee bit o' hot Scotch temper, and 'tis not healthy to trifle wi' the bairn beyond a certain point. "Fetch back that bottle, Cap'n!" he cried, "we're no soaks," and I could see him draw his lips together and pull his cap rim down while he watched our only visible means of warmth float with the tide. But our skipper, who was now pulling away, heeded not. When he arrived opposite the derelict he suddenly made a sensational turn, picked it up, and put it in his face for a space of time that gave us an excellent idea of eternity.

"Yah! thar's good licker—put hair on yer elbows!" he gasped, smacking his lips, and broke into a roar of laughter that startled the ducks into midair for miles around, in which we joined on one side of the mouth only. Then, like the 600 at Balaklava, he rowed back, but not the same. "Thar y' be," said he, with a grin, and jerked the now half empty receptacle to Harold; "hain't enuff into her naow ter keep fr'm shootin' stret, eh? Ha, ha! Lay daown baoth an' make fur fly!" My comrade looked immensely relieved, and it has struck me since that he feared the insidious poison might have drifted to the shore of some South Sea island and demoralized the dusky inhabitants, whose spiritual welfare has ever been his constant solicitude.

Be that as it may, the birds were now flying thick and fast, so we stretched flat on our backs, gazing wistfully at the zenith and waited. We had pig-lead pillows. It was my first experience in a sink box, and my shoulder blades being anything but retiring, I soon reached a degree of misery that induced me to breathe language that could only have been the result of extreme nervousness. The back of my neck began to petrify, and my thoughts wandered on such remote subjects as the honest, hot old yule logs of bygone days and the Chicago fire. Harold was just out of sight in his box, but I could hear his teeth clatter, and presently he hissed between clatters: "Here they c-come! Here they c-come! K-keep down!" "Wh-where? Wh-where?" I hissed back and sat bolt upright, scanning the horizon through hazy spectacles, but could see nothing with feathers on. Oh! it was delightful to sit up for a moment and get off my ear. "Great Scott!" growled Harold in disgust, "don't jump up so soon like a Jack-in-the-box! Let the birds come over the stools. That flock's gone, sure." This little ceremony was repeated so often that my kind and good friend began to get hot under the collar, and frequently he passed compliments across to my *loge* which, I am pained to state, were not couched in the phraseology of a chaplain. Yet he shot several birds in spite of this. As for me, I couldn't hit a cathedral. My position was such that I couldn't even hit the pipe to keep my face warm. And, worse than all, a great dampness now invaded me, and we discovered to our dismay that the bay was pouring into my lair through a leak in the joining. This ended the shooting temporarily and gave me a valid excuse to stand up, which I eagerly did, and Harold followed suit. We proceeded to signal the boat and were in the midst of an animated debate as to the proper way to shoot ducks over decoys, when we spied Funk coming toward us in the sharpie with a Leander stroke. Even then we could see he was mad clean through. A big bag means a good advertisement for the boat, and the old man couldn't figure it out that the Marie Louise would be likely to go thundering down the newspapers as a result of this trip. When scarcely within hailing distance he stood up in the boat, waving his headgear and yelling like seven lunatics:

"Git daown thar! Git daown! Yer loom up liker praayer meetin'!" And he was down again in a jiffy and pulling furiously, only to rise anew before he had advanced 25yds.

"Git daown thar in th' baat'ry! Look thet big bunch bro'dbill cummin' yonner! 'Tarnal mud! Y' ain't gittin' no ducks a-stannin' up laike tew smoke stacks!"

We were indeed enjoying a smoke just then, and we let the old chap come alongside before we explained elaborately but quietly that there was water to burn in one of the boxes, due to his carelessness.

"Waal, why didn't yer lay daown ennyhaow!" he flung at me. "I never seed no man draown into 3in. er good salt water yit. Bay's plum full er ducks, an' ef yer shot enuff yit ter take the skunk off, I'm er liar."

The box having been bailed out and the leak stopped with an old glove finger, he left, picking up the few dead birds as he went.

We had been warmed over somewhat by the moving about and the smoking, and felt more comfortable as we settled down to business. And hardly were we ready before a splendid flock of broadbills came skimming along the water toward us. I see them at last, and my heart thumps against my palate as they swoop down upon the stools. I can now clearly see the green in their eyes. "Up now," says Harold; and we rise together in the nick of time; and as they struggle and twist in air to get away we let 'em have it, making two doubles. Four barrels, four birds! "Say, Willie, you're a dandy!" chortled Harold in his joy, and I felt I could agree with him. (He often calls me Willie when under the strain of great excitement.) We nudged each other in the ribs, winked knowingly and shook hands. We shook hands again all around and said nice things to one another, too sacred to be set down here.

There was no lack of birds, and we both shot well after that. An assignment of broadbills would barely be off our hands and our guns loaded before a dozen or sixteen coots, with the best intentions in the world, would sail up to our very feet and look in on us for a moment. And it was a study in mental panics to see their awkward embarrassment and shock when we rose to pay them our respects and they discovered we didn't belong in their set. Sometimes a wedge of black ducks, high in air, passed over us, laughing no doubt, if ducks over laugh out of the mating season, at our clumsy contrivance; or a bunch of geese, talkative as "sweet girl graduates," but far shyer, gave us the slip to the right or left.

But our time was now more than up, and as we stepped later on board the yacht (let me call it a "yacht" for once) Frank and Schnupps stood ready for their turn. Although the battery was anchored in not more than 3ft. of water, Schnupps had taken the precaution to encircle his person with a life preserver, in spite of the jeers of the Captain and crew, who stood lined up on deck to salute and see him off, to the accompaniment of bad jokes and worse onions. Frank upheld his reputation for marksmanship during the afternoon, and kept the mate busy gathering in dead ducks. He did it all alone too, because Schnupps, after discharging his gun twice or thrice into the "woundless air," had the tact and courage to fall asleep in the embrace of the life preserver. Meantime Harold and I burned powder on board, blazing away at wing-tipped and otherwise crippled birds. And here it may be remarked what an infernal fusillade a wounded duck will stand without dropping an eyelid! And how easy 'tis to miss a placid "old mammy," sitting mayhap "in maiden meditation, fancy free," not 40yds. from the muzzle! How provocative of wit from the fellow who isn't handling the pump!

All of which reminds me that as we were about to suspend operations for the day the Captain hailed us hurriedly to the port side.

"Yon's a crepple!—over thar, nigh thet clammer."

Between the queenly schooner Maud E and ourselves an object bobbed up and down on the waves, a duck if there ever was one.

"I guass," said Funk, turning to Harold, "thet's the bro'dbill yer wing'd 'baout tenner clock, eh?"

"That's right; same bird!" cried Harold, reaching for his 10 bore, delighted at the prospect of adding another to his score.

"Shucks, thet toothpeck don't fetch her!" exclaimed the Captain, scornfully. "Ran daown belaow an' git my 4-bore—she'll sock it to her." Harold returned in a twinkling with a double-barreled cannon, and our now strangely obliging skipper put the Marie Louise through a startling evolution in the spanking breeze to get out of the line of the Maud E. and give the eager marksman a clear sweep at the "crepple."

"Be kaarful," he cautioned, as Harold put the engine to his shoulder, "she's chuck full th' blaack'st kainder paowder, an' she kicks laike mule critter. Ledder gao!"

Boom! The spray rose about the object of this delicate attention as it rises at Sandy Hook when big guns are under test.

"Naver phased her, biggosh!" bawled Funk, as he leaned on the tiller and winked at us, "giver th' laft!"

He gave her the left, but the tantalizing "crepple" seemed only to be warming up and getting into line for another volley, which would undoubtedly have been forthcoming had not a stentorian voice been hurled from the Maud E.:

"What are yew farmer people shootin' intew my buoy for? Can't yer taal wooden duck fr'm laive un?"

In the uproarious hilarity that followed, Harold was the only one who didn't join. The joke was on him and the Captain had got even for the little trick of the night before.

Thus ended the day. Our bag did not reach into the hundreds, but that sportsman is to be pitied who counts his pleasure by the number of birds in his basket. 'Tis not all of shooting to shoot. Indeed, it is only when the thrill of the skillful shot is intermingled with the glow of good-fellowship, and with the gladness that springs from the contemplation of the ever restless sea, or the forest with its myriad life, that the charm which eternally beckons the sportsman from the artificial haunts of men is rightly understood.

PELLETS.

Tennessee Notes.

GRAND VIEW, Tenn., Jan. 7.—This is not a good season for botanizing, but I have met with one plant which has much interest for me, and which I believe is not found north of Kentucky—the climbing fern, sometimes called "finger fern" (*Lygodium palmatum*, Swartz). It is fairly plentiful here in some localities, and seems to me to be the most beautiful of the family to which it belongs.

I am sorry that my bird notes are usually so meager, but my eyes and ears are not as acute as of yore, and I cannot always identify the little fellows I see flitting about among the thickets.

I saw a woodcock on Dec. 19, and on the 25th was most agreeably surprised at the sight of eight bluebirds. These were at Towstring, and there were also several meadowlarks and four or five scarlet tanagers.

The particular Towstring to which I refer is about nine miles long. Some try to dignify it with the name of Pleasant Valley. It is in the valley of the Tennessee, and is not far from Roddy, which, as you are aware, lies a few miles to the eastward of Possumtrot.

We heard the note of a bluebird and a robin near here a week ago, and I am of the opinion that both these birds are often sojourners in this region through the winter, though they keep near thick coverts.

PODGERS'S COMMENTARIES.

Buried Treasure.

SAN FRANCISCO, Dec. 28.—In your issue of Dec. 19 your correspondent Tarpon writes of the "Islands of the Pacific," and in the last chapter of Cocos Island, and speaks of the legend of pirates' treasure being buried there, and of an expedition having at one time been fitted out from San Francisco to search for it. If he had said half a dozen expeditions he would have been within the facts.

The story of an immense treasure having been buried there by pirates is one of the standing legends of the last half century, and it has been the occasion of the fitting out of at least four expeditions, that I can remember, from this port to search for the fabulous wealth.

The story is that a sailor, lying sick unto death in some hospital, and being afflicted at that late day with a conscience, confessed to a comrade in attendance that he was the sole surviving member of a piratical gang that had looted a Spanish galleon off the coast of Peru; and after the crew and passengers (several rich Peruvians fleeing from political persecution with all their wealth) had been made to walk the plank, the pirates took the treasure aboard and, burning the ship, sailed gaily away for their rendezvous, which was Cocos Island. There they held high revel and drunken quarrels until the Kilkenny practice left but four survivors. They, fearing to be seen with so much wealth, agreed to bury it; and after filling their pockets with doubloons each was tattooed with the latitude and longitude of the island, which was then unknown. They then sailed for Panama; and when near the port burned their vessel; landed in a boat as shipwrecked mariners, and making their way across the isthmus scattered. One by one three of the four died, and this last one made the confession imparting the secret of the buried treasure. The man receiving it turned up in New Orleans; and happening to be there fitting out a clipper schooner for a voyage to Mexico, I was importuned to change my destination and go for this treasure. The man who possessed the secret showed a sketch of the exact locality where it was buried under a big dead tree; and he had the latitude and longitude of the island tattooed on his arm. He generously offered half the find; and as evidence of good faith agreed that we might hang him from the yardarm if he proved false. But I lacked faith, and declined the attempt at the making of a big fortune so easily, romantic as it was to a young chap fond of adventure. But singular to relate, I subsequently purchased a schooner yacht in New York and sent her around to San Francisco, and in less than a month after her arrival sold her to a party to go in quest of the Cocos Island treasure. That same surviving pirate had turned up here and had succeeded in enlisting a number of credulous people to furnish the necessary funds. The expedition sailed, loaded down with shovels and pickaxes. With an eye to possibilities, or as they thought certainties, they had a lot of canvas sacks made to contain the doubloons and jewels, and a strong iron tank or box located under the after deck with a huge lock and fastenings to prevent any tampering with the treasure on the return voyage. Some six months later they came back, quietly sneaking into the harbor without a doubloon or a jewel, their wealth consisting of some second hand shovels and pickaxes. The schooner was sold and the concern wound up Since that time more expeditions have been fitted out from here, quite a number, and periodically the fever breaks out, and another expedition sails, and returns with the same result; so credulous can people be found, by whom the romance and fascination of buried treasure cannot be resisted, and who will put their money into these wild goose schemes. That Cocos Island treasure is one of the standing jokes of the water front.

A book was written some few years ago called "The Myths of the Middle Ages," wherein the author sets out to prove that all the old legends of William Tell, Pope Joan, Rip Van Winkle and others are the veriest bosh; that there never was any such person as William Tell nor Gessler, and that the same legend was recited as occurring in every country on the face of the earth. What should be done with a fellow who thus destroys the cherished beliefs of our childhood? Confound him, hanging is too good for him. It is a wonder that he never got on to the Cocos Island legend. He would have proved as ingeniously that there never were any pirates, never any Cocos Island, never any treasure, and that sailors innumerable had died all over the world with the same story on their dying lips; but happily there are still people that believe implicitly in William Tell, Pope Joan and Rip Van Winkle. It was only the other day that I saw in a Swiss saloon a large painting of William Tell in the act of drawing his bow, and a big apple on the head of a very fat, bandy-legged, overgrown boy, who seemed to be wondering what his chances were for bagging the apple as his perquisite.

I hope Tarpon will continue his description of the "Islands of the Pacific," for there are but few that I have not visited. Especially did I make it a point to take in Juan Fernandez, on which I bagged one of Robinson Crusoe's goats, or a descendant, a patriarchal old Billy that we essayed to eat; but he was of the Samson brand, and even old Jack in the forecastle could not stand him, but threw him to the sharks. By the way, I read in a recent newspaper that a ship reports that the island has been completely destroyed by the bursting out of an extinct volcano. The rumor needs confirmation.

In reading the last number of the FOREST AND STREAM, I see you quote from the *British Medical Journal* some opinions on the injurious effects of bicycle riding by children under seven years of age, which changed my views in regard to an investment for a "bike" for a young gentleman who had claims on me for a "Christmas," and he will not thank you for being the cause of his not receiving it. But while the article opposed the first proposition, it advocated the use of the machine for old duffers as invigorating exercise, which accounts for our seeing so many old parties wabbling through the streets, which I contend is an undignified practice for gray hairs, especially several judges of the courts, whom I see hard at it; but it is not quite as objectionable as seeing girls in bloomers. Of course I shall be set down as an old fogy, and behind the times, but it is too masculine, and that ungraceful pumping of the limbs I object to, and when it comes to a rear view—well! there is an explanation of why young gentlemen's eyes bulge out so when one chair is doing the duty of two; weighty reasons.

A year or two ago there was an animated discussion in the Eastern newspapers, which has been recently renewed, as to whether sharks ever dined on human beings. Mr. Herman Oelrichs challenged the production of any reliable proof that there was ever any such instance, whereat he was inundated with letters from people who had witnessed sharks eat men, and he had to take water, that is, the northern waters as meant. I see that some skeptic suggests that Mr. Oelrichs try the experiment by jumping into the tank in the Castle Garden Aquarium containing a shark, which proposition he wisely declines. I doubt if the shark would be so impolite as to make a meal of him; but what a drawing card it would be to witness the experiment. If the shark should happen to be an article imported from say Port Royal, I would not care to insure Mr. Oelrichs coming out unscathed, as I have myself witnessed the gobbling of a sailor in the bay of Panama, who fell overboard and was torn to pieces before he could be rescued. I hope Mr. Oelrichs will never try the experiment in those waters, as he is too valuable a member of society to furnish the menu for the well-known appetites of those denizens of the deep. Sharks and alligators are considerably in my debt, especially alligators—for one cocker spaniel and one pointer pup, not to mention one three-year-old little darky, in which I had not so much interest.

PODGERS.

[We may add as commentary upon Podgers's Commentaries that an expedition has recently gone out from this city to look for hidden treasure; and our recollection of the account, as given in the papers at the time, is that the sanguine fortune hunters were bound for this same alluring Cocos Island. We have had in these columns from time to time several accounts of hidden treasure expeditions, including the search for the plunder concealed by Blackbeard, the pirate of North Carolina waters. D. Henshall once wrote of the Punch Bowl, a great spring of fresh water on the shore of Biscayne Bay, Fla., fabled to have been the hiding-place of treasure for the buccaneers and pirates who once infested the Florida coast.]

Dog Fancier: "Yes, madame, I have all kinds of dogs here. Is there any particular breed you wish?" Old lady (who reads the papers): "Oh, anything that's fashionable. Lemme see an ocean greyhound."—*New York Weekly.*

"My child," said the old herring to the young herring, by way of parting advice, "the whole ocean is before you, but don't go too near those canneries along the coast of Maine unless you want to be taken for a sardine."—*Chicago Tribune.*

Natural History.

THE OTTER AND HIS WAYS.

IT is an off time for fish stories just now, but there is never a lack of interesting matter in the way of the habits of the enemies of the fish, and the otter is one of the most destructive of these. This animal seems to be distributed all over creation, as his prey is. I find him here in North Carolina sneaking about my ponds and the river, in which he plays the same sort of tricks he does elsewhere, as I knew him once in the far northern part of Michigan. There, over forty years ago, I once employed a Yankee hunter—who had learned his tricks in the picturesque Housatonic when he was a boy, and studied the ways of fish and learned how great an enemy this sinuous, slippery fellow was to them—to hunt fur for me during the winter. I often accompanied him on his trips over the hard snow on our snowshoes for many miles through the dense, then scarcely ever trodden, woods, unless it was by the Indians or such hunters as came that way. I saw these animals playing like boys on their slides down the steep banks, chasing each other up the banks, then to the slides, down which they slid into the water, where the holes were, and up or down the stream to other holes, which they kept open doubtless for this purpose. These slides were the surest places to set the traps under the water, so that the otters would get into them as they went under. I remember this man that year took enough otter fur to pay me something over $800 for my half of it. It was in war times, when furs were dear, and this man went to York, as he called it, with his bales of fur, and brought me back my money all in solid gold, coming to my house, before he went anywhere else, with the money at 11 o'clock at night, so anxious was he to deliver it, lest anything might happen.

Here in the South these animals play the same tricks and kill the fish in just the same way they did in the North. They are often to be seen swimming in the water with the nose just above the surface, scouting for game, when all at once they go under and then swim to the bank with the prey. Once I saw one lying on the bank at the edge of the water suddenly slide in and take a big trout as it was in the act of rising for a fly on the surface, making not the least ripple or splash as he went in, but quite a turmoil as the fish struggled to get free.

It is a difficult matter to get an otter except by trapping, when one of the double spring Newhouse traps set where they come out of the water, 4 or 5in. below the surface, is the most successful method I have never known them to take a bait, living as they do on live fish only. These animals are hunted in England with spears, and by dogs—a sort of terrier of large size, much of the kind known as the Dandie Dinmont, of which Scott in one of his stories writes; the dogs going into the stream or hunting on the bank dislodge the game, when the hunters on shore spear the animals as they may be seen diving like fish in the clear water to gain their holes under the banks.

I send you a clipping from the London *Fishing Gazette*, in which will be found some interesting history of this animal, new to me, as it doubtless will be to many of your readers. HENRY STEWART.

"I may claim some right," said Mr. M. R. Frances in the *Fishing Gazette*, "to speak confidently of the otter's proceedings when in pursuit of his prey, since I was the first person to record, from the testimony of eye-witnesses, the course of his dealing with his victims, both by land and by water. It is unlucky that Major Fisher, who writes on such subjects with the keen interest of a sportsman, should not have seen this testimony, which would have saved him the gratuitous error of denying that the otter seeks his prey on land as well as in water.

"No doubt this error has been encouraged by the position of Lutra's eyes, which look upward from above a rather flat snout. Naturalists at once inferred that this arrangement was for the convenience of the otter in seizing the slippery victims from below. This being demonstrably a mistake, we are tempted to suggest that this upward gaze enables him in his long dives to keep in view the course of the eddies and the outline of the bank—matters which closely concern him. But of course this is mere conjecture. We know, however, that whether on land or in water, he seizes his prey from above, infixing in almost half a moment his four claws and inflicting with eager haste what is designed to be a fatal bite. When he was watched while seizing a rabbit on the bank of the Mole he seemed not to have bitten deep enough, and dragged his victim, piteously squealing, into the river, where he deliberately drowned it, and then ate it at his leisure, washing the flesh from time to time, so as to suggest that the warm blood was over strong for his digestion.

"The observer on this occasion, whose attention was first drawn by the cries of the rabbit, was fortunately himself a master of otter hounds, used to watching the stealthy maneuvers of the enemy. He had with him a sharp fox terrier, and though on the opposite side of the stream to that on which the otter was dining, rather expected the latter to make himself scarce when the dog appeared. But the marauder showed amusing coolness; he dropped into the stream, raised his head above the water a few yards from the bank and watched the terrier's proceedings. Having satisfied himself that the dog had no taste for anything beyond dry shikar, he returned tranquilly to his dinner. Here we had a depredator, bold as well as cunning, and obviously a clean feeder. Of course I do not assume that the otter usually, or even frequently, seeks his prey on land. I am content to know that he is capable of doing so 'as occasion serves,' and that in such a case, at all events, he does not seize his victim from below.

"About the same date at which this curious rabbit incident was reported to me I received from the same neighborhood an account, equally well authenticated, of the otter's *modus operandi* when in pursuit of the fish, which, we may safely assume, form his principal diet. A pike, guessed at some 7lbs., was seen basking under an overhanging tree on the Mole. Nearly above him ran a bare bough. Along that bough an otter was seen to creep—I wish I could find some apter word to express the prowler's stealthy, sinuous movement—till he was close above the pike, down on whose back he dropped or slid, at once fastening all his claws in the fish, and, as I fully believe, though the spectator's eye could not note the movement with certainty, fixing the long grip of his jaws just over the junction of his skull and spine."

A CURIOUS NEW RABBIT.

IN the Proceedings of the Biological Society of Washington, issued Dec. 29, 1896, Dr. C. Hart Merriam, of the Biological Survey, describes a new and extremely interesting rabbit, recently collected in Mexico by Mr. E. W. Nelson. In appearance and habits this species is unlike any known rabbits. It is singular for its small size, its short ears, its lack of tail and its exceedingly short hindlegs, and, instead of moving like ordinary rabbits by a series of leaps, it runs along on all fours, and lives in runways in the grass like the meadow mice. Moreover, it has certain characters in the skeleton which are very different from those of the ordinary rabbits, and these differences, external and internal, are so marked that not only is it placed in a new genus, but the characters of the family *Leporidæ* must be extended to include it. As Dr. Merriam remarks, "It is singular that of the four characters given by Flower and Lydekker in the first sentence of their diagnosis of the family *Leporidæ* (imperfect clavicles, elongated hindlegs, short recurved tails and long ears) not one applies to this new rabbit."

Mr. Nelson preserved a perfect skeleton of the new rabbit, and this shows that the clavicle, or collar bone, of this species is complete, and articulates directly with the sternum, a thing that never happens in the genus *Lepus*. There are marked differences in the sternum, or breast bone, in the vertebræ, and in the bones of the legs and feet. On the other hand, the skull does not differ markedly from that of the cottontails.

What little is known about the habits of this species is given in the following account, prepared by Mr. Nelson at Dr. Merriam's request:

"On my first visit to Mt. Popocatepetl, in the spring of 1893, I learned that these little rabbits were found there, and on my return to the city of Mexico I prepared for an expedition to secure them. On Jan. 5, 1894, my assistant, Mr. E. A. Goldman, and I made our camp on the side of a cañon at an altitude of about 3,350 meters (11,000ft.) on the northwest slope of the mountain. We were accompanied by three Indian hunters and our packer. Among the firs and alders at this altitude the northerly slope of the hills and cañons are covered with a luxuriant growth of saccaton grass in huge bunches, from 3 to 6ft. across, and often reaching a height of 6 or 8ft., which covers the ground, so that the only open spaces are small spots scattered irregularly here and there. A search under the overhanging masses of long grass blades showed a perfect network of large, arvicola-like runways, tunneling through the bases of the tussocks, and passing from one to another under the shelter of the outcurving masses of leaves. It was evident that the rabbits were very numerous, and we all proceeded to hunt the vicinity carefully for them. The first day I saw three, but was unable to get a shot at any. One came running through the grass along one of the hidden trails, and seeing me stopped in a little opening only 7 or 8ft. away. It was too near to shoot, and so escaped, after looking at me with inquiring eyes for a few moments. The next day I shot one by taking a stand on a large log, whence I could see several small openings in the grass, and saw one as it stopped a moment at the entrance to a runway. By persistent hunting for three days my Indians secured three more.

"On our first night wire snares were set without success, so the next night we put out a lot of steel traps in the runways. This latter method was very successful, and three fine specimens were taken in a small area a few yards across. So far as observed, these animals are strictly limited to the heavy growths of saccaton grass, between about 3,050 and 3,650 meters (10,000 and 12,000ft.), a few ranging a little above and below these limits in favorable places along cañon slopes. I found them equally numerous in the heavy grass on cañon slopes and hillsides and in the dense growth of grass about the sides of the small parklike openings in the forest. They make their forms within the matted bases of the huge grass tussocks by tunneling passageways along the surface of the ground through the mass of old grass, leaves and stems, and then hollowing out snug retreats within the weatherproof shelters thus obtained. Their concealed runways were intermingled with those of the common meadow mice of the mountains, and the striking resemblance in coloration and habits between the two animals was remarkable. Like the arvicolas, the rabbits are mainly nocturnal, but are occasionally found moving about by day. They become active just at dusk, and on frosty mornings sometimes come out at sunrise into the small openings among the grass to bask in the warmth. My Indian hunters claimed that they often found them out sunning themselves in this way on summer afternoons after cold, heavy showers.

"This species has practically no external tail, though in some specimens there is a small fleshy papilla 2 or 3 millimeters in length; in others even this is absent. In this respect the animal resembles the pikas (*Lagomys*)."

Dr. Merriam has named the new genus in which this rabbit is placed *Romerolagus*, in honor of the Mexican Minister at Washington, and has given it the specific name *Nelsoni*, after Mr. E. W. Nelson, its discoverer.

Robins Wintering in New York.

ITHACA, N. Y.—The writer and a friend, while hunting rabbits a few miles south of town, Jan. 1, saw a robin redbreast flitting among the gaunt forms of the birches and maples of a dense hillside cover. He sported a lusty chirrup and a mahogany-splashed vestment strangely out of harmony with his bleak, wind-swept surroundings. Are we to vote him a social outcast, forced to experience this solitary vigil, after the manner of the mateless auk upon an arctic isle? M. CHILL.

[We have seen a robin in New York city almost daily up to this date, and if here why not in Ithaca? It is much more usual for robins to winter with us than is commonly supposed, but as they keep themselves pretty well hidden in woods and swamps they are not very often seen.]

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Game Bag and Gun.

DAYS AFIELD.

THE Professor and I arrived at a small wayside station in western North Carolina a little before noon on the Monday after Christmas, three hours late. Eager for a hunt. Boys again.

He had been poring for months over a learned article on Hebrew verbs. I am in business, and most business men know without telling what I was poring over the last six months of 1896; but to-day the sun sparkles, bankers, bills receivable and payable, due and overdue, are 600 miles behind me.

Here are stubbles and woods, fields and meadows, and, as I glance over the country I firmly believe, quail.

Dogs—the Professor had a blue-blooded pair with him, one of which has fought and won, or taken an honorable place, in numerous field trials, and no judge has yet failed to "see him" when on the bench. Lewis has sent my three. They have had steady work all the fall, and are tuned to just the proper pitch.

A hasty dinner and change of clothing and we decide to "put down" my special pets, Donald and Rab—setter and pointer. Even to the novice in dogs it is unnecessary to explain how they are bred; they look and are thoroughbred.

Donald knows me well—with him grouse and woodcock and quail for the past two years have been a familiar story. Rab has been away from me so much that he does not seem sure that I am the same man who took him out of the crate when he left his aristocratic dam two years ago.

I have always noticed that most shooters, in telling of their outings in FOREST AND STREAM, have perfect dogs. The points are dramatic and stanch; there is no breaking to shot or wing; the dogs always drop to shot and only pick up the dead bird after being ordered to "fetch."

I have spent some money and a good deal of time trying to find that sort of dogs.

In front of the house is a stubble, thirty acres or more—and away go my dogs, with heads in the air like racers, and out of sight in a minute. I make for a knoll in the center of the field, and gaining its crest look around for them. There they are, almost 300yds. from me, just in the edge of those pines.

Donald, how did you stop quickly enough to strike that attitude? and Rab, did you know the birds were there to get so close?

Did I feel good? Add another dollar to each one those dogs have cost, and still another, you could not buy them now.

I beckon to the Professor to come, and can see the light dance in his eyes as he sees the handsome pair, while he nervously feels for the safety on his gun.

"Just look, Professor, at that little pointer Rab. I never thought to see him do so nicely. Did you?"

We are now within 50yds. of the dogs, and Rab seems uneasy; a quick glance over his shoulder to see where we are, and in he goes, and away go the birds with that miserable dog after them—over the fence into the woods and out of sight.

The Professor grunts and says, "I don't quite think he will catch any, but he will come very close to it."

I won't write what I said.

Really, I don't believe I caught that precious pup until he had put up every single bird. Then he came in, and, looking into my face in an innocent sort of way, seemed to say, "What do you think of that? Can't I make them go?"

Naturally, I proceeded to introduce myself then and there to His Royal Highness, and, frankly, I never saw a "licking" make a dog so fond of a man before. He apparently couldn't bear to leave me the remainder of the afternoon, and I don't believe he was that day 10ft. from my heels excepting once: in following me over a log that spanned a stream, he fell in and nearly drowned. The farmer who was our host, and who was guiding us, pulled him out.

Trouble? We had lots of it, though good times outweighed by far the petty annoyances of a mistake here and there with a dog. Next day Rab improved, and a couple of days put the dogs on good terms with me. They are not perfect. Nor do I believe the dog is yet born that is.

As to the birds we shot. We secured some, as many as we needed or wanted, and lots got away. G. B.

WHO OWNS THE GAME KILLED BY THE GUIDE?

PHILADELPHIA.—*Editor Forest and Stream:* Following out the rule of action laid down by Shaganoss in FOREST AND STREAM of Jan. 9, namely, "Primarily the man who captures wild game owns it—always and everywhere," any man cannot waive his ownership. Here it appears that Shaganoss loses sight of several important considerations directly relating to the subject. Primarily every man is free, but in civilization it is found that man's freedom is largely a theory. In business matters men give up a part of their freedom. For a consideration they give up their time and services in exchange for something of value to them. The services of the employee accrue to the advantage of the employer, otherwise what purpose of gain would the employee serve. In the fisheries, in the fur trade, etc., from time immemorial, the sailors and trappers never considered that their employers had no ownership in the fish and fur they captured.

The question has been considered merely from the standpoint of sportsmanship. The standing of the guide who follows his calling for hire alone has been confounded with sportsmanship. The guide works for his wages the same as any other employee, and his standing in the matter is that only of a wage earner and not an appendage to take wages for his labor and appropriate to himself the products of it. So long as he is hired as a matter of business, it is no concern of his what his employer's motives are. If he is paid a sum of money which is commensurate with his skill and the value of his services, the proceeds of his labor are as fairly his employer's as if he were engaged in some other business.

Because a man is a sportsman it is not a reason for ruling him out of what he justly can purchase.

It may be odious to many to think of shooting as other than an abstract enjoyment, something of ethereal pleas-

ure detached from all thought of material gain. It isn't. The capture and the material results are quite as essential to pleasure as are the pursuit and the refinements. To capture without skill or effort is without sport. To strive and seek without adequate return for labor and skill are repugnant. Such is not sport. There must be a reward for effort.

To assume that one's personal pleasure is all there is at stake when one sets himself forth for the capture of game is to take an unwarrantably selfish view of the matter. Probably not one sportsman in ten thinks of the amount of game as a gratification to himself. There are kinsfolk and friends at home who spur him to his greatest efforts, so that he may have enough to bring a present and pleasure to all of them. If he return empty-handed, his gratification at his own selfish pleasure is chilled by the disappointment of his friends. When his time is limited, or when game is scarce, the sportsman may not be assured of enough game to supply his needs. He may hire a guide to shoot for him to make up the deficiency. The guide may not add a jot to the sport or to the sportsman's personal pleasure or gain. But the former may add enough birds to make the trip an unselfish success, and the pleasure of having them to give may be greater than the pleasure of their capture.

It may be retorted that people should not like birds to eat; that the birds should only serve for the sport of seeking them. That is absurd. So long as people have good appetites, with mouths which have a taste for good things, they will continue to eat regardless of what a few may talk. Many of the people who decry the considerations of game as something to be sought for its own sake can themselves show a nice performance on it with knife and fork.

The game shot by a guide is not as if bought in Fulton Market. The associations and machinery for its capture are the sportsman's own. His organization of the plan and supervision of the sport, and his own conjoint effort, are widely different from walking into a market and buying game.

"Dost thou think, because thou art virtuous, there shall be no more cakes and ale?" SIMPLE SIMON.

BUCK RANCH.

"DEAR TRIPOD," the letter ran, "Capt. Bradford has invited me to join a hunting party which he is organizing, to go out from here in a few weeks; as I will not have time to go, I have his consent to your going as my substitute. Affectionately your father, COAHOMA."

This arrangement was far from distasteful to me, the receipt of the letter being the first of a sequence of events which have furnished a store of happy memories to brighten the moments of future pensiveness.

In due time came a message over the 'phone: "The party is to leave here Nov. 19. COAHOMA."

* * * * * * *

Armed with a hasty pencil sketch of the intricate route over which my journey lay; mounted on a gay sorrel pony, the property of an indulgent friend, and contemplating with expectancy the beauties of the new 38 Winchester which was to do me service, I cantered toward McKee's, where I would meet the other members of the party, whom I had left in the forenoon to go by rail from Clarksdale to Tutwiler, where wagons waited to convey baggage and camp equipage. Nightfall—McKee's. No party to meet as yet, but a big log fire and a warm supper well constructed on a groundwork of bear meat, the fruit of the labors of Capt. McKee and Mr. Caffe, and prepared in tempting style by Mesdames Caffe and Wilber. Later came the wagons. Darkness had o'erspread the face of the earth nearly two hours when the mile and a half lying between McKee's and Buck Ranch was covered, and we were welcomed by Mrs. McMannus to Capt. Jas. L. Bradford's new hunting lodge.

Buck Ranch, in Quitman county, Miss., ten miles east of Tutwiler Station, is, I think, the only game preserve in the Mississippi Delta owned by an individual. "No partnerships for me except the matrimonial one," said the Captain when a club was suggested.

Buck Lodge is on the east bank of Cassidy Bayou, 100yds. below the Captain's new private bridge, which is 330ft. long, and built at a cost of $600, solely to insure access to the ranch. A frame house, ceiled with tongue and grooved pine; two rooms, 20×20, with a 12ft. hallway between, and a broad porch in front; two shed rooms behind; fireplaces nearly 4½ft. wide and high in proportion—what log fires we had!

Capt. Bradford is negotiating for the control of 4,000 acres of forest, all good feeding ground for deer, turkeys and bears—indigenous. Already he has bought some of this land. The ranch will be surrounded by a wire fence, "dog tight," "bull strong," but not "deer high." For, says the Captain, "the deer when run with dogs, or shot at by market hunters outside, will jump into my ranch. When they find fewer enemies inside they will not jump back out."

The ranch scheme is only a few months old. The lodge had just been finished and there had not yet been time for putting in furniture, but a five wide (five men wide) bed spread on a softening of hay made the night hours glide softly by, while in the interim before bedtime we sat on trunks, camp stools and boxes and compared guns—Maynards, Winchesters ('94 and later models), combination shotgun and rifle, Old Betsy (a muzzle-loading shotgun which the Captain uses when he fire-hunts), and a certain long, meddlesome-looking old rifle with 7in. of notches under the stock, recording its slain deer, which he had brought along as a present to McMannus, his keeper, and turned over to its future owner with the comment: "Oh, that is a wicked gun!"

Capt. James L. Bradford and E. A. Stanford, of New Orleans; Col. Berry, member of Congress, and his son Shaler, of Newport, Ky.; A. L. Dabney, of Vicksburg, Miss., and Arch McMannus, of the Ranch. Hapless day for the deer!

"Yes, that is a beauty," said the Captain, of Mr. Stanford's new rifle. "If I were a deer, I should like to be killed with just such a gun!" And then, "Oh, that is a wicked gun," as his eye rests affectionately upon the 7in. of notches on his old standby. His newer gun, a .40 Maynard, was also not without a display of notches. "Well, boys, let's spread the bed! We want to be up early in the morning, and get ready to go down to our camping ground."

"How far off do we camp, Captain!"

"Oh, about three or four miles."

"But, Captain, why do you go out and camp when you have all this fine house to live in?"

"What! me live in a house when I have the whole wide woods before me?"—and soon three members of the party were being lulled to sleep by a duet of snores. It was of no moment that our bed had no springs, for the roof of Buck Lodge was over our heads, the great log fire blazed above a bed of glowing coals, and without, the wide, wild woods of Buck Ranch echoed the occasional hoot of owls.

"Give me another cup of coffee, please, Mrs. McMannus, this one has worn out," says the Captain, as Stanford and Col. Berry replenished their plates with bear meat (more of the McKee bear); Shaler and Arch turn their attention to hot biscuits and molasses as a second course, and I myself realize that this is no time to waste in idleness. Too soon is past that happy interval between the beginning of breakfast and the end of breakfast, and we are all busied with selecting necessary luggage for one week under canvas: folding bedding, packing the provision chest, shucking corn to take along for the horses, and finally adjusting to them their new harness, and loading the wagon.

Late in the forenoon we steamed out of port, bearing down through the cane toward Possum Bayou. Possum is a small bayou between broad, sloping banks, skirted on each side by a continuous, narrow ridge of switch cane, interspersed with beautiful holly groves. On the slope of the bank, with one of the holly groves in the background, we stretched our little open-front A tent and spread the bed all the way across the back end; for this time we would have Arch also for a bedmate, and the bed must be for six.

As the afternoon advanced the Colonel and Shaler went down the bayou to find their lost deer. Stanford wandered up the bayou to see, perchance, what the future had in store for him, and I went with Capt. Bradford on an exploration to the northeastward. Three-quarters of a mile from camp he left me to sit on a log and keep a deer-scrape from getting lonesome. A gray squirrel introduced himself and barked at me excitedly from a limb overhead for half an hour. I thought that in his chattering he said, "Now here's a mighty brave. He couldn't hurt a deer when he'll sit there humbly and let a little fellow like me low-rate him like I'm doing. I've seen several uglier fellows that I'd be afraid to sass this way." And then he laughed in derisive glee.

Nightfall, and the Captain approached, the squirrel went to bed and we journeyed toward camp, where was found a hot supper which Arch and Stanford had scared up on short notice; for McMannus, who had been intrusted with the duty of engaging a cook for our hunting camp had been unable to find one. The cooking was to fall to my lot next day; so I had a big pile of wood collected, and all preparations made for daylight coffee by early bedtime.

"Boys, let's spread the bed," yawned the Captain, "and if you'll only let me shlape how sorry Oi'll be in the marnin'. That's what the Irishman said. He was exhausted with watching by the bedside of his sick wife and had lain down for a nap. 'Patrick!' 'U-u-ugh!' 'Patrick, wake up!' 'Oh, go 'way!' 'Wake up, Patrick, your woife's did!' 'Oh, go 'way an' l'ave me alone!' 'But your woife's did, mon, yez must wake up!' 'Oh, if you'll only let me shlape how sorry Oi'll be in the marnin'.'"

The Colonel was reminded that we were sadly in need of fresh meat, and he was expected to provide us with fresh venison for dinner, as the hunters started out in several directions after daylight coffee, and I turned my attention to the preparation of a 10 o'clock breakfast for them.

I was caused discomfort by not having a dishpan, first, because the log I had to stand on down at the creek bank was slippery; second, because cold creek water won't half take off grease from a tin plate anyhow. But I put the oatmeal on to stew and then proceeded with the dishwashing. The rest of the washing that they didn't get doesn't matter now, because the boys didn't know any better, and anyway it is all over now.

The oatmeal stewed away to perfection, the coffee turned out well, and I happened to hit the right proportions on the corn bread, having been previously coached by Mr. Stanford.

All came in on time except the Captain, and seemed to think that the breakfast would pass.

Stanford and the Colonel concocted a cabbage, onion and red pepper stew with a chunk of bacon for trimmings, and put it on the fire to simmer down. This would form the body of our 2 o'clock dinner, and these two in particular "sat great store" by it. Then we waited lazily for the Captain to come. And when he did he was panting over what he said was a five-mile walk. The Captain is a quiet, reserved man, hence the more strange his actions seemed. He whooped before he was in sight of camp; then when he came up he looked all sorts of ways—especially restless like—and sat his gun against a tree. On the stock was a new notch—a large one—deeper and longer than the others. Before we could ask him how it got there he lit in on Shaler: "Didn't you hear me shoot?"

"Yes."

"Didn't you hear me holler, and didn't you answer?"

"Yes."

"Well, why didn't you come to where I was? I killed the biggest bear on the American continent out there where I was, and waited and waited for somebody to come and help locate him, until finally I had to leave him and go away around over a route that I could locate him by. Get the horses ready while I have breakfast, and then I want several of you to go with me to bring him in, for he's as long as from here to that tree, and I could just raise his head off the ground! Give me another cup of coffee, Tripod—this one's worn out. You needn't have dinner until about dark, because it will take all the evening to get that fellow in. And you can get ready to have bear steak."

I am not a professional cook. One never learns entirely how to succeed at anything until he has made one failure in that thing, it is said. Thus did it come about:

The cabbage had simmered full two hours (for it was now an hour past noon and the party had gone for the bear); the water in it had boiled low and been replenished, and the fire stirred up. What more could I do now, for the other preparations for dinner need not be begun until shortly before sundown. I was weary and lay down for rest. Ill day for me; I unwittingly fell asleep on duty, and knew no more for several hours! And when I did know, would I had not known! Over the smouldering ashes, where I had left a crackling fire, still nestled the cabbage pot, but within it was a picture of desolation—neglect. The water was simmered away, the meat nearly all evaporated, and onions, pepper and cabbage—oh, the cabbage—were a mass of cinders. And then when I tried to drown my care in biscuit making I had more hard luck, for I didn't quite know how to make dough, and by the time I learned it was sundown. And then I saw a flock of wild turkeys down the bayou, and forgetting higher duties gave chase, returning twenty minutes later empty-handed. I never recovered from the time lost chasing turkeys and learning to make biscuits. I had just gotten them on to bake when Stanford, Shaler and the Colonel hove to, tired and hungry, reporting Capt. Bradford still searching for the lost bear.

"What! Dinner not ready?"

"Naw!"

"How's the cabbage?"

"And no biscuits done, either?"

"No. It took me longer to make them than I thought."

"You're a fine cook anyhow. Where's the coffee?"

"Haven't had time to make it."

"Not even any meat sliced!"

"Waiting for bear steak."

"Got back at last, Arch? Needn't look hungry around here! The cook's played out. Heard anything of the Captain?"

"No. He ought to be here, too. It's already pitch dark out in that cane and he'll have a time getting out. What do you say if I shoot Old Betsy?"

"Let her go then."

Old Betsy roared like a battery, and then Arch called for a volunteer to go with him and hunt for the Captain.

The cabbage episode was painfully fresh in my memory; the biscuits wouldn't cook; now the coffee; I couldn't get the bacon to work right; everybody was hungry and mad—in short, though it was dark and raining, I volunteered, and we patrolled two miles of that bayou for two hours, making the woods howl with war whoops and rifle shots in answer to a distant horn, which sounded now north, now west, now south, and at last was located directly down the bayou; and wet and humble we crawled into camp, where the Captain had been nearly the whole of that same two hours comfortably reclining, and trying to convince us, by an occasional blast, of the folly of staying out there in the rain.

"Well, boys, let's spread the bed," said he. "We must find that bear in the morning."

"Don't believe you ever killed one."

"You're into it now, Captain. You must find that bear or your reputation 's gone."

"Oh, l'ave me alone, and if you'll only let me shlape tonight, how sorry Oi'll be in the marnin'."

And he turned his back upon us, leaving Stanford and the Colonel to uphold the superior epicurean advantages of Kentucky and New Orleans respectively in a heated argument.

"Yes, and you don't have any papaboti," says Stanford.

"But we have other kinds of fish just as good," retorted Col. Berry, and then we all nestled into a sweet repose. The rain pattered on the canvas, and in dreamland were the grimy black pots and kettles tinted with a roseate hue.

It was a monster bear that we found twenty-four hours after he was killed, lying where he had sank in his tracks and died without a struggle, for the single bullet was in his brain. The night had been so warm that the meat was spoiled, but his coat was perfect. A shaggy black rug will bring to the Captain's mind in future years the rainy night in Possum.

After the bear was skinned, camp was struck, as it had been decided that we were not in the best deer ground. Meanwhile, by permission of the Captain, I scoured the country for a cook. At nightfall I victoriously returned with a man of promise, who was duly commissioned.

This night we spent in the house, moving next day to our new camping ground, in the midst of an extensive oak wood, where deer tracks were unnumbered. It was with regret that we had to say good-by to our Kentuckians on this morning. Col. Berry had been racked with rheumatism for several nights, and it is small blame for him if he did pine for the blue grass and leave next morning instead of accompanying us to the new camp.

We were perplexed to know how the Colonel came at the weight of our '553 b. bear," which he reported to his folks on his arrival at home.

Thanksgiving Day had come, and yet no fresh meat on the table. That morning the Captain explained to the cook now to wash the coffee pot, for variety's sake.

"Well, I believe I'll quit the drive," quoth the cook.

"Why, are you tired?"

"Yes, very tired."

"All right," and we were cookless.

On learning that the cook had quit I found occasion to wander over toward Possum and try to find the flock of turkeys that had helped me to forget the biscuits. Our camp was away from any water course, in the middle of an open wood, so it was necessary for me to blaze a trail as I went to Possum, by which to return. A big flock of turkeys was there waiting for me, but I had a very momentary glimpse of them as they took the cane on the opposite bank.

It was a case of necessity. Our party would be basely humiliated if turkey didn't grace at least our supper table, and now or never must that turkey fall!

Half a joint of cane, a log for cover, a few imperfect "yelps," and out tripped a gobbler of tender years! I don't know why I missed the half of his body that was visible from behind a tree, but any insinuations about buck ague are uncalled for.

Other yelps failed to bring any response. I crossed the bayou and took a new position, then made some more music on the yelper. Finally, with an un-Thanksgiving Day spirit, I decided to go to camp, and was preparing to rise, when my eye lit on feathered objects—one, two, three—eight, yes, there stood ten or more of the proud birds, within 60yds., drinking unconcernedly at the edge of the bayou. "Crack!" said the rifle, and he was mine. Instantly reloading, I downed the companion that had stood at his elbow before he could decide what was wrong. Thus did we have Thanksgiving turkey.

Such a clatteration of yelps all around me for the next half hour, yet they wouldn't come any more to that funny-talking turkey, though I had changed my position

again. The yelping was too imperfect and would not entice them. I consumed so much time that night caught me halfway of the "blaze," and morning might have found me still hunting for camp but for the Captain and the horn.

Clouds were gathering, and there was lightning and thunder in the distance. Late in the night the rain came in avalanches, and next day we had to strike camp and move back to the house. The same story again: flat woods, no drainage, big rain—you, O knights of chase and reel, know of rainy nights and ditchless tents!

After that night Mr. Stanford, like the illustrious cook, said, "I believe I'll quit the drive." And he was soon homeward bound, after we had reluctantly bidden him farewell and called the roll to see how many of us were left.

A drove of five deer had been seen near our last camp, where sign was plenty. We decided to hunt this ground, going from the lodge on horseback. The day after camp was moved in, the Captain and I went out in that direction after a flock of turkeys he had scattered late the evening before. He bagged one before the rest of them got together and stopped responding to our calls—this time on good box callers. With his yelper on one side of them, and mine away off in the other direction, four or five young gobblers were thrown into such a state of excitement that they gobbled vigorously, though it was a freezing November day. Later on we had met and separated again to circumvent another scattered flock. I got an answer to my yelp—a gobble. The turkey came nearly within sight, then turned back again to join several more that were answering. Creeping in the direction he had gone, I discovered that there were a number of them together, and that they were no longer heeding my calls. The only chance was to crawl and get a shot if possible, or shoot anyhow to scatter them.

A carefully executed stalk brought me within 50yds., and down came the gobbler. A chance bullet went after one of the retreaters, scoring a miss.

"You took that bird right out of my mouth!" said a voice, as I was retrieving him. There stood the Captain as near the turkey as I had been. "I called and they wouldn't come. Finally I decided to sneak up. I was drawing a bead when you fired, and had selected a second choice when your next shot scared him off. But I got another back yonder. Come, let's go to the house. We've got meat enough to last for a week."

That evening we rested from our labors and cleaned guns.

Two deer had been seen during the day. Next morning two hunters sallied forth with firm set lips and a grim look of venison in their faces. Half a mile from the deserted camp ground the Captain dismounted. "My horse will follow you, Tripod. Hitch both horses at the old camp and hunt from there."

But I met him before I got there. He looked as big as an old ox as he rapidly walked through the bushes toward me, with his nose stuck forward on a level with his back, and looking neither to right nor left. I had barely time to dismount and step in front of the horse, while he was passing behind some trees. An instant later and he sank to the ground—my first deer!

His struggles to rise reminded me that bucks sometimes get up and depart after they are dead, and I poured a volley at him which caused him to gather himself together and flounder off through the woods, for none of the bullets took effect. It must have been the ague that came on. I gave chase and soon came upon him, where he was lying down to rest. A careful shot at his head secured my title, and I called the Captain.

"Was all that shooting at one deer, Tripod? I thought you had a whole drove!" Then he told me what a big one it was. Arch had to be brought out to help before we swung him high enough to a limb to get him on the horse.

Liver, heart, kidneys, brains and tenderloins of venison in a stew, with "put in some of everything you've got" as a last direction, and you forget that the cabbage burned up one day.

It was on the next morning but one that we found four deer, fired five shots in all and came home without a feather. Arch's gun was destined to be ornamented with the next notch, coming by it honestly on a succeeding morning. One shot did the work, and a buck was down almost in his tracks.

But the buck with the big horns was yet to come. He came one morning a little after sunrise.

We were out three strong that day, stationed in the feeding grounds, about 300yds. apart. A crisp, frosty morning, sitting on a log like a statue was a cool occupation. So still was it that cow bells two miles away were distinctly heard. A thrush came very near me in its search for a morning meal, and worked vigorously at tearing away the leaves which were matted together by the frost. Some jaybirds jayed, a squirrel ran up a tree with a big leaf, intended no doubt as a bay window to his parlor, and a scratching of bark overhead had drawn my attention to a big coon, when bang! went Arch's gun, and bang! again, then again. The coon went in a hole and I devoted all attention to scanning the woods for deer during the next hour, to try and get even with Arch.

"How many did you get?" I called, when we finally met.

"Oh, I'm bewitched! I'm going to quit! I wouldn't have shot again if he had been in 10ft. of me!"

"What's the matter with you? What was it?"

"I'm plum bewitched! The biggest deer I ever saw in my life! And he's got the biggest horns! I'm clean done on that deer! He wasn't 70yds. away, standing broadside. I sat on the log just this way, as composed as I am right now, and pulled down on him. He didn't move out of his tracks, only put up his head to see what made the noise. Then I got on my feet and shot again. Then I moved two or three steps up to a tree—just so—and shot the third time, and that deer stood there long enough for me to have shot three more times before he moved off."

Arch found out how the witches had worked him; his sight was raised for 300yds., and he overshot 2ft. That night the three of us constituted a committee on resolutions against that horned deer, and next day two notches sidled up to the big bear notch.

The Captain told us how it was: "I saw them feeding toward me from a long way off and waited quietly. I could see his big horns in the bushes and knew he was the one. When I shot I couldn't see anything for the smoke; but soon I heard a crash and knew that he had fallen dead. The bullet was in the right place. The doe had run off some distance, but I kept my seat, and finally she turned back to look for the buck. When she got where I wanted her I gave her a center shot. She ran 75yds. and fell."

The pair were hauled up in the wagon and the buck skinned for the taxidermist, for he and my buck will right nobly grace an alcove in Capt. Bradford's home.

"Give me another cup of coffee, Mrs. McMannus—this one has worn out," and then the Captain put on his town overcoat, and we turned our faces toward the setting sun. Buck Ranch rests in peaceful solitude, and we dream of bucks with big antlers, and of the sunrise of an April day, of a gentle call and of answers from many gallant gobblers.

TRIPOD.

HUNTING.

UNDER this title Messrs. Charles Scribner's Sons have published in their Out-of-Door Library a volume consisting of a number of articles printed at different times in *Scribner's Magazine*. These chapters have been revised by their authors and are published now in book form for the first time.

There are eight of these sketches, written at various times and covering a wide range of subjects and of territory. Five of them treat of hunting on the plains or in the Western mountains, one of Canada, one of Australia and one of the far north. Also, as was to be expected in view of the variety of authorship, the chapters vary a good deal in quality. Some of them are written by old campaigners, who have the faculty of telling their stories in a straightforward fashion and often with a considerable degree of literary skill; others are not so well told either from the literary or the sportsman's point of view.

"Hunting American Big Game" is too broad a title for Mr. Archibald Rogers's capital chapter on Western hunting, which covers elk and mountain sheep hunting, but is devoted chiefly to bears, of which Mr. Rogers is a mighty hunter. Besides being an excellent shot and a successful hunter, the author is a close observer and recounts his adventures in a simple and pleasing style which is very attractive.

"Camping and Hunting in the Shoshone" is the title of Dr. W. S. Rainsford's contribution. By Shoshone is here meant the Sierra Shoshone, sometimes known as the Absaroka Range, which lies east of the Yellowstone National Park. Dr. Rainsford's memories of the West go back to buffalo days, but it is not of these he writes here, but of later hunts, some of them made from Sunlight Basin into the mountains just beyond it, and of further journeys into the National Park. However much we may disagree with some of Mr. Rainsford's statements, and little as we can sympathize with him in his shooting of trapped bears, it cannot be denied that he tells his story charmingly, nor that in many respects he gives very excellent advice to those unacquainted with travel in the mountains. His article is one of the best, as it is one of the longest, chapters in the volume. It is to be noted that while Dr. Rainsford intends to give Col. W. D. Pickett full credit for his wonderful bear-hunting record, he really deprives him of it by spelling his name Pigot. Such is fame.

"Climbing for White Goats" is a short chapter by Mr. Geo. Bird Grinnell, which deals in part with the natural history and in part with the hunting of the so-called white goat of the Western mountains, which of course is not really a goat at all, but an antelope. This hunting, which is difficult only on account of the altitude at which the species lives, combines mountain climbing with hunting, and so has a double attraction. The chapter is interesting also for the faithfulness of Mr. Thompson's illustrations, which give an excellent notion of the surroundings of this alpine antelope.

"Sport in an Untouched American Wilderness," by Mr. Frederic Irland, gives an account of trips made in New Brunswick for moose, and with the hunting there is not a little fishing. The pictures painted are pleasant ones, for Mr. Irland enjoys his outing and tells his story gracefully. The illustrations of this chapter are chiefly half tones from photographs and one—of a salmon leaping—is very interesting.

It is a far cry from the Canadian wilderness to the sheep ranges of Australia, of which Mr. Birge Harrison tells us in "A Kangaroo Hunt." The sketch has the attraction which always attaches to accounts of places and doings of which we know little, but aside from that, it is excellently conceived, well proportioned and well told. Because men are hunters, or love to read of hunting, it does not follow that they are necessarily bloody-minded, nor that they care to be told how a rifle ball smashed this bone or that, or what a beast seemed to suffer in its dying struggles Mr. Harrison saw his kangaroos at home, and not his kangaroos only, but other birds and beasts which inhabit that home; he tells us too of the sheep ranges and the way in which the kangaroos have been destroyed to make room for the sheep, whose pasture they devoured. An avenger for the almost exterminated kangaroo has been found, however, in the introduced English rabbit. The illustrations of the chapter are very interesting, but we are moved to ask whether there is not an error in the caption which reads, "An 'Old Man' under a Fir Tree." Should it not read "An 'Old Man' under a Tree Fern?"

"The Last of the Buffalo" is a title which has been used too often, yet Mr. Grinnell's account of this species as it was in the old days is not without real interest. It is not surprising that people who never saw the old buffalo plains should imagine exaggerated the stories of the species' former abundance, which are given here, as they have often before been told by others. Stories of buffalo hunting by white men are common enough too, but in this article they are brought into contrast with aboriginal methods, to which considerable space is devoted. Much odd and unusual information about buffalo is given, knowledge picked up no doubt through years of residence on the old buffalo range. The pictures are excellent, Mr. Thompson's sketch, "Going to Water," being a vivid reminder of the days of buffalo plenty and the Blackfoot piskun, being the only accurate pictorial representation of this device that we have ever seen.

"At St. Mary's," by Harry C. Hale, deals with that beautiful region in northwestern Montana which has of late years become so well known to a few New York sportsmen. The sketch tells in a light and pleasing way of the adventures of two young officers who went to the St. Mary's Lakes in command of an escort for a party of West Point instructors, and while there hunted sheep with ultimate success. It is perhaps not generally known that the St. Mary's Lakes are those visited by Mr. James Doty in 1856, and by him called Chief Mountain Lake and Bow Lake. Later these lakes were lost, and for many years now the name Chief Mountain Lakes has been applied to two connecting bodies of water lying in the mountains to the north and west, which should be known as Watertown Lakes. The name St. Mary's was given the lakes nearly fifty years ago by old Hugh Monroe.

"Hunting Musk-Ox with the Dog Ribs," by Mr. Frank Russell, is an extremely interesting account of a spring hunting trip from Fort Rae, on Great Slave Lake, to a point within the Arctic Circle, near the head of Bathurst Inlet. The sketch is much condensed, yet in the light of what we know of the Barren Grounds and the hardships of travel over them it gives a clear notion of the suffering endured on the hunt, which lasted about a month, and on which Mr. Russell secured all the skins that he could haul on his sledge. Among the int resting points incidentally touched on is the fact that many of the male Barren Ground caribou seen and killed were yet carrying their horns in April. The conduct of Mr. Russell's Indian companions was identical with that of those who accompanied Mr. Whitney on his trip. Every man raced as hard as he could to get ahead of his fellows. It was such an exhibition of natural selfishness as one sometimes reads of, but seldom sees.

The sketches contained in this volume are certainly worth preserving in this permanent form, and the book will be a welcome addition to the library of every big-game hunter. The mechanical part of the book is well done. The binding is plain, but the page, with its large type and odd, small type running heads, is very attractive.

ADIRONDACK DEER FACTS AND FIGURES.

[From the report of Superintendent of Forests William F. Fox, in the report for 1895 of the Commissioners of Fisheries, Game and Forests, of New York.]

In collecting the statistics submitted herewith, the various correspondents, representing every minor locality in the Adirondacks, were requested to report also on the number of deer found dead in their respective districts during the previous winter. The large number thus reported, none of which had been killed or wounded, is a matter requiring serious consideration. Mr. Wellington Kenwill, an intelligent and reliable guide who keeps a hunter's hotel at the Indian Clearing on the headwaters of the South Branch of Moose River, reports ninety-three dead deer found in that particular locality. It is within a few years only that these stories of dead deer have been heard. During the last two years an increased number have been reported, and now information from the south part of St. Lawrence county indicates that a large number died in that section during the winter of 1894–95. Various reasons and theories have been advanced in explanation of this serious mortality among our largest and best game.

Deer Mortality.

There seems to be a general belief among the guides and hunters that the animals die of starvation; that, owing to the severe prolonged winter, the animals were unable to find a proper supply of food, or were powerless to travel through the deep snow in search of browse; that in the vicinity where the carcasses were found all the foliage of the evergreens and buds of the hardwoods within reach had been entirely devoured; and that the deer, under the protection of the game law, had increased so rapidly within a few years that there was no longer a sufficient supply of food for them all during the winter season. In opposition to this explanation it is argued by others that the Adirondack winter is no longer or more severe, and the snow no deeper, than in Maine, Michigan and Canada, where no dead deer are found at this season; that the winters in the Adirondacks are no worse than years ago, when the deer wintered without any noticeable loss of this character; and that at the same time and under the same climatic conditions not one dead deer was observed in Essex county and other large areas of Adirondack territory. Deer have been closely observed in the vicinity of lumber camps, feeding on fallen tree tops, which were thin, weak and sickly in appearance, evidently suffering from some distemper; and it was noticed that these animals died afterward, although an abundance of hay and other food was purposely placed within their reach.

It has also been suggested that this great mortality among the deer in winter may be due to an epidemic, some kind of contagious distemper or epizootic. The deer are a species of ruminants so closely allied to certain of our domestic animals that there is nothing improbable in the idea that they may be affected with some cattle disease similar to that which often kills our cows and sheep. In reply it has been urged that the deer die only in winter, whereas if they perished from some form of cattle disease the epidemic would manifest itself at other seasons as well as in winter; at least, its appearance would not be confined exclusively to that one season.

Another theory, suggested probably by the restricted territory within which the deaths occurred, is that the deer have found there some noxious, deleterious weed or vegetable growth of a poisonous nature, which they eat, and which enfeebles them so that they die from its effects. The local character of the epidemic is advanced as warranting this idea. The indications of poison were so strong that it was broadly hinted in those localities that some guides, enraged at their exclusion from certain large preserves, had sought revenge by making salt licks on which Paris green had been sprinkled. There is no ground for the latter assumption, and it is an unwarranted imputation on the good reputation of the guides. If the death of these deer was caused by poison, it resulted from natural causes.

Still another theory has been advanced by intelligent, observant residents in the forest—old, experienced hunters—who assert that the deer which are found dead are animals that were hounded too hard; that these deer became overheated in some long race with the hounds, and then plunged into the cold waters of the lake to escape the dogs; and that they thereby contracted lung disease or some other serious ailment that either enfeebled them so that they were unable to withstand the winter, or else induced some form of acute disease that was the direct cause of their death. But this plausible and reasonable explanation is weakened by the fact that

PODGERS'S COMMENTARIES.

Buried Treasure.

SAN FRANCISCO, Dec. 28.—In your issue of Dec. 19 your correspondent Tarpon writes of the "Islands of the Pacific," and in the last chapter of Cocos Island, and speaks of the legend of pirates' treasure being buried there, and of an expedition having at one time been fitted out from San Francisco to search for it. If he had said half a dozen expeditions he would have been within the facts.

The story of an immense treasure having been buried there by pirates is one of the standing legends of the last half century, and it has been the occasion of the fitting out of at least four expeditions, that I can remember, from this port to search for the fabulous wealth.

The story is that a sailor, lying sick unto death in some hospital, and being afflicted at that late day with a conscience, confessed to a comrade in attendance that he was the sole surviving member of a piratical gang that had looted a Spanish galleon off the coast of Peru; and after the crew and passengers (several rich Peruvians fleeing from political persecution with all their wealth) had been made to walk the plank, the pirates took the treasure aboard and, burning the ship, sailed gaily away for their rendezvous, which was Cocos Island. There they held high revel and drunken quarrels until the Kilkenny practice left but four survivors. They, fearing to be seen with so much wealth, agreed to bury it; and after filling their pockets with doubloons each was tattooed with the latitude and longitude of the island, which was then unknown. They then sailed for Panama; and when near the port burned their vessel; landed in a boat as shipwrecked mariners, and making their way across the isthmus scattered. One by one three of the four died, and this last one made the confession imparting the secret of the buried treasure. The man receiving it turned up in New Orleans; and happening to be there fitting out a clipper schooner for a voyage to Mexico, I was importuned to change my destination and go for this treasure. The man who possessed the secret showed a sketch of the exact locality where it was buried under a big dead tree; and he had the latitude and longitude of the island tattooed on his arm. He generously offered half the find; and as evidence of good faith agreed that we might hang him from the yardarm if he proved false. But I lacked faith, and declined the attempt at the making of a big fortune so easily, romantic as it was to a young chap fond of adventure. But singular to relate, I subsequently purchased a schooner yacht in New York and sent her around to San Francisco, and in less than a month after her arrival sold her to a party to go in quest of the Cocos Island treasure. That same surviving pirate had turned up here and had succeeded in enlisting a number of credulous people to furnish the necessary funds. The expedition sailed, loaded down with shovels and pickaxes. With an eye to possibilities, or as they thought certainties, they had a lot of canvas sacks made to contain the doubloons and jewels, and a strong iron tank or box located under the after deck with a huge lock and fastenings to prevent any tampering with the treasure on the return voyage. Some six months later they came back, quietly sneaking into the harbor without a doubloon or a jewel, their wealth consisting of some second hand shovels and pickaxes. The schooner was sold and the concern wound up. Since that time more expeditions have been fitted out from here, quite a number, and periodically the fever breaks out, and another expedition sails, and returns with the same result; so credulous can people be found, by whom the romance and fascination of buried treasure cannot be resisted, and who will put their money into these wild goose schemes. That Cocos Island treasure is one of the standing jokes of the water front.

A book was written some few years ago called "The Myths of the Middle Ages," wherein the author sets out to prove that all the old legends of William Tell, Pope Joan, Rip Van Winkle and others are the veriest bosh; that there never was any such person as William Tell nor Gessler, and that the same legend was recited as occurring in every country on the face of the earth. What should be done with a fellow who thus destroys the cherished beliefs of our childhood? Confound him, hanging is too good for him. It is a wonder that he never got on to the Cocos Island legend. He would have proved as ingeniously that there never were any pirates, never any Cocos Island, never any treasure, and that sailors innumerable had died all over the world with the same story on their dying lips; but happily there are still people that believe implicitly in William Tell, Pope Joan and Rip Van Winkle. It was only the other day that I saw in a Swiss saloon a large painting of William Tell in the act of drawing his bow, and a big apple on the head of a very fat, bandy-legged, overgrown boy, who seemed to be wondering what his chances were for bagging the apple as his perquisite.

I hope Tarpon will continue his description of the "Islands of the Pacific," for there are but few that I have not visited. Especially did I make it a point to take in Juan Fernandez, on which I bagged one of Robinson Crusoe's goats, or a descendant, a patriarchal old Billy that we essayed to eat; but he was of the Samson brand, and even old Jack in the forecastle could not stand him, but threw him to the sharks. By the way, I read in a recent newspaper that a ship reports that the island has been completely destroyed by the bursting out of an extinct volcano. The rumor needs confirmation.

In reading the last number of the FOREST AND STREAM, I see you quote from the *British Medical Journal* some opinions on the injurious effects of bicycle riding by children under seven years of age, which changed my views in regard to an investment for a "bike" for a young gentleman who had claims on me for a "Christmas," and he will not thank you for being the cause of his not receiving it. But while the article opposed the first proposition, it advocated the use of the machine for old duffers as invigorating exercise, which accounts for our seeing so many old parties wabbling through the streets, which I contend is an undignified practice for gray hairs, especially several judges of the courts, whom I see hard at it; but it is not quite as objectionable as seeing girls in bloomers. Of course I shall be set down as an old fogy, and behind the times, but it is too masculine, and that ungraceful pumping of the limbs I object to, and when it comes to a rear view—well! there is an explanation of why young gentlemen's eyes bulge out so when one chair is doing the duty of two; weighty reasons.

A year or two ago there was an animated discussion in the Eastern newspapers, which has been recently renewed, as to whether sharks ever dined on human beings. Mr. Herman Oelrichs challenged the production of any reliable proof that there was ever any such instance, whereat he was inundated with letters from people who had witnessed sharks eat men, and he had to take water, that is, the northern waters as meant. I see that some skeptic suggests that Mr. Oelrichs try the experiment by jumping into the tank in the Castle Garden Aquarium containing a shark, which proposition he wisely declines. I doubt if the shark would be so impolite as to make a meal of him; but what a drawing card it would be to witness the experiment. If the shark should happen to be an article imported from say Port Royal, I would not care to insure Mr. Oelrichs coming out unscathed, as I have myself witnessed the gobbling of a sailor in the bay of Panama, who fell overboard and was torn to pieces before he could be rescued. I hope Mr. Oelrichs will never try the experiment in those waters, as he is too valuable a member of society to furnish the menu for the well-known appetites of those denizens of the deep. Sharks and alligators are considerably in my debt, especially alligators—for one cocker spaniel and one pointer pup, not to mention one three-year-old little darky, in which I had not so much interest.

PODGERS.

[We may add as commentary upon Podgers's Commentaries that an expedition has recently gone out from this city to look for hidden treasure; and our recollection of the account, as given in the papers at the time, is that the sanguine fortune hunters were bound for this same alluring Cocos Island. We have had in these columns from time to time several accounts of hidden treasure expeditions, including the search for the plunder concealed by Blackbeard, the pirate of North Carolina waters. D. Henshall once wrote of the Punch Bowl, a great spring of fresh water on the shore of Biscayne Bay, Fla., fabled to have been the hiding-place of treasure for the buccaneers and pirates who once infested the Florida coast.]

RUFFED GROUSE AND WOODCOCK.

From the original photograph.

Dog Fancier: "Yes, madame, I have all kinds of dogs here. Is there any particular breed you wish?" Old lady (who reads the papers): "Oh, anything that's fashionable. Lemme see an ocean greyhound."—*New York Weekly.*

"My child," said the old herring to the young herring, by way of parting advice, "the whole ocean is before you, but don't go too near those canneries along the coast of Maine unless you want to be taken for a sardine."—*Chicago Tribune.*

have any authentic account was killed in Michigan, and weighed before he was dressed 246lbs. But such specimens are rarely met with. It is much more common to meet adults that will not exceed 80lbs. in weight, and the average weight may be set down at not more than 100lbs. The guesses of hunters often give much larger weights.

"In the fall of 1876 I shot a buck in northeastern Wisconsin which was judged by several experienced hunters to weigh nearly 250lbs. Four of our Indians came from camp, but would not undertake to carry him in (not more than a third of a mile), although we were very anxious to have it done. They dressed him on the spot and made four loads of him. The chief Indian remarked that one might hunt a lifetime and not see such a deer as that."

The foregoing extract indicates that the deer in Michigan and Wisconsin are not so large as the Adirondack deer.

GUNS AND THINGS.

YESTERDAY was New Year's Day, and I spent the morning performing a melancholy yet not entirely unpleasant task. I cleaned and tested my gun before greasing it and putting it away until snipe shooting time; and I cleaned and greased my hunting boots before hanging them up in the attic. The choke-bore gun sometimes gets the choke shot out of it, and past experience taught me that it is well enough to target such a gun every year or so. Accordingly, I shot my choke-bore barrel at a 30in. circle at 40yds. and got 320 out of 1⅛oz. No. 8 shot in the circle, so I have reason to hope that I may continue to "pull down a high mallard" now and then in the future. The other barrel is a cylinder and does not require any attention. I find such a combination more nearly right for all sorts of shooting than any other. I have accustomed myself to shooting whichever barrel is best fitted to make the shot—the left barrel if it seems to be 40yds. or over and the right barrel for lesser distances. The latter will make uniform kills up to 35yds. and the left up to 45, with frequent clean kills up to 70yds. at all sorts of game except deer, which I have quit shooting at with a shotgun, as more are wounded and escape than are wounded and captured when shot with buckshot.

And about ammunition: Despite Mr. Tenner's intimation to the contrary, my American-made gun shoots much closer and harder with one of the powder wads 11-gauge, instead of 12, as the other wads are. It does not bulge the shell if put in properly. My kind of boots are worth taking care of. They are watertight. They are made of beautifully flexible leather, that never gets hard from any amount of wetting. They can be used all day in the water, and when dried will be as soft as ever. "But no leather," I think I hear some one say, "will turn water, especially snow water," and he is right; no leather will. But my boots are lined with rubber prepared canvas, and between the canvas and the leather is an inner lining of oiled silk. I know of a similar pair that remained watertight for nearly seven years. They were lined with thin leather instead of waterproof canvas, but the oiled silk kept out the water. Boots for hunting should be made large enough to admit of two pairs of stockings being worn, because then the chafing takes place between the stockings, and the tender cuticle of the town-bred hunter is spared.

Not long ago an acquaintance complained that a dog that had recently come into his possession had a habit, when sent to retrieve, of trying to eat the bird. Now I knew the dog, but not the man, so I began to investigate.

"How much do you feed that dog?"

"Oh, plenty."

"But how much is plenty?"

And when he had gone into the pitiful particulars I replied:

"That is not enough and not of the right sort. A hunting dog, especially when hunting, requires meat and plenty of it, and I never saw a dog yet that thought he had enough until his ribs were expanded."

"Well, the man evidently thought I was crazy, but the dogs don't. The only good dog is the all-day dog, for only a few of us can keep a whole kennel of pointers or setters. The all-day dog is the tough dog and he cannot be tough on "health food."

When I am shooting chickens, one of my chief pleasures is to go around to the kitchen door in the evening and ask for a lot of cold meat for the dogs, who will have followed me around there and are looking on with grave expectancy while the cook lady hands me out a breadpan full of cooked meat, left over from the day. Then I call out each dog's name in turn, tossing him the while one big hunk or two little ones, and when that is over I saunter down street to a butcher shop and ask him for 25 cents' worth of lean meat from the cheap part of the shoulder or neck, which he cuts into chunks and with which the dogs and I go through the pitch and toss process again. When they come out of that butcher shop they have the aspect of a man with a toothpick in his mouth, and are ready, after a night's rest and digestion, to repeat the 75 or 100 miles of ranging of the first day. On the third day, however, they must rest.

Did you ever miss a whole flock of birds—*seriatim*, I mean?

Well, that is what I did on Wednesday. A meat dog (thanks for the word, Hough), named Jim Crow, and I were approaching a little gully, when a bevy of quail rose out of it. They were too far away for more than my left barrel, and so I only shot at one hole, which I hit. They flew into a piece of woods, where Jim Crow carefully pointed them by ones and twos. They didn't seem to care which way they went so long as they got there. Some would dart straight up into the tops of the tallest of the trees, some would duck down behind the hazel brush, some would wheel in their first spring and take the back path, while others would make a side lunge for the cornfield adjoining. I had begun to realize that I was having a sensation by the time Jim pointed the last one in the leaves beside a big white oak.

"Well, I've got you anyhow," I exclaim, as I confidently walked in ahead of Jim. "It's open here and you can't dodge me."

And just then he "screamed" around behind the white oak, and when I got around after him he was out of range. He did it so well that I cried out, "Good for you!" and retraced my steps, hoping as I went that that valiant covey might live forever. It is true that once, as I proceeded on my way, some fine feathers were floating in the air, and Jim Crow shortly thereafter stopped and fetched me one dead quail from off in the woods, but I think he flew against a tree and killed himself. It was a wonderful covey of quail: trained by their papa and mamma in every device for eluding No. 8s; able to fly around corners and over tree tops; going off in the clouds almost like mallards or turkeys. I trust they may elude other dangers as they do the danger of shotguns, so that one may have the keen pleasure of missing them again each year. The next covey consisted of twelve birds of quite another feather and parentage, for they had none of the tricks and manners of these first ones.

I scattered them, killed seven, left four for next year and missed one. It was tame. Besides it was late and my farmer friend called to me from the house on the edge of the valley that dinner was ready, and I quit shooting for the day.

Jim is one of the dogs that has not been trained so much as to know nothing but drill tactics. Most of his knowledge has been derived from association with an older dog. I only have to whistle for him a few times each day, and those times are occasions when he has pointed in a dense cornfield and I cannot find him. He is a perfect retriever, and not only finds every bird I knock down, but averages about two birds a day that I think I have missed, but which he thinks I have crippled. I carried him up to a hayloft that night where he would have a warm bed to sleep in and where he could not fight with the hounds, and when I started to take him down the next morning it proved to be more of an undertaking than I had bargained for, owing to his great weight and the fact that I had to get him down through a trap door that had no ladder leading to it. When I sat on the edge and reached him down as far as I could his hind-feet still would not reach the manger below. He did not know but what he was going to get hurt, so he clasped my leg with his muscular forearms, and I saw at once that he proposed to hang on and sustain his weight in that manner, so I let go my hand hold and he swung on to my leg until I lowered it to the manger.

GEORGE KENNEDY.

UTAH GAME LAWS.

THE year that has just closed has put the new game law of Utah to a thorough test. Many of the features are unsatisfactory to the sportsman, the professional hunter and the man who fishes for a living. The new Legislature, which meets within a week, will be asked to make several amendments or to entirely revise the act of March 30, 1896.

Those sections which relate to fish are especially distasteful. Commencing with the trout, July 15 is considered entirely too late for the opening of our season. From my personal observation in almost all the trout streams of the State, I find that, excepting those that run from Fish Lake, Wayne county, spawning is practically over by June 15. Then the trout commence to work down stream. To say nothing of their lacking the fighting qualities that form the fisher's true sport, they become soft-fleshed and almost unfit for the pan. Then again, the irrigating ditches are opened about June 1. The streams are dammed, the water diverted and, at a low estimate, 80 per cent. of the available trout supply is turned upon the fields to rot in the July sun and fertilize the soil. This is no guesswork, but the result of careful observation and figuring. The following facts will prove the case and I have verified them. They will also explain how I came to investigate the matter.

At the mouth of Provo Cañon, where the river of the same name leaves the Wasatch range on its level run to Utah Lake, eight large irrigating canals are taken out. These water about twenty-eight square miles of farm land. On July 2 a boy went out to water. He had a four-acre field of lucerne stubble and six hours of water right. Above him, on the same canal, were seven large laterals and forty-seven smaller ditches. He was five miles from the head of the canal. When he was through with his work he gathered from the muddy field thirty-two trout of marketable size. I saw them. This little incident set me to thinking. I went up the canal in September and inquired of the farmers how many such trout they had gathered during the season. At the current wholesale price the value amounted to $320. This would give for the eight canals $2,560, and of course this is but a small percentage of the number that are lost in the tall alfalfa and grain.

Later in the season I had a trout supper at the cabin of a farmer in Garfield county, near the headwaters of the Sevier. Knowing that my host was very busy, I asked him where he had bought his fish. The reply was:

"I don't have to buy. Every time I water I get enough to last the folks a week, and I've got a barrel salted down for winter."

The law as it reads at present requires unconstructable screens at the mouths of ditches. They have never been put in, and as the great run of trout is during the latter part of June and early in July, I believe that then the rod and reel should have a fair chance.

With regard to bass, fishermen claim that they are multiplying rapidly. Their breeding haunts are inaccessible, and now many more are caught than can be legally used. The Legislature will be petitioned to allow their exportation. An effort will also be made to have doves recognized as a game bird, as in many of the Eastern States.

A strong effort will be made to reject the Governor's nomination of a new Fish and Game Commission for Utah. While I voted for Gov. Wells, I do not believe in giving an office simply as a reward for political services; and while the appointee is an estimable gentleman, he is absolutely ignorant of the work before him. He has sent out letters of inquiry to find when fish spawn, etc. To show his fitness, he visited the Provo Woolen Mills a short time since to inspect the new fish ladder. When asked if the turbines should not be screened, as they resulted in the destruction of hundreds of pounds of fish, he replied that so long as the fish ran up it made no difference how they came down. He is strictly opposed to spending money for the importation of eggs and fry, regardless of the fact that every $1,000 expended has brought $10,000 into the pockets of the people.

Utah county thinks that as the leading fish and game bird county of the State it should have the office of State Commissioner, but for my part I fail to see the necessity of removing, on political grounds, the man who has made Utah's fish and game what it is to-day—A. Milton Musser.

SHOSHONE.

SALT LAKE, Jan. 4.

CHICAGO AND THE WEST.

Winter Camping Trip.

CHICAGO, Ill., Jan. 9.—It is only within the last few years that I have discovered for my own satisfaction that the best time for a vacation trip is not in the summer, but in the winter, provided that the purpose of the trip be one of benefit to the physical health. The city man is always more or less out of health, or at least is not perfectly healthy, because he does not take exercise enough to keep him in condition. A trip to the lakes or woods in the summer time is well enough in its way, but very often it falls in warm weather, when one is indisposed for much exercise. In consequence of this, the vacationist goes back to town improperly rested because he has not been properly tired. His muscular tissues remain unfreshened, and in a short time he is seedy as ever. A camping trip in the winter time means of necessity plenty of hard work, and that work in a pure and wholesome air, whose oxygen burns out all the waste matter of an overworn physical machine. The enforced exercise confers an enforced benefit.

A winter camping trip is of course much better if it can be taken in the pine woods or some wild country far away from civilization, but when one cannot do that he may do the next best thing. I am on the point to-day of doing the next best thing, and going out for a couple of days' tramp in the wilderness which lies within thirty miles of Chicago. This wilderness is one not in the least to be sneezed at. There lies around the southeren end of Lake Michigan a strip of rough country, three or four miles wide by thirty or forty long, covered with pine and cedar and broken into a series of mountainous sandhills of considerable picturesqueness. The traveler who penetrates half a mile into this rough country might well imagine himself in the wildest part of the Loup country of Nebraska or in the foothills of some Arizona range. He could never imagine that he was within a few miles of the edge of a great city.

The Calumet Heights Club is located in the upper part of this sandhill wilderness, and mention has often been made in these columns of the character of the country, which is well known to the members of that club. There has never been, however, any attempt made to fully penetrate and explore the extent of this wild hill country. The region can never be farmed and will probably never be settled, the tall sand dunes offering a most inhospitable front to any home-seeking invader. This strip of heaped-up sand lies between the edge of the lake and the edge of the terminal moraine of the great glacier which once swept down across this country. I have at times described our tracing of the course of the mysterious Calumet River, which curls far around the foot of Lake Michigan and heads in the top of this moraine, the divide between Lake Michigan and the Kankakee waters. It remains now to see what lies in this country between the Calumet country and Lake Michigan. There are rumors of mysteries which have a certain fascination, since they seem so close at hand. The country has no wild game to speak of, excepting a few foxes, an occasional ruffed grouse and an infrequent wildcat. In places it holds little landlocked bodies of water which seeps up from the sand. Alex Loyd and myself have long figured on going through this country together, as a sort of sequel to our first voyage on the Calumet; but Alex does not turn up just yet ready for this winter trip. Mr. A. C. Patterson is the next man to declare that he is as big a fool as I am, and hence ready for the walking and camping trip of a couple of days through this nearby wilderness. I notice that Mr. Patterson also is absent at this writing, and I am not sure that he will qualify to start. As I can find no one else foolish enough to go with me, I presume that I may be obliged to go alone. The weather just now is not so very cold, but this climate is uncertain, and we may have a blizzard at any time. It is necessary, therefore, to go pretty well prepared. This I think it is possible to do, and yet confine one's luggage within portable limits. Of course everything must be carried on the back, as horses and wagons are not possible in that country. I have gotten out the old pack-bag, which is one of my dearest possessions, and as I write it sits beside me ready loaded. It holds a tent weighing 2 or 3lbs., one pair of blankets, a buckskin shirt, a sharp little axe, one aluminum dish, and my Yellowstone tin cup, which serves as a coffee-pot. My rations are confined to beef, bacon, bread and apples; and here I am in doubt, for it is always difficult to tell how much a man is going to eat when he is on a winter tramp. My theory is that the above outfit, with a pound or two of further odds and ends, will enable me to keep comfortable, even in pretty rough weather, and the whole will weigh only about 30lbs. As to the nature of the country, we shall see what we shall see; but as to the nature of the trip itself, I know very well it will be a good one. Hard walking all day in the winter air is good medicine, and I hope that before the 5 o'clock train starts one or more of my friends will see it in the same light.

Wisconsin Deer Killing.

Mr. F. A. McDougald, of Clear Lake, Wis., writes me as below in regard to the killing of Wisconsin deer:

"In FOREST AND STREAM of Oct. 31 last you expressed an idea that the deer in Wisconsin would have a chance for their lives this fall; but I can safely say that more deer have been killed from Oct. 15 up to date than before for twenty years. Out of fifty or sixty deer that are known to have been killed around here not more than three or four have been killed by settlers and sportsmen; the rest have been killed and shipped out by market-hunters, and they are still hunting at this writing. Inclosed please find a clipping from our weekly paper, the *Weekly Courier*, of Clear Lake, which covers the case to perfection, and any settler in this country will say the same. We have got to stop the sale of game at all seasons of the year or lose our game."

The newspaper clipping referred to by Mr. McDougald reads as follows:

No one objects to anyone coming out here to kill a deer in season, but to keep coming out here day after day, month after month, indefinitely, and hauling them out for what they are worth, we draw the line. Some say deer can't be shipped away now, as it is against the law. Possibly so, but I notice that if a deer is killed on one day, they are right back next day for another. If no complaint is made, this will last as long as the deer last. If the State intends to protect the animals, there must be a game warden to every township—three or four would be better—in the infested districts, with full power to arrest any party on sufficient evidence—which would be the least of all trouble here. The few wardens there are no doubt doing all they can, but that avails but little when one man has about 500 to cope with. The State may be long on law, but it is mighty short on protection.

By rights, to whom do the deer belong, anyway? Are they not bred and raised on land belonging to settlers, that have bought it and who pay taxes on it? Is it not on their lands that they get their living, such as grass, shrubbery, turnip patches and hay marshes? Where can you find a settler that can go out at the time of year prescribed by law to hunt? He must needs go when he can. If the State is going to do anything let it protect the settlers; they are the ones it gets its revenue from, NOT from a gang of lazy, loafing, shiftless men that make a business of roaming over the country at will, killing regardless of laws, time of season or anything else, as long as there is a deer left. Let them emigrate to some place where the game is more plentiful and more their equal. A settler should be permitted to kill a deer at any time through the fall if he needs it to feed his family, and no more. Otherwise, if this wholesale killing goes on, in three or four years the deer will be as extinct in northern Wisconsin and Minnesota as the buffalo is on the plains of Dakota and Montana. If the State is going to do anything in the matter, let it debar all transient hunters, for the State derives no benefit or revenue from them. At the least calculation over fifty deer were shot in this township from Oct. 1 up to date and spirited away to foreign places, and what has the State out of them? Not a cent, and as far as I know, not a settler has got one.

If the State intends to enforce this matter it must adopt something more stringent than the present resolutions and before another season, too. This year there has been practically three months up to date, not here only, but all over the State, and who has heard of an arrest for violation of the law? Now, if anyone thinks I am "off" on this matter. I shall be pleased to hear from them through the columns of the *Courier* or otherwise, and don't be afraid to sign your name.

Respectfully, A. R. RICHARDSON.

VANCE CREEK, Wis.

Arctic Owls.

Oregon papers chronicle a great influx of arctic owls this winter in that State. It is said that this bird has come down from the North all over Oregon as far as the California line. This snowy owl does not migrate from the North as a usual thing unless the winter is unusually severe. The Portland *Oregonian* says that these owls have not been seen in numbers in that State since 1881. I recall that Mr. J. D. Allen, the taxidermist at Mandan, N. D., had many dozens of these birds mounted when I last was there. As I reported at the time, he said that when he first went into that country the snowy owl was rather scarce, and he gave a good price for a specimen. This set all the farmer boys to trapping owls, and he soon had them offered in great numbers. The owls were taken by setting a steel trap on top of any little eminence on the level prairie country. A couple of sods thrown up would make a perch on which the owl was sure to light. The trap set on top of such little hillock was sure of a catch. A mounted snowy owl, with wings spread in screen fashion, is a sort of staple at $5.

Wants Some Bear Galls.

I am in receipt of the following interesting letter from a gentleman in Orange, Mass.: "I have read in 'our paper,' FOREST AND STREAM, about Mr. Bobo's bear hunting, etc., and I thought perhaps you can help me out. Now, I want to get two or three bear galls, for which I will give 50 cents each.

"Can you tell me where I can get them? I thought you would probably know of parties who hunt bears.

"If it will not be of too much trouble please let me hear from you."

This only goes to show how useful a place a newspaper office can be at times. It is the pride of this office that a man can get anything he wants there, from a fight to a sermon, and I trust we shall be able to fill this order. We are just out of bear galls, but I am expecting some in, and shall take pleasure in advising the inquirer immediately upon their receipt. I think that 50 cents is not enough for a single bear gall, but maybe the price could be made lower on club rates such as those suggested. It seems to me that Captain Bobo could make a good thing at raising bears for their galls. It is a well-known fact that the removal of the gall from the bear does not injure the activity or the usefulness of the bear to any great extent, and upon such removal it at once sets about producing another gall, after the fashion of the eider duck, which will pick a whole feather bed off itself in order to keep its nest going when the latter is robbed by the cruel hand of man. Captain Bobo's great acquaintance with bears would probably allow him to gather his bear galls about every thirty days, and this would leave a profit on each bear of $6 a year, as the cost of feeding the bears is merely nominal. I see no reason why a large and profitable industry should not be built up in this way. If Captain Bobo has any bear galls in stock he can dispose of them at this office. I trust that we have not yet reached a position where we are not adequate to meet any demands upon our resources.

Poygan Gun Club.

At the regular meeting of the Lake Poygan Gun Club at the Sherman House yesterday afternoon the following officers for 1897 were elected: President, James Pease; Vice-President, R. R. Clark; Secretary, R. M. Simon; Treasurer, S. A. Goss. Board of Trustees: James Pease, R. R. Clark, E. W. Murphy. Membership Committee: Dr. F. D. Porter, Dr. E. N. Elliott, E. L. Mason. The club will try to secure coöperation in the passage of common game laws by Illinois, Wisconsin, Indiana and Michigan. The club expressed it as its sense that spring shooting should be stopped, and determined to further all measures looking to that end. The Poygan Club has valuable shooting privileges in Wisconsin.

Bound South.

Mr. H. O. Wilbur, of Philadelphia, is in Chicago to-day. He starts on Monday for a few weeks' shooting on the Gulf Coast of Texas, and will probably drop in at the mid-winter shoot at San Antonio. Thence he goes to California, where he will spend the great part of the winter. Mr. Wilbur last winter shot with Fred Kemp on Puerto Bay, near Rockport.

The Limited Gun Club, of Indiana, is endeavoring to make up a party to go to the San Antonio Midwinter shoot. A number of Northern sportsmen make this tournament the occasion for a Southern trip in which they will see something of the delightful field shooting of that country. Dick Merrill, of Milwaukee, has already started South, and will join friends lower down in the country for a Texas trip, which will take in the Midwinter. It is a most agreeable experience to get out of this cold Northern country for a month of paradise in the South.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Wife—"Be sure to advertise for Fido in the morning newspapers."

Next day the wife read in the morning newspapers: "Ten Shillings Reward.—Lost, a mangy lapdog, with one eye and no tail. Too fat to walk. Answers to the name of Fido. Smells like a monkey house. If returned stuffed, 30 shillings reward."—*Pearson's Weekly.*

Governors' Messages.

From the Message of Gov. Powers, of Maine.

"OUR vast forests abound with moose, deer, caribou and other game. Our lakes, rivers and bays, well stocked with many varieties of fish, offer to sportsmen unequaled attractions, and bring with each recurring year large and steadily increasing numbers of people, whose sojourn here is pleasant, healthful and beneficial to themselves and profitable to many of our own citizens. During the past two years the Commissioners of Inland Fisheries and Game used every reasonable effort and adopted the best known methods of fishculture, to more fully stock our lakes, streams and rivers with fish suitable for food. They have good reason to hope and believe that success will ultimately crown these endeavors. Already there has been a marked increase in many rivers and lakes of the several varieties which they are propagating. These Commissioners have also for the past two years taken extraordinary care to protect and preserve, especially during close time, the game with which our forests abound, and they have, to a great extent, prevented the indiscriminate and illegal killing of moose, deer and caribou, which was so common not a very long time ago. The slaughter by men lumbering in the woods has nearly ceased, and at present most of the guides, woodsmen and settlers upon the outskirts of the forests recognize the wisdom of our game laws and quite generally obey them. But there are some persons that nothing but the rigid enforcement of these laws will restrain. Hence the evident necessity of having a reasonable number of energetic and efficient game wardens, who I think should also act as fire wardens, as it is necessary to protect the forests from fire if we would have game at all. This work, so plainly beneficial to our State, is deserving reasonable pecuniary aid and support, which you will doubtless be pleased to grant."

From the Message of Gov. Black, of New York.

A question too long neglected is the preservation of our forests. The State, either through indifference or false economy, has been stripped of its most valuable timber lands, allowed its water supply to be seriously impaired, and the most wonderful sanitarium in the world to be defaced and partially destroyed. Every element of economy and foresight is outraged by this course. Private individuals have taken advantage of the State's neglect until of the entire Adirondack region, consisting of more than 3,500,000 acres, the State owns 841,000, less than a quarter; and of the proposed Adirondack Park of 2,800,000 acres it owns even a smaller percentage, about 661,000 acres. Of this proposed park more than 880,000 acres are held as private preserves, and more than 1,250,000 acres by lumbermen and others; so that of the proposed total area of 2,800,000 acres more than 2,000 000 are owned by private individuals. More than 1,250,000 of the 2,000,000 so owned are now subject to fire and axe, and the devastation wrought yearly is appalling and disgraceful. More than 450,000,000 feet of wood and timber are cut and more than 100,000 acres stripped every year. This work of devastation is progressing fast. The banks of the lakes and rivers and all sections accessible from either are ravaged at such a pace that but few years more can elapse before that region, in many respects the most wonderful and valuable in the world, will be practically destroyed. The parts acquired or claimed by individuals are the best. A traveler through any desirable portion of that country is sure to be met with the charge of trespassing, for the cases are rare in which the title of the State to a desirable tract is acknowledged.

Some time this deplorable condition must be rectified. Every year the loss to the State grows larger, in all cases difficult, and in some cases impossible, of recovery. The land is steadily and rapidly increasing in value. The bogus title burrows further out of sight the longer it is let alone. Witnesses die, and the only thing sure to increase is the encroachment of individuals upon the domain of the State. The enlargement of the canals will require more water, and the demand in every direction is increasing, while the supply is steadily falling off. A subject of such magnitude should not be postponed nor conducted with halting method, which is too apt to distinguish public enterprises in which large appropriations afford convenient resting places in which office holders may grow old. Not long ago the State appropriated $1,000,000 to preserve the beauties of Niagara Falls. That subject is without significance compared to the Adirondack forests. Every consideration of health, pleasure, economy and safety urge the speedy consideration of this subject, and such consideration should include appropriations adequate to ascertain the nature of the titles adverse to the State, and to recover where the titles are insufficient, and to purchase where they are valid. Any other course would be false and unwise economy.

New York Game Protection.

Editor Forest and Stream:

THE non-shipping game law is good as far as it goes, but it does not protect us as it was intended.

We have plenty of ruffed grouse cover, and but for three things would have excellent shooting all the fall. One thing is too many foxes; another, four or five market shooters hunt for about three days each week till they get about 100 birds together, and then one of them takes them in a trunk to market; another thing is, four or five city sportsmen go out and stay two or three days and carry back about twenty birds each. Whether they sell them or "give them to friends" I cannot say, but it makes no difference so far as thinning out the game is concerned. My idea for a remedy is to put a law through giving $1 bounty on each fox killed. This would save many a farmer's poultry and game, more than a majority of shooters have any idea of. Then make it illegal for any one to kill more than five grouse in one day, or have in possession at one time. This would stop market shooters carrying their game to market, for it would not pay them. It would stop cold storage houses storing game. It would stop the city sportsman from taking home more than five birds to each man, and would afford them just as much pleasure to say they got all the law allowed them as to carry home twenty and give away or sell the other fifteen.

.16 BORE.

ALBANY, Jan. 7.—Col. William Cary Sanger, of Oneida county, introduced in the Assembly on its opening day two bills proposing changes in the fish and game law. One relates to the killing of deer in all parts of the State except Long Island; the other proposes a change in the open season for partridges and squirrels. Both bills have the approval of the State Fisheries, Forest and Game Commission, and they were prepared after consultation with members of that Commission.

The bill which relates to the killing of deer prohibits hounding and jacking, and in this is in line with the change made last year, when the season for killing deer by these methods was made shorter than it had previously been. The present law allows the jacking of deer from Sept. 1 to Sept. 15, and hounds may be used from Oct. 1 to Oct. 15.

The Commissioners believe that, notwithstanding these short open seasons, the number of deer killed in the Adirondacks this year was fully as great as it was the year before, when the season was longer. Reports from the game wardens indicate this, although there are no detailed reports this year which show the actual number of deer killed in each county. Such reports as have been received by the principal gamekeeper are that during the fifteen days' open season the haunts of the deer were fairly alive with hunters, and the slaughter correspondingly great.

It is because of these reports that the Commission believed it wise to give a greater protection, and limit the killing to still-hunting. The proposed change is said to meet the approval of many of the dwellers in the woods, who have prior to last year done a thriving business with dogs. They find that it does not pay to keep the dogs idle for eleven and a half months for the privilege of renting them for fifteen days. The gamekeepers believe that greater restrictions are needed to prevent the dogs, which are kept in the woods the year round, from destroying the deer. Some complaints have been heard that the dogs are frequently at large, and there has been no way of preventing hounding even when there have been no sportsmen. The proposed change prohibiting the use of dogs, the Commission believes, will be of advantage to the deer by practically clearing the woods of dogs the year round.

The bill which relates to the partridge season is backed by the Commission because it believes that under the present law the extinction of the bird is threatened.

The open season for partridge is now from Aug. 16 to Dec. 31. Mr. Sanger's bill proposes to shorten this at both ends, making the time when partridge may legally be killed from Sept. 1 to Nov. 15. If the bill becomes a law, it will prevent much slaughter of the birds when they are "budding," and the date for the end of the season was selected for precisely this object.

The Commissioners believe the birds should be protected from the time the first snow falls and they are driven to the hardwood trees for their food. This bill also contains a section relating to the wholesale shipping of partridge, a provision which is said to be aimed at those who visit the breeding places and have practically a monopoly of the birds, buying from the local sportsmen and transporting them to the cities. Col. Sanger's bill proposes that no person shall "accompany" to exceed fifty birds.

The open season for squirrels is changed by Col. Sanger's bill, to give an open season from Sept. 1 to Nov. 15. The present law makes it from Oct. 15 to Feb. 15. The Commission believes the squirrels are matured by Sept. 1.

One change is proposed by the Commission in the law fixing the fishing seasons, though the bill to bring about the change has not yet been introduced. It is proposed to make the date of the open season for black bass July 1. It is now June 1. The Fisheries Department advocates the change on the ground that black bass are spawning in June.—*Correspondence, New York Times.*

Michigan Sale of Game.

LANSING, Mich., Jan. 5.—*Editor Forest and Stream:* I am glad to be able to report a move in the direction of preserving the game of Michigan:

A. L. Lakey, of Kalamazoo, secretary of the State Game Protective Association, is preparing an amendment to the present game law, which he will endeavor to have passed at the coming session of the Legislature. One of the features which he desires introduced is that no game of any kind shall be offered for sale. Mr. Lakey asserts that under the present law he has known of a number of cases where venison is killed and sold by hunters to pay the expenses of their trip.

A provision for more complete reports of the issuance of hunters' license is also a feature of the amendment. It is proposed that county clerks shall report and turn over the license fees received to the county treasurer, who shall report to the State treasurer. Some 20,000 blank licenses were sent out to the county clerks last fall, and the Secretary of State has received, it is said, fees for only about 100 licenses, but it is pretty evident that the number of deer hunters largely exceed this figure. A higher fee for the license is also contemplated.

This is a matter which sportsmen throughout the State will be pleased to have brought about. JULIAN.

The Globe-Democrat's Yarns.

ST. LOUIS, Mo. Jan. 9.—A great journalist has just died in this city, Mr. Joseph B. McCullagh, of the St. Louis *Globe-Democrat;* and the journalists of the whole country have united in paying tribute to his greatness. If but two of his articles, one on Judge Normile and the other on Father Phelan, had appeared in the old-time London *Spectator* of Mr. Addison, instead of in a modern daily, he would have been one of the immortals. He made the *Globe-Democrat* so excellent that other merely good papers seemed trash in comparison. But for years past his paper has contained in the Saturday edition a series of articles about sports afield, written for the most part* by space writers, one of whom once confessed to me that he had never been hunting in his life. Their patent artificiality only disclosed that the great editor had always been too busy to go a-hunting. And yet he was too big not to know a sham when he saw it, and it may have been his quiet way of laughing at the man who is ever willing to lapse from the intense life of the spirit to the old-time ways of the savage; from the constant labor and asceticism of genius to the brief snatches of pleasure with which those of us who are "but children of a larger growth" beguile the way. GEORGE KENNEDY.

* A few articles were taken from FOREST AND STREAM, which, of course, are not subject to this mild criticism.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

Gen. Chester Alan Arthur.

ON the Potomac River, three or four miles above the city of Washington, there is a bridge called Chain Bridge Once upon a time there was a suspension bridge at this point which was hung on chains, but has been replaced by a wooden structure, which retained the name. During our late war Fort Alexander was built near this bridge, and in the fall of 1862 I was in garrison there with a battery of the 7th N. Y. Heavy Artillery, proudly wearing upon each arm the chevrons of a first sergeant. A native darky boy, who volunteered to be my valet in consideration of certain privileges in the cook house, was of service in many ways besides polishing boots and buttons for dress parade, and cleaning rifle and sword for inspection; he knew the country quite well a few miles around the fort, for his parents lived close by.

Months afterward, when the heavy guns were left in the forts, and our men took their muskets and served as infantry on those terrible marches, when we had the outside track in the race for Richmond, we looked back to the defenses of Washington as a pleasant home, where clean underclothing was not considered a luxury. Every commissioned officer and many of us non-com's had darky boys, who were proud to be attached to the garrison and equally proud of being called "tigers."

Perhaps a week had passed, and the routine of garrison life was established, so that I could think of looking around a bit, and one day I asked my tiger, whose name was Jim, if there were any fish in the river.

"Fish, sah? Yessah, deys de greates' lot o' rock up at d' falls, sah, an' some days dey gets 'em by de bushel. Ef yo' want to go fishin' I jess show yo' wha' to catch 'em." And he gave the buttons a quick brushing to remove the tripoli powder and unstrung the button stick. "Does yo' want to go an' catch some rock?"

Evidently "rock" was a fish. Just what kind of a fish it might be was beyond my guessing powers, but Jim said it was "de bes' fish dat yo' ebber eat," and so I went to the quarters of Capt. Shannon, saluted, and asked: "May I have a day off to-morrow? I wish to fish in the river and Sergt. Falk will attend to the sick call, guard mounting and other duties, and I will be back at 5 P. M. in time for dress parade." The captain gave permission and I sent Jim out after crayfish and worms, while I borrowed some fishing tackle from the Ordnance Sergeant, who, by the way, was a "regular" who had been at the fort the year before and was something of a fisherman. Among the things he loaned me were several hooks with bits of red flannel tied to the shank, like an artificial fly, and he said, in answer: "Yes, sorr, ye'll find thim as killin' as any o' yer baits, an' more so av ye can cast the fly, as we did in the ould counthry, an' strik' them at the proper moment."

It was not daylight when the sentinels challenged and received the countersign, and Jim and I struck out on the Harper's Ferry road. The morning was cool and delightful and the road, free from mud or dust, wound through forest and over hills, with occasional broad views of the river. The unfamiliar road seemed long and the sun was an hour high when we reached the falls Leaving shoes and stockings on the bank and rolling up trousers, we worked our way out a short distance until my *fidus achates* said: "Dis yer's de bes' place to fish fum dis side," and as the river was not very high for the time of year we found a rock to lay our impedimenta on and began fishing, using a crawfish bait for the "rock," an unknown fish which might be anything that imagination could suggest. As the current took the first bait down stream a carriage stopped on the road and two gentlemen got out. They put on wading boots, went past us and prepared to fish.

Several baits had been taken from my hooks, but no fish, and I saw one of the strangers land a "rock" that looked to weigh 2lbs., for they were not 50ft. away. They were using artificial flies, that was plain, and I changed to the red flannel lure, hooked and landed a good fish. "Dat's a good rock," said my mentor as he killed it. Then, "Hi! look-a dah!" and one man had slipped on the slimy rocks and was struggling to get back, while their basket of necessaries floated down the river along with one rod and line. He came over to me and explained matters. They had lost everythir g except one rod and its line and bait. If any sort of a pole could be cut in the woods, could I furnish hook, line and bait? I could, and did. Jim went ashore with him and they came back with a pole and we rigged it up. The stranger said: "We drove out to take a few striped bass, and our coachman has gone back to Tenallytown and will not return for us until near sundown, as we proposed to make a day of it."

The speaker was a man about my age and size, say thirty years, and 5ft. 6in. His companion was much taller, but both wore flowing side whiskers, the chin alone being shaved. There was a similarity of dress and make-up that stamped them at once as from the great city on Manhattan Island. I looked my fish over and decided that it was the striped bass of my boyhood on the upper Hudson, but larger. Since then a more extended knowledge of the popular names of fishes has proved that south of New Jersey the striped bass is called "rock" and "rockfish," but the great Northern market is gradually extending its name for the fish through the commercial fishermen who get their returns from Fulton Market.

About noon I said, "Jim, go over and ask the gentlemen if they will come and take a bite with me." They came, apologizing for their mishap. The man who had been ashore for a pole introduced himself as Mr. Endicott and his tall friend as Mr. Arthur. Every man knows how trivial things affect the whole course of his life, how chance throws him in the way of a woman whose life becomes bound up in his for better or for worse, and how a most enduring friendship may be made in an hour. In this way I made the acquaintance of Frank Endicott, of whom I shall write later, but now wish to mention as one of the most conscientious gentlemen and best all-round sportsmen that it has been my fortune to know. Our basket contained a severely plain luncheon from the garrison cook house, and consisted of cold boiled pork, which was really good despite its soldier name of "sow belly;" but then soldiers always dubbed their corned beef "salt horse," and had discrediting names for everything that was issued to them. Rice was "swamp seed," and army shoes were "pontoons," etc. We had some "salt horse" also, baked beans, two loaves of soft bread and unlimited hard tack, as well as a quart bottle of coffee. This was put up for Jim and me for dinner or any regular or irregular feed, for Jim was afflicted with an appetite which had become chronic.

"Sergeant," said Mr. Arthur, "this is very kind. Fishermen get hungry, and you seem to be fairly well provided; so we will accept the invitation in the spirit in which it is offered, and will hope for a chance to reciprocate in the future"

I kept an eye on Jim while he kept an eye on the provisions, and I fancied that there was a sad note in his voice when he asked, "Does yo' want some mo' dese beans, sah?" as though he would be disappointed if they took them. The supply was ample, however, for all; but none was left for the evening tramp to garrison.

Their cigars were not in the basket that had floated away, and we smoked and talked of the fishing. I remarked that my angling had been mainly inland, and that the identity of these "rock" of 2 to 3lbs. with the little ½lb. striped bass of the upper Hudson had been a matter of doubt, because I didn't know that they grew so big.

"You are not familiar with this fish on the sea coast," said Mr. Arthur, "for they are often taken of 60lbs. weight, and I have taken them of over 20lbs."

That was a new bit of fish lore. I had known of one being taken at Albany weighing 2lbs., and had remembered it as a monster.

I told them that I must leave at 2 P. M. in order to be back in time for dress parade at 5 (my leave expired at 4), and we had all the fish we cared to carry. Endicott took me one side and said: "Sergeant, my friend is Gen. Chester A. Arthur, who was appointed by Gov. Morgan as Engineer-in Chief on his staff, and is now Acting Quartermaster-General, stationed in New York city, preparing and forwarding troops; and he has been inspecting the State troops at Fredericksburg and on the Chickahominy, in Virginia. He is an intimate friend of your Colonel, Lewis O. Morris, and is here on purpose to consult him about something. Don't mind overstaying your time, it will be all right"

Endicott was not a soldier, so I said: "No matter how the case may be smoothed over with Col. Morris; I have given my word to my captain to be back at a certain time, and will be there, bar accident."

After this Gen. Arthur came and said: "Our carriage will be here at 3 P. M., and if you will stay and fish we will be pleased to have you ride back with us, for I wish to see Major Springsteed after dress parade at Fort Alexander and then drive to headquarters and see Col. Morris."

This gave us more time to fish and a ride back, the latter no small favor. Jim was in his glory, mounted with the coachman, and I was not miserable inside.

Months passed; Battery I was moved to Fort De Russey, the extreme right of the line of forts garrisoned by the 7th, over near the Seventh street road, and the fishing incident had been partially forgotten in other and smaller fishings in the waters of Rock Creek, as occasion offered, for the fort was on a hill whose base was washed by the creek. I had been promoted to a lieutenancy in Battery C, and again to Battery L, at headquarters near Tenallytown, late in 1863, when this incident occurred: A young man of influential and wealthy family had been commissioned from private life as a second lieutenant and assigned to the 7th Heavy, and of course the old sergeants in line of promotion didn't like it, but there was no remedy. He was of the good fellow type, with unlimited cash, and he proposed to celebrate his muster-in. Purely by way of apology for the following account of this "celebration," let me say: Here was a regiment of twelve batteries, three majors, twelve captains and forty-eight lieutenants, besides the staff. They were weary of drills and hungering to go to the front, where there was not only active service, but promotion, and they were young. They represented all the temperaments that can be found in the same number of vigorous young men between twenty and thirty years old. Therefore the festive young recruit found a few who would forego the study of projectiles, ricochet fire, time fuses and such exciting subjects, and could devote an evening to making his acquaintance in the sutler's tent.

I was one of that chosen few who sacrificed an evening of study to welcome Lieut. ———, and I never regretted it, no matter how much some other men may disapprove of such a symposium We had been introduced all around and our new comrade had ordered several bottles of champagne, and the sutler was about to open them when Capt. Jones called a halt and remarked: "There's only one way for a soldier to open a bottle, and that's with his sword."

"That may be true," said Lieut. Niles, "but there's not an officer in this regiment who can do the trick." The door opened and two men in "mufti" came in, but no one paid any attention to them

"For the cigars, Niles?" I asked.

"Yes, for the cigars and oys ers also, if you dare."

"All right! Capt. Jones; will you take the cork out of a bottle to oblige me?" He declined. The fact was that I had learned the stroke from Gen. Genet, who taught fencing to Ira Wood, as related in sketch No. 10, where I said: "While he was learning I picked up a point or two which was of service in garrison when the neck of a champagne bottle was to be severed at a clean stroke, * * * you may be told of this when ex-President Arthur is under the searchlight." I had been putting Jones through on bottles filled with water, but he declined to exhibit his skill in public and there was no alternative. Clearing a space behind, I brought the sword to the left elbow and, advancing the right foot, with a strong up stroke cut the bottle at the point where the shoulder of the muzzle meets the neck, and the break was clean and smooth; the bottle standing while the fluid effervesced over the opening. When the applause subsided one of the strangers said:

"Gentlemen, pardon us for interrrupting your proceedings, but after meeting Col. Morris we asked after Lieut. Mather, who showed us some courtesies on a former visit, and were informed that he was over here." A glance showed that they were my angling friends of over a year ago, whose names had been forgotten. With a refreshed memory there were introductions all round and Mr. Arthur suggested that he might try his hand at opening the second one. He took my sword and uncapped the bottle neatly, and two nicks in a blade hanging on my wall to-day represent two glass enemies. As the party comprised over a dozen able-bodied men, it was necessary to open more, and my pupil, Capt Jones, did credit to his preceptor. It looked easy and Niles tried it. Just how or where he struck the enemy is not on record, but there was a smashing of glass and a flood. The recruit smashed much glass. It was an exhibition of skill that only long practice can attain, and is worthy of attainment by the man whose life may depend on the momentary handling of a sword. By invitation and permission, I dined with my brethren of the angle in Washington the next evening.

The custom of army officers then was, as it is with navy officers to-day, to discard uniforms when going ashore or outside of garrison, and don mufti; and so I appeared at the dinner. It was a culinary poem, and I reported to Adjt. Hobbs next morning before my leave had expired, and then in the long marches and the excitement of the campaign with the Army of the Potomac the next spring all these things were forgotten, even the names of my fishing friends. The fact that one of them might have influence sufficient to give me higher rank never occurred, and that shows how little sense I had. Those fellows who are so perfectly satisfied with themselves as to say that they never made a mistake are to be envied. I've made dozens of 'em, and only wish I could give the wheel of time a twist and sing:

> "Backward, turn backward, O Time, in thy flight,
> Make me a child again just for to-night,"

and then enforce the order.

Gen. Arthur was President of the United States nearly two years before I had any idea that he was my whilom fishing companion, and then Endicott told me of it after I had somehow renewed acquaintance with him. I had carefully noted the fact that after President Garfield had been wounded by the assassin the Vice-President had been modest in not claiming to act in his stead during the long weeks that the President lay wounded, and that he won hosts of friends from among those who had opposed his nomination; and his administration as President has passed into history as a most wise and conservative one. Many thought that Arthur's sudden death in November, 1886, was hastened by his failure to have his administration approved by a nomination for the Presidency, and it was said that there were enough of his admirers on Long Island alone, who resented his being "turned down," that voted for Mr. Cleveland, to have carried the State of New York and elected Gen. Arthur if he had been a candidate. Of politics I know little, in the sense of the workings of parties, and never mixed in it further than to keep posted as well as possible and to vote as seemed best

Once Mr. Endicott and I were going to Washington to attend a meeting of the American Fisheries Society, and at Jersey City he shook hands with a tall man, while I walked away It was Gen. Arthur, and he asked us into his car to smoke. "It will give me a rest from the politicians," he said, and we spent an hour talking of fish and fishing while some anxious men outside were wondering who we could be and what manner of axes we were grinding. We called on him next day, and the fact that neither of us wanted any favors seemed to make him enjoy the visit.

First of all things, Gen. Arthur was a gentleman in the best sense of that abused term. Perhaps Endicott expressed this thought better when he said: "Gen. Arthur is the only President since Martin Van Buren who knew how to wear a glove." That may not be the best thing to be said of the highest officer of a republic, but it serves to give point to my remark. Just where Mr. Arthur developed these traits as a boy in a country where it is said to require "three generations of wealth to make a gentleman" is a question which I will answer. It was innate to the last degree, and only needed an observant eye to note the minute details of things a gentleman may not do. All else is simple

Gen. Arthur was born in Vermont in 1830, and entered the Sophomore class of Union College in '45, and while there taught school to pay expenses; and after graduating three years later was principal of an Academy at North Pownal, Vt, where Gen. Garfield taught penmanship in 1854. In 1853 he was admitted to the New York bar, and later took part in politics. His whole life shows what a poor boy may become under our form of government Unhampered by ancestors, he worked his way solely on his own merits; born a free man, he is taken at his exact worth by his fellow men and placed in the position which their votes wish him to occupy. Look over in Spain! See a ten-year-old boy on a throne because he is the son of a former ruler, who ruled because he was somebody's son! It would be funny if it were not a sad spectacle. In Europe the Prince of Wales is the only heir to a throne who does not take himself seriously and believe that he is destined to rule by divine right The "War Lord" of Germany—but you know all about him, and also how easy it is for me to get off the track,

In his report to the Governor of New York, in 1863, Gen. Arthur said: "Through the single office in the city of New York, from Aug. 1 to Dec. 1, the space of four months, there were completely clothed, uniformed and equipped, supplied with camp and garrison equipage and transported from this State to the seat of war, sixty-eight regiments of infantry, two battalions of cavalry, and four battalions of artillery." Yet a little impoverished monarchy in Europe, which cannot subdue an insurrection in an island which has an area less than the State of New York by some 10,000 square miles, talks of war with our now united nation!

Gen. Arthur was a genial gentleman with literary tastes, affable and companionable to those whom he did not regard as persons trying to work him for personal ends. Endicott and I came within this category.

For years Gen. Arthur's catch of a 50lb. salmon on the Restigouche was the highest record, and it has only been beaten in late years.

The gentle art, as depicted by Walton, had a most worthy disciple in Chester A. Arthur, who was, in the language of Shakespeare, "An affable and courteous gentleman;" but, while in quoting mood I am puzzled when the memory of Arthur, Endicott and self, as a trio, confronts that sentence from Sheridan's "Rivals:" "You are not, like Cerberus, three gentlemen at once, are you?"

It's not pleasant to have conundrums thrust upon you at all times—there were two gentlemen, at least, in the trio.

FRED MATHER.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

ANGLING NOTES.

Fisheries, Game and Forest Report.

A FEW advance copies of the New York Fisheries, Game and Forest Commissioner's report for 1895 have been issued to the press, and the newspaper notices have been the means of causing an unprecedented demand for the reports. The applications have been sent to the office of the Commission in Albany, to the Commissioners and others at their homes and elsewhere, and already the number of applications for copies of the report exceed the number of copies printed for distribution. Up to Jan. 6 the Commission had not received from the printer the reports to be distributed from its office; nor has the Legislature received the copies assigned to its members. When all the books are bound and delivered to the departments it will require a little time to make the distribution, and when it is made I imagine that many people will be disappointed at not obtaining the copies they have asked for, unless the Legislature should order another edition printed to supply the demand. Mr. Taylor, the secretary of the Commission, told me on Jan. 6 that he had received nearly 200 applications for copies of the report that morning, and that number is but a small part of the grand total on file. I judge that it will be practically impossible to even reply to the applications until after the distribution of the reports has been made and it is known what the shortage really is, so the applicants will not know for some little time to come what the fate of their applications may be. The Commissioners are powerless to remedy the existing condition of affairs, much as they regret it, and if it shall be in their power eventually they will furnish a copy of their report to each person applying for it, otherwise they will have to furnish copies until all are gone in the order in which the applications are filed. The newspapers have given notice that copies of the report can be obtained for the asking, overlooking the fact that the edition is limited by law, while there is no limit to the applications.

Frost Fish.

A considerable of my time is spent away from my home, and during my absence newspapers (and I am sorry to add letters) accumulate in formidable numbers. Always upon my return I try, so far as I can, to reply to the letters, but am generally so far behind in my replies that if by any chance the pile of unanswered letters should be reduced to reasonable limits I imagine it would be cause for rejoicing in the household, for I cannot be very companionable when spending days and nights in letter writing. Newspapers I do not ever pretend to read, but a member of my family reads them for me by proxy and blue-pencils everything relating to fish and fishing which they may contain. If an item is not marked with pencil the papers may be ever so carefully arranged in consecutive order and conveniently placed, and yet I miss it. Very recently I was told that there was an article about frost fish in one of the papers, and it had not been marked, but I could easily find it in a certain paper of such a date, as the caption was "Frost Fish" in large letters. It was something past midnight when I got to the frost fish business, and I then searched the file of the particular paper and searched it again without avail. The house was still and I finally gave up the search and retired. The next morning at breakfast I remarked that I had searched for the frost fish, but could not find it, and in the future if articles were not marked I could not undertake to look for them, and the only time to mark an article was when the paper was in hand. My wife said she could find the item at once, as she knew exactly where to look for it This she did, and handed me a paper containing about two sticks of matter headed "Fish—Frost." It proved to be a marriage notice of Arthur Fish and Mary A. Frost, with a list of the persons present at the ceremony.

Long-Distance Fly-Casting.

The English sportsmen's papers have had quite a bit to say of late about Mr. Alexander Grant and his patented vibrating fishing rod, which seems to exceed in power any other fly-casting rod made. Mr. Grant made a public exhibition of his rods. With a salmon rod of 20ft. he made a cast on Dec. 10 of 168ft. With a rod of 18ft. 5in. he cast 162ft. With a rod of 10ft. he cast 111ft. The caster stood 15in. above the water level. Silver Grey, of *Land and Water*, then tried the salmon rods, and with the longer one made a cast of 148ft and with the shorter one 135ft

The next day, with a rod of 19ft., Mr. Grant cast 159ft. 5in., and with a rod of 16ft. 10in. made a cast of 148ft. The correspondent of *Land and Water* made a cast with the shorter of these two rods of 132 t 9in.

On the 12th Mr. Grant cast again, standing 13in. above the water level, and with the rod 18ft. 5in. long made a cast of 164ft. 6in. Mr. Marston, writing of the casting, says the days were unfavorable. On the 12th "it was a very wet, cold afternoon, with a strong down-stream wind, coming every now and then in gusts from all quarters."

The casts were measured from the point where the caster stood to the point where the fly fell on the water. All the above casts were made with a trout fly on a trout leader, and the fly dropped so lightly on the water that it was like dew falling. With a salmon fly Mr. Grant made a cast of 150ft. 6in. with the rod 18ft. 5in. long. Mr. John Enright, the Irish world's champion fly-caster, was present and pronounced the casting most astonishing.

What is a vibrating rod? Silver Grey says: "It was in March, 1893, that Mr. Grant's ideas on the scientific manufacture of fly-rods were first placed before the public. Since then Mr. Grant has continued to pursue his study of the laws of gravitation and of nature, with the result that his now perfected fly-rod surpasses in every respect any rod that has hitherto been made.

"This I say with all respect to the many good rod makers which we have; but it is an incontrovertible fact, and by unbiased minds must be admitted as such. Mr. Grant, who is far from being robust, and weighs barely 140lbs., lays no claim to being a champion fly caster, and his object in visiting the Thames was not to cut records, but to show what could be done with his rods, even with the moderate strength which he possesses. His principle is the graduation and unity of force from butt to tip of the rod, and this principle is supplemented by the gradation of the running and casting line and the vibrating rings; but while there is a secret in the making of these rods which I cannot even hint at, Mr. Grant's patent lies in the splice I cannot better explain the nature of this splice than by giving the substance of a conversation between myself and a very well known expert, which occurred while the trials were in progress at Kingston on Saturday:

"'The best rod that can possibly be made is of one piece of perfect wood.'"

"I assented.

"'Then how is it that these splices are thicker, and have, so to speak, a shoulder on them? They would represent a swelling in certain places if the rod was solid.'

"'Yes,' I replied, 'but as soon as you cut wood the weakest point in it afterward is the splice, and these splices are so shaped and strengthened that the vibration and power of the wood is maintained as if it were one piece.'

"Another peculiarity of these splices is that they are self-tightening, and can be put together almost as quickly as ordinary joints."

All the casts that I have mentioned as having been made by Mr. Grant were Spey or Welsh casts, or what we call in this country switch casts. Mr. H. W. Hawes has a record of 102ft. at switch casting with a trout rod, made at Central Park in 1887. Mr. Marston speaks of the English casting as "an elaboration of the Spey cast," or "I should be inclined to call it rather a simplification of it, for anything more easy than Mr. Grant's style I never saw. I tried the rod and the cast, and found that I could very soon get the knack of it, and so did Mr. David Wilson, of the Fly-Fishers' Club. I like the feel of Mr. Grant's rods very much, and I like the patent splice; but when he tells me he has got some secret power which he imparts to his rods, which he discovered by accident almost when studying the effects of sound, or perhaps I should say the laws of sound—well, I confess I cannot credit it. That Mr. Grant believes he has *discovered* this mysterious power, or at any rate the application of it to rods, I am sure, for that he is an honest man I am certain."

Mr. Marston looks at the rods from a practical, common-sense standpoint, and appears to approve of them, at least he admits that with them the longest casts in the world have been made, and yet he says he would like to see a fair test made with the rods against other rods of same length and weight, and probably we will hear more about the vibrating rods later.

A. N. CHENEY.

NETTING IN LAKE ONTARIO.

Editor Forest and Stream:

A special dispatch to the New York *Evening Post* reads as follows: "The Fisheries Department at Ottawa has received information that the Lake Huron fisheries are in a critical condition. A number of Canadian fishermen propose to leave these waters and fish in the lakes of the Rainy River and Lake of the Woods districts, as they cannot make the Lake Huron fisheries pay. This serious depletion has arisen from overfishing."

From this we see that the just retribution, which has long ago been meted out to the netters of the other Great Lakes, has at last descended on the netters of the most fruitful and apparently inexhaustible lake of all. It is the last of our geese which the netters are ripping open to find the source of the golden eggs, for such certainly have been in the past the great lake fisheries.

The history of food fishing in our Great Lakes is a pitiable recital of brutish ignorance and reckless greed; a slaughter of spawning fish which has resulted in the complete extinction of some species and the decimation of all.

Other causes besides netting may have conspired to drive the Atlantic salmon from Ontario, but the damming and drying up of tributary streams does not account for the enormous decrease in other food fish.

In the golden age of netting it was a notorious fact that the bulk of the fish were caught just before or during the spawning season, for it was then only that trout, wall-eyed pike, whitefish and ciscoes visited shoal waters, and it naturally followed that those waters most resorted to for spawning purposes fairly bristled with man's engines of destruction.

First were used seines and gill nets, and if market-fishing had been limited to these devices Lake Ontario would still swarm with food fish. The profits of the business, however, begot a resistless greed, and brought the deadly salt-water pound net, which, by its wholesale, indiscriminate slaughter of spawn-bearing fish, in a very few years killed an industry employing hundreds of men and thousands of capital.

As fishing got poorer, the pound net was gradually abandoned, as aside from the initial cost of the net, which was great, it was expensive work setting and fishing them. They were abandoned too late to save the fish, however, for the former myriads of trout, pike, whitefish and ciscoes had been caught out or driven away.

As the food fish became scarce netters turned their attention to fish heretofore despised: bass, perch, etc.

Then came the trap net, undoubtedly the invention of the devil, incomparably worse than the pound net, for this reason: the latter can be set only on a mud bottom, which means generally water from 18 to 30ft. deep; while the trap net, not depending on stakes, can be set anywhere, even on the very rocky shoals where bass spawn and feed, and on the shelving shores along which they travel.

It thus transpires that the mantle of the old pound netters has fallen on the trap netters, who, the food fish being gone, are waging the same war of extermination against game fish and vermin.

In extenuation of their (I grieve to say it) lawful but destructive netting of bass, these market fishermen say that, being unable to sell or possess bass before May 30, they do not catch spawn-bearing, spawning or spawn-tending fish. In this assertion they ignorantly or willfully attempt to mislead. In more southern waters bass do spawn in May, sometimes early in May. In Kensico Lake (twenty miles from New York city) I have seen female bass tending broods of young fully ¾in. long late in May, but in more northern and colder waters the spawning season is delayed, and I venture to assert that unprejudiced investigation will show that more bass spawn in Ontario after than before Decoration Day. I have caught female bass in Chaumont Bay late in August still spent and thin from spawning. How could that be if they had reared their brood in May? Fish do not spawn on a fixed day any more than buds open or birds nest at the same time in all latitudes. When all climatic conditions are fulfilled, especially when the temperature of the water becomes fitting, then and then only do bass spawn, it may be May 1 or July 1.

For all practical purposes it matters little whether bass are caught before or just after spawning, the result is equally destructive. Bass not only protect their nest, but also their young, for some weeks after hatching, and the nest is soon emptied or the callow brood quickly gobbled up if deprived of the protector. Unless netting is quickly stopped in spawning waters the story of the bass will be that of the food fish.

The puerility or iniquity of our fish legislation has no counterpart in history. When compelled by popular clamor to legislate for the protection of fish in Ontario, our legislators passed a law prohibiting netting, etc., within one mile of shore throughout the lake except in Mexico Bay, Guffin Bay, Chaumont Bay and Three Mile Bay; in other words, netting was stopped where it would do least harm and has been perpetuated where it would do most harm, for these bays are the natural spawning grounds of the whole lake. Guffin, Chaumont and Three Mile bays are shallow and landlocked, have shelving, rocky shores, and are full of rocky reefs and shoals where fish may spawn and feed, and yet this is the only part of the lake open to shore netting.

I make no charges of corruption, but I know that when this law was framed our legislators must have been deceived, and I think willfully deceived. Why should Henderson Bay, Black River Bay and the St. Lawrence River (Thousand Islands) be protected and Chaumont Bay left open to netters? I'll tell you. In Henderson Harbor, Sackett's Harbor, Dexter and down the river there are hotel interests and associations of guides and boatmen, which, to preserve the custom and patronage of anglers, have compromised with netters by telling them if they will relinquish their waters they may devastate Chaumout Bay unmolested. All interested know that it is better fishing ten times over in Chaumont Bay than in either of these other places, and they also know that, if we had the protection they have, hotel men and boatmen would come there and make the resort famous. It is for their interest to keep Chaumont unknown or even to ruin its fishing, and they are accomplishing their aim.

While this sharp practice may be all right from a business point of view, it is unworthy of sportsmen, and yet it is as the latter that these men go to Albany and get netters driven from their shores. I am not logrolling for hotel men nor for oarsmen, but speak for a large class of sportsmen who, like me, would like to be able to go out and catch a half dozen bass without losing tackle on a trap net, and who, like me, when sailing, don't like to be always on the lookout for submerged pound-net stakes.

The present law is an example of class legislation. Let it be rescinded. Either prohibit netting, etc., within a mile of land all over the lake, or throw the whole lake open to netters. The first course is best, and is possible if united action be taken and petty jealousies thrown aside. The latter course would be an improvement on the present state of affairs, because some of the netters now sterilizing the lake by netting its spawning beds would go elsewhere and do less harm. Last summer scores of trap and hoop nets lined the shores and covered the shoals of Three Mile, Chaumont and Guffin bays Eight or ten men did the work. It was no uncommon thing for each one to bag 500 large bass at one lifting of the nets. This, going on from May 30 until bass left the bays, means a good many bass. Besides this, about 2,000 small bass were taken alive from one water to stock other waters in the State. In the year 1890, according to the United States Fish Commissioner's report, over five and one-half tons of bass were netted in the waters of Jefferson county alone. How long can any water, however prolific, stand such a drain?

Netters are not fools, and when they see a gang of so-called sportsmen bring home bass to rot on the beach they complain, and justly, that such practices are worse than theirs. They lose no opportunity to throw such acts in real anglers' faces, and it behooves real sportsmen to disclaim all consanguinity or sympathy with fish hogs. Therefore, with a law prohibiting netting I would also favor a clause restraining the angler. Make it illegal for any man to retain more than a dozen bass a day, and make their minimum length 10in. This will put a damper on "count" fishermen, who bring home bass to rot and who do more to discredit real sportsmen than anything else.

R. W. AMIDON.

NEW YORK, Jan. 7.

LARGEST trout preserves and hatcheries in Canada. Eight ponds, nine mile stream teeming with trout. Will lease to a club on easy terms. Apply J. C. Cockburn, 25 Elgin avenue, Toronto, Canada.—*Adv.*

Nov. 15.—Newton, N. C.—Eastern Field Trials Club annual trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

THE BACILLUS OF DISTEMPER IN DOGS.

THIS bacillus was first discovered by Dr. Bruno Galli-Valerio in March, 1895 (1), and since that time has been isolated and studied by several observers, so that its identity and pathogenic properties may be considered as fairly well established. Dr. Valerio has obtained the bacillus in pure culture in a number of cases from the lungs, brain, spinal cord, pus from the *sinus frontalis* and from the discharges in conjunctival catarrh; never from the blood or other organs. (2) This bacillus grows in the ordinary culture media of the laboratory (nutrient gelatin, agar-agar, bouillon, potato, etc.), and such cultures when injected into young dogs produce a typical distemper which is usually fatal. Old dogs are not susceptible. Dr. Valerio gives an instance which seems to prove conclusively the infectious nature of the disease. Two pups, born in a cage in which four months before a dog inoculated with a culture of the distemper had died, promptly contracted the disease and died in a few days From the brain, spinal cord and lungs the bacillus was recovered in pure cultures.

The bacillus is not pathogenic for guinea pigs, rabbits or white mice. In one case only a rabbit had an abscess at the seat of the infection, from which the bacillus in small numbers was obtained.

A short description of this organism may be of interest.

In nutrient gelatin at a temperature of 18°–20° C. after twenty-four hours gas bubbles appear along the streak of the needle. On the surface a small white point resembling wax may be seen. This increases in diameter and depresses the surface of the gelatin in the center, causing a funnel-shaped depression, without, however, causing liquefaction. Even after many months the gelatin is not liquefied. Microscopical examination shows an oval bacillus, usually single or in pairs.

On agar-agar at 38°–40° C. a white point appears after twenty-four hours, which spreads, forming a whitish growth with irregular edges. Microscopical examination shows bacilli resembling those found in gelatin cultures.

In solidified horse serum the appearances are much the same as in gelatin, except that gas production is not pronounced.

In liquid horse serum at 18°–20° C. small flocculi appear at the bottom of the tube, the bulk of the liquid remaining clear. Microscopical examination shows chains of 18–20 elements.

In pepton bouillon after twenty-four hours a uniform turbidity is produced, and after a few days white flocculi appear at the bottom of the tube. Microscopical examination shows single rods and short chains.

On potato at room temperature after twenty-four hours a white, transparent growth appears.

In milk at room temperature the bacillus grows very well without causing coagulation. Microscopical examination shows typical oval forms as they are obtained from the dog.

The bacillus gives no indol reaction and grows in glucose bouillon without causing fermentation.

In all cultures the bacillus is motile. Sometimes bacilli are found with enlarged ends containing small spores. The bacillus stains well by Gram's method. A few take the stain uniformly throughout, others a deeper end stain, others occur with their poles united by a protoplasmic substance which stains very feebly.

The writer is not aware of any successful attempts to produce either an artificial immunity in dogs by Pasteur's method or an anti-toxin for the cure of the disease after it has developed. In view of the lasting immunity conferred on dogs by an attack of the disease, it seems very probable that some such method could be devised

The Sportsmen's Association.

IN connection with the Sportsmen's Exposition, to be held in Madison Square Garden beginning on March 13, the Sportsmen's Association will give a bench show, unique and specially valuable in that it will be restricted exclusively to pointers, setters (English, Irish and Gordon), beagles, foxhounds and greyhounds, and of these only such as have won in public trials are eligible to competition. Also, there will be a limit to the total allowed, probably seventy-five. This show will be an object lesson in field dogs. The qualifications of eligibility will place the competitors in a recognized position from the start. Rumors and owners' claims are nothing if not backed up by records. Its composition and purposes are thus strictly in keeping with the exposition. Those who have eligible dogs should not miss this rare and important event. It is said that the prize list will be very liberal. A meeting of the committee to arrange preliminaries was held in the A. K. C. rooms on the 7th inst. The members of the committee are: Major J. M. Taylor, B. Waters and J. Johnson, for the exhibits of setters and pointers; Hermann F. Schellhass, beagles; Bradford S. Turpin, foxhounds; L. F. Whiton, for greyhounds; Mr. A. P. Vredenburgh, chairman. The setters will have classes for dogs and bitches, for respectively both Derby and all-aged winners; pointers the same, but as eligibility rests on field record there will be no division by weight. Beagles will have classes for dogs and bitches of different heights, and foxhounds and greyhounds will have classes for dogs and bitches. Also specials for kennels and sire and his get, etc., will be offered. Circulars and prize lists will be ready for distribution soon.

The Westminster Show.

THE premium list of the forthcoming annual show of the Westminster Kennel Club is noteworthy for the long list of specials given in the several classes by the Westminster Club, the specialty clubs and individuals. The premiums run $15 and $10 or $10 and $5 for puppy and novice classes; $15 for challenge classes; $15, $10 and $5 for some open classes, and $20, $10 and $5 for others. The full list will be sent on application by Superintendent James Mortimer, No. 66 Beaver street, New York. The judges are as follows:

St. Bernards and Newfoundlands, Miss A. H. Whitney; Great Danes, Mr. Charles D. Bernheimer; American foxhounds, Mr R D. Perry; Chesapeake Bay dogs, Mr. George E. Pollock; cocker spaniels, Mr. Andrew Laidlaw; poodles, Mr. H. W. Lacy; Boston terriers, Mr. Dwight Baldwin; Dachshunde, Mr. L. A. Klein; beagles, Mr. George B. Post, Jr.; bulldogs, Mr. John A. Matthews; mastiffs, bloodhounds, greyhounds, English foxhounds, pointers, setters, Irish water spaniels, clumber spaniels, field spaniels, whippets, pugs and toy spaniels, Mr. George Raper; Russian wolfhounds, deerhounds, collies, old English sheep dogs, all terriers, schipperkes, Pomeranians, Italian greyhounds and miscellaneous, Mr. L. P. C. Astley.

Dogs of Constantinople.

THE wars of the Constantinople street dogs are eminently satisfactory from the point of view of the inquirer into animal politics. Theoretically, they are complete examples of what the rational warfare of animals ought to be, but usually is not. It has for object either defense or conquest of territory, not the mere plundering instinct, or that primitive desire for making a meat dinner off an enemy which occasionally suggests an attack on weaker neighbors to the cannibals of the Congo. This civilized and rational warfare of the Constantinople dogs is due to their territorial instinct. Certain streets and quarters belong to particular dog communities, which again subdivide their territory among individuals. In some streets each heap of refuse on to which the common rubbish of a group of houses is thrown belongs to one dog, who lies on it, brings up its puppies on it, and looks on it as his home. "There were three sweet families in one street," according to the account of a lady who recently visited Constantinople and thought its dogs most interesting native inhabitants If food becomes scarce in the next dog "parish" an invasion is planned into a richer neighborhood, where the rubbish heaps—the Turkish equivalent for dust bins—of a wealthier class of inhabitants promise to yield better results All the dogs of the invaded territory at once muster for resistance, and the fight, which is not organized, but of the rough and tumble order, goes on until victory declares itself for one side or the other, or until the inhabitants step out and stone the packs till they separate. Not unfrequently a street or two are annexed by the invaders; more often the defense is successful. This is always conducted by a levy en masse, even the puppies joining in the fray. It is observed that it is only serious invasion which causes the dogs to fight. A single dog may pass through a strange quarter, provided he gives himself no airs, but lies down on his back and sticks up his feet with proper deference and humility whenever the owners of the street come up to expel him. According to Turkish tradition, these street dogs were once most successful in warfare, for their ancestors fought and beat the devil. Their story is that when man first appeared on earth, and Satan drew near to kill him, the dogs attacked and drove away the arch enemy and preserved the first man. Hence, when a Turk has broken some minor ordinance of the Koran, he often buys a few loves of bread, and, stepping out into the road, throws them in dignified manner—not as an Englishman would throw them—to the dogs of the street.—*London Spectator.*

POINTS AND FLUSHES.

Mr. W. W. Titus informs us that he will probably start his pipe factory at Calmer, Iowa, about the middle of this month. Though engaged in other business than training, Mr. Titus still maintains an earnest interest in dog matters, and no doubt will always do so. We heartily wish him success.

The special prizes offered by the Poodle Club, to be competed for at the forthcoming New York show, are worthy of the earnest consideration of exhibitors. The Meadowmere Kennels offer three cups to be competed for at same show. For information as to particulars, address Mr. Z T. Baker, 13 William street, New York.

Mr. Royal Robinson, Indianapolis, who accepted an invitation to act as one of the judges of the Continental Field Trials Club at Tupelo, Miss., this week, has notified the secretary that he has withdrawn his acceptance.

Nothwithstanding the severe business depression of the past year, the A. K. C. was prosperous and generously supported. In 1895 there were 3,283 registrations. In 1896 there were 3,348, a gain of 65 over the previous year. Listings in 1895, 1,669; in 1896, 2,413, which was only exceeded once, in 1891, when the listings numbered 2,504.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

CHAINLESS BICYCLES.

IT is significant that after the wide publicity given the idea of bevel gears for bicyles last year so little is heard of the subject at present. On all sides it is conceded that the chain is a poor means for transmitling power, and that its use involves a considerable loss of energy; consequently that some improved method of converting the force created by each downward pressure of a man's legs on the pedals of a bicycle to the multiple turning of a driving wheel is eminently desirable.

To the lay mind, judging from the newspaper reports, it seemed as if the desideratum had been reached in the bevel gear, and by some it was expected that an immediate revolution would result. This assumption has not, however, been borne out by facts, and the present indications are that, as heretofore, the vast majority of the bicycles manufactured will be chain machines.

The natural inference is that the bevel gear in its present state of development possesses no great advantage over the common gear It is not likely that difficulties of mechanical construction alone would prevent its adoption, for in other machinery where conditions call for this method of transmission of power the bevel gear is successfully used, and no very complex form would be required for the bicycle.

At the National Cycle Show in England last month, a number of devices for doing away with the chain were shown, but they did not apparently occupy an important place in the exhibition, or arouse any special enthusiasm. The most prominent, and also the most practical, was the Acoteus chainless bicycle exhibited by the Metropole Company.

This is the bicycle upon which Rivierre, the French long-distance racer, did such good work. In this the power is transmitted by means of a hollow shaft, furnished at either end with cog wheels cut on the bevel, which engage with similar cog wheels upon crank and driving wheel axles. The hollow shaft runs on ball bearings situated under the gear wheels at either end, and the stay on the gear side of the bicycle passes through it. In appearance it is very neat, and it has the further advantage of being practically dust proof. The speeding up of the mechanism is mainly affected by the disparity in size between the wheel on the pedal shaft and that in connection with it, but a variation in the size of the other cog wheels causes a slight additional gearing up. No arrangement has been made for changing the gear, though this feature has received attention. Elsewhere several inventions were shown in which double wheels of different size, designed to be quickly thrown in or out of gear, were the common feature, but for varying gear in the chainless bicycle interchangeable cog wheels would seem to be the more practical. A bevel gear, in which rollers took the place of cogs, was also shown by an English company, and a so-called ball-bearing bevel gear was the feature of a Danish exhibit. Among other substitutes for the chain was a mechanical device in which two cylindrical disks, running in vertical planes and attached to the axles of the cranks and driving wheel, were connected with each other by short reciprocating rods working in sockets near the peripheries of each wheel.

In another arrangement the power was transmitted through tubes with a semi-circular channel by means of balls which followed an endless circuit, passing over both sprocket wheels, which were cut with semi-circular spaces to hold the balls. The general opinion after an examination of these devices seems to be that the French invention comes nearest the practical solution of the problem of bevel gear for bicycles. The advocates of this machine, however, who are willing as a test of the sincerity of their convictions to go to the extent of investing in a wheel were not very much in evidence.

Novelties.

AMONG other novelties exhibited at the English National Cycle Show were tires in which shark's skin takes the place of rubber in the composition of the cover; also tires made from a string of rubber disks, threaded alternately with smaller disks of cork, and enveloped in a covering similar to that of an ordinary pneumatic tire, except that it is not inflated; pumps for tires, which are operated by grasping the saddle and working the seat pillar up and down in the tube which carries it; bicycles propelled by rear drivers, with a sun and planet movement operated by swinging levers, which give an elliptical action to the pedals; a balance action machine, which has four wheels in line, and which it is said "may embody an excellent principle," but the complication and unwieldiness of the structure place it outside the range of practical mechanics; and last, but not least, some of the old high bicycles, 54in. "ordinaries" with pneumatic tires.

Yachting.

THE special meeting of the Lake Y. R. A. on Saturday promises to be quite as interesting as the recent annual meeting at which the "harumfrodite" rule of a different standard midship section for each class was passed. As we stated at the time, this compromise was too absurd to be allowed to stand, and the matter will be positively settled in one way or another at the coming meeting. A great deal of feeling has arisen among the Lake yachtsmen, some of the leading members of the Victoria Y. C., in concert with Com. Berriman, of Chicago, opposing all attempts to restrict the fin-keel in any class whatever.

So far as existing interests on Lake Ontario are concerned, there is now no cause whatever for any further dispute, as the proposers of the 35 per cent. limit have agreed; in fact this was done at the Rochester meeting to exclude the 27ft. class, and they never intended the restriction to apply to the 22ft. class. This takes out of the fight entirely Hiawatha, we believe the only fin-keel in the 27ft. class, and also disposes of the attempt to represent the 22ft. class fins as martyrs. The only other yacht affected by the limitation of the midship section is Canada, and as she is owned by the proposers of the rule she offers no bar to its adoption with the provision which they are willing to make, that she shall pay a fair handicap for her smaller section.

We are not posted as to the grounds for the opposition from Chicago save that last winter, when the new yacht was first designed for international honors on the lakes, it was decided to make her a fin-keel of the size and general type of the Herreshoff Niagara and Isolde. It will be remembered that when, after the yacht was partly completed, a challenge was sent by Com. Berriman and the Lincoln Park Y. C. to the Royal Canadian Y. C., the latter declined to build to the size of Vencedor, about 52ft. r.l., on the ground that a yacht of this size and adequate draft, particularly a fin-keel, was unsuited to the waters of Lake Ontario, and would prove destructive to the largest existing class, 42ft. r.l. The resulting compromise will be remembered; the challenging yacht—Canada—being in the 42ft. class, while Vencedor was limited to not less than 43ft. l.w.l. length, nor over 45ft. r.l. While Vencedor was of the extreme fin type and construction, Canada was a cutter of very hollow section, but of the usual construction, with deep oak keel and planking carried down nearly to the lead keel.

In spite of the position so strongly taken by the R. C. Y. C. last year in the matter of size, Com. Berriman has been anxious to race this coming season in yachts of 55ft. r.l. and of the fin-keel type; but the R. C. Y. C. has gone even further than last year after its experience with Canada, and is not only unwilling to build out of the 42ft. class, but also wishes to prohibit the fin-keel entirely.

There can be no question that the best interests of yachting, both on Lake Ontario alone and through the chain of lakes, will be served by the prohibition of the fin-keel and the retention of the racing in the 42ft. class, for the reason that there are very few of the active sailing men who can afford to build the modern racing machine of excessive draft, limited accommodation and useless save for racing, of which there is thus far not enough to warrant the construction of a yacht for it alone.

So far as sport is concerned, it cannot be claimed for a moment that the racing suffers in any way because both sides are limited to a certain minimum area of section; it requires just as much skill on the part of the designer to turn out a yacht of Defender's section as one with the section of Jubilee or Pilgrim. The difference in speed between the two types might be a controlling factor on the coast or in England, where the conditions make it impossible to bar the fin-keel, but as between boats of but one type racing together this difference would not be apparent to the expert observer. If, for instance, the fin-keel were barred on the Lakes and two new boats were built this year to the proposed limit of midship section, of the latest construction and rigging, no one could tell in seeing them raced that they were materially slower than two fin-keels. This past year, it will be remembered, the boat of comparatively full section actually defeated the extreme fin-keel.

The Lake yachtsmen have a good deal at stake in this matter. While the present outlook for yachting is most encouraging as compared with the past, it is plain enough that there is much yet to be done to place yacht racing on a firm and satisfactory basis on fresh water. If, with the example of the Atlantic clubs before them, in which, in spite of the many wealthy yachtsmen, it is hard to keep up a few permanent classes even in the smaller sizes, they adopt the extreme racing machine, it means that the racing will be limited to occasional syndicates, and will no longer be the sport of men of moderate means. If, on the other hand, they are willing to work together harmoniously in the effort to restrain that fever of outbuilding which is the bane of modern racing; to limit the size according to the local conditions; to encourage a type that is capable of other uses than mere racing, and, as proposed by the Queen City Y. C., to be first in a new field by placing a wholesome limit on con-

uction—there is no good reason why yachting and yacht cing should not become generally popular on the great in- d seas.

At its last meeting the Royal Canadian Y. C., of Toronto, cided to abolish its present 18ft. class, and to replace it th a 20ft. class, according to the regulations of the Sea- nhaka C. Y. C and the Royal St. Lawrence Y. C. A ecial prize of $100 will be given for the best boat of the w class, and it is hoped to have several at Montreal for the al races of the R. St. L. Y. C.

THE LAKE Y. R. A.

At the request of three members of the council a special eting of the Lake Yacht Racing Association will be held the Tifft House, Buffalo, N. Y., on Saturday, Jan. 16, 2 P. M., for the purpose of considering and passing on following amendments and additions to the sailing rules the Association:

1. The Royal Canadian Yacht Club has given notice that will move at above meeting that Rule III of the racing les be amended by substituting 150 for 125 in the second ragraph of section 2, and by striking out the following ords in such paragraph, "but any yacht built prior to No- mber 7, 1896, which by reason of being required to meas- e with crew on board shall exceed the upper limit of the ss in which she has previously sailed shall be permitted continue to sail in such class, provided her measurement s not been increased since that date, but shall give time owance from her actual r. l., notwithstanding any pro- ion to the contrary in Rule VII"

2. The Queen City Yacht Club has given notice that it ll move that Rule IV. of the sailing rules be struck out d the following substituted therefor: "The area of the mersed midship section of any yacht over 27 feet r. l., ilt after November 7, 1896, or brought to the Lakes after at date, when in racing trim shall not be less than 35 per nt. of the beam at l.w.l., multiplied by the extreme aft wherever found, exclusive of centerboard, if it be not board weighted for ballast.

3. The Queen City Y. C and Royal Canadian Y. C. joint- give notice that they will move that the following be in- ted as Rule V. in the Racing Rules, and that the present le V. be numbered Rule VI., and so on. "The frame bers, keels and planking in all wooden yachts built after v. 7, 1896, or brought to the lakes after that date, shall restricted to the minimum sizes in the table below* and at the council of the Y. R. U. of the G. L. shall settle the le above mentioned, and that when so settled and notifi- tion thereof given to the secretary of the Lake Y. R A., ch table shall be inserted in the said rule and become part ereof; and that the council of the Y. R. U. of the G. L. recommended to employ an expert to advise on said le."

4. The Royal Canadian Y. C. gives notice that the follow- g be added to Rule VII. of the Racing Rules as Sec. 2 ereof: "The Council may from time to time require that y yacht built prior to Nov. 7, 1896, the midship section which is less than 35 per cent. of the beam at l.w.l., mul- ed by the extreme draft wherever found, exclusive of cen- rboard, if it be not a board weighted for ballast, shall give allowance of time in addition to any time required by the les, such additional time to be fixed by said Council."

5. The Royal Canadian Y. C. gives notice that Sec. 3 of ule XIV. is to be amended by striking out the words "of ft. r. l. or under," and also the words, "and must be anned by Corinthians, except that any yacht may carry d use her regular professional crew."

On Jan. 5 a meeting of the sailing committee of the Royal anadian Y. C. was held, at which the following resolution as adopted:

"That in the event of the Royal Canadian Y. C. receiving challenge for an international race this year, and in the ent of Canada being chosen to defend the challenge, the oyal Canadian Y. C. will not require the challenging yacht comply with the rule of the Yacht Racing Union of the reat Lakes restricting the area of the midship section, nor ill it require the challenging yacht's midship section to be a greater coefficient than that of Canada."

In addition to the above, those members of the R. C. Y. C. ho built and raced Canada last season have prepared for esentation at the meeting a deed of gift by which the lver cup won by Canada from Vencedor is made a per- tual international challenge trophy for yachts of the Great akes.

The Queen City Y. C. also held a meeting, at which the llowing resolutions were adopted:

That in the opinion of the Q. C. Y. C. the compromise otion passed at the last meeting of the L. Y. R. A. limit- g the coefficient in the several classes to certain at present nknown quantities, as represented in the boats named, is ot in the best interests of yachting, and will not be accepted y the majority of owners and intending builders.

That the Q. C. Y. C. is still opposed to the restriction of e coefficient or any other element that shall prohibit in the 7ft. and 22ft classes the bulb-fin or any other type of yacht present in use.

That it is desirable that the keel, frames and planking of l new yachts shall be limited to certain minimum sizes, to e tabulated by the Association, that will, while leaving the ope to the designer, at the same time insure a safe and sea- orthy construction.

That the Q. C. Y. C. favors a restriction of the coefficient the larger classes to 35 per cent., when coupled with the roposition as to scantling and the additional provision that l existing yachts below that limit shall give time to the xtent of — seconds per mile for each unit of difference.

That in view of the unsatisfactory result of the Rochester eeting the Council be requested to take such measures as ill lead to a reconsideration of the whole subject.

On Jan. 5 a meeting of the Victoria Y. C. was held at Hamilton, at which the club's delegates to the L. Y. R. A., Messrs. George Webster, Wm. Burnside and T. L. Stephens, ere instructed to oppose the amendments proposed for that eeting, and also to object to the recognition of the delegates om the Kingston Y. C. Com. E. C. Berriman, Lincoln ark Y. C., of Chicago, owner of Vencedor, was elected a ember, and also G. F. Anderson, of Sandusky, O. It was ggested that in the event of the amendments being passed e Victoria Y. C. should withdraw from the L. Y. R. A.; t this was opposed by most of the members.

* In the event of this amendment being accepted, a table of scantling will be prepared by competent parties.

American Model Y. C.

The conditions governing the *Outing* cup for model yachts have just been amended to read as follows:

First—This cup is donated by the Outing Publishing Company, and shall be known as the Outing Model Yacht Perpetual Challenge Cup.

Second—The objects of this cup are to stimulate the building of sailing models of actual buildable proportions, such as can be enlarged up to yachts of actual size, and it is to be competed for as hereinafter directed.

Third—The cup is open to any member of any model yacht club in the United States or Canada, or any individual owner of a model yacht.

Fourth—All challenges must be received by the individual holding the cup at least thirty days prior to the date proposed by the challenge. The challenged party shall name a place for a race within ten days of the receipt of the challenge. A copy of all challenges, and replies thereto, must be forwarded to the chairman regatta committee of the American Model Yacht Club, whose name and address are appended to these conditions.

Fifth—In case the holder of the cup does not acknowledge the receipt of the challenge, and be on hand on the day proposed by the challenger and the place named by the challenged party, or any agreed date and place to defend the cup, nor consummate any agreement as to a time and a place for a race within thirty days after the receipt of challenge, he shall forfeit the cup to the challenger.

Sixth—All challenges must specify the name and address of the owners, the l.w.l. length and greatest beam wherever found, and name of challenging yacht An excess of over 2in by official measurement (on the day of the race) of the length so specified shall bar a yacht from competing.

Seventh—In event of more than one challenge being in hand at one time, the earliest received shall have precedence over the second, the second over the third, etc

Eighth—Models challenging for the cup must not be less than 35in. or exceed 48in. on l.w.l. Beam not to exceed one-third the l.w.l. length.

The racing rules of the American Model Yacht Club, of Brooklyn, N. Y., shall govern all races sailed for this cup, and the regatta committee of that club will have charge of the races when sailed in the vicinity of New York.

In case the cup should be won by anyone residing at a distance from the city and a challenge be received, a committee shall be chosen from some local yachting organization, if possible, who shall provide themselves with a copy of the American Model Y. C. sailing rules and govern the races accordingly.

"FULL TO THE BRIM."
One of W. H. Mullin's Double-Ender Pleasure Boats.

The Payne Bill Again.

After a long rest, in which it has had the opportunity to study some more failures in the shape of American-built steam yachts, and some very fine examples of the Clyde work, the *Marine Journal* takes up the Payne bill again, as follows:

The *Marine Journal* respectfully appeals to the Senate of the United States to pass House bill 8038, which is on the Senate calendar and which passed the House at the last session with but one dissenting vote. This bill amends section 4,216 of the revised statutes and reads as follows:

"Section 4,216.—Yachts belonging to a regularly organized yacht club of any foreign nation which shall extend like privileges to the yachts of the United States shall have the privilege of entering or leaving any port of the United States without entering or clearing at the Custom House thereof or paying tonnage tax, *provided that the privileges of this section shall not extend to any yacht built outside of the United States, and owned, chartered or used by a citizen of the United States, unless such ownership or charter was acquired prior to the passage of this act.*"

The amendment is in italics and is intended to equalize the owning and operating of yachts built abroad, as the owners of such yachts not only receive the advantage of underpaid mechanics in building on the other side, but are also enabled under existing law to navigate their yachts with cheap foreign officers and to ignore the United States inspection laws which have for their object the safety of life and property in steam vessels, and this while they fly the American flag over such vessels.

Since this bill was introduced in the House four of the largest class of steam yachts have been built abroad for American owners at an estimated cost of $2,000,000, and these craft are exempt from all port charges or tax of any kind whatever. All the designers, builders and mechanics engaged in yacht construction in the United States ask is that the American who goes abroad to build his yacht shall pay equal port charges with an American of a foreign-built merchant vessel. The Senate cannot do the industry of yacht building a greater act of justice than by indorsing the action of the House in amending Section 4,216 R. S. at once.

We have already shown that this bill is not in the interest of the American yacht designer, the drafting being largely done by underpaid imported labor in American yards; nor is it to any material extent in the interests of the American mechanic; those who would profit by it are the builders, who after many years of trial demonstrated their inability to turn out the class of vessels which yachtsmen demand. Not a few of the "designers, builders and mechanics" mentioned by the *Marine Journal* as so solicitous for the passage of this bill were born under the British ensign, though they have found it profitable to adjourn to this side of the Atlantic.

The mischievous character of this bill is not at once apparent on the face, nor does the *Marine Journal* aid in disclosing it. It is not merely that the owners of foreign-built yachts would be compelled to pay a certain sum, large or small, but that they would have to go through certain set formalities almost every time they got under way. Take, for instance, such a yacht as Minerva or Clara, brought here by an American owner for the encouragement of sport and the improvement of design and construction. If, after entering and clearing at the port of New York, she should start with the fleet of the New York Y. C. on its cruise, she could go no further than the next customs district without being liable to heavy penalties unless she entered at the custom house of that district. While the rest of the fleet, after a night at Morris Cove, was on its way to Newport, the imported yacht would be involved in all the red tape of the New Haven or New London custom house.

The same thing applies to steam yachts under the law as proposed; their owners would be unable to use them in American waters on account of the endless and interminable succession of formalities in passing from one customs district to another.

As applied to sailing yachts the law is absolutely unnecessary and positively bad; there is now no importation of British sailing yachts, not even enough to keep up a healthy competition; and the law, if passed, would prevent entirely such beneficial experiments as the importation of Clara, Stranger and Minerva.

As applied to steam yachts, the law would have two results: it would keep some of the large yachts, such as Varuna, Margarita II. and Mayflower, constantly in foreign waters, where they now are, and it would prevent some Americans from building at all when confronted with the alternative of a Columbia, a Thespia or an Electra, or no yacht at all.

If the *Marine Journal* is really ready to resume the fight for the Payne bill, we hope that it will at last take up our challenges of last spring and tell who designs the alleged American steam yachts, and what they are worth when completed.

Where Our Spars Come From.

Most of our large vessel spars for several years past have come from Oregon and Washington, and are cut from the tree generally known as the Oregon fir. Spars have been sent here of extraordinary size, one measuring 38in. in diameter; another spar was 172ft long. The average length of these spars is about 90ft, and the diameter from 22 to 23in. The smaller spars are brought from New Hampshire, Vermont or Canada, but probably not 25 per cent of the total used here come from these sections, the rest coming from the Pacific Coast The Oregon fir spar has a great advantage over the white pine mast used some years ago, inasmuch as it has greater strength, and hence less diameter is required for the same height. Shippers have sent some fir decking planks along with the spars in the past, but ship-builders claim it is inferior to white pine and are not using as much as they were. The cut of the Pacific States has as yet hardly made any impression on their timber supply. The lumber cut not alone furnishes the markets of that section to a considerable extent, but also is shipped to the Atlantic seaboard States, to western South America and European ports. Oregon pine, in short, has come to be quite a staple commercial wood England imports considerable quantities of this and California redwood. In our own markets these Pacific coast woods have for some time played a prominent part, and each year seems to develop something new.—*Marine Journal.*

New Yachts.

Thus far the numerous eager New York yachtsmen who were only awaiting the speedy settlement of the draft question before placing their orders have shown the traditional backwardness in coming forward, and but one yacht, the 51-footer for Mr. Hoyt, is under way. In Boston there is going up a fleet that, though of small size, at least promises good racing. Lawley & Son have two new orders for knockabouts: one a racing boat for Frank E. Peabody, an old racing man; the other for Samuel Noyes, Jr. Bo Peep has been sold to Mr. Pickman, of Beverly, and the new 19ft. c. b. knockabout in the shops has been sold to J. P. Morgan, Jr., of New Rochelle. Two new knockabouts are now well under way in the shops: the Pardon boat for Walter Burgess, and the other 24ft. keel boat for Mr. Proctor. The firm has just booked a larger order for one of the handy steam yachts for which it is noted. She is for Mr. Spoor, of Chicago, and will be 105ft. over all, 87ft. l. w. l., 15ft. 6in. beam, 6ft. 6in. draft, of composite construction and with triple expansion engine, with schooner rig.

YACHT DESIGNING.—XII.

BY W. P. STEPHENS.

[*Continued from page 35.*]

THE model shown in Fig. 21 is of unknown origin, an old-time fishing schooner with the cod's head and mackerel's tail. It will be noticed that the topsides amidships have a slight *tumblehome*, the breadth at the upper side of the third lift being greater than the breadth on deck. The model is of white pine, 31½in. long, the scale being ½in. to the foot, so that the vessel herself would be about 60ft. "on the keel," as these craft were measured. The model is a typical one in that it represents only the form of the inner surface of the planking, and not the complete exterior surface of the vessel. The stem, keel, sternpost, rudder, centerboard and masts are left entirely to the imagination. The model was cut by the builder, every third frame station was marked on it at intervals of 3in., equal to 6ft. in the vessel; it was taken apart, the lifts being fastened by the two dowels shown, and the half breadths at each station were measured with a carpenter's rule and marked in pencil on the lifts. From these rough *offsets* the lines were laid down on the mould loft floor and the moulds for the frames were made. The exact shape of stem, keel, rudder, etc., and the location of the centerboard and masts, were all determined by the builder as the work progressed, and no record of them was made on the model. In all probability, no drawing was ever made.

The method of drawing without the actual model, of performing all the operations of cutting and drawing the sections by means of the imaginary planes described in the previous chapter instead of the material saw, is not only easier when once understood, but more rapid, thorough and conclusive. In order to explain this method in a very short time and with few words, the models shown in Figs. 20, 22 and 23 were made by the writer for use in the lecture mentioned in a previous chapter. Fig. 20 is merely the usual half model of a yacht—in this case an attempt to copy by eye the then new wonder, Gloriana. Fig. 22 represents the same model in skeleton, the section at each station being cut out of cardboard and mounted on a wire in its true position relative to its fellows. The outlines of the model were formed by wires lashed to the proper points on the cardboard sections, and other wires were run to represent the "*load waterline*" and the "*middle bow-buttock line.*" The large wires supporting the sections were fastened in the bottom of a box, the front and top being absent, the wires being parallel to the back of the box. The dropping of the stern shown in the figure is due merely to a collision in the process of photographing, and is not the serious and irremediable defect that is too often seen in even prominent yachts.

The immediate purpose of these two models was to present directly to the eye the solid model, with its curved surface free from all lines, as in Fig. 20, and the same surface as indicated by the mere skeleton of lines formed by the edges of the sections and the wires. From these two it is hoped that the reader, even though unfamiliar with the imaginative processes of marine drafting, will grasp the idea of the cutting of lines from the surface of a solid by imaginary planes

The various intersecting or *auxiliary planes* in this case are indicated on the different sides of the box surrounding the skeleton model. There are first the vertical planes across the model, indicated by the cardboard sections, by vertical lines on the back of he box; and corresponding lines across the bottom, as in Fig 23. Then there are the horizontal planes, indicated by the lines on the back and ends of the box, the upper one also by the wire representing the *load waterline.* Then there is the vertical plane parallel to the back of the box, indicated by a vertical line on each end and a horizontal line on the bottom, as well as by the wire representing the *middle bow-buttock line.*

The lines being thus cut from the surface, the next step is their projection on the sides of the box, the *coördinate planes.* From the wire representing the l.w.l. a silk thread is run vertically at each station to the bottom of the box, indicatting the projection of the l.w.l. on the bottom, as better shown in Fig. 23. The projection of the *bow-buttock line* on the back of the box is plainly visible in both figures. The projections of the outlines of the different cardboard sections on the ends of the box were originally indicated by silk threads drawn from points along each section to its corresponding projection. In order to make this part perfectly clear, the sections from the middle forward are projected on the end next the bow, and those from the middle aft on the end next the stern.

The relation of the solid model to the skeleton, and of the lines composing the skeleton to their corresponding projections on the various sides of the box, being now clearly understood, we may go a step further by folding back the sides and the bottom of the box (Fig. 23), which are hinged to the back, until they are all in one plane, coincident with the surface of the drafting table, showing, if our work has been sufficiently clear, the final relation between the sides of the box on which the lines of our model have been projected and the flat drawing of the designer.

In the skeleton model comparatively few lines are shown, for the sake of clearness, but in Plate I. the same design—Fig. 23—is shown on a larger scale and with all the necessary lines of a complete drawing. From this time on the original conception of the solid model may be relegated to a secondary place, and we will deal directly with the flat drawing on paper and its numerous straight and curved lines; through these alone, by practice, being enabled to see in imagination the solid form of the vessel.

In examining the different lines we will take up first those which form the basis or foundation of the drawing rather than the shape of the model, beginning with the *base line.* This is a horizontal line parallel to the lower edge of the paper, and forming the bottom of each of the three plans, though in Fig. 24 it is represented at the top of the *half-breadth plan.* This is the first line drawn in beginning a design. Parallel to the base line in the sheer plan and body plan are numerous straight lines known as *level lines,* or sometimes as *waterlines,* the former term being the more exact. One of these lines, the *load waterline,* commonly denoted by the letters l.w.l., is of special importance as the initial point of every modern design. The term *waterline* is manifestly correct when applied to the *level lines* below the l.w.l., but is less directly applicable to those above; for this reason it is preferable to use the term *level line* to cover all of these lines, whether above or below water. The *level lines* are designated in various ways, there being no one recognized method; sometimes they are numbered continuously from the top or from the bottom, sometimes the l.w.l. is called No. 1, the numbers running downward from it and those above being lettered. We have found it convenient to designate the *load waterline* as l.w.l. and to number downward, the first *below* it being called W1, the next W2, etc. The first *above* the l w.l. is called A, the second B, etc.

The level lines are invariably straight in the sheer and body plans, and they may be drawn in at the will of the designer, being spaced at equal intervals, usually some even figure, as 6in , 1ft., 2ft., etc , according to the size of the drawing. In the half-breadth plan the level lines are always curved, unless the vessel be a scow, and they are drawn in as other portions of the work are advanced.

Next in importance come the *stations,* or *square stations,* the former term being sufficiently definite and thus preferable. These lines are straight and vertical in both the *sheer plan* and the *half-breadth plan,* and, like the *level lines,* they may be located at will and drawn in with the very beginning of the design. In the *body plan,* however, they are curved, and can only be drawn in later.

In the location and designation of the *stations* there is no uniformity, as already explained; in the old models they were located where the frames were to come in the vessel, and this practice is still followed by many

The starting point for laying off the stations on the old models was the *midship section,* or dead flat. In nearly all the old vessels there was what was termed a *straight of breadth,* or *dead flat,* the middle portion of the vessel being of one uniform size and section for an appreciable distance

Fig. 22.

before beginning to taper toward bow and stern. The section at this portion, necessarily the greatest cross section of the vessel, was termed the *midship section,* or *dead flat,* and the mould for this section served for several frames at least. The terms *straight of breadth* and *dead flat* are now obsolete so far as yachts are concerned, and largely so in other vessels, but the term *midship section* is still retained, and always will be. Unfortunately the term itself is incorrect and rather misleading; the *midship section* is not the section amidships, at the middle of the vessel; it is very seldom indeed that it is located there; formerly it was forward of the middle, now it is invariably aft. It is in reality the section of greatest breadth, and might much more properly be termed the *beam* section than the *midship* section.

It is seldom, however, that the greatest breadths on the different level lines occur at the same station. In order to

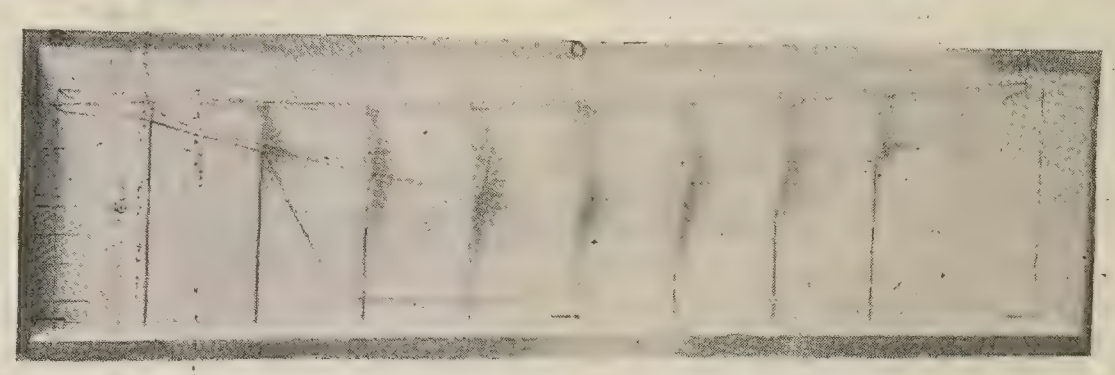

Fig. 23.

obtain an easy entrance, the designer carries the point of greatest breadth on his l.w.l. well aft of the middle, and to obtain at the same time an easy run he begins to cut away forward of the middle down toward the keel. This is shown in Plate I., the greatest breadth on deck being at *Station 7,* while the greatest breadth on the different *level lines* as we go downward approaches nearer to *Station 6.* The dotted line, *m s,* between Stations 7 and 6 in the *half-breadth plan,* shows the position of the largest transverse section of the yacht. This section is called a *raking midship section,* as the breadths on each successive level line are not in the same vertical, but in an inclined line. The true midship section, as will be shown later when we come to the subject of the proper distribution of the bulk through a *curve of areas,* is at the widest part of this curve, or in the present case just forward of Station 7.

In the old models and drawings the *midship section,* this clearly defined point of location of the largest frame, was the initial point for the laying off of the stations, and they were spaced forward and aft from it at intervals of one, two or three frame spaces. The *midship section* was indicated by this mark ⊠ or a similar one; the frames forward of it were denoted by letters, a, b, c, etc., and those abaft it by numbers, 1, 2, 3, etc ; thus a lettered frame was always in the fore body and a numbered one in the after body. In Fig. 21 the stations are marked in this manner: the midship section thus ⊠ , the next station forward being c, the two frames a and b being omitted, and similarly aft, 3, 6, etc.

In most of the work of the old shipyards the l.w.l. was never considered; it was not used in any way for measurement or tonnage, the *length on keel* or on deck being of far more importance, and the base line of the model or drawing was often the bottom of keel or the rabbet line, the level lines being thus out of parallel with the l.w.l. and the stations out of square to it.

In modern vessels, and especially in the sailing yacht, the l.w.l. is of the first importance; even in cruising craft the proper displacement can only be decided on by first assuming some waterline at which the yacht shall float, and in racing craft, in addition to the necessity for some exact amount of displacement, the l w.l. is the most important factor of measurement. Instead, then, of beginning at the midship section, we will take the load waterline and establish our first station at its fore end, where it intersects the line of the stem or keel, from this point laying off all of our stations.

At first sight it might seem desirable to follow the old method, and locate the stations in conformity with the frames, but there are good reasons against doing this. For purposes of calculation it is necessary that the under water portion of the hull shall be divided into some number of equal spaces or *intervals,* and also that there shall be an even number of *spaces.* Taking then the two ends of the l.w.l. we can divide the distance between them into 8, 10, 12 or 16 equal parts. A division of 10 is most commonly used, as it gives quite enough stations; in fact, 8 is usually enough, but of all divisions we prefer 12 It will be found convenient in first getting the design into form to use a small number of stations, but when it comes to the final fairing a larger number is necessary. If 12 intervals be used, all of the preliminary work can be done by omitting each alternate station leaving 6 to work on, then in fairing the omitted stations will be run in. If 10 be used the half will be 5, an uneven number that cannot be used for the calculations If 8 intervals be used, the half, 4, makes too few stations; and if 8 be used for the preliminary work, twice this number, 16, makes additional work in the final fairing, taking off offsets, etc., and is no more accurate than 12. We will then divide our l w.l. into 12 equal parts, continuing the same division along the prolongation of the l.w.l. at each end, so as to include the overhangs.

It is probable that this spacing will not bring the stations coincident with the most desirable spacing of the frames when we come to build, but this is a very small matter. At present we are concerned simply with the drafting of the outside of the hull and not the construction. This portion of the work properly done and the lines complete on the board, or laid down on the mould loft floor, it is merely a matter of a few hours' drawing to run in the extra lines of the frames or moulds at the required points.

As in other similar matters, there is no uniformity observed in designating the various stations, but the numbering begins at the fore side of the stem at deck, at the fore end of the l.w.l., or even at the after end of the design The best system is that shown in Plate I., the station at the fore end of the l.w.l. being numbered 0 and that at the after end 12. These two and their intermediate stations are the ones used in the calculations, and the numbering is thus in uniformity with the method followed in the calculations: that of the multipliers used in calculating the position of the C B, C R, etc. Abaft the l.w.l. the numbering is continued for the stations of the counter; forward we have found it convenient to use the alphabet reversed, Z for the first station forward of the l.w.l., Y for the second, etc., as shown; there are seldom more than three such stations. It would be more natural to use A, B, C, etc., for the fore end of the yacht, but this is confusing, the same letters being already used for the upper level lines.

This method of division and marking makes it an easy matter to compare different drawings, No 0 is always the fore end of the l w.l., No 12 the after end, and No. 6 the middle. If the last station is No. 15, it shows that the after overhang covers at least three intervals, or is of one quarter the length of the l.w.l.; Z is the station just forward of the l.w.l., No. 4 is at a certain place in the fore body, and No. in the after body. To appreciate the advantage of following some one system, it is only necessary to attempt to compare three drawings: one with the stations marked in this way one with all numbers beginning at the extreme point of the bow, and one with the fore end of the l.w.l. numbered 1 The *base line, level lines* and *stations* are arbitrary lines that may be located by the designer at will; we will now take up another set of lines, those which indicate the bounding surfaces of the half model.

The first of these is the *keel line* in the *sheer plan,* or, for broader term, the keel contour. This line shows the outside of the stem, keel, sternpost, rudder and counter, as projected on the *sheer plan.* The projection of the same parts in the *half breadth* and *body plans* is called the *side line.* It usually happens in modern yachts that the lower part of the keel does not present a flat bottom and two straight sides, as shown in the figure; but that the angle is boldly rounded off, the section of the bottom of the keel being sometimes a semicircle. It is most convenient, however, to draw the keel with a flat bottom and a positive angle, as in the figure, in order to get a *side line* for the ending of the stations. After other parts are completed, the rounding-off of the corners of the keel to any desired extent may be drawn in, as in the present plans.

The *side line* shows the half breadth of the stem, keel, etc., at the outer and lower surfaces.

The highest line of the *sheer plan* we will call the *sheer line,* representing the upper edge of rail, bulwark or deck, as the case may be. There are at this part of the vessel number of lines that are usually shown: the upper and lower

PLATE I. ENLARGED LINES FROM FIGS. 22 AND 23.

edges of the *rail*, the upper and lower edges of the *plank-sheer* (or outer strake of the deck), and possibly the line of moulding, gilt stripe, etc. Some of these lines belong solely to the construction, and though they are usually shown in the main design they have no place there. We propose to leave to their proper place in the construction drawings all such lines, and for the sake of clearness and simplicity to deal here only with those lines necessary to define the form of the hull Until a recent period, some of these lines were necessary because of changes of exterior form about the bulwarks and rail; the former being set in a little from the plankshеer edge, and having an independent flare from that of the hull proper. In all modern yachts, whether of wood or steel, the bulwarks are simply a continuation of the fair line of the side; the only lines visible to the eye are the rail and the moulding or gold stripe, and there is nothing to show the height of the bulwark above the deck, or where the two join. All that the designer need concern himself with for the present is the rail, as it shows to the eye above the paint of the topside, and the moulding or stripe which he will use at some distance below it (not necessarily just at the deck) as a foil to it and to break the surface of the topsides. This upper line of all, the top of the rail, we will call the *sheer line*. It is sometimes convenient to run in also the line of the upper edge of the plankshеer or deck, as in the present case. The center line of the middle of the deck is also shown. The sheer line appears in the body plan, forming the upper ending of the stations.

The same line is known in the half-breadth plan as the *deck line;* at least it will be convenient to call it such As in the sheer plan, more than one line may be drawn here, the half breadth of the top of rail, top and bottom of bulwarks, and top of plankshеer, but so many lines are only confusing and entirely unnecessary; we will dispense with all but one, the intersection of the outer surface of the planking, plating or bulwark with the upper side of the rail. There will really be rounded moulding to the rail and not a sharp edge, but this may be disregarded. This line will not always be the true *deck line*, but it is convenient and sufficiently accurate to call it so. There is another small line, the intersection of the main surface of the counter with the after surface, which appears as a curved line in all the plans; it is called the *cross seam*.

We now come to a third set of lines, cut from the hull by various auxiliary planes: the *diagonals*, *dividing lines*, *bow buttock lines*, *inclined waterline*, etc. These lines appear as straight in some plans and curved in others.

A Christmas Yacht Race.

FORT MEADE, Polk County, Fla , Dec. 28, 1896.—*Editor Forest and Stream:* About eight miles N.E. from here is a fine sheet of water called Lake Buffum, five miles long and nearly two miles wide, with shallow shores for the most part and pine trees and bay heads down to the water's edge. Several small sail boats, called yachts by courtesy, are kept by the numerous residents on its shores, and a boating club has been formed. To keep up and increase the interest in boat sailing, to which the writer is passionately devoted, he has given to the club a cup of no considerable value, but simply a trophy to be competed for as a perpetual challenge, the winning of which is wherein lies the honor and glory, and not in the holding thereof. The first match, then, was arranged to come off on July 4 of this year, but a storm raged nearly all day. Two boats sailed over the course, one of which went ashore, a lee shore at that, and had to wait until the gale moderated before setting sail again; the other took the cup and held it until a day or two ago, when it came into the hands of the original giver by right of conquest, and this was the way of it:

It blew hard from N.N.E. all Christmas Day, a cold, icy wind, that even here made one shiver at the thought of facing it close hauled in a dead beat to windward, but the day after there was a change for the better, and the rivals for cup honors—there were three this time—determined to race at all costs.

There was Waterwitch, who won on July 4, and Lady of the Lake, who did not; also Defender II., a boat of untried caliber and speed, with a scanty spread of canvas.

Quite a party from the previous day's festivities assembled under the trees on the bank to see the start, the course being triangular, one and one-half miles to a leg. The wind being about N.E. by E., the course was laid E. by S. to the first mark, then N E. to second mark, and from there W. S.W. to the starting line.

The start was a flying one, Lady of the Lake getting off first, her new mainsail drawing well, at 3:10 P. M. Defender II. followed at 3:11 P. M., and Waterwitch last at 3:13:50, she having failed to make the line between the two buoys —which was a narrow one and too near the shore—at the first attempt. The wind was very flawy, but not nearly so cold, and excitement kept the crews warm. Lady of the Lake, who carried Fred W. Porter, a graduate of Annapolis, as crew and sailing master, with the present scribe at the helm, held her own to the first mark, having to make one tack to fetch it, when getting into shoal water at the turn and the wind failing she lost a little time, enabling the others to catch up and Defender to get around first, although the owner, sailing single-handed, was disqualified for sculling around the mark, he using an oar for a rudder, which gave him a better time at the finish than he was entitled to. Waterwitch came up about the same time and rounded the mark last, but only just astern of Lady of the Lake, who quickly got away and picked up Defender and went on a hunt after the second mark on the port tack, which she held until nearly abreast of it, and then went about to the eastward to get to windward of the mark and run down to it; this maneuver Waterwitch had executed soon after rounding the first mark, and was coming for the second, but she was too far off, barring accident, to be feared.

Defender crept along, and with a little more sculling from the stern, under the lee of the land, the wind being light, made the second mark first. Lady of the Lake soon followed, and eased sheet and hauled up her centerboard for the run home, going easily past Defender, who was never dangerous, and with a good lead on Waterwitch. Great cheering greeted the winner when she got in, followed by her two rivals, and the cup was gracefully handed over. The official times are as follows:

	Start.	Finish.	Elapsed.
Lady of the Lake.....	3 10 00	4 56 30	1 46 30
Defender II.....	3 11 00	5 02 25	1 51 25
Waterwitch.....	3 13 50	5 06 12	1 52 22

Lady of the Lake thus won by 9m. 42s. elapsed and 5m. 52s. corrected time from Waterwitch, which was well handled by Fred W. Oren, owner, with Joe Whittaker as crew.

Beverly Y. C. Fixtures.

THE Beverly Y. C. announces the following fixtures for races south of the Cape. The date of the open regatta at Marblehead is not yet settled:

JUNE.

17. Club house, first open sweepstakes.
26. Club house, first championship.

JULY.

3. Club house, second open sweepstakes.
5. Club house, second championship.
24. Club house, third open sweepstakes.

AUGUST.

7. Club house, third championship.
14. Club house, fourth championship.
21. Marion—A. M.—cup race.
21. Marion—P. M.—first open regatta.

SEPTEMBER.

4. Club house, fourth open sweepstakes.
6. Club house, second open regatta.
11. Club house, fifth championship.

W. LLOYD JEFFRIES.

YACHTING NEWS NOTES.

It is reported that Archibald Watt, owner of the steam yacht Meteor, will shortly build a steam yacht of American design, to be 290ft. over all, 254ft. l.w.l., with twin screws and a speed of 20 knots.

The new steam yacht for Howard Gould has progressed no further than the consideration of plans, and the yacht will not be built for some time. She will be about 260ft. over all, 235ft. l.w.l., 34ft. beam and 15ft. draft.

Norna, schr., now on a cruise around the world, has reached Norfolk, Va., where she is tied up by a libel for $3,000 for work done in fitting her out.

The Royal St. Lawrence Y. C. has recently sent out the following circular: "The Royal St. Lawrence Y. C. having, as was announced by the circular letter of Nov. 15, accepted the challenge of the Seawanhaka Corinthian Y. C. for the Seawanhaka international challenge cup for small yachts, and the conditions governing the contest having been arranged, can now announce both these conditions and those which will govern the trial races for the selection of its representative yacht for the defense of the cup. The contest being an international one, the Royal St. Lawrence Y. C. hopes to interest other Canadian clubs to assist in the defense of the cup in order that the fastest 20 footer may be selected as its representative. The club has accordingly arranged for open trial races, to be held on Lake St. Louis early in August, preceding the match, which will be sailed on the same waters, beginning about Aug. 14. Prizes for place in the trial races and a suitable trophy to the yacht winning the cup match will be given."

At Pepin, Wis., on Jan. 1, Capt. I. A. Fuller's ice yacht Tempest and Com. R. M. Anderson's Lorna collided on Lake Pepin. Each boat carried three men. The former was in charge of Claude Fuller and the latter in charge of O. L. Murray. Tempest was coming in from a run at a mile a minute, and Lorna was maneuvering for a landing. The boats came together at right angles, and the crash was heard all over town. The men were thrown in all directions. Glen Murray was knocked senseless, and lay in that condition for some time. He has a bad cut on the head. George Murray was cut on the head, face and knee, and may be crippled for life. Had Lorna been running at a high speed none could have escaped. Neither sailor saw the other boat until the crash came.—*Chicago Tribune.*

There are now about two score of aged inmates in the Webb Academy and Home for Shipbuilders, and several worthy young men are, under the provision of its endowment, obtaining free instruction in the trade of shipbuilding. The institution is pleasantly situated on Fordham Heights, at Sedgwick avenue and Academy street, and its management is on lines most agreeable to its beneficiaries. The school of instruction is in charge of competent men. The current expenses of the academy and home during the year aggregated a little under $30,000, all of which was provided as it was needed by Mr. Webb. The secretary of the institution is Stevenson Taylor, and the treasurer T. F. Rowland.—*Marine Journal.*

The nominations of the New York Y. C., recently posted, for the annual election on Feb. 11, are as follows: Com., J. Pierpont Morgan, steam yacht Corsair; Vice-Com., L. Cass Ledyard, schr. Montauk; Rear-Com., August Belmont, cutter Mineola; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Dr. Morris J. Asch; Regatta Committee—John C. Barron, Theodore C. Zerega and Dr. W. Barton Hopkins; Committee on Admissions—Edward M. Brown, C. Oliver Iselin, L. Cass Ledyard, W. B. Duncan, Jr., and James A. Wright; House Committee—E. E. Chase, F. M. Cronise, F. H. Davies, C. L. F. Robinson and Alfred Grymes; Library Committee—Fordham Morris, Arthur H. Clark and A. V. H. Ellis; Committee on Flag Stations—Wm. H. Thomas, 1, Bay Ridge; Frederick H. Benedict, 2, New York, East Twenty-sixth street; F. A. Schermerhorn, 3, Whitestone; L. Vaughn Clark, 4, New London; Tarrant Putnam, 5, Shelter Island; Frederick P. Sands, 6, Newport; Frederick Grinnell, 7, Vineyard Haven; John P. Duncan, 8, Atlantic Highlands; A. L. Barber, 9, Ardsley-on-Hudson; E. R. Ladew, 10, Glen Cove.

The annual meeting of the Seawanhaka Corinthian Y. C. is being held as we go to press; the nominations are as follows: Com., Henry Clark Rouse, schr. Iroquois; Vice-Com., S. Van Rensselaer Cruger, slp. Indolent; Rear Com., Henry A. Van Liew, steam yacht Aquilo; Sec'y, Charles J. Stevens; Treas., Walter C. Hubbard; Measurer, John Hyslop; Fleet Surgeon, Dr. Valentine Mott; Fleet Chaplain, George R. Vandewater, D. D. Trustees: To succeed Charles H. Leland, W. Emlen Roosevelt and Henry Stanton, resigned; and in place of William Foulke, Walter C. Hubbard, Walter C. Kerr and Auguste P. Montant, whose terms of office expire, but who are eligible for reëlection—D. Leroy Dresser, Frederic de P. Foster, Bayard F. Foulke, Henry W. Hayden, Henry Marquand, Leon F. d'Oremieulx, Charles A. Post and Gordon Wendell. Race Committee: Oliver E. Cromwell, D. Leroy Dresser, Walter C. Kerr, Charles A. Sherman and C. W. Wetmore. Committee on Lectures and Entertainments: Clarence Goadby and Herbert L. Satterlee. Committee on Lines and Models: John Hyslop, A. Cary Smith and W. P. Stephens. Law Committee: F. Kingsbury Curtis, Alfred Ely and F. de P. Foster.

Reva, steam yacht, Joseph Leiter, arrived at Tampico from Progresso on Dec. 22, having lost one blade of her wheel. She reached Galveston in tow of a tug on Jan. 10.

Rialto, steam yacht, S. P. Hedges, sunk at her wharf in Greenport on Jan. 5, her condenser pipes having burst with the frost.

The special committee of the Atlantic Y. C. has recommended the removal of the club station to Norton's point, and the question will now be submitted to the club. The proposed site is 200 by 600ft. on Gravesend Bay, just inside the point. The present house will be moved and greatly improved if the plan is carried out.

At Racine, Wis., on Jan. 2 Frank W. Cutler, deputy United States marshal of Milwaukee, sold the schooner yacht Crusader, of Chicago, to satisfy a claim of Milwaukee parties amounting to $365. The boat was bid in by Attorney Marks, of Milwaukee, for other parties for $530. None of the owners of the boat appeared. Crusader is moored at the dock of the Racine Boat Manufacturing Company. She was the pioneer schooner yacht on Lake Michigan, and at one time was the pride of the Chicago fleet, and owned by Commodore Paulson, of the Columbia Y. C., Chicago.—*Chicago Tribune.*

It is reported that Queen Victoria will soon have a new royal yacht to replace the present ancient craft, Victoria and Albert.

Canoeing.

The Paddling Trophy.

Editor Forest and Stream:

Allow me to heartily second the views of Mr. D'Arcy Scott as published in your last issue. That a paddling canoe of reasonable dimensions, of use in all the A. C. A. paddling races, is desirable cannot be questioned. Paddling is a branch of athletic sport intended to compare the relative merits of racing men, and such comparisons are all but useless where there exists any great disparity in the canoes used.

The A. C. A. meets are getting to be more expensive pleasures each year, and to be obliged to transport a fleet in order to race may be the means of deterring some racing men from attending meets and entering the races.

I agree with Mr. Scott in all respects but one—that is, the limiting of "fours" to a standard 30in. canoe. To those who have been fortunate enough to attend the meets, the sight of a small canoe loaded with four good big men shoveling water into their nearest competitor until he is swamped is not altogether unknown. Such a canoe is built for two or three persons when used at moderate speeds, but is totally unfit for four men working with might and main to force her through the water. The result of this overloading is the question asked by some crew, "Did we fall or were we pushed?"

In the main, however, the idea of a standard canoe for all single and tandem events is good. One of the main objections to the racing machine is its tendency toward making racing a serious business, of professional influences. When a man beats a competitor under even conditions there is some satisfaction and honor in the doing.

Canoeing is a developer of men, and a real sportsman does not require an egg shell to beat another in a 50lb. boat. Now I'd like to have a go at Scott myself; but would I race in a good, wholesome canoe against Scott in an oiled silk canoe with a mosquito netting deck? Nit. ILEX.

Red Dragon C. C.

THE Red Dragon C. C., of Philadelphia, held their annual club mess at Dooner's Hotel on Tenth street on the evening of Jan. 5. The banquet hall was handsomely decorated with the club colors, while the menu card was printed in colors with the Red Dragon insignia, and each was attached to a miniature paddle, making a very neat and appropriate souvenir. At 6 o'clock thirty of the members assembled at the table and enjoyed a fine spread. Com. W. J. Scott presided and J. E. Murray acted as toastmaster. Speeches were made by ex-Com. A. S. Fenimore, who spoke with feeling on "How it Feels to be Commodore—Nit." M. D. Wilt responded to a toast, "How to Tackle in a Football Game." C. H. Zimmerling responded to "What I Don't Know about Shooting Clay Pigeons." H. W. Fleischmann gave a humorous recitation in his usual clever manner. Harry Blumner followed with a recitation which was warmly received. H. E. Bachmann gave an imitation of Prof. Kelier in feats of magic. William Peters also performed some sleight-of-hand tricks. J. W. Hamilton responded to the toast, "My Half-Rater." H. M. Kreamer gave a toast on "The Great Ball Game." Some entertaining clog dancing was given by Bachmann's nigger boy. Dr. F. O. Gross was presented with a trophy, accompanied by a toast from Mr. Murray. The doctor responded with a rousing speech. After the table had been cleared, the club orchestra, consisting of J. E. Murray as leader, with violin, H. W. Fleischmann mandolin, E. W. Crittenden flute, and F. R. Wise with guitar, rendered music which enlivened the occasion. Songs by Messrs. Wise, Bachmann, Wilt and R. G. Fleischmann were well received. The evening was a most enjoyable occasion, and the Red Dragon C. C. are bound to prosper for many years to come. W. K. P.

THE Red Dragon C. C., of Philadelphia, held its annual election at the Colonnade Hotel on Jan. 2, the following being elected: Com., W. J. Scott; Vice-Com., John M. Hamilton; Purser, Omar Shallcross; Quartermaster, R. G. Fleischmann; Correspondent, Will K. Park; Fleet Surgeon, Dr. W. C. McFetridge; Meas., H. E. Bachmann; Trustee (to serve for three years), Charles Barton Keen; House Committee: H. M. Rogers, C. H. Zimmerling, Lloyd R. Titus, A. S. Fenimore.

The purser's report showed the club to be in good financial condition, and considerable enthusiasm was expressed by the members over the bright prospects for the next season's sport. The regattas given by this club are always well attended and are very pleasant, both from the boating interest and the social features.

There will be some new boats in the fleet next season. R. G. Fleischmann contemplates building a 15-footer from designs of H. E. McCormick. She will be constructed on the composite plan.

A Sea-Going Canoe-Yacht.

THAT variety of heavier and stauncher canoe-yawl which the FOREST AND STREAM was the first to call the "canoe-yacht" has been but little used in this country, but is still quite popular in England. The *Field* of Dec. 12 publishes the lines of an excellent example of the type, Tavie II., designed by Albert Strange, of Scarborough, of the Humber Yawl Club, and built by Bond, of Birkenhead, for John D. Hayward, of the B. C. A. The boat is used about the Mersey, and often in very rough water, her owner cruising single handed, though she has good room for two. She is 22ft. over all, 19ft. l.w.l., 6ft. 4in. beam, and 2ft. draft of hull, which includes about 8in. of keel—11cwt. of iron. The centerboard is of iron, weighing 235lbs., and is placed so far forward as to leave the small cabin unobstructed; when down it draws 4ft. There is a small and deep cockpit, with a bulkhead aft, forming an after compartment, and one forward, at the after end of the cabin. The cabin top lifts to give head room when at anchor. The boat is very fully fitted with lockers, shelves, etc. The rig is small to American eyes, but 240sq. ft. in all—165 in mainsail, 40 in mizzen, and 55 in a roller jib.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

ATLANTIC DIVISION.

Name.	*Residence.*	*Club.*
Frank M. Pinckney	111 Broadway, New York	——

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., Dec. 28.—The members of the Columbia Pistol and Rifle Club were early on the range at Shell Mound yesterday. This was the last shoot for the season of 1896, and several of the medal matches (re-entry in some of them being allowed) were close; hence the anxiety to put in a few more scores before it was too late.

The San Francisco *Call* of to-day's date give the following list of prize winners:

"On the rifle range, Columbia target, the competition for the Unfred diamond medal, one of the most beautiful trophies ever put up for a rifle competition, was the most spirited of any in years. Adolph Strecker in the morning was ahead by a very few points, D. W. McLaughlin and F. O. Young being close behind him. Ticket after ticket, three-shot scores, were fired until the targets closed on all re-entry matches at 3 o'clock; but Strecker won, beating Young by 3 points and McLaughlin by 4 points.

"On the 50yd. range there were several spirited contests. C. M. Daiss was determined to win the splendid pistol medal presented by Gordon Blanding. He was closely followed by Pape and J. E. Gorman, but when the day closed Daiss was ahead by several points. The Carr pocket revolver medal for several weeks past had been conceded to Gorman, but Carr, the donor, thought he would show that he is still champion of the American weapon, and he won the trophy, which he will put up for competition again next year.

"The pretty medal presented by Dr. L. O. Rodgers, president of the club, for the ladies to compete for, was carried off by Mrs. L. J. Crane. This lady is a fine shot with the .22-caliber rifle, for she also won the Glindemann ladies' trophy on a single score of 26 points in ten shots. Mrs. M. J. White also had 26 points, but Mrs. Crane won on Creedmoor count, going back to the sixth shot to win. Mrs. C. F. Waltham was only 3 points behind. In the same class of shooting, .22-caliber rifle, there was a hot spurt between Ed. Hovey and E. Jacobson for the unique medal presented by Colonel S. I. Kellogg. Hovey, however, pulled ahead.

"The Siebe medal for the military rifle fell to Young. The first regular re-entry scores were as follows:

"Rifle, Unfred diamond medal, 3-shot scores, re-entry: D. W. McLaughlin 8, 11; F. O. Young 9, 10; A. Strecker 9, 10. Rifle record medal, 10-shot scores, re-entry: F. E. Mason 67, H. D. Wicker 76. Most flags during the month: F. O. Young 9, D. W. McLaughlin 8, A. Strecker 8, F. H. Bushnell 2, A. H. Pape 2.

"Pistol, 50yds., Blanding medal, 3 shot scores, re-entry: J. E. Gorman 8, C. M. Daiss 13. Revolver, Carr medal, 5-shot scores, re-entry: H. Carr 22, 23, 28, 31; J. E. Gorman 30, 37, 41. Twenty-two caliber rifle for ladies, Rogers medal, 5 shots, re-entry: Ed Hovey 9, 10; E. Jacobson 10, 12; S. I. Kellogg 11, 13; A. H. Pape 11, H. R. Crane 20.

"Revolver match, 6-shot scores: J. E. Gorman 30, 31; H. Carr 31.

"Then came the tug-of-war of the day. Colonel S. I. Kellogg and Howard Carr 'chose sides' and made a team match, composed of all the Columbias present. Each shot five shots with the rifle at 200yds. and five shots with the pistol at 50yds. Colonel Kellogg's team won by a good majority. The scores were as follows:

"Captain Kellogg's team: Dorrell 55, Pape 56, Mrs. Crane 63, Dr. Rodgers 64, Poulter 67, H. R. Crane 69, Hooey 70, Kellogg 70, Bushnell 77, Jacobson 81, Daiss 86, Glindemann 114, White 117, Mrs. Waltham 147. Grand total 1,136.

"Captain Carr's team: Young 66, Gorman 72, McLaughlin 85, Kuhnle 83, Mason 91, Strecker 86, Barrere 110, Mrs. White 59, Waltham 86, Bremer 116, Wicker 56, Forrest 127, Lewis 173. Grand total 1,209.

"A. B. Dorrell, making the highest scores on both ranges, was crowned Chief of the Columbias, an honor he will hold during the ensuing year.

"The club then repaired to the park dining room, where Capt. Siebe spread a banquet, with all the market affords. While the banquet was in progress the president, Dr. Rodgers, presented the winners with their prizes, accompanying each presentation with a neat speech. The following were the medals, the winners and their scores. In the re-entry the next highest to the winners are also given:

"Class medals, rifle, 10 shots, four best scores: Champion class, D. W. McLaughlin, 216; first class, F. E. Mason, 308; second class, E. Jacobson, 297.

"Pistol, 50yds., 10 shots, four best scores: Champion class, J. E. Gorman, 164; first class, A. B. Dorrell, 193; second class, E. Jacobson, 245.

"Re entry matches, rifle, Unfred diamond medal, 3 shots, ten best scores: A. Strecker 90, Young 93, McLaughlin 94.

Glindemann military medal, re-entry, Creedmoor count, 10 shots, ten best scores: F. O. Young 466, Ed. Hovey 461, F. H. Bushnell 452.

"Rifle record medal, re-entry, best single 10-shot score: F. O. Young 41, J. Utschig 47.

"Rodgers ladies' medal, re-entry, 5 shots, ten best scores, 50yds. off hand: Mrs. L. J. Crane 126, Mrs. M. J. White 157, Mrs. C. F. Waltham 211.

"Kellogg .22cal. rifle medal, re-entry, 5 shots, ten best scores, 50yds., off-hand: Ed Hovey 89, E. Jacobson 92.

"Glindemann ladies' trophy, best single 10-shot score, 50yds., off-hand, no re-entry: Mrs. L. J. Crane 26, Mrs. M. J. White 26 (last by Creedmoor count), Mrs. Waltham 29.

"Pistol, 50yds., Blanding pistol medal, re-entry, 3 shots, ten best scores: C. M. Daiss 66, Pape 74, Young 76, J. E. Gorman 73.

"Revolver, 50yds., Carr pocket revolver medal, re-entry, 5 shots, four best scores: Howard Carr 104, J. E. Gorman 110, M. J. White 132.

"Cash prizes, any revolver, re-entry, 6 shots, best single score: First prize, J. E. Gorman 30; second prize, H. Carr 31; third prize, F. O. Young 31; fourth prize, J. E. Klein 41.

"Siebe all-round medal, four scores on Blanding pistol medal, Unfred rifle medal and Glindemann military medal: F. O. Young, musket, 49, 47, 47, 47; rifle, 9, 9, 9, 8; pistol, 4, 7, 8, 8." ROEEL.

Police Revolver Teams.

REVOLVER teams have been organized from the two platoons of the New York police department in order to create a friendly rivalry in marksmanship between platoons, and also between the various precincts. Twenty men have been selected from among the best marksmen on the force, ten from each platoon, and from these teams of five men each will be picked to represent each platoon, while the other men will be held in reserve.

It is proposed to enter teams from each platoon in the team matches held at the time of the Sportsmen's Exposition, and it is very likely that individual members will also compete for trophies. Captain Petty and his assistants in charge of the revolver school, including Roundsman Jones, and Patrolmen Benham, Smith, Colgan, Cameron and Fischer, are barred from competition.

Following are the scores made on the last shooting day:

FIRST TEAM - FIRST PLATOON.

	Rank.	Precinct.	1st string.	2d string.	3d string.
Henry J Eberman	Ptl	11	70	69	67—206
John Leddy	Ptl	34	72	66	65—203
Nicholas Illich	Ptl	38	68	68	65—201
Henry J Stennes	Ptl	12	67	66	65—198
Wm H Ward	Ptl	29	67	65	65—197
					1,061

SECOND TEAM—FIRST PLATOON.

Henry Schryver	Rds	4	67	64	64—195
Gustave Kolle	Ptl	24	65	65	62—192
Jas F Ball	Ptl	22	65	63	63—191
Patrick Dowling	Ptl	38	66	63	56—185
John Dormody	Ptl	37	68	62	53—183
					946

FIRST TEAM—SECOND PLATOON.

Milton Woodbridge	Rds	35	72	71	71—214
John J McNally	Sgt	27	66	66	65—197
John Townsend	Sgt	24	67	59	59—185
Geo Brown	Rds	66	63	63	59—185
Albert Mason	Rds	20	66	64	55—185
					967

SECOND TEAM—SECOND PLATOON.

Joseph Warner	Ptl	20	67	60	56—183
Geo Eckhoff	Ptl	10	62	61	59—182
Frank McCarrick	Rds	18	65	60	56—181
Jas Adams	Ptl	23	61	61	58—180
Jas J Cain	Ptl	9	62	59	58—179
					925

Three strings of 15 shots per man, Creedmoor 100yds. target, highest possible for team, 1,225.

Scores with a Pocket Revolver.

AMATEUR revolver champion W. E. Petty is at present acting captain at the Charles street station, and also has the supervision over the school for revolver practice. The Charles street station house is pretty well down town on the west side, while the 8th Regiment armory, where the revolver school is located, is up at 91th street on the east side. Naturally Captain Petty is kept on the jump between the two places, and the exactions of his dual rôle are such that he has very little time for anything aside from his official duties. As a result he is very much out of practice as a marksman, and recently, when the subject of a challenge was discussed, he very rightly demanded the privilege of a reasonable length of time to get in trim for the match.

On January 8 Captain Petty tried a few strings at the 10yd. range in the Armory, and though his shooting at times was somewhat erratic owing to rustiness, he made several five shot scores which are extremely good, two of which we reproduce. These targets are exact size, and it will be noted that one counts the highest possible, while the other foots up to 47.

The revolver used was the new 32-caliber police Colt, with factory sights, and the ammunition used was U. S. factory cartridges.

Calumet Heights Rifle Scores.

CHICAGO, Ill., Dec. 25.—The Calumet Heights Gun Club has several riflemen among its members. On the club's ranges to-day the scores given below were made by Class A. The weather was fairly bright at times, though the sky was overcast with shifting clouds; a light wind was blowing. Class A shoots at 200yds., off-hand, standard target; Class B at 100yds., rest, .22cal. rifle, reduced Creedmoor target:

	No. 1.	No. 2.	No. 3.
Dr L L Davis	3 34444443 - 35	.....	.....
C W Spalding	5443344544 - 40	.....	3454323344 - 35
Dr F A Hodson	2545534 53 - 37	3034433344 - 31	33254433 3 - 29
Miss Ervin	4344304354 - 34	5343243234 - 33	.....

PATTY.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 9-10.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

Jan. 18-20.—BUFFALO, N. Y.—Audubon Park first annual midwinter tournament. First three days, targets; last day, live birds.

Jan. 12-14.—ERIE Pa.—Clover and Pope's midwinter tournament at Massassauga Point. Live birds and targets. Added money and merchandise prizes. For programmes address Seth Clover or A. P. Pope, Erie, Pa.

Jan. 16.—RUTHERFORD, N. J.—Testimonial shoot to Neaf Apgar. Targets. Shoot commences at 9:30 A. M.

Jan. 20-21.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club. Sparrows. Royal Robinson, Sec'y.

Jan. 21.—BRANCHPORT, N. J.—Elkwood Park inaugural shoot.

Jan. 23.—HACKENSACK, N. J.—Shoot for the E. C. cup. C. O. Gardner, Sec'y.

Jan. 23.—RUTHERFORD, N. J.—Invitation handicap sweepstake, 20 live birds, $15 entrance, birds included. Shoot will be held under the auspices of the Boiling Springs Gun Club.

Jan. 25-29.—SAN ANTONIO, Tex.—Second Texas Midwinter tournament. Targets and magautraps. $2,000 added. Under the management of J. M. George, Albert Steves and O. C. Guessaz, at San Pedro Springs grounds. Open to the world.

Feb. 8-20.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live-bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Feb. 10.—HACKENSACK, N. J.—Second contest for the *Recreation* cup, under the auspices of the Bergen County Gun Club. C. O. Gardner, Sec'y.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week)—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

It has been decided that no regular programme will be gotten out for the Apgar testimonial shoot at the Boiling Springs Gun Club's grounds, Rutherford, N. J., on Saturday next, Jan. 16. Shooting will commence shortly after 9:30 A. M., and all events will be at targets. One of the special features of the day will be a 3 men team race. Two teams have entered already, as follows: Van Dyke, Apgar and Colin R. Wise; J. S. S. Remsen, George Piercy and F. S. Edwards. The conditions are 100 targets per man, unknown angles, optional sweepstake on each 25 targets. It is hoped that more teams will enter on or before the day, the race commencing at 12:30. This race will be shot in a series of 25-target races, other squads being made up of all those who wish to enter "for the birds" or to join in the optional sweepstakes above mentioned. Neaf Apgar will run the shoot and will have plenty of assistance rendered him by members of the home club. A good lunch will be furnished on the grounds.

In the brief notice of the programme for the Texas Midwinter shoot, which we published last week, we referred to a contest at 100 bluerocks for a cup entitled the "Schmelzer's World's Inanimate Target Championship Trophy." Without wishing to cast any reflections on the management of the Midwinter tournament, it seems to us poor policy to announce a contest for a trophy bearing the above high-sounding title, a title that is absolutely misleading and untenable. Surely a "championship of the world" contest should have more than two weeks' notice. There is only one champion at inanimate targets, and only one inanimate target championship trophy. Rolla O. Heikes, of Dayton, O., is that champion, and the E. C. cup, which he won from Fred Gilbert, represents the inanimate target championship. Don't let inanimate target-shooting drift into the same championship quicksands that live-bird shooting is now wallowing in.

H. P. (Du Pont) Collins, of Baltimore, has been named by the E. I. du Pont de Nemours & Co. as its representative at the Winston-Mosher shoot at Yardville, N. J., on Jan. 16. Mr. Collins will also act as referee.

Clear Lake, Ia., has been busily engaged entertaining Charlie Grimm since his return to that place with the Cast Iron medal. At the Lake House a banquet was tendered to Mr. Grimm, at which many happy things were said, and at which Charlie made a speech that almost makes us regret that he is not a Member of Congress from Iowa. The speech came to us somewhat in the nature of a surprise. We always knew that Charlie could shoot, but we had no idea that he was an orator. All doubts on that head are now at rest. The features in the decorations of the banqueting hall were two Smith guns. Under one hung the following card: "The Smith gun that won the championship at the World's Fair." Under the other was the following inscription: "The gun with which our Charley won the championship of America."

We have received the following communication, dated Jan. 5, from Messrs. Phil Daly, Jr., and Chanfrau, the managers of the new shooting grounds at Elkwood Park: "We wish to announce through your shooting columns that every Saturday at 1 P. M. there will be live pigeon shooting on the new grounds. In a few weeks we will be in a position to throw the grounds open to the public, with all three sets of traps in operation; with live crows on one set, live blackbirds on another, and live pigeons on the third; all sweeps. We will also have a main event at 25 live pigeons, $25 entrance, handicaps from 25 to 33yds., with a good big sum of added money." As we understand it, the "main event" referred to above will take place on the opening day at Elkwood Park, particulars being announced at a future date.

There is no question about Pittsburg having the shooting fever. Announcement is made in the *Dispatch*, of that city, of Jan. 10, as below: "Announcement is made that there may be a match made for eight of the members of the Herron Hill Gun Club to shoot eight members of any of the Eastern gun clubs for $1,000 a side, each man to shoot at 25 pigeons. If a match like this were made it would be one of the most sensational that there has ever been, and as far as the Pittsburg shooters are concerned, they are quite willing to take part in such a contest. They have already arranged for the stake, and have made up their minds to engage a special car to carry them to New York should the match be consummated."

The Bridgeport, Conn., Gun Club is a live organization. Under the guiding hands of Mr. V. A. Blakesley, secretary of the club and general enthusiast, and of Mr. Wm. H. Thomas, the captain, the club has every prospect of a prosperous season in 1897. One of the features of its winter programme has been a series of team shoots for suppers, and these shoots have been productive of any amount of good-fellowship among the members. One of the most prominent members of the club is its president, Mr. W. M. Thomas, the U. M. C. Co.'s expert, so well known to shooters all over the country under the honorable title of "U. M. C." Thomas, bestowed upon him by FOREST AND STREAM some years ago. U. M. C. is no relative of "the other Thomas."

Just before going to press last week we received a short telegraphic dispatch from John L. Winston, informing us that the Du Pont trophy shoot would take place as originally decided. The contest between George Mosher and Winston will therefore be held on Saturday, Jan. 16, at Zwirlein's grounds at Yardville, N. J. Winston says—and makes no secret about it—that the next challenger for the trophy (should he be fortunate to defeat Mosher) can set his mind at rest as to where the contest will take place: If a Western man challenges, the match will be shot at Yardville; if an Eastern man challenges, he will have to go to John Watson's to decide the ownership of the trophy.

Who is "Mr. Robinson, an American?" A dispatch from Monte Carlo, dated Jan. 5, says: "An exciting pigeon shooting match was held here to-day between Mr. Robinson, an American, and Mr. Beresford, an Englishman. The match, which was for £100 a side, 100 birds, was won by Mr. Robinson, who killed 95 birds. Mr. Beresford killed 91;" 95 and 91 at Monte Carlo, with the Monaco boundary and Monte Carlo bluerocks for flyers, is quite steep! Who is "Mr. Robinson, an American?" Does he hail from San Francisco?

On New Year's Day a "hog shoot" was held at Rockledge, Pa. The prize in the main event, which was at 15 targets, was a 500lb. hog; chances at 50c. each, anybody being allowed to enter in the event as often as he chose. Among the contestants were Landis and Will K. Park. Landis took three chances and scored 14 each time; Will Park took one chance and ran 14 out of 15. As 14 was high, and as no one else could reach that total, the hog was divided between Park and Landis, Park getting one third. It would be interesting to know just what part of the hog Will chose.

A recent issue of the Chicago *Daily Record* is responsible for the following: "Nearly half a million head of game have been killed by the Earl de Grey during the last twenty years, his average being 25,000 head a year. He was only fifteen years old when this record commenced, and to give an idea of the rapidity with which he shoots it may be stated that in December, 1881, he shot at fifty pheasants in three minutes and killed forty-nine of them. In this immense total, which places the earl at the head of the sporting shots of the old world, are included eleven tigers, several rhinoceros and elephants, a number of lions, bison, Russian and Rocky Mountain bears and wolves."

Secretary Strader, of the Endeavor Gun Club, of Jersey City, N. J., writes as follows: "At the annual meeting of the Endeavor Gun Club, held Jan. 8 at the club room, 642 Newark avenue, Jersey City, the following officers were elected for the ensuing year: President, Z. P. Fletcher, M.D.; Vice-President, F. Post; Secretary, A. R. Strader; Captain, E. Collins; Treasurer, Carl von Lengerke. Directors: E. Hollister, C. W. McPeek, G. H. Piercy. Tournament Committee: E. Collins, G. H. Piercy, E. Banks, E. Taylor, C. von Lengerke.

To do away with a good deal of trouble in regard to championships at live birds we respectfully suggest to Charlie Grimm and Jim Elliott the following: Shoot a series of three 100-bird races for the Cast Iron badge and the Kansas City *Star's* cup, each man to name one ground and toss for choice of the other; the winner to take both cups, and the Cast Iron badge to be at once rivered onto the cup, thus making one emblem. This would reduce the list of championship trophies by one at any rate. The suggestion is made in all seriousness.

Mrs. M. F. Lindsley (Wanda) is feeling very good over a Christmas present she has received. This is what we know about that present: "You have often heard me talk about having a new gun for ever so long. It has at last arrived and is a little beauty, an L. C. Smith, and one of the finest made. Best of all, it was presented to me by the King Powder Co. and the Peters Cartridge Co. I must be appreciated somewhere." Mrs. Lindsley is appreciated in many places, particularly in New Jersey.

I. R. Sheldon, the little seven-year-old wonder of the Pawtuxet, R. I., Gun Club, handles his miniature gun very well. He shoots a .44cal. double gun, using brass shells loaded with 16grs. of Du Pont and ½oz. of No. 9 shot. He stands 5yds. from the trap, and on New Year's Day he broke 20 out of 45; on the next day he broke 15 out of 20 under the same conditions.

We dropped into 8 Murray street on Monday afternoon about 1:30 P. M. If anybody thinks there was no "match talk," look at the following list of those we found there, outside of employees of Von Lengerke & Detmold: R. O. Heikes, Ben O. Bush, Ed Taylor, Neaf Apgar, Geo. S. McAlpin, Frank Butler, H. P. Fessenden, J. 147 Winton and J. L. Brewer. The last two caused all the noise.

Business interests will prevent the attendance at the Texas Midwinter tournament of Noel E. Money or Captain A. W. Money. Captain Money will probably not return from Europe for a few weeks yet, hence Noel will be kept "chained to business." This week, however, he is away in Maine, running some of his foxhounds in the trials promoted under the auspices of the Brunswick, Me., Fur Club.

The American E. C. Powder Company has issued a new pamphlet containing full information in regard to the shotgun and rifle powders manufactured by the company. Among the extraneous matter contained in this pamphlet is a complete description of the workings of the Rose system of dividing purses at tournaments.

We received the following letter from Mr. H. D. Kirkover, Jr., of the Buffalo Audubon Gun Club, too late for insertion in our issue of Jan. 9: "The dates of our shoot have been changed to Jan. 18-20. Wish you would mention same in the next issue of your valuable paper."

One of the special features of the great tournament promoted by Rolla Heikes in his dream, which slipped our memory when preparing same for the press, was a special event, *open only to those who had never claimed to be champions.* Needless to say, the event didn't fill.

The Poughkeepsie (N. Y.) Gun Club is a comparatively young organization. But young as it is, it lacks only three of having a muster roll of 100 members. The weekly club shoots are held every Thursday afternoon, the average attendance being 15.

Rolla Heikes is in the city for a few days, and will be present at Neaf Apgar's testimonial shoot at Rutherford, N. J., on Saturday next, Jan. 16. In all probability Heikes will make an attempt to break his record for 100 targets over the Boiling Springs traps on the above date.

On Saturday, Jan. 23, an invitation handicap sweepstake at 20 live birds per man, $15 entrance, including birds, will be held at Rutherford, N. J., on the grounds of the Boiling Springs Gun Club. Entries must be made on or before Jan. 21 to G. E. Greiff, 8 Murray street, city.

Mr. Thomas Bell won the Oritani Field cup at the regular monthly shoot of the club, held on Saturday, Jan. 2. The shoot is at 50 targets; Bell scored 43, Conklin 36, Belden and Ricardo 35 each.

Opening day at Elkwood Park will be Jan. 21. A full programme has been arranged.

JAN. 12. EDWARD BANKS.

Western Traps.

CHICAGO, Ill., Jan. 9.—Last week Mr. Emil Werk, of Cincinnati, was visiting friends in Chicago and ventured to suggest that it would be a good thing if some of the Chicago boys would come down and shoot a little race with the Cincinnati team. As a result of the talk a little team race was concluded which was pulled off at Cincinnati last Tuesday, the conditions being Chicago against Cincinnati, 4-men teams, 25 birds a corner. The visiting Chicagoans were Messrs. C. D. Gammon, W. W. McFarland, B. Dicks and J. H. Robbins. They were accompanied by Mr. Lew Wadsworth, who served as referee in the race. The Cincinnati team was composed of Messrs. Emil Werk, Wm. Schuler, Milt F. Lindsley and Mr. Mackey. The Chicago men looked upon this race as a walkover for themselves, but it came near being a walk home instead; for the Cincinnati contingent came pretty near breaking the crowd. The Chicago boys are now proclaiming their ignorance of any such visit, and declaring that they have never been out of town at all. The facts leaked out, however. The scores are as follows:

Chicago: Gammon 21, McFarland 24, Dicks 18, Robbins 11; total, 74.

Cincinnati: Werk 19, Schuler 22, Lindsley 17, Mackey 23; total, 81.

There will be a second team race, 2-men teams, between Messrs. Werk and Schuler, of Cincinnati, and McFarland and Dicks, of Chicago. This will be shot at Chicago, March 15. The Chicago men express themselves delighted with the treatment they had at Cincinnati.

THE MIDWINTER SHOOT.

The annual Guessaz-George-Steves circus will open its tents to a large and admiring multitude Jan. 26, at the old Mission town of Santone, by the Saltpeter or St. Peter River. The enterprising gentlemen who are at the head of this regular yearly Texas agricultural exhibit assure me privately that the performance this time will eclipse all previous efforts, and ask that the public be advised thereof. All visiting shooters are requested to bring their own blankets, and those not accustomed to sleeping on cactus should have their blankets made puncture-proof before starting South. The Indians are no longer dangerous in the neighborhood of Santone, but the streets are not safe at night, so they are usually taken in at sundown. The weekly train from the North will be met by a large trio, who will head a party of rangers, thus making the journey to the hotel perfectly safe, so that no timid gentleman need have fears about making this trip. Santone is a great health resort, and its graveyard would be vacant except for the Northern visitors who are buried there as a result of last year's tournament. Everybody likes the place. Oscar Guessaz is in strict training for the event, and Geo. Jorge has in store several new tricks. Albert Steves is just in receipt of his new commission as coroner, so no one need be afraid to let a relative go to this shoot. Mr. Steves is under promise to report at once any cases of death of Northern shooters, and it is well known that he is a man of his word. The best of funeral arrangements have been made by the railroad, so that all bodies will be returned to their homes as soon as the details of the shoot have had proper attention. Large and appropriate mottoes, such as, "Willie, we have missed you," have been secured to decorate the funeral trains on their way North, and no pains will be spared to prove to all visitors and friends of visitors that the Big 3 do nothing by halves. There is sure to be a good crowd—at first—and every precaution has been taken to keep the mortality at as low a point as possible. I hope there will be a large and enthusiastic attendance, and I am sure that all who come back from Texas will be sure they have been to a shooting match. The dangers of a trip to Texas have been shamefully exaggerated. It is really a quiet place, and devoid of any unusual excitement, and, as may be seen by the above, all care has been taken to reduce even these small risks to a minimum. Go to the Midwinter by all means, but whatever you do, don't let Oscar Guessaz hug you, don't let Geo. Jorge tell you stories, and don't let Albert Steves coax you into a bowling match. Lock your door at night, put out the fire when you go to bed, and don't show your roll to anybody, because there are men there who would shoot you for it in a minute, or for any part of it, and let you name the conditions. A few simple precautions of this sort on your own part, added to those which have been taken by the progenitors and projectors of this shoot, will make the matter practically safe and highly enjoyable. (For details as to wooden limbs see our advertising columns.)

E. HOUGH.

CONEY ISLAND ROD AND GUN CLUB.

Jan. 6.—The Coney Island Rod and Gun Club held its regular monthly live-bird shoot to-day at Dexter Park, L. I. John Schlieman won the club shoot with 7 straight. Scores:

No. 1, club shoot, 7 live birds, all standing at the 28yd. mark: George E. Loeble 7, Walter Gilman 6, James H. Dykeman 3, Louis C. Hopkins 3.

No. 2, team sweepstakes at 5 birds each: Loeble 5, Dykeman 4, total 9; Hopkins 4, Mills 4, total 8.

No. 3, 5 live birds each: Loeble 5, Dykeman 5, Hopkins 3.

No. 4, team sweepstakes at 5 birds each: Loeble 5, Lippock 2, total 7; Hopkins 2, Dykeman 2, total 4.

No. 5, same: Loeble 5, Lippock 0, total 5; Hopkins 2, Dykeman 4, total 6.

CRESCENT ROD AND GUN CLUB.

Jan. 7.—The Crescent Rod and Gun Club held its January shoot at Dexter Park this afternoon. G. E. Loeble, who won the Beaufort badge in the last season's contests, was presented with it this afternoon. He started the new year well by making the only straight score in the club shoot. Scores:

No. 1, club shoot, 7 live birds: John Schlieman (28) 7, ex-Judge James B. Voorhies (29) 6, William Hughes (30) 4, Hugh McLaughlin (28) 4, Dr. F. C. Raynor (28) 4.

No. 2, 4 birds, 28yds. rise: Voorhies 3, McLaughlin 3, Dr. Raynor 3, Schlieman 2, Hughes 1.

HELL GATE GUN CLUB.

The annual meeting of the Hell Gate Gun Club was held at the club rooms, 103d street and First avenue, Jan. 7. Several changes were made in the by-laws and rules. Meeting day was changed to the first Tuesday of each month, and it was decided that new members must in future be proposed at the meeting prior to the date of their election. The handicap committee's new rules on scoring and handicaps were adopted. The following officers were re-elected: President, John H. Voss; Vice-President, Fred. Trostel; Treasurer, Conrad Webber; Financial Secretary, Philip Woelfel; Corresponding Secretary, Eugene Doeinck. The report of the treasurer showed a balance of about $ 00 on hand.

NEW UTRECHT GUN CLUB.

Jan. 9.—The New Utrecht Gun Club held its first club shoot at live birds for 1897 this afternoon at Dexter Park. The attendance of members was very small. As the handicap committee has not yet given out the handicaps for '97, those present shot their scores on their old marks:

Club shoot, 10 live birds, club handicap rises:

J Gaughen (28)	1222221222—10	E G Frost (27)	2012002011— 6
J A Bennett (28)	1110222211— 9	*Dr Moore	1002012202— 6

* Guest, shot at 28yds.

Opening Day at Elkwood Park.

MESSRS. DALY & CHANFRAU, managers of the new shooting grounds at Elkwood Park, send us the following notice of the programme for the opening day:

The inaugural shoot for the Patten cup (presented by W. R. Patten, Esq.) will take place on Thursday, Jan. 21, at 12 o'clock noon; 25 live birds, $25 entrance, handicaps from 25 to 31yds., ties on 5 birds; 50 per cent. and cup to the winner, 30 per cent. to second, and 20 per cent. to third; high guns. Open only to members of the Carteret, Westminster, Larchmont, Riverton, Tuxedo, Philadelphia, Country Club, Morristown and Ocean County Hunt and Country Club. To be shot on the new grounds; 3 sets of traps, those favoring the birds to be selected on the day of shoot.

No. 2, 10 live birds, $10 entrance, amateurs at 30yds., professionals 32yds. (Brewer barred).

No. 3, 15 live birds, $15 entrance, birds included, open to all, at 30yds.

Plenty of birds for sweeps, which can be shot while the other contests are in progress.

The station for Elkwood Park is Branchport, on the New York & Long Branch R. R.

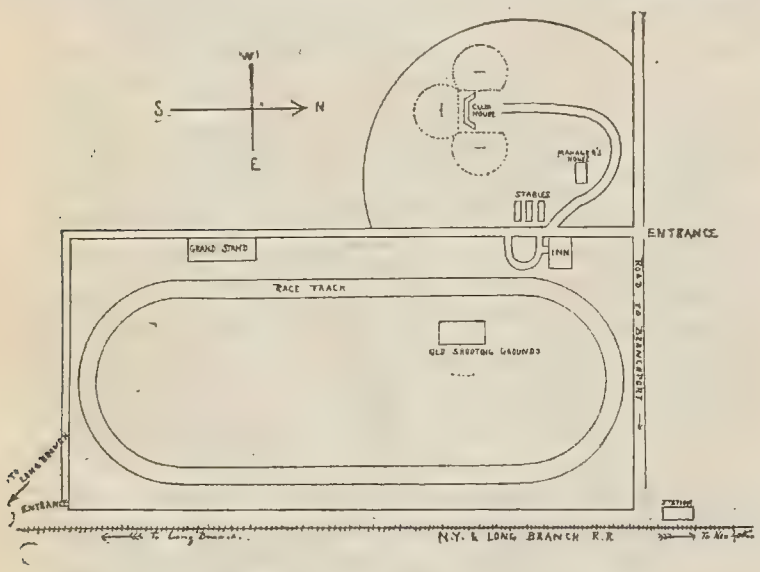
Grand American Handicap.

ELKWOOD PARK SELECTED.

THE classification and tournament committee of the Interstate Association had an important task set it when the matter of the choice of grounds for the Grand American Handicap of 1897 was placed in its hands. Manager Shaner was appointed a committee of one by the above committee to visit certain grounds and report on their desirability or otherwise. Mr. Shaner, as already stated in FOREST AND STREAM, visited the three race tracks near Elizabeth, N. J.—Waverly, Linden and Dwyer's—and also the new grounds at Elkwood Park, N. J.

In his report, handed in to the committee on Tuesday, December 22, manager Shaner stated that the only places suitable for the purpose of holding the above shoot were Dwyer's track and the Elkwood Park grounds. The committee decided to visit the two grounds named and inspect them, and set Tuesday, Dec. 29, as the date for the visit of inspection. Later, when it was found that this date was unfavorable for certain of the committee to attend, another date was fixed—Thursday, Jan. 7.

The classification and tournament committee is composed of the following: Irby Bennett, Chairman; Noel E. Money, Justus von Lengerke, Paul North and J. L. Lequin, secretary of the Association.



DWYER'S TRACK.

On Jan. 7, as agreed upon above, the committee, with the exception of Paul North, left New York by the 10:10 A. M. train over the P. R. R., and first visited Dwyer's track. The committee was accompanied by manager Shaner. Messrs. Zwirlein and Astfalk met the committee on its arrival.

Elizabeth can be reached in forty minutes from New York. One minute's walk from the depot is the track of the electric cars, that run to within a short five minutes' walk of the race track. Ordinarily cars run every ten minutes, and it takes about ten minutes from the depot to the end of the line near the track. Given the closest connections possible, and it would take an hour to get to the entrance to the track. From the entrance to the main buildings, in front of which the middle set of traps would have to be located, is about another three minutes' walk; perhaps not so much.

The inclosure itself is as perfect a natural shooting ground as one could wish to see anywhere. For a target tournament such a location could not be surpassed. Eight or ten sets of targets could be placed in a straight line without either inconveniencing the other. Shooters would face about E.S.E., and every target would have a sky background. As soon as Noel Money saw it, he said: "I wish we'd seen this ground before we gave our tournament last year."

Taking it altogether the committee was most favorably impressed with the advantages offered by locating the handicap on these grounds, and so openly expressed itself. It was, of course, understood that much would have to be done in the way of preparing for the comfort of the shooters, in case the weather during the Grand

ELKWOOD PARK AND ITS NEW SHOOTING GROUNDS.

American week was unfavorable. Shooters know—none better—that temporary arrangements, however good, are at the best unsatisfactory if the weather is bad. It was its experience in this matter in the past that made the Interstate Association so careful this year in the selection of its grounds for the Grand American Handicap.

ELKWOOD PARK.

The committee left Elizabeth on the 12:46 P. M. train for Branchport, a station on the New York & Long Branch R. R. Both the P. R. R. and the C. R. R. of N. J. run trains over this road, tickets being good either way on trains of both roads. The great drawback to Elkwood Park has always been, to our way of thinking, its distance from New York. By rail it is fifty-five miles; trains take one there in one and one-half hours from the New York side of the ferry. As last year, trains will be stopped during the shoot at the crossing where the highway from Branchport crosses the railroad track at the upper end of the park. The crossing is plainly shown in the accompanying illustration. If you walk to the grounds you can do it in ten minutes easily. If you ride, five minutes will cover the distance.

(NOTE.—This year the Elkwood Park management guarantees to carry *all shooters free* from the train to the club house.)

To return to the visit of the committee: The day was the loveliest imaginable for the time of year. Of course both Dwyer's track and Elkwood Park showed at their prettiest. The new club house stood up prominently on the top of the rise where the new grounds are located. It at once attracted all eyes. An inspection that was something more than thorough was made of this club house, trap pits, etc. And there was much to see and admire. If there are any more perfectly arranged shooting grounds or any that are more perfectly equipped, we couldn't name them in a month of Sundays. If Chimmie Fadden was a shooter, and if he was to visit Elkwood Park's new grounds, he'd use his favorite expression to give vent to his feelings on the point: "They're outer sight." And Chimmie would be perfectly accurate.

In our issue of Oct. 31, 1896, we gave a very full description of the grounds as we saw them then. As we saw them on Jan. 7, 1897, it is not putting it much too strongly to say that our breath was taken away. On Oct 20 all was in embryo; no club house stood there; not even its foundations had been begun; pegs marked its limits, that was all. On Jan. 7 the club house was practically complete. Steam was passing through the radiators, making it warm throughout; painters were putting their last touches to it, the coloring chosen for the inside decoration being a very pretty shade of red. Outside it is white, with "yellow trimmings." Carpenters were busy laying the board walk around the building, while a strong rail and wire fence bounded the board walk, absolutely preventing spectators from crowding or annoying shooters at the score.

The puller's house, sunk slightly in the ground so as not to obstruct the view from the house, was inspected; also the house for the referee and the scorer. Alongside the latter's house was the dog handler's house and cold storage pit, as it were, for the dead birds. The retrieving is all done by dogs, and neither dog, handler nor dead birds being visible to the spectators or shooter until the dog is released to retrieve a bird. Some practice work was had to show how fast the birds could be trapped when shooters were ready at the score for their turns. As stated in our issue of Oct. 31, all trapping is done from below ground. The committee went underground and saw the trapper at work—only one man is wanted at each set of traps, and as he put it to us, he has a "picnic."

A miss-and-out was started to give a practical illustration of the workings of traps, etc. The miss-and-out had 7 entries: Money, Von Lengerke, Soistman, Bennett, Daly, Japhia Van Dyke and Edwards. (It is not necessary to state who won the pot; perhaps some of the others might not like it mentioned.) Nine times out of ten the trap that had been sprung was loaded and ready for business before the dog had the dead bird in its mouth; and the dog was not a slow one by any means.

The traps are those known as the Mott disappearing traps. They are unquestionably harder to shoot over than the King traps, from the fact that they disappear instead of falling over with a clatter. But the act of disappearing causes quite a racket, and in addition a bell that acts as a "starter" attracts a shooter's attention to the trap almost as well as the clatter of an opening King trap.

THE COMMITTEE'S DECISION.

After inspecting everything, lockers for shooters, and all other accommodations, the committee decided that if Messrs. Daly and Chanfrau, the managers of the grounds, would sign the contract to be mailed to them the following day, there was no further question before it as to where the Grand American Handicap of 1897 should be shot. In making such decision, we think the committee only acted as they were instructed to do: to find the best and most desirable location for holding the Grand American Handicap.

LAST YEAR'S DISCOMFORT.

All those, and they were many, who suffered the discomforts that attended the shoot at Elkwood Park last year, can rest assured that this year the Interstate Association has taken every precaution to guard their interests. It is too premature to make any announcement in this issue as to just what the management of Elkwood Park will do to absolutely secure the comfort of the shooters who will be its guests. Manager Shaner is now at work on the programme, and it will soon be in our hands and in the hands of the shooters of this country. The reading matter in that programme will contain abundance of interesting data as to how things will be worked this year.

Personally we can say that, under the circumstances, we should have adjudged the committee unworthy of the confidence reposed in it had it decided any other way after once seeing the grounds at Elkwood Park. On this point we are satisfied that shooters themselves will agree with us when they see the grounds.

As stated above, one of the greatest drawbacks to Elkwood Park is its distance from New York. The claim is a good one and had a great deal of weight with the committee when it came to the actual choice of grounds. But there was a decided set off to this disadvantage. It can easily be figured out that with the increased facilities for shooting off events rapidly offered by the "clover leaf" sets of traps, together with the underground system of trapping, etc., it is perfectly possible to finish the Grand American Handicap in *one day* with a list of *100 shooters*. Last year it took about 1,500 birds to finish the race; with three sets of traps that means just about 150 birds for each set of traps, with over six hours to do it in; 100 birds an hour is ordinary match work with ordinary appliances. At Elkwood Park it will be easily possible to beat that rate, even in a big sweepstake like the Grand American Handicap.

Each shooter will start at No. 1 set of traps and shoot a bird on each set of traps, and then retire until his turn comes to shoot his next 3 birds. Thus anybody who is fortunate enough to stay in until the 25th round has been shot will have fired at 9 birds on No. 1 set of traps and at 8 on each of the other two sets. With shooters at the score with any degree of promptness, it can readily be seen that the Grand American Handicap can be run off in one day if the entries do not amount to more than they did in 1896.

A COUNTER ATTRACTION.

On Saturday, Jan. 9, we had a talk with Mr. Charles Zwirlein. In the course of conversation he stated positively that a counter attraction, with good and solid monetary attractions in the shape of added money, would be held at Dwyer's track on the same day as the Grand American Handicap. We sincerely hope that Mr. Zwirlein and Mr. Astfalk will do nothing of the kind, as we feel that such a policy would be not only hurtful to the sport itself, but would also be almost suicidal, as in all probability both events would be something like direct failures through the effects of such clashing of interests.

WORK DEFEATS DAVIS.

Jan. 5.—George Work and J. H. Davis, the latter a member of the Riverton Gun Club, of Philadelphia, shot a race to-day on the grounds of that club at Riverton, N. J. The conditions were 100 birds per man, 30yds. rise, 50yds boundary. The birds were a fast lot, the strong southerly wind helping them away from the traps at a great rate. Work shot in poor form, his score of 82 not being up to his standard by any means. He seems just now to be shooting generally away below his average for the past few years. The fact that he only scored one double-figure run, 10, shows that there was something wrong with the way in which he pointed his gun. Davis made a lower score than Work, losing the race in the last 25 birds; he had two runs of double figures, both 10s. Davis started in the lead with 22 to 20 at the end of the first 25; he increased his lead to 4 birds at the end of the 50th round, the scores standing then Davis 43 to Work's 39. Although Work only scored 21 in the next 25, he gained 3 birds on his opponent, who could do no better than score 18. This left Davis 1 bird in the lead at the end of the third 25. Work's score of 22 in his last string was far too much for Davis, who made his lowest total for a string of 25 in this match, 17. This left Work the winner of the match by 4 birds, the scores standing as shown below:

George Work	2122122202022222222202202—20

FORESTER GUN CLUB, OF NEWARK.

Jan 1.—The New Year's Day shoot of the Forester Gun Club was not largely attended. Too many shoots were on hand for this day in the vicinity of Newark, and that fact no doubt had much to do with the number of shooters present at our grounds to-day. A long list of events, 20 in all, were shot off. Nos. 1, 2, 5, 7, 9, 12, 15 and 18 were at known traps and angles: Nos. 4 and 19 at unknown angles; Nos. 3, 6, 8, 10, 13, 16 and 20 at reversed order; Nos. 11, 14 and 17 at expert rules. Scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
C Smith	8	4	6	..	..	..	..	..	..	6	6	5	9	10	9	8	8	..	7	..

Nos. 1, 3, 5, 7, 10, 11, 13 and 14 were at known angles; Nos. 2, 6 and 9 at expert rules; Nos. 4, 8 and 12 at reversed order.

H. E. WINANS, Sec'y.

BOILING SPRINGS VERSUS ENDEAVOR.

Jan 9.—One of the closest and most interesting team races ever shot in this vicinity was decided this afternoon on the grounds of the Boiling Springs Gun Club at Rutherford. The Endeavor Gun Club, of Jersey City, put a ten-men team in the field against a team of the home club and suffered defeat by just two breaks, the scores standing 195 to 193 in favor of the home team. This match settled the series between the two clubs, as the Boiling Springs Club defeated the Endeavor Gun Club on its own grounds at Marion in the first match. Scores in the team race to-day did not rule high, but the work of everybody was generally even.

The gathering to-day was quite a representative one for a New Jersey team race. Among those present were: Justus and Carl von Lengerke, of the firm of Von Lengerke & Detmold, together with Gus Greiff and Theodore Baron, from the same store; Ed. Taylor, of the Laflin & Rand Powder Co., and Marshall Herrington, of W-A fame; Neaf Apgar, the new Austin graduate; Tom Keller and Eddie Collins, both of them talking and shooting King's Smokeless; Platt Adams, Colin Wise, W. M. Harding, C. F. Lenone, Charlie Hebbard (of the W. Fred. Quimby Co.); George Piercy and his son Louis, A. R. Strader, H. P. Fessenden, etc. From out of town were Elmer E. Shaner, almost minus a voice, of Pittsburg, Pa., and Ben. O. Bush, of Kalamazoo, Mich. Mr. Shaner kindly consented to act as referee in the team race, despite the weakness of his vocal chords referred to above. He had a "good eye" with him, and that made up for all deficiencies in lung power. (As a matter of fact Elmer had a very bad cold indeed.)

The weather could not have been more delightful, and had the old order of things prevailed the scores would have been much higher. Four new springs on the bluerock traps sent the targets much further than has been customary on these grounds. The background is a perfect one, all sky, and it was only necessary to gauge the speed of the targets correctly and get well ahead of the quarterers. Some of us found difficulty in doing this. Tom Keller and Ed Taylor were both suffering from rheumatism (not gout), so some allowances must be made for their totals. (This statement is made gratuitously and was not solicited!) Justus von Lengerke tried a new gun that he found on trial did not suit him, the pistol grip not fitting correctly his crippled right hand.

The scores made in the team race are given below in detail, the conditions being 25 targets per man, unknown angles:

Boiling Springs.

A record of all the events shot during the afternoon is given below, every event being at unknown angles. No. 6 was the team race and No. 11 was one of the "after dark" shoots, the referee and scorer having to go down to the trap house to judge breaks and misses, it being almost too dark to see the targets:

Events:	1	2	3	4	5	6	7	8	9	10	11

W. S. EDEY VERSUS H. EDEY.

Jan. 9.—As a result of the New Year's Day shoot at the Westminster Kennel Club, a 100 bird race was shot to-day on the grounds of the Carteret Gun Club, at Bayonne. On New Year's Day Harry Edey scored 23 out of 24 from the 27yds. mark and won the Kennel Club's cup; W. S. Edey, his brother, stood at 29yds. and retired in the 6th round. To-day's race was shot under similar conditions as to rise, W. S. Edey conceding his brother 2yds.; the conditions called also for a 21yds. boundary. Had the usual boundary of 50yds. been adopted, W. S. Edey's score would have been 87 to his brother's 81. Carteret is becoming famous for the fast birds now trapped on these grounds, and to-day's lot were no exception to the rule. The light was good, but there was no wind to help the birds. Considering everything, however, the scores made were decidedly creditable. Below are the totals:

W S Edey (29)	2222220•2202112222•02102—20	
	2122221121222222222122—21	
	1101222222222•0•0000222—18	
	2•0•2 2•0222220202102222—20—80	
H Edey (27)	22•02122120•1•02•20221—20	
	1•0020•0•12•0101112122—18	
	0122222210022201200122220—19	
	0222120102111212211212222—21—78	

NEW YEAR'S DAY AT OAKWOOD INN.

Jan. 1.—New Year's Day did not bring out many shooters at the Oakwood Inn traps, near Elizabeth. Aaron Woodruff and Nate Astfalk made a good race of it for first honors, Nate finally beating Woodruff out by 5 misses to 6. Scores:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	No 6.
Woodruff (31)	21220—4	02220—3	01122—4	210—2	20122—4	11111—5
Mulvaney (28)	22221—5	02012—3	11002—3	021—2	22120—4	11210—4
Astfalk (30)	21222—5	12102—4	12221—5	121—3	02122—4	01121—4

No. 7: A. Woodruff and Mulvaney 5, Astfalk 4, N. Woodruff 3.
No. 8: A. Woodruff 5, Astfalk 4, Noah Woodruff 2, Mulvaney 1.

Cobweb Gun Club.

NEW YORK, Jan. 7.—The members of the Cobweb Gun Club did not turn out in much force to-day, but several guests arrived on the grounds quite unexpectedly, making the afternoon a pleasant one for all. McDonnell won the Class A medal; A. Elliott the Class B medal; Dittmar the medal in Class C, and Thompson the Class Z medal. Scores:

	Club shoot.	Tie.		Club shoot.	Tie.
G E Greiff (A)	21111—5	100	W Purdy (B)	1•110—3	w
McDonnell (A)	12112—5	201	T Hughes (B)	21001—3	2220

GEO. W. THOMPSON, JR., Sec'y.

New York State Shoot.

AUBURN, N. Y., Jan. 9.—*Editor Forest and Stream:* Please mention in Fixtures that Auburn Gun Club claims the second week in June for the tournament of the New York State Sportsmen's Association; $2,000 cash guaranteed, besides a large list of guns and other good merchandise. We intend to give the biggest and best lot of open sweeps, no handicap and nobody barred, that has ever been given in the East. We hope to have a large attendance of the tournament shooters from the West and South and the Eastern States, and have claimed above dates to be in line with the Cleveland shoot and Pennsylvania State tournament. C. W. TUTTLE, Sec'y.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Trap at Buffalo.

AUDUBON GUN CLUB.

BUFFALO, N. Y., Jan. 1.—The New Year's Day shoot of the Audubon Gun Club, of this city, was a complete success. There was a very large attendance of out-of-town shooters, while the home club showed up remarkably well, both in point of numbers and in scores. Ten teams entered in the team race: Five teams from the Audubon Gun Club, two from the Rochester (N. Y.) Rod and Gun Club, and one each from the following clubs: Cazenovia, Lockport and Bison Gun clubs. The cup went, as might have been expected, to Rochester. The first team of that city's club put up a score that was extremely hard to beat—44 out of 45. With such men on the team as Sim Glover, L. V. Byer and Eddie Myers, one naturally looked for a big score; but 44 out of 50 is something extremely warm. The Audubon No. 1 team shot a good race; Hammond broke 15 straight, E. O. Burkhardt only dropped one target, while F. D. Kelsey managed to lose 3, something he does not do very often when on a team.

Almost all day both sets of traps were kept constantly busy, over 6,000 targets being thrown; 49 shooters took part in the sweeps and in the team race. Scores were as below, the team race resulting as follows:

Rochester No. 1: Sim Glover 14, L. V. Byer 15, E. C. Myers 15—44.

Audubon No. 1: E. C. Burkhardt 14, F. D. Kelsey 12, E. Hammond 15—41

Audubon No. 2: C. S. Burkhardt 12, H. D. Kirkover 13, L. Norris 12—37.

Rochester No. 2: Weller 13, Quirk 11, Wride 12—36.

Lockport Gun Club: C. Ward 12, J. Covert 10, I. J. Atwater 12—34.

Cazenovia Gun Club: R. Stacey 12, N. Alderman 13, L. Swope 12—37.

Audubon No. 3: G. Hines, Jr., 13, A. Heinold 14, L. Bennett 11—38.

Audubon No. 4: A. Forrester 15, E. Andrews 14, Ald. Zoeller 9—38.

Bison Gun Club: Wielin 7, Wheeler 13, Ditton 11—31.

Audubon No. 5: H. Hanks 14, G. A. McArthur 11, L. Fries 12—37.

Sweeps were shot as below, event No. 7 on the programme being the team race given below:

Jan. 2.—The attendance at to-day's shoot, the regular weekly shoot of the Audubon Gun Club, was not as large as the fine weather warranted. Part of the falling off in the attendance may be directly attributed to the long day's work at the traps yesterday. There were, however, plenty of shooters to make it interesting, and some good scores were recorded.

In the club badge shoot Johnson and C. S. Burkhardt tied on 24 each out of 25 in class A, but as Burkhardt was penalized 2 targets the emblem went to Johnson. In class B Snyder was the winner, J. E. Dodge winning in class C. The main feature of the day outside of the above event was a team race between teams captained respectively by Sim Glover and C. S. Burkhardt. The race resulted in a victory for Capt. Burkhardt's men, the score standing 72 to 68. Scores in all the sweeps were as below:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	25	20	15	15	20	10
E C Burkhardt	10	13	22	14	11	10	17	9

Calumet Heights Gun Club.

CHICAGO, Ill., Dec. 25.—The members of the Calumet Heights Gun Club shot at some good birds to-day, the majority of those trapped being strong flyers. The white birds were hard to see over the snow-covered ground. Interest in the sport only ceased when all the birds had been trapped.

Event No. 1 was at 10 live birds, $3, high guns to win; Class A at 32yds., Class B at 30yds., and Class C at 27yds. Lamphere and Lewis divided first and second, Metcalfe took third, and Sibley fourth. No. 2 was at 5 birds, $1.50 entrance, same conditions as to rise, but gun below the belt until the bird was on the wing. Knowles won first money, Paterson second, and Metcalfe third, it being high guns to win. No. 3 was shot under precisely similar conditions to No. 2. The four straights shot off for place, the shoot-off resulting in Metcalfe taking first money, Wescott second, and Sibley third. Scores:

	No. 1.	No. 2.	No. 3.

PATTY.

Limited Gun Club.

INDIANAPOLIS, Ind., Dec. 31.—Mr. George Wood, formerly of Pittsburg, but now living in Colorado, has been visiting relatives in this city for several weeks. He has shot from time to time on the grounds of the Limited Gun Club. His good work in practice led some of his friends to back him against the veteran Geo. C. Beck, at one time holder of the *American Field* cup. The match was at 50 pigeons, for $50 a side, and was shot this afternoon.

Mr. Beck shot with much of his old-time vigor, and was an easy winner; 27 of his birds were killed with the first barrel, there being no excuse for using the second, even for safety. His second barrel, when used, was placed quickly and with excellent judgment. His first loss was the 5th bird, a rapid driver, which was centered with both barrels, but managed to get a few feet outside the flags. He also lost his 15th, 21st and 45th, two of them right-quartering drivers and one an incomer to the left.

Mr. Wood shot unevenly, his best run being 10. He was weak on the fast birds, although he killed some of that sort in a way to merit applause. He is capable of much better work than the score indicates.

The birds were a mixed lot, as usual with us—too many with an incoming tendency, but with a sprinkling of very hard drivers, all the harder because unexpected. Beck shot an L. C. Smith gun, with Schultze powder and No. 7 shot in both barrels. Wood shot a Crown Greener, with Schultze powder, shot unknown. Each had 1 dead out of bounds. The scores follow:

Wood	2201022000021012221122220—17	
	1222122022012220212202221—21	—38
Beck	1111202211211220111120d121—22	
	1211211111121221212012212—24	—46

Other scores for the same day, for price of birds only, were: Parry 24; Marott, 16 out of 25, Marott standing at 30yds., and allowing his opponent 5yds.; Holliday 19; Hearsey, 15 out of 25; Tripp 21, Parry 18, both shooting from 26yds. mark; Cooper 18; Lilly, 13 out of 25.

Jan. 1.—It was my pleasure to be one of a party from the Limited Gun Club which made a social call one day last spring on the Buckeye Gun Club, of Dayton, O. The day was raw and bleak enough, but was made bright by the genuine warmth of the greeting extended to us, and it became real hot before the team shoot, a mere incident of the visit, was over.

With 10 men to a team, each shooting at 50 targets, they beat us 77 points, but we didn't mind that. We had already been defeated by teams from the Soft Mark Club of Chicago, and the gun club of Wabash, Ind., and felt proud to add the famous Buckeyes to the list—just to give it tone, you know. At any rate we returned home even gayer than when we started, and have since cherished the memory of that trip as the brightest and best thing in our trap-shooting experience. Truly, "it is not all of shooting to shoot."

To-day the Buckeyes were our guests, and while they for a while tasted the bitter dregs of defeat, we hope they may recall the day as one not unmixed with pleasure.

The weather was most disagreeable and unfavorable for shooting, as a steady rain fell throughout the day and the clouds hung so low that the light was extremely bad. All was cheerful enough within the club room, where a plain lunch was served at noon. At 5:30 P. M. an elegant repast was served at the Grand Hotel, but unfortunately this enjoyable feature of the day was cut short by the neeessity of the visitors leaving for home at 7:10 P. M.

Our guests were welcomed in appropriate words by Hon. W. D. Bynum. Dr. Adams responded and uncovered a beautiful and costly vase of elegant design, which he presented on behalf of the Buckeye Gun Club to the home club. Dr. Britton accepted it and the party broke up in a hurry to catch the train.

As to the team shoot, the visitors did not present all of their best men. Mr. Heikes would have been a tower of strength to them, but the illness of his wife kept him at home. Scott McDonald was shooting a strange gun, some villian having stolen the old Lefever, with which he was a hard man to beat. And Ed. Rike shooting a Winchester; what do you think of that? It but illustrates the loyalty of Heikes's friends to him. C. W. Raymond (pretty near "old Reliable") just pounded out 48 and seemed a bit astonished that so many got away.

Of the home team Tutewiler and Parry, two of our best and most uniform shooters, "fell down," as did also Dr. Britton, who for many years has been our main dependence.

There were all kinds of guns, but with those exceptions every man on the ground used Winchester factory loads and E. C. Powder.

The scores of the sweeps follow:

Events:	1	2	3	4	Events:	1	2	3	4
Raymond	14	13	14	14	Cooper	11	15	10	12
Craig	14	11	11	13	McDonald	11	14	10	11
Makley	14	..	12	..	Griffith	11	14	14	13
Wildnack	14	14	..	..	Wood	11	11	13	15
Robinson	14	15	14	13	Coon	11	14	12	14
Parry	13	13	11	13	Curphey	9	10	..	..
Partington	13	14	14	13	Keifaber	8	11	..	..
Buck	13	11	10	12	Tripp	..	10	12	14
Rike	12	14	14	14	Lockwood	..	..	..	11
Beck	12	15	13	12					

Team race, 50 empire targets per man, unknown angles:

Limited Gun Club.		Buckeye Gun Club.	
Cooper	48	Raymond	48
Beck	45	Rike	44
Tripp	45	Craig	42
Robinson	45	Wroe	42
Griffith	43	Wilson	37
Grube	42	Makley	35
Britton	41	McDonald	35
Lockwood	41	Glaser	35
Townsend	40	Keifaber	31
Wildnack	40	Curphey	29
Parry	36	Achey	28
Tutewiler	33—497	Adams	27—431

Technically Mr. Cooper's score was 46, he losing two targets through pulling the wrong trigger, but the visitors generously allowed him to shoot at two more, both of which he broke. ROYAL ROBINSON.

Towanda Gun Club.

TOWANDA, Pa., Jan. 1.—The Towanda Gun Club was favored with fine weather for its New Year's tournament held to-day on the club's grounds. The birds were a fast lot. All the shooters seemed to have a good time, and to enjoy the sport. The live-bird scores were as below:

	1	2	3	4	5	6	7	8	9
F Welles	21122—5	20021—3	0	1	20	21	.	.	.
Montanye	10121—4	20201—3	0	0	0	12	0	1	2

W. F. DITTRICH, Sec'y.

Pawtuxet Gun Club.

PAWTUXET, R. I., Jan. 2.—The scores given below were made on the grounds of the Pawtuxet Gun Club yesterday and to-day. They are not by any means remarkable, with the exception of the shooting of I. R. Sheldon, who is a boy of only seven years of age. The targets were thrown for him from a strong empire trap. Master Israel is the son of W. H. Sheldon, of this place, and was seven years old last July. He used in shooting at the targets a .44cal. double gun with brass shells containing 16grs. of Du Pont and ½oz. of No. 9 shot. He stood 5yds. from the trap. This is only his second trial at the trap, but he has killed birds on the wing.

Jan. 1.

I R Sheldon	00101011001000000001110101111100000001101011	—20
Con Thunell	11000000110000101010111101111000010011111110101111010—28

PAWTUXET.

Kelly and Smith vs. Mott and Gammon.

CHICAGO, Ill., Jan. 2.—An interesting team race was shot on Dec. 26 at the Gun Club grounds at the Diamond race track, northwest of Chicago, between Messrs. Ed. Kelly and J. J. Smith on the one side against Messrs. R. S. Mott and C. D. Gammon on the other, at 50 birds, $50 a corner. Abe Kleinman was referee, and the race was a good one at good birds. Additional interest was given the matter by a little argument between J. J. Smith, of Evanston, and Charlie Gammon, the former stating that he could beat the latter 5 birds in the 50. This he stood ready to do till toward the close of the race, when Charlie pulled up a bird and won this part of the race. There were many interested spectators of the shooting, and the thing was near enough to make the contestants feel the event was not decisive. Score:

Trap Around Philadelphia.

SILVER LAKE GUN CLUB.

Jan. 2.—The Silver Lake Gun Club held its regular shoot of the winter series on the club's grounds at Greenwich Piers to-day. The special event was the fourth contest for the three silver cups to be contested for in thirteen shoots, each contestant to take part in ten regular club meetings. A sliding handicap and point system is used. The three highest scores at each contest get 3, 2 and 1 point. A 3-point man loses one target at the next meet. The 2 and 1-point men remain as they were; and all contestants who did not score any points are allowed one more broken target to add to their score.

The standing to date is: Gregory 7 points, Murphy 6, Apker 6, Mink 6, French 5, Ford 5, Woodstager 4, O'Brien 4, Price 4, Stoffer 2, Numbers 2, Reed 2, Lane 1.

The conditions were 25 targets, unknown angles, handicap of misses as breaks:

		Handicap.	Points.

KEYSTONE SHOOTING LEAGUE.

Jan. 4.—The Keystone Shooting League, whose grounds and club house are at Holmesburg Junction, Pa., held its annual club shoot and election of officers to-day, winding up with a banquet, at which about forty members and guests sat down.

The league, which is one of the largest and most prosperous gun clubs in the country, made a new departure to-day, electing in addition to the regular officers a board of governors consisting of three members, to whom are to be referred all matters pertaining to the management of shoots, tournaments and the election of new members. The league also reduced the admission fee for new members from $25 to $10, and twenty new members were admitted.

At the banquet Harry Thurman acted as chairman and toastmaster, calling on many of the members, who responded in short speeches. Common Councilman James Wolstencroft gave a history of the league from the time it started as the North End Gun Club in 1880, until it was chartered under its present name in 1892, and took up its present location. The inclosed grounds embrace over two acres, but the club has recently leased the balance of the tract, which takes in over fifty acres. The officers elected were: President, Wade Wilson; Vice-President, Albert W. Worrell; Secretary, George E Pack; Treasurer, E. R Johnson; Field Captain, William H. Pack; Assistant Field Captain, H. L. David (Landis); Scorer, Nathaniel Swope; Board of Governors' J Longnecker, William M. Pack and Henry Febriger.

Among those present at the banquet were:

Harry Thurman, W. H. Wolstencroft, G. S. Norris, Wade Wilson, Henry Febeacker, H. T. Danvid, Will K. Park, Thomas Kellar, James Wolstencroft, Joseph Thurman, Howard Ridge, E. D. Johnson, D. Longnecker, J. Ross, Harry Stevenson, R. S. Elwell, H. S. Callaway, A. Stevenson, William Donnelly, W. H. Pack, J. K. Starr, J. Rothacker, C. H. Fitzgerald, N. Moore, O. K. Stevenson, J. B. Ridge, A. Warrell, Harry Allen, H. B. Wilson, Jr., N. Swope, I. W. Budd, Dr. Allen and P. N. Day.

For the league's annual shoot the members were divided into teams of twelve men each. The conditions were 10 live birds per man, 30yds. rise, 50yds. boundary, under A. S. A. rules, the losers to pay for the banquet to follow. After an exciting match the team captained by W. H. Pack won, defeating Captain Thurman's team by the small margin of 1 bird. Summary:

Pack's Team.

FLORISTS' GUN CLUB.

Jan 5.—The twentieth shoot for the Donaldson diamond medal was held to-day by the members of the Florists' Gun Club, on the club's grounds at Wissmoming. The weather at the start of the shoot was quite pleasant, but when squad No. 2 went to the score the wind blew up strong and cold, making the flight of the targets very erratic. Although A. B. Cartledge made the highest score of the day for the actual number of targets shot at, T. Cartledge, by virtue of his handicap, beat him out for the medal and scored a win for that trophy. Six more contests have yet to be shot before the actual ownership of the medal is assured. The score of wins to date stands thus:

George Craig 4, Charles D. Ball 3, Edward Reid 2, Thomas Cartledge 2, John Burton 2, George Anderson 2, A. B. Cartledge 2, Will K. Park 1, W. K. Harris 1, J. W. Colflesh 1.

Medal shoot, 25 targets, unknown angles, handicap allowance of extra targets to shoot at;

Thomas Cartledge (10)	1111111011111111010100110001111111111—27
A B Cartledge (4)	1111101111101111111111011011—25
Ed Reid (4)	1111011111101111011101101111—23
G O Bell (4)	1100101010011111111111011111110—21

V Dorp (0)	1010101000010000001001000— 7
J Ford (0)	0000000000001000011000000— 3

Thos. Cartledge, A. B. Cartledge, Ed Reid and G. O. Bell were the only men who shot out their handicap allowances, none of the others having any chance to win.

Another race at 25 targets, unknown angles, was also shot, with the following result:

G. Craig 9, Ed Seid 13, W. P. Craig 6, J. D. Carlisle 9, G. O. Bell 14, T. C. Brown 8, C. D. Ball 22, J. W. Colflesh 19, Thos. Cartledge 9, W. K. Harris 18, J. Ford 6, H. Bucknell 21, A. B. Cartledge 18, W. K. Park 17, T. Keller 15, W. Smith 21, J. Burton 16, G. Anderson 22, Payne 13, V. Dorp 7.

New Haven Gun Club.

NEW HAVEN, Conn., Jan. 1.—An all-day shoot was given to-day by the New Haven Gun Club on its ground in this city. There were about twenty-five shooters present, including a number of out-of-town men, among the latter being Messrs. Harvey and Cutler, of Windsor Locks, and Mr. Blamey, of Holyoke, Mass. There were ten events on the programme, but a number of extras were also shot. Several men, whose names do not appear in the scores, shot for targets only.

First average for the entire day, including extras, was won by Mr. F. L. Harvey, of Windsor Locks, with 85$^{1}_{7}$ per cent.; second, by H. O. Whitney, 84$^{1}_{7}$; third, by F. J. Potter, 83$^{3}_{7}$. On programme events only H. O. Whitney was first with 87 per cent.; F. J. Potter second, 86$^{2}_{5}$; F. L. Harvey third, 84.

Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	Extras.				
Targets:	10	10	10	10	15	10	20	15	10	15	10	10	10	10	10

The club held its annual meeting on Saturday, Dec. 26, at Bassett & Reeves's store. The secretary's report was read and accepted, after which officers were elected for the ensuing year as follows: President, M. H. Clark; Secretary-Treasurer, W. H. Hazel. Directors, C. B. Bristol, F. J. Potter, G. L. Clock. The club starts the new year with a substantial balance in the treasury and bright prospects for the future.

The regular club shoots will be held the second Wednesday of each month. A schedule has been arranged as follows:

No. 1, handicap race, 30 singles, 15 at known angles and 15 at unknown; three merchandise prizes each month.

No. 2, team race at 20 singles for cash prizes.

W. H. HAZEL, Sec'y.

Mount Ellis Gun and Rifle Club.

NEWBURGH, N. Y., Jan. 1.—The members of the Mount Ellis Gun and Rifle Club held a shoot to-day at clay targets. Among the events shot off were two team races. The first race was between 5-men teams captained respectively by Messrs. Bradley Scott and Sneed. Mr. Sneed's team won easily by 83 to 68. Score in this event was as follows:

Scott's Team.

J Bradley Scott	0010001110101011111010011—14
James Todd	111100101011010101101001—15
Geo W Miller	0010001110111100101111010—14
David C Miller	1100110100100000011010100—10

G W Miller	1111011110010011O0101110—15—61

Jan. 5.—The annual meeting of the club was held this evening, the following list of officers being elected for 1897: President, Elmer E. Roosa; Vice-President, Lewis F. Suydam; Secretary, Frederick M. Sneed; Treasurer, A. Lincoln J. Miller; Captain, Alex. T. Moran; Trustees—Samuel L. Stewart, David C. Miller, Alex. T. Moran, F. M. Sneed and Geo. W. Miller.

The club was organized in March, 1895, and was incorporated in February, 1896. Its membership, which is limited, has increased rapidly. The grounds, which are located just outside the city limits and therefore easy of access, are splendidly arranged and equipped. The club has undoubtedly one of the best 200yds. rifle ranges in the State, and since organization some of the members have developed into excellent marksmen. At the traps the club has thus far confined itself to the clay targets, and as nearly all the members were new at trap work the average scores have not been high. But if the members have, during the short time the club has been organized, failed to make record-breaking scores, there is one thing in which they are not lacking, namely, enthusiasm in the sport.

Greensburg Gun Club.

GREENSBURG, Ind., Jan. 1.—The Greensburg Gun Club some weeks before the first day of the new year decided to celebrate to-day with an all-day shoot, live birds in the morning, clay birds in the afternoon; but their hopes almost vanished when with the morning came a very hard rain which lasted until nearly noon, so that only one live-bird match was shot. This was between Winchester and Zoller, and was won very easily by Mr. Winchester.

The principal event of the day, and as it turned out the only event in the afternoon, was the shoot for the Laflin & Rand W-A powder trophy. This was arranged to take place at 1:30, but on account of the rain it was after 2 when the first squad of the 12 contestants took their places at the score. The afternoon was very dark, and a mist of rain fell continuously, increasing into showers at times. Had the weather been at all agreeable for shooting the scores would have been much better. The W-A trophy is a very handsome silver can about 5in. in diameter and 5½in. high, filled with W-A Smokeless powder. The club appreciates the kind remembrance on the part of Messrs. Laflin & Rand, and at a meeting of the club held this evening extended to the company a vote of thanks. The trophy was won by D. A. Myers, the president of the club, who broke 47 out of 50, that being the number of bluerocks allowed each contestant. The club had the following inscription engraved on the trophy before it was presented to the winner: "Won, Jan. 1, '97, by D. A. Myers, score 47 out of 50." Following is the score:

Minear	01100.0110110000011011111111101011111101100110001—31

SAM P. SWENSON, Sec'y.

An American at Monte Carlo.

THERE has been a great deal of talk during the last few days as to who the "Mr. Robinson, an American," was who had defeated Mr. Beresford, an Englishman, in a 100-bird race at Monte Carlo on Jan. 5. The New York *Herald* gives the following cable dispatch republished from its European edition of Jan. 6:

"MONTE CARLO, Jan. 5, 1897.—A return match, 100 pigeons, at 30yds. for 2,100f. a side, between the California shot, Robinson, and the well-known English marksman, Orchardson, took place this afternoon at Mount Boron, and ended in favor of the Pacific coast champion.

"It must not for a moment be thought that there was any collusion between the shooters. On the contrary, unfortunately there was bad blood between the rivals from the commencement, for no sooner did Robinson arrive on the ground than he asked to see the birds, and remained in the pigeon room alone with the employees fully ten minutes. Coming out, he proposed to M. Bertrand, the directeur of the Tir, to ask Orchardson to allow two strangers, in the shape of two street boys who never trapped pigeons in their lives, to take the place of the ordinary trappers. To this the Englishman, a splendid specimen of the British sportsman, replied, although evidently nettled:

"'Anything you like, so long as we begin the match. Have two ladies to trap if it pleases you,' and after a pause he added: 'Say, would you like two boys to retrieve instead of dogs?'

"Here the incident closed. The two did not exchange a word until they shook hands when all was over.

"The light was dull and gray, with not a breath of air to help the birds. This was considered by the betting division to be worth fully £150 in wagers over the result in favor of the American."

The race resulted thus: Robinson 92, Orchardson 89. The birds are said to have been only a very moderate lot, something we are not accustomed to hear said about European bluerocks. The poor quality of the birds evidently attracted attention, as the *Herald's* correspondent winds up thus:

"After the contest several friendly sweepstakes were decided. The majority of the birds flew well. This M. Bertrand attributed to the difference in trapping. Be this as it may, in the match what was sauce for the goose was sauce for the gander.

"After all was over everyone was pleased to see the two opponents at the buffet together. I do not think, however, that the deciding match will be shot on this side of the Channel, but probably at Hurlingham or at the gun club, where English bluerocks alone are used, and the Belgian bizet is unknown.

"In a previous match, shot at Cap d'Ail, Orchardson killed 85 to Robinson's 82."

At Watson's Park.

CHICAGO, Ill., Jan. 7.—J. Rehm shoot at 20 birds for practice this afternoon. Score:

J Rehm	22220222202222222220—17

Jan. 8.—J. Dart tried his hand to-day at 60 live birds for practice. He scored 34, as below:

J Dart	0122002221202012002010000120 20—14
	2110202121021000220012101101212 20—34

Jan. 9.—The Kenwood Gun Club shot at Watson's Park to-day with the following result in its club shoot:

H H Frothingham	2222201000— 6	Com Thorne	2112221112—10
Pettit	2202220110— 7	Dering	2001012210— 6

Trap Around Pittsburg.

TEAM RACE AT DAVIS ISLAND.

PITTSBURG, Pa., Jan. 7.—The new set of traps on the Herron Hill Gun Club's grounds, at Davis Island, were used for the first time to-day. This set is a great improvement over the old ones. The team shoot to-day was between C. A. May and Fargo against W. S. King and Strong. The former team won by 5 birds, as shown in the following score:

C A May	2222220222222220022122222222202212222222222220201	—44
Fargo	2110212122222211212120122222200222221012212212211 22	—45—89
W S King	2221212222222222221120200212111111222202121120112	—45
Strong	0102210212102212022022021102220012212211110121111 1	—39—84

ALEX KING VS. M'PHERSON.

Jan. 8.—Alex. King and Sandy McPherson shot a 100-bird race on the Herron Hill Gun Club's grounds at Davis Island. King won by 6 birds with a score of 91 to 85. Both men shot from the 30yd. mark:

A H King	2222200222222212120221222 —22	
	2222212222222220021222202 —22

PUBLISHERS' DEPARTMENT.

Changes in the Lehigh Valley R. R.

MR CHAS. S. LEE, General Passenger Agent of the Lehigh Valley R. R., announces that Mr. E. B. Byington, after many years of faithful service, retires from the office of General Western Passenger Agent of the company, and is assigned to other duties. Mr. A. A. Heard is appointed Western Passenger Agent, in charge of passenger traffic originating at Buffalo, Niagara Falls, Suspension Bridge and all points West, with headquarters at Buffalo.—*Adv.*

Oilers for 1897.

MESSRS. CUSHMAN & DENISON are the pioneers in the manufacture of pocket oilers, and to-day supply almost the entire bicycle trade. For fourteen years they have carefully looked after the improvement of their product. Their "Perfect" oiler is everything the name implies, while the "Star" is a good second, and one with which almost any sportsman or wheelman would be satisfied were it not for the "Perfect."—*Adv.*

The Luxury of Travel.

THE man who has never been West over the picturesque New York Central has a sensation in store for him that he cannot afford to forego. Nature has done almost as much for him in what he sees as mechanical skill has done in placing him in a magnificent hotel on wheels, and whirling him toward his destination on the very wings of the wind.—*Hardware.* *Adv.*

Card Case.

EDWARD SMITH & Co., 45 Broadway, New York, makers of the celebrated "E. S." spar coating and other varnishes, are sending to their friends a neat souvenir morocco card case.—*Adv.*

Property for Sale.

AN excellent opportunity to secure a prolific trout stream in Michigan for club purposes is offered in our "Property for Sale" column this week.—*Adv.*

WHEN YOU GO SOUTH to the great Texas midwinter shooting carnival at San Antonio, or to the Arkansaw Traveler's annual winter tournament at Hot Springs, Ark., remember the Missouri Pacific R. R. When you go South for a bit of the best shooting in America, to the Texas Gulf Coast or the Indian Nations, remember the Missouri Pacific R. R. Elegant through trains out of St. Louis, with all the luxuries of modern travel. Special tournament rates. Address H. C. Townsend, G. P. A., St. Louis, Mo.—*Adv.*

THE free attendant service maintained by the New York Central at Grand Central Station, New York, is another example of the care and courtesy by which patrons of this great railroad are surrounded.—*Adv.*

ON the New York Central you travel in perfect security, protected every foot of the way by Block Signals.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 23, 1897.

VOL. XLVIII.—No. 4. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

Fishing, if I, a fisher, may protest,
Of pleasures is the sweet'st, of sports the best;
Of exercises the most excellent;
Of recreations the most innocent.
But now the sport is marde, and wott ye why:
Fishes decrease, and fishers multiply.
Thomas Bastard, 1598.

THE BOONE AND CROCKETT CLUB.

THE tenth annual meeting of the Boone and Crockett Club, which was held on Saturday, Jan. 16, in New York, was an interesting occasion. The attendance was large, and among those who were present were many who are eminent in different walks of life. Not one of those present but seemed to be impressed with the fact that the club has a real work to perform and to be willing to do his part in performing it.

The work done by the Boone and Crockett all counts for a good deal, though some of it, appearing in the statutes of New York State and of the general Government, and not being labeled with the club's name, is likely to be forgotten. A permanent work which the club has accomplished appears in two volumes of its publications printed in recent years, and these, it is understood, are soon to be followed by a third, the plan being to publish a volume every two years. The doctrine of game protection and of good, honest sportsmanship inculcated by these volumes reaches a good deal further than the personal influence of the members of the club; yet this personal influence is strong. With a membership which, though small, reaches from the Atlantic to the Pacific, covering alike our largest cities and States, which are only just beginning to develop their resources, the club covers a vast territory, and the precept and example of its members come to a great many people.

In our report of the meeting, printed elsewhere, the resolution introduced by Mr. Henry L. Stimson, of New York, gives expression to the sentiment which has always pervaded the club, but which up to the present time has been its unwritten law. Mr. Stimson's resolution, unanimously passed, condemns the use of steel traps, the killing of game animals while helpless in the water or in the deep snow, and the killing of the females of any horned game.

Certainly it is a good thing for game protection and for sportsmanship when a club like the Boone and Crockett Club takes this ground. And on the other hand, it was high time that the club should express in its constitution what has always been the sentiment of its members. The killing of the females of several species of horned game is already prohibited in some States of the Union, and it should be forbidden in all.

The club's plan, first adopted at its recent meeting, of having a formal paper read by some high authority on some one of the subjects in which it is specially interested, is highly to be commended. However agreeable it may be for a number of hunters to dine together, and to exchange experiences and swap hunting stories, it must be acknowledged that the profit of such a meeting, either to any cause or to the individuals themselves, is not great. It is much more in keeping with the serious purposes which should animate a club such as the Boone and Crockett to devote a part of this meeting to the acquiring of knowledge. Papers such as were read by Mr. Low at the club's last meeting greatly increase our knowledge of an unknown quarter of America, and this is a subject about which no American can have too much knowledge.

While the Boone and Crockett Club was perhaps established as a hunting club, and while its members do a great deal of hunting and enjoy it, it aims at something higher than being a mere social organization. Among the objects named in the constitution of the club are the promotion of travel and exploration in wild portions of the country, the working for the preservation of large game in this country by furthering legislation for that purpose and by assisting in the enforcement of law, and inquiry into and recording observations of the habits and natural history of various wild animals. Objects such as these are surely worth striving for by any man or any body of men, and the Boone and Crockett Club is to be congratulated upon the work it has done and the record it has made in the ten years of its life.

KITES IN THE LIFE-SAVING SERVICE.

IN these days, when the use of kites for various purposes is receiving so much attention, there are a variety of practical matters in which they may be employed which deserve the consideration of practical men. We are told that kites are being used to lift people above the earth; to carry cameras which shall photograph portions of the landscape beneath them; to transport explosives, which may be dropped on enemies at a distance, and to carry and lay telephone wires, over which conversation can be carried on.

The number of lives saved each year by the life-saving service along our Atlantic coast is large, and of these rescues a very considerable proportion are made by means of the breeches buoy, the lines being cast over the ship from the shore by means of mortars. Many vessels, however, go ashore where there are no life-saving stations, or perhaps two or three may be wrecked nearly at the same time near a single station, and may go to pieces before the life-saving crews have time to attend to all of them.

It is necessary that a life-saving force should be stationed on the land and that its operations should be conducted from the shore. Yet it is certain that often the work of establishing a communication between a wrecked vessel and the shore might be carried on with much better prospects of success from the vessel, provided there were practical means of carrying the line ashore. This suggestion, however, involves a reversal of the customary plan of initiating communication between the wreck and the shore, and so may at first seem startling. We believe, however, that a little thought will make plain some of its advantages.

It appears to us entirely practicable to use kites in life-saving, and we believe by this means many human lives may be saved.

All vessels should be provided with large kites, which, if the vessel went ashore, could be flown from the masthead, and would carry a fine line to land. By means of this fine line one larger could be hauled ashore, and by that a hawser, which would thus afford passage to shipwrecked men to the shore. Under ordinary conditions, the ship provided with such a kite and with a half mile reel of stout cord or wire could send the line ashore, the kite being dropped as soon as it is over the land. Even if the line should not fall into the hands of a member of the life-saving crew, the individual who received it would be certain to have intelligence enough to haul in the line, to bring the stout rope ashore and to make it fast. Communication once established between the wrecked vessel and the land, the rest would seem to be easy.

What makes it certain that in ninety-nine cases out of one hundred a kite could be used from a vessel is the fact that ships which come ashore during storms are almost always wrecked on a lee shore—that is to say, they are wrecked because and at a time when the wind is blowing from the sea to the shore, either directly or at some angle which is not an acute angle.

It is, of course, true that occasionally through carelessness or in thick weather vessels, particularly steamers, blunder ashore with an off-shore wind, and when this is the case a kite could not be flown from the ship; but in such case the life-saving crew could send over it a line with as much speed and certainty by a kite as could be done by the mortar.

The method by which the kite could be dropped or the line freed from the kite and dropped alone are mere questions of detail. There are many ways in which this could be accomplished, and it would require little ingenuity to devise a method, either for setting free the kite and dropping the line vertically and by means of a small weight attached near the bridle which holds the kite, or by tearing out the surface which holds the wind so that the kite itself should at once fall.

The expense of providing a vessel with a couple of kites such as would be required, and with the necessary reels of line, would be very trifling, and yet such provision might result in the saving of the lives of a whole ship's company. Of course neither the owner who sends out a vessel, nor the master who commands her, ever believes that this particular ship will be lost. They believe that other vessels may be wrecked, but think that this one will escape. At the same time, the owner does not neglect any precaution of insuring his vessel and her cargo against loss. Would it not be worth while for him to pay the small sum required for kite equipment, and count it as an insurance premium paid on the lives of master and crew?

There are laws in plenty protecting our commerce and governing the navigation of our vessels, yet after all the sailorman is looked after by our legislation as little as any man that works. To himself, and to those who depend on him for support, his life and his safety are as precious as the safety and the life of any other human being. Every means that human ingenuity can devise or human skill execute should be put in practice to protect him from the dangers to which he is peculiarly exposed. This project, simple and inexpensive as it is, is surely worth a trial, and if it should prove practicable our navigation laws should be so amended as to provide that no vessel shall clear from any port without being equipped with the necessary apparatus of kite and reels of line which shall enable the crew to send the kite across.

SNAP SHOTS.

The Florida green turtle lives in the sea, but comes to land to deposit its eggs in the sand of the beach. The Floridian hunts out the turtle nests and robs the eggs. The pursuit of the turtle at sea and the consumption of its eggs ashore have been going on long and unremmittingly. Now the fishermen and the eggers are asking one another what has become of the green turtle supply. They appear to think it an insoluble mystery.

Joel T. Headley, who died on Jan. 16, was one of the earliest writers on the Adirondacks. In 1846 Mr. Headley was associated with Henry J. Raymond on the New York *Times;* and in the following years, for the benefit of his health, he used to make summer visits to the Northern Wilderness, where he was among the first to make proof of the recuperative influences of the mountains, lakes and forests. In 1849 his newspaper sketches were collected into a volume entitled "The Adirondacks; or, Life in the Woods." The volume had a wide sale and did much to direct public attention to the woods; although the time was not yet ripe for the popularity which was afterward awarded to "Adirondack" Murray's book.

The Mongolian pheasant stocking enterprise in Massachusetts has not been a pronounced success outside of the State aviaries at Winchester. Of the birds sent out to different persons for breeding and liberating, only three lots survived.

The annual midwinter convention of the New York State Association for the Protection of Fish and Game, at Syracuse last week, was quite in keeping with the meetings of other recent years. The amendments which the Association will ask the Legislature to make in the law this winter are given in our game columns. They are in general in the line of more protection; and everything which tends to that is in these days desirable. All good citizens of New York should support the recommendations of the Association.

We have reprinted in leaflet form the FOREST AND STREAM Platform Plank, with the argument for its adoption, and we shall be glad to supply the leaflet in any desired quantities for distribution.

The Sportsman Tourist.

TIM, MY TUTOR.—I.

I HAVE just laid aside the Christmas number of FOREST AND STREAM. It takes me back many, many years, and the world, looking up toward the midwinter sky, seems brighter than it did two hours ago. It is evening. The fire is burning as cheerily as it can in a womanless house, where embers, not flame, make the pictures of the past. The gun stands in the corner, wiped, but not put away since the last expedition for jack rabbits. My dreams are given shape by Fred Mather's inimitable "A Christmas with Old Port." There is the low sound of distant music—not of the sonata, symphony or opera, that has long since been dead to me, but the song of a bygone life.

A June noon! The shadows scarcely know which way to fall. Down in the meadow the cows are lying in the bushes, or standing, belly deep, in the stream to escape the Egyptian plague of flies. It is ten minutes since the last shrill chords struck by the whetstone on the gleaming scythe died away. Beneath some grateful shade the mower is eating his frugal repast and washing it down with great gulps from a brown stone jug of hard cider. A boy climbs the four-rail fence and wonders which way to turn toward home. He has run away from his grandfather's farm to enjoy a morning with the trout. Secretly he dug the worms behind the old brown barn, noisy with the merrymaking of the hayers. Stealthily he sneaked up the hillside and cut a birch pole, almost too heavy for him to wield. Surreptitiously he filched a doughnut or two from grandma's jar, and 20yds. of twine from the village store, and started on his expedition.

All through the hot forenoon he fished. The robins chirped, the thrushes warbled, the finches caroled and heaven seemed very close to earth. About him the first blooming roses showered their fragrance and, where the slow turnings of the brook made a marsh, the cardinal flower flaunted all its regal splendor. He was fishing the headwaters of the Raritan on the border between Morris and Somerset counties, New Jersey. He had two small sunfish strung on a very diminutive twig, and he had doubts as to whether these were sufficient to save him from a well-deserved thrashing when he returned home.

While he was thus pondering he heard a faint sound from up the road and, looking in the direction of the voice, he saw a sway-backed horse, a grizzly-stubbed, gray-haired man and a rickety wagon, all on the way from Mendham to Chester. The strange combination came nearer and now he could catch the words that the old man shouted, although there was no house within a quarter of a mile:

"Oh, clams, fine clams, fresh clams, I say,
They've lately arrived from Rockaway!"

There is a rustle among the blueberries behind the boy and a tall man leaps over the fence, regardless alike of blossoming blackberry brambles and of the blacksnake that, sluggish yet ever alert, is hunting the fresh-laid eggs of yon disconsolate chippy.

"Hey, mister! Haow dew ye sell them clams o' yourn?"

What ensued I do not know, but I saw a dozen or so of clams exchanged for a couple of trout, and then the peddler drove on. The man who had bought the aforesaid bivalves now became conscious of my presence. His shock of red, matted hair set off the clear blue of his eye, and the ragged shirt and torn jeans were emblems of glory and not blemishes in my sight—so straight, so strong, so frank and hearty, my boyish mind made Tim a demi-god.

"Waal, Walt, what yer doin'? Guess the old man don't know whar ye be!"

He had the advantage of acquaintance. I had not, though I had seen him many a time loafing around the village store, sitting on a packing box and squirting tobacco juice at every prominent nail-head. Naturally I asked his name and found it to be plain "Tim." He was known throughout the country-side as a ne'er-do-well, who wasted his time on "huntin' an' fishin' an' chorin' 'raound." His redeeming features were scrupulous honesty and a fervent devotion to Miss Cynthia Drake, the youngest daughter of a wealthy farmer. Cynthia might possibly have reciprocated this affection, especially as Pa Drake always referred to the young man as a "low-down feller," and whenever he found Tim on his property used only the expressive word "Git!"

"What yer fishin' fer? Shiners, hey? Ye ain't goin' tew take them things hum, be ye?"

I replied that I had angled assiduously all the morning in hope of getting nobler game, but to no purpose.

"Didn't spit on yer bait! Ye'll allers hev luck if ye spit on every bait an— Let's see; you've been fishin' in the sun an' stood right whar every mortial traout c'u'd see ye. Ye wanter drop in under some bank or inter a deep, shady hole, an' let yer bait float daown. Gittin' hungry? Waal, come on an' hev some clams. Fish don't bite much in the middle uv the day. I've got a little string tied tew the willers. Thar fur Cynthy. She's powerful fond of traout, she is."

We sat in the shade and Tim displayed his prizes with great gusto, though there was not a fish in the lot over 9in. in length. Then we divided the clams. My companion did the honors with a rusty knife that was entirely in keeping with his other possessions. I remember how, as he lay down and took his post-prandial quid, I resumed my occupation, and having carefully spit upon my bait, according to directions, dropped where I thought was a likely spot.

A moment later my line straightened, and instinctively the tip of the pole described a mighty arc with such velocity that a small shiner was dashed to pieces on the hillside 50ft. away.

"You'll never git traout in thet way. Feel for 'em, Walt, an' don't be so bresk. Naow thar's a good hole under them willers. Jest watch me an' see haow its done."

Tim fixed a fresh worm on his No. 4 hook, adjusted his cork to the proper depth and crawling to the water's edge placed his line where it would be the most successful. Slowly it sank, and the cork floated among the willow leaves as though absolutely heedless of its important duty.

"Tim! It's a-bobbin'. There it goes again—'way down under."

Very cautiously Tim gave a pull, then a harder jerk, but the cork did not reappear. Only the willows swayed uneasily, as if moved by some sub-aquatic influence.

"He's run araound a root, but I've got him sure!"

The fisherman divested himself of his clothes and stepped into the pool. He felt along the line, bending as he did so until naught but his red hair was visible. Then with a shout of triumph he suddenly straightened, jumped backward, and hurled upon the bank cork, line, and the largest brook trout that I had ever seen. All the afternoon we rambled; Tim doing the fishing, and I gaining the experience of his wood lore.

"Tim," said I, as we turned homeward, "what do you do in the winter, when the trout don't bite?"

"Everything to its season, boy. When the fish quit bitin', the squirrels come on. That's the time o' year for me. All the woods a-rustlin' with red and yeller; the chestnut burrs a-bustin' an' makin' the graound as brown as Cynthy's hair; the checker-berries winkin' at yer through the creepin' pine, and every time ye step on a twig somethin' happens. Sometimes it's a jay bird that chatters ahead uv yer, an' ag'in it's a pa'tridge jumpin' up an' lightin' fur the timber like a gray cannon ball; an' the squirrels come aout tew see what's the matter. They're a sly critter, but powerful cur'ous. Ef you'd lay daown an' pertend tew be asleep, they'd run daown the shagbarks tew find aout what wuz in yer pockets. Gosh! but it's fun tew shoot them big grays! An' then thar's rabbits; an' in winter I can make quite a bit o' money trappin' mushrats an' minks. Onct I ketched a red fox, but they're powerful skeers. Sometimes I go tew Long Pond or Brooklyn Pond, an' allers git a few pick'rel through the ice. They fetch a good price tew Morrist'n. That keeps me in paowder an' sich, an' I've begun tew lay by a little fur—. Waal, I guess I'll take these 'ere traout up tew Cynthy, an' you'd better be gittin' hum. When ye come up at Christmas, I'll take yer 'long, ef yer dad 'll let ye go."

Father stood by the bars bending a hickory switch in anything but an assuring manner. Mother was in tears, and I readily perceived what was coming. Just then grandmother, peace to her ashes, came to the door:

"Remember, Charles, that you used to do the very same thing when you were a boy."

My father, not liking to have his youthful failings thus published in the presence of his son, turned away, and I am yet awaiting my punishment.

When we went to Mendham for the holidays I took the first opportunity of going to Phœnix's store to inquire for Tim. The boy had disappeared some weeks before. Perhaps he had enlisted; perhaps gone West. No one could tell. But every morning, when the mail arrived from Morristown, Cynthia Drake was at the post-office asking for a letter—from whence, who cared?

SHOSHONE.

ISLANDS OF THE PACIFIC.

No. 3.—The Chinchas.

FORTY years ago the Chinchas were well known throughout the world, chiefly for their product of guano. They consist of three small islands on the coast of Peru, distant from Callao, the port of entry, some three days' sail. At the date of my yarn it was no unusual sight to see 100 sails of different nationalities at the islands loading guano.

The islands are very high, with bluff, bold shares, while the guano is all on top. To load they use a canvas chute slung under two long cables, their shore ends secured to heavy posts, while outboard they are hauled taut to an anchor, stretching the chute from the bluff to a point some 10ft. above the water, and standing at an angle of 30 to 40°. Large iron lighters are used to convey the guano to the ship. The lighter is towed in and made fast to the cable under the chute, while the guano is dumped in the top and comes rattling down into the lighter. When full the lighter was towed alongside the ship, the guano hoisted out with a bucket and purchase and dumped in the hold.

The bottom of the hold having been floored over with dunnage, the first lot of guano was put into bags, which were laid snugly side by side all over the bottom and well up the sides; this was done so that in case of springing a leak the guano could not get into the limbers and choke the pumps. The flooring off having been attended to, the guano was then run in in bulk and trimmed, as required. The trimmer was usually shipped at Callao for the trip to the islands.

Callao being the nearest port of entry, all ships had to go there to enter; then to the islands and load, and back to Callao to clear. Ships usually shipped two or three men, one a trimmer, for the trip, discharging them on the return to Callao. I sailed several trips to the islands and back in the capacity of trimmer, and know something of what it is. It was dirty work at the best, somewhat hard and a trifle dangerous. I have seen men hauled up from below, overcome by the ammonia thrown off by the guano during the process of handling, and bleeding at mouth, nose and ears. As I said, it was hard work; but the pay was good, the intervals between trips long enough to spend it in, and Callao was a good place to get rid of money.

At that time Callao was the wildest place on the globe, I believe. Rum shops, dance halls and gambling dens were as common as daylight. Crimps were plentiful and shanghaiing was an every-night occurrence. What is that? I hear you say. Well, in those days when a ship master wanted men he would go to a boardinghouse keeper and bargain for so many men, to be delivered at a certain time and place. If the boarding master had them, well and good; if not, he must get them. Sometimes poor Jack would be just landed, perhaps from a long voyage. No matter, if there was a chance he was filled up with rum, then dragged aboard ship for another long voyage, and a two-months' advance to work out. If a sailor was not handy, anything would do, so long as the crimp got him drunk enough to ship. I have heard of a minister being dragged and carried aboard ship; and he had to go the voyage too. I have been on a ship where the crimp brought a dead man; the boat came alongside at night with some half dozen or more in all stages of drunkenness, while the dead man lay in the bottom of the boat. "Lift him up, boys," says the crimp; "he'll be all right when he's had his sleep out." So he was bundled aboard, dragged to the forecastle and tumbled in, where he was found the next morning, having apparently been dead a day or more. Men have been knocked down on the street, stupefied with drugs and sent a voyage to sea.

At the time of which I write there were two brothers in Callao—Mon and Jack Britt. One kept a den, rumshop, gambling house, or anything you choose to call it, while the other was a runner or crimp. They had several times tried to get hold of me, and I had been sharp enough to keep out of the way. I went in the shop one day and Jack Britt asked me to drink. I had always refused before, but this time I thought I would see what the row was. "All right, Jack, set them up." Jack handed out a small bottle from beneath the bar. I filled my glass, while Jack filled his from another bottle. As he set the bottle down I said, "Jack, when I drink with a man I always like to change glasses for the first time," and I picked the glass he had filled for himself and pushed the other across the bar. Right then and there the circus began. His face got red and he roared out, "What do you mean?" There was something else he said for a sort of emphasis, but I don't like to write it. "I mean that I don't care to drink out of that bottle you passed me," I answered, "I believe it is drugged liquor." Jack came over the bar roaring like a bull. As he came for me I caught him a good one, and as I did I got one myself from Mon Britt, who came in at a side door. Two were too many, and I was thinking of retreat, when a short stout man came in the outside door with a rush. He took in the situation at a glance. "I'll take the big fellow, matey. You 'tend to the other one."

This changed matters a trifle and before long we had the business all settled, books balanced and everybody paid off.

My new friend proved to be a genial, whole-souled sailor, Sam Watson by name, and I believe the ablest man physically I ever knew. He was short and very broad-shouldered, with a drawling voice and an easy, slouching gait. But when he did turn loose he was a whirlwind. We traveled together a long time and made several trips to the islands. We had many a jolly time both in Callao and Valparaiso.

If this should meet his eye or of anyone who ever knew him I should be pleased to know it.

I was at Callao in 1867, when I found the place greatly changed. There was less crimping, less drinking and less fighting, and a great deal less shipping. In fact, there were less than a half dozen American flags in Callao of a Sunday morning.

I did not go to the islands, but was told that times were very dull there.

I started in to write about the Chincha Islands and I have filled up my paper with personal matters, most of which happened in Callao. Well, I usually miss my calculations worse than that.

TARPON.

GEORGIA GAME AND FISH.

MACON, Ga.—The variety of conditions of soil and altitude in Georgia makes the game somewhat diversified, that of the coast and lower pine levels differing very materially from that to be found in the northern and mountainous portions. The Virginia partridge (called quail by most sportsmen) is the most generally distributed, and is the game bird *par excellence* of this State. This gamy little fellow was formerly very abundant all over the State, but in the northern section the cold and snow of two years ago sadly depleted their numbers, and small bags are now the rule. All through the middle or central part of the State partridges are still to be found in fair numbers, eight to twelve bevies a day being a good day's work for a well-trained dog. The lower range of counties where the yellow pine forests flourish is the home of this bird, and it is not unusual for a bag of 80 to 100 birds in a day for two guns to be made.

A few ruffed grouse frequent the laurel ridges in the extreme northern and northeastern parts of the State, but it is very hard work to bring them to bag. On the streams of southern and southwestern Georgia some deer, wild turkeys, black bears, ducks and squirrels can be found; turkeys and squirrels are very abundant in most of the river swamps.

Dove shooting is excellent in the winter and is a sport that tests a man's shooting skill to the utmost. These birds gather in immense flocks to feed in the pea fields, or in baited fields, and the slaughter is immense, as many as fifty guns often being in one party. The Legislature, recognizing that this meant extermination for the doves if unchecked, has recently enacted a law cutting off one month of the open season, the time now being from Aug. 1 to March 15, instead of July 15 to April 1.

The farmers are almost universally posting their lands all over the State, but very few of them object to a gentleman sportsman shooting, their object being to keep off market or pot-hunters, and vagrants or negroes.

The fishing waters of the State lie mostly in east and south parts. Black bass (locally called trout) grow to a large size, and in the swift-flowing streams are very gamy.

These with perch and bream are the best fish to be found, and on such streams as the Altamaha, Satilla and Allapaha rivers afford great sport.

The brook trout are found in the mountain streams of north Georgia in fair numbers, but run small in size, 6 to 8in. being about the largest.

There are a number of whole-souled sportsmen in Georgia who are always glad to extend any courtesies to visitors.

F. C. E.

Brünnich's Murre on Inland New York Waters.

ITHACA, N. Y., Dec. 27.—The waterfowl foreign to this locality which have recently been bagged in considerable numbers by Cayuga Lake gunners are pronounced by Dr. Wilder, of Cornell University, to be Brünnich's murre, a species of arctic wildfowl rarely found in this latitude. In many important particulars the Brünnich's murre seem closely related to the loon, notably the body conformation, legs, head and beak. In size it closely corresponds to the butterball duck. Below the waterline the bird is white, and above it is a blue black, or perhaps, to speak more accurately, Prussian blue. It furnishes but a small measure of sport, however; for, seemingly unconscious of danger, it sweeps in among one's decoys and stolidly remains there, despite the cannonade, until shot. Forty or more of these birds are said to have been bagged in a single day lately.

M. CHILL.

[It is only a few years since we first heard of these birds being taken on the waters of northern New York. As they yield neither sport nor meat to the gunner, it seems a pity to kill them.]

FIVE WEEKS AT LITTLE SOU'WEST CAMPS.

I LEFT Fredericton Oct. 27, to spend a few weeks at the Little Sou'west Camps of Mr. Braithwaite. My friends, Messrs. Irland and Risteen, had already returned from those famous grounds with two fine moose heads, which has already been told the readers of FOREST AND STREAM by the able pen of Mr. Risteen—otherwise the Prowler. I cannot hope to equal Mr. Risteen in literary style or descriptive ability, but I will try to give a true account of my little trip, and, what is of more interest, the amount of game we saw.

Some, no doubt, will remember my unsuccessful hunt in this region last year, when Braithwaite and I each lost two fine moose through not having heavy enough rifles and being obliged to shoot in the brush. So this year I provided myself with a new Winchester, .50-100-450, which I thought was about the right gun for moose. And I must say that from what I have seen, both this year and last, I have not changed my opinion, notwithstanding Mr. Cecil Clay's opinion to the contrary. Your .44-40 will no doubt kill a moose if you get a side shot, as, of course, there is nothing between you and his heart but a thin skin and a rib or two, but how many times are you going to get the moose to stand in that way? Not once in fifty times. On this trip we saw seventeen moose; twelve of these we still-hunted, four crossed our path, and one we paddled up to. Throw out the four which crossed our path and you come down to but one moose, which, you might say, we had a chance to kill with a popgun. The others were all either quartering shots or running shots, some both. When you undertake to still-hunt moose in a New Brunswick thicket you want a gun, and a big one at that, something that will stop him quickly. I suppose we can't all think alike on the gun question, but when I make a change it won't be for a smaller gun.

I left Fredericton on Tuesday morning, Oct. 27, for Boiestown, on the Miramichi River, which is the headquarters of Mr. Wm. Richards, the well-known lumberman, where I expected to get a chance to go in the woods with some of his parties going to the headwaters of the Dungarvon. Any other year, or a little later, when the snow is on, "portash" teams are going every day, but where a party is on the same grounds for two or more years they send in supplies a year ahead, or rather grub for this fall's work was sent in on the last of the "going" last spring. Mr. Braithwaite and I had our supplies sent in when theirs went in, so all we had to do was to get there ourselves.

I arrived in Boiestown at noon. I had come over on the freight train, as I was in no hurry and wanted to take the full benefit of my holidays (it was just a year since I had the last), and I take pleasure in the whole trip. The little incidents of travel, the boys on the train going to the woods, the old friends one sees at the stations and along the road, all go to make up a good trip. When we got to Cross Creek four young men got in. I knew in a minute they were bound for the woods. I asked them whom they were going in for, and they said they were going to join Billy Davidson's party in the morning at Boiestown. So I told them I was for the same country, and we became chummy at once. They had been having a "wee shock," as the Scotchman said, and were feeling pretty well, and when the conductor went out of the caboose one of them tried to ride his bike, but as the train was going about twenty miles an hour he didn't make much of a success at it, and the conductor coming in put a stop to the fun. One of the older boys said: "He won't feel that frisky by the time he gets to Rocky Brook," and he didn't. As the train drew into Boiestown the first person to grasp my hand was Mr. John B. Holts, who lives at Pleasant Ridge, eight miles from Boiestown.

His home is headquarters for parties going to and from the woods up Dungarvon. I had sent word ahead for him to meet me, and he was on hand with a stout buckboard wagon and smart horse. After seeing some friends in Boiestown we started, and arrived at Mr. John B.'s at 1 o'clock, with a good appetite for one of Mrs. Holts's first-class dinners. Mr. and Mrs. Holts are a fine example of some of the old settlers. She is a smart old lady of seventy, and he is an equally smart old gentleman of seventy-five. They have eleven sons and daughters, who are all living—never having lost one, which is quite remarkable in so large a family. They celebrated their golden wedding year before last, when their boys came home from all parts of the Union to help them remember it. It was made a kind of big party—so big, in fact, that the table for the wedding dinner had to be set out of doors, as people came from all around to congratulate them, as no people are more highly thought of in the country than they. I stayed all night at Mr. Holts's, and was up in time to see Mrs. Holts, with the help of one girl and a man cook, get breakfast for thirty-eight hungry men on their way to the woods.

Mr. Richards, the day before, had told me that he would advise Billy Davidson's party to go to Dungarvon *via* Rocky Brook, and as that would mean that they would go up the main Sou'west Miramichi and would not pass Mr. Holts's place, I got Mr. Holts to drive me down to the river to meet them. When we got to the forks of the road there were no teams in sight, and the white frost on the road showed plainly that no one had been along that morning, so we waited. Pretty soon the advance guard showed up in the form of five or six of the party, among them our friend of the bicycle ride. Just then the schoolmarm came to the schoolhouse door, and seeing us standing there said: "Come in, boys;" so we all filed in and watched her open school. The wagons coming along then, we had to start. We bowed to the teacher, came out and shook hands with Mr. Holts, and started on our three days' walk into the woods, the boys to wrestle spruce logs, and I to try for a shot at a bull moose. There were seventeen of us, and as we walked along behind the teams that fine fall morning it was a pleasure to be alive and to be out of doors. Some of the party had revolvers and two had guns, and the word was "let nothing live"—and they didn't. Partridges, squirrels, owls, everything had to fall before them; even a tin kettle belonging to some "portasher" was punched full of bullet holes, for which I got the blame from the aforementioned "portasher"—also his ill will, as he thought only a towny would do such a trick, and he knew there was a towny in the party. We kept on up the river to "Hayes's." The river is swift here, and the teams had to ford about two miles above, so all but the teamsters were to cross here. There were two dugouts on the shore, and a kid in one who was just about tall enough to see over the gunwale. When asked if he could set us across, he said: "Of course I can." And he was right. Every Sou'wester can pole a canoe nearly as soon as he can walk. The kid set us over and we kept on up the shore to Palmer Flat, and there waited for the teams. They showed up in about half an hour, but it took them about an hour to get over the river, as they had to make two trips.

We boiled the kettle, and turned about to face the celebrated Rocky Brook Portage, and it is a rocky brook portage, and no mistake. As the Dutchman told us last summer, "I've traveled vid circus and Vild Vest, and I tell you vot, it vos a Vild Vest." The first three miles it was mud—deep mud, black mud, red mud—but coming out at the top of the hill we met an old friend in the person of Miles Hunter, under whose care I had gone when a kid on my first salmon trip, and he told us we were through the worst of it. We made about six miles before dark, when we put up a lean-to, and with lots of rock maple for a fire we had a fairly comfortable night. In the morning we were off at daylight, and about noon stopped in an old camp for lunch, and as it commenced to snow one of the boys, not wishing to lie out another night, stumped anyone to strike for camp—eighteen miles away. I said I would go, and when the rest saw us getting some lunch they wanted to go also, and so two more came along. When we had made about four miles we came to the new camp of Mr. Daniel Evans, of Cardigan, who very kindly asked us to stay over night; but our leader, Joe Weaver, had said Forty-Seven-Mile Brook Camp, and Forty-Seven-Mile Brook it was to be. At Evans's Camp we were overtaken by five more of our boys, making nine all told, and they didn't bring any grub either. We walked pretty hard, and at 5 o'clock we reached Forty-Seven-Mile Brook Camp. We found the old stove up, and that was about all. We made a little tea, ate some sweet cake and lay down in our wet clothes on the floor to put in the night. We got the night in somehow, and in the morning I and another of the party started over to Fullerton's Camp for grub. On the way we met our old friend Mr. Patchell, who had been in the woods since April, watching the stuff in the storehouses. He had lots of inquiries to make about his family and his neighbors, and he was free to confess that he was glad the parties were coming in to take his job away from him. We got a sack of grub and brought it over to the boys. We waited until dark for the teams and then put out for Fullerton's Camp, where there was grub, with blankets. There I met Dave Douglas, who, with Henry, had been in the woods ever since Oct. 10.

BLACK DUCK.

From the original photograph.

Dave and I went back in the morning to Forty-Seven-Mile Camp, and as the teams had arrived shortly after dark the night before, I got my bundle and big gun, and with Dave for pilot we started for the Crooked Deadwater, the home of the moose. We stopped at Fullerton's Camp again for lunch, as I had early in my Dungarvon experience learned to eat at every camp I came to; for, as Henry puts it, "You will need it all before you get out of these woods." Two miles from Fullerton's we came to the tent, and there was Henry looking as natural as life. This tent is only a temporary outpost in Henry's chain of camps, which extend from Louis Lake, on Renous, to Little Sou'west Lake, on the Little Sou'west, and from old No. 64, on the head of Clearwater, to the head of Bathurst, fifty miles away, and including among the rest of the old favorites two new camps, one named after Mr. Irland and the other Renous Lake. Burton Lake, Louis Lake, Renous Deadwater, Little Sou'west, Crooked Deadwater, Injun Lake, all these are old friends and call up none but pleasant memories, and by the time a man is acquainted with the ground they cover he will have seen a good lot of the best moose country there is in New Brunswick. The first question I asked was, "How are the moose?" Henry said, "I guess there are lots of them, although I haven't heard many since Mr. Irland and Risteen left. The lumbermen are making a fearful noise blowing rocks in Dungarvon, and I guess all the moose will leave and go up country. However, we will follow them."

Dave and I had to have another lunch, and after that we made up our packs and started. About four miles from here we came to the Deadwater, but before we got there Henry said, "I suppose it is a fine head or none this trip," and I said, "Yes." And I meant it. I wouldn't be bothered with the little heads some parties bring out. A well-known Bangor taxidermist sent me a photo of a lot of moose heads, and among the lot was one good head, the rest just spikes. Now a small caribou head may be as pretty, even prettier, than a large one, and a moose head is a rough looking customer at best; but a moose head adorned with a pair of spikes is, to my mind, not worth mounting.

I was to have my resolution tested sooner than I expected. We got in the canoe and started down the Deadwater, and about the second turn we all saw something on the shore that looked like a big rock. I was in the bow, Dave in the middle and Henry in the stern; the rock didn't move, and we kept getting nearer and nearer, and at last up comes the head and shoulders of a moose. He had been feeding on the grass and stuff in the water, and so we could not see any of him except the flank and hindquarters. He saw us, but had not got our wind, and as we were coming closer all the time, he straightened up and looked at us. By this time I had a shell in the rifle and was ready to fill him full or let him go, as might seem to be right when the time came. When we got to within about 50yds. or less Henry said: "His horns are small. Don't shoot, but just watch him." He got our wind by this time and walked back a little way from the bank. Henry grunted at him and he returned the grunt in a kind of half-friendly, half-anxious tone with a note of inquiry in it, as much as to say, "Who are you, anyway?" We left him alone in his glory, which I think was far better fun than shooting him. I really can't see where the sport would have come in to have shot that moose. There was none of the excitement there would have been in calling him, and I am sure there would not have been the sport there undoubtedly is in still-hunting them, which is after all the nicest way, unless you yourself can call.

We arrived at camp about 4 o'clock on the fifth day after I left home, but this time can be shortened to three days by proper arrangement. As there was no snow, we didn't try to hunt any, but turned our attention to cutting some much-needed trails and fixing up camps. In about two weeks there was a fall of snow while we were at Renous Lake, and in the morning we made a start for County Line Mountain. We walked across the top of it and never saw a track, but, as Henry had said the rock blasting had probably scared them up country, so up country we went. When we got to Injun Lake Camp we had to take a day fixing it up and go over the line to No. 64 Camp. We crossed a new log road, and we knew by this that the lumbermen were in the vicinity. Last time we were there it was three or four miles to the nearest lumber camp: now it is only about three-quarters of a mile. We sent Dave down to get some supplies, also the news, and Henry and I turned to and cut our night's wood and fixed up the old camp a little, as it was a bitter night. Before we had supper cooked, in walked Bill Carson, the boss of the camp, and kindly invited us to come down and stay all night, adding that Mr. Lynch's orders were to bring us down if he had to fall a tree on the camp to drive us out. Henry, however, said he would stay, and by the time supper was ready it was pretty late, so we asked William to join us, and he appeared to enjoy our smothered moose meat very much. William had been in the woods since Aug. 18 and had seen lots of tracks, etc., but had not shot at a moose. William stayed until about 9 o'clock, and then struck out for his own camp. In the morning, bright and early, in came Mr. Lynch and William, and Henry and I each had to take a talking to from good-natured Mr. Lynch on our refusing to go down to his camp the night before. However, we patched the matter up somehow, but he left us with the comforting assurance that as soon as we got out he would fall a tree on old No. 64, as he didn't want us camping in his dooryard; his camp was where he wanted us, and we were to come as often as we liked and stay as long as we pleased; no more lying out while we were so handy to his operations.

That night it snowed, and in the morning we started up the ridge to try for a moose. We had seen lots of tracks the day before, but we walked two miles before we struck anything this time. At last we came to the trail of a two-year-old, and followed along for about a quarter of a mile and came on the moose lying down. We sighted him just as he got up, and it was a shap shot at 75yds. I thought I had missed, but Henry said, "No, there is blood. It comes out of his mouth. He is our moose." And so it proved, for we came on him stone dead about 200yds. from where I shot. We dressed him out in good shape and started for camp. The next day being rainy and soft, we tried for another. This day the tracks were so thick on the ridge we got on that it was almost impossible to follow them. We jumped a lot, and saw some cows and calves, but not a good set of horns did we see, so did not fire a shot. The one I shot the day before was to eat. On the way to camp we struck a caribou track, and as he was going our way we followed him. We jumped him in a fir grove, and I had a snap shot at him, but I only succeeded in putting the bullet through an old fir stub. Henry's only comment was, "Too slow," and as I had to say something I quoted from old Joe Mitchell, my old Indian guide: "Let him go to the devil; plenty more."

The next day it froze hard, making very noisy hunting, so Henry went to Cranston Lake to see about some traps, and I went out alone. I routed an old cow and two calves berore I had been out ten minutes, and inside of half an hour I routed three more. I then started for camp and had the ill luck to start a bull. It was very noisy, so I suppose he heard me half a mile. At any rate he started for the head of Tobique before I got sight of him. Seven moose started in less than half a day was a good sign of game; but that was our share of them.

We moved back the next day to Irland Camp, and on the way I got a very fair caribou. Next day we went up on the ridge near the camp, and there I got my first deer. They are just beginning to get into this country. Three years ago we saw one track, last year a few, this year dozens of them. They move in from the south. Maine is where they get the start for our country. They travel north, just the opposite of moose, as we think the moose make south all the time. As Henry says, they want to leave his farm, where they are safe, and go outside, where they are sure to get killed. When I fired at the deer the noise jumped three more deer, also a cow moose and two calves, as we afterward found out; so we thought the next day we would try another ridge. I forgot though to say that before we saw the deer we saw a cow moose with one calf. I could easily have shot the cow, as she stood and looked at us long enough for us to have shot her twice.

Next day we struck off to Moose Lake, and here again we saw nothing like what we were looking for. All small tracks, except one or two large ones so old and mixed with others that we did not follow them. It took us less than fifteen minutes to walk from Moose Lake to Deer Lake, and on the way we saw over a dozen tracks, none of them over twenty-four hours old. We saw another cow and calf that afternoon on our way to camp. We got within 50ft. of her, but let her go.

Next day we moved down to Crooked Deadwater, and the next to little Sou'west, where we put away the canoe for the winter and looked up old friends at Ritchie's camps on the lake. We never expected to see the day when men would go to the little Sou'west for a log, but they are there now. Their portage is seventy-five miles long, which is a long way to go for spruce lumber even in these days. We called at Sinclair's camp and found the boss at home; also the cook, who makes as good sweetcake as he did last year. We stayed to dinner, and after dinner struck out for our own camp.

Twenty-three years ago Henry built his first camp on this lake, and until last year no lumber parties ever got nearer than Dungarvon, about fifteen or eighteen miles away. Last year they opened this country, and the first thing done was to dam up the outlet of the lake. This has raised the water and killed the trees, and now they are blowing down. In fact they have spoiled the prettiest lake in this province just for the sake of a few logs. However, as Henry says, "It can't be helped," and the old tops they leave will bring the caribou around again, so perhaps it won't be so bad after all.

Next day we made the Deadwater again, and next Renous Lake. Here I made up my mind to go out, and as Dave had been over to Fullerton's and brought back word that no teams were expected till Christmas, and also that as lumber was up they were opening up some old camps down Dungarvon, Henry thought the best way to go was to get over to Louis Lake and go out that way. So we started for there and made with packs Renous Deadwater for lunch and old Louis camp for night. This lake is named after old Louis Bear, a famous Indian trapper, who had a line through this country about fifty years ago. The finest trout I ever saw come out of this lake. In the morning I made up my pack, said good-by to Henry and Dave, and started for the lumber camp on the trail old Joe and I had taken out two moose on two years ago. We got in among some lumber works and did not strike camp till about 4 P. M., and found it unoccupied. There were sled tracks to the door, so we knew they had been there for the old stoves, and as it was too late to go back to Louis, we thought we would try to make their camp, although we had no idea how far it might be. We had not gone far when we heard a familiar voice and soon came in sight of Charlie Cameron, the boss cook of the Dungarvon. Charlie gave me the first meal I ever ate in a Dungarvon camp; but this time he was yarding logs. We asked him where he was camped, and he said, "Down in the old Holts's camp, about a mile. Better come down and stay with us"—which kind invitation we accepted. We put in a fine evening with the boys, as there were a lot of good singers among them. Here we met Bob Ross, who is second only to the old reliable Tom Hunter in his ability to brave the dangers of the Dungarvon portage. He it was who was along with Mr. Irland when they came across the "lost man" two summers ago. He said he was going out in the morning, so I made arrangements to go along. We started about daylight, and at dark we got to Holts's, where I was glad to get a shave, a good supper, and a clean bed after five weeks spent in the woods.

Since I got home I have been much interested in reading a letter from Deerslayer, also some answers to it. I cannot understand where the sport comes in in roping a deer, then killing him with buckshot at a range of a few feet. How any man could do it I can scarcely understand, and I am glad that we have no such sportsmen here in this country, but then we are very much behind the times here; perhaps we will get up to that after a while. Deerslayer shows his ignorance of some kinds of hunting when he says, "and if he is a moose hunter, calling him up," as if the only way to get a moose was to call him. He also speaks in terms of contempt of pitting your skill against their instinct. And again, he calls still-hunting sneaking. So it is; but I will venture to say that if Mr. Deerslayer takes his rifle and "sneaks" up on a moose and gets him, that he will find that it calls for more exertion than his old way, and also that he will stand much higher in the opinions of the readers of FOREST AND STREAM than he does now.

We saw on the trip seventeen moose, three caribou and three deer. We jumped twenty-nine moose. We also saw a beaver dam, houses and beaver. There are nearly twenty families of beavers on Henry's ground, all told.

BLUENOSE.

Natural History.

INTERCOMMUNICATION OF WOLVES.

THE united testimony of trappers and hunters gives the wolf the highest place, or at least one of the highest places, in the scale of intelligence among the wild mammals of North America. A similar verdict might have been reached on purely hypothetical grounds, for the wolf is the only species which at once takes its prey by stratagem, saves its own skin by artifice, and supplies the place of speed and strength by combination and concerted attack.

It is the only sociable beast of prey in our limits, and in obedience to two well-known principles we might expect to find the species more highly gifted than any other with the power of intercommunication.

These principles are:

The more intelligent an animal is, the greater its power of intercommunication.

The more sociable an animal is, the greater its power of intercommunication.

It seems that experience justifies this conclusion, for wolves are known to have remarkable power of intercommunication, although how it is effected has not been satisfactorily determined.

As illustrations and proofs: Wolves in a given locality are known to learn quickly the nature of any traps that are prepared for them, and this cannot be the result of first-hand knowledge; for the wolf which is caught and gets away again, or has seen a comrade caught, must be rare. Yet all the wolves fear and avoid the trap. More than this, the dam teaches her young to do so as soon as they can follow her about. Precisely the same remarks apply to poison; the wolves in a new country are easily poisoned, but soon the information is spread among them and it becomes very difficult to poison them.

Similarly wolves soon learn to dread firearms, and to avoid all men in the daylight on account of their being known to carry them. A curious illustration came under my notice last winter. The cowboys on a certain cattle range had orders to fire at every gray wolf as soon as seen, with a view to driving them from the neighborhood. One cowboy was watching through a telescope a wolf a mile away when another fired at it; the ball struck the bank behind the wolf, which at once ran to the spot and was examining it, when a few seconds later the faint report reached him. At once he showed that he knew what it was, for he ran as hard as he could till out of sight. Dr. Merriam, in his "Mammals of the Adirondacks," relates a circumstance which may possibly be an evidence of intercommunication of a remarkable character. The wolves were very numerous and destructive in those mountains until the State offered a bounty for every wolf killed. Although after this no more than usual were killed in a season, the wolves immediately afterward disappeared, or at least became extremely rare.

In seeking to investigate the methods of intercommunication we are apt to attach by far the most importance to the voice, because it is our chief means; but it is an open question whether scent does not serve the dog tribes more often than sound, and it will be seen that in the lower animals generally all the senses do duty as transmitters of ideas.

1. *Sight*.—Animals learn from each other gestures when an enemy or probable quarry is near. For example, a duck sees a hawk in the sky and at once turns his head to watch it, the other ducks see the gesture and imitate it or make for shelter; a fox out hunting with her young suddenly squats, the cubs do not see what she does, but squat because they see her do it; a dog sees another digging at a rabbit hole, and at once goes to see what there is in it. No one can watch two dogs playing or quarreling without noting a great number of silent gestures used to convey ideas from one to the other.

2. *Sound*.—It is almost unnecessary to illustrate the use of sound as a means of transferring ideas. A cow calls her calf; a rooster calls the hens; a partridge alarms her brood with a note; a dog barks to call his master's attention to anything. We ourselves use sound (or sound signs on paper) so much more than any other means that we are apt to forget that there are other means of intercommunication.

3. *Touch*.—Little pigs, calves, etc., punch the mother's udder with their noses to let her know that they are hungry; a horse nibbles his comrade on a part of the body to show where he wishes his comrade to nibble him; ants and bees are said to intercommunicate by touching their antennæ, and animals lick and stroke each other in token of affection.

4. *Taste*.—This sense is perhaps the least used as a transmitter. Dogs and wolves are occasionally seen to touch their open mouths, but it would be hard to prove that they thereby intercommunicated any idea. Young rabbits, however, are sometimes seen to taste their mother's lips to make sure before eating certain foods.

5. *Smell*.—At first sight, smell might seem of minor importance as an intercommunicator, though its prime value as a means of acquiring ideas first hand is not open to question. My observations to satisfy myself on this point have developed some curious facts, which I shall set forth as briefly as possible:

Scientists who have examined the matter declare that scent is by far the most wonderful of the senses. It is difficult for us to believe this, for the human species has nearly lost the faculty, and is incapable of judging *a priori*, just as it is impossible to give a blind man any clear conception of the wonders of sight. It is very certain that all things on earth have their distinctive odor, and this is readily proven. There is no known material that does not in time lose of its substance when exposed to the air; there is no known substance that will not in time be entirely dissipated by such exposure; and it is this atmospheric solution of the substance which is its odor. To illustrate: There are but few more indestructible substances than rubber, beeswax, copper or bronze, and yet even to the blunt human sense they have a perceptible odor.

To show the fineness of the sense and the infinitesimal amount of substance requisite to produce a sensation, let

us instance the case of a single grain of musk which continues to give off its intense odor for years before the substance is entirely dissipated. Similar illustration is afforded by a drop of any fixed oil, creosote or skunk musk. To illustrate the feebleness of the human scent faculty; we cannot detect the presence of milk or water by their odor, and yet we know they must have a powerful odor because they are so rapidly dissipated, as well as because they are so quickly discovered by wild animals; camels, for instance, are said to smell the water at a distance of miles. Proof that at one time our species had a good nose is found in the well-known fact that smell makes a quicker, stronger and more vivid appeal to memory than any of the other senses.

Since, then, as already claimed, odor is dissipated substance floating in the air, and since all substances are dissipatory, all have an odor And there is no good reason to doubt that this odor is as distinctive as the appearance of the thing; even more so, one might say, for all animals with well-developed noses learn to confide in them, for intelligence, rather than in their eyes. And the evidence of these insubornable witnesses all goes to show that every object in the landscape, every tree and shrub, and each part of each tree and shrub, has a separate individual odor that is at least as distinctive as its color. Yet we find this as hard to believe as would the blind man that the appearance of the objects in question was more distinctive and diagnostic than their feel.

It is scarcely necessary to prove that each species of animal has its own odor. The differences of the respective odors of horse, cow, fox, skunk, negro, Indian, etc., are sufficiently obvious to ourselves. But, more than this, it is very easy to prove that each individual of the species has its own peculiar odor as surely as it has its own peculiar appearance. This is so well known that no hunter or naturalist will be likely to question it; but as one out of many proofs I may cite the well-known fact that a dog has no difficulty in keeping the track of the same deer or man no matter how many others of the kind may cross it.

It may be thought that I am pushing it too far when I now assert that not only each individual animal has its own odor, but each part of that animal is giving off an odor which is peculiar to itself, and this the reader can readily prove. Let him take a dead animal of any furry kind and wet the fur with hot water in different regions, and he will find that even the blunt human sense can distinguish many variations of the smell. And I am satisfied that the keen nose of the beast of prey does far more than this, and can even distinguish the scents left by the heel and toe of the same foot. This is the simple explanation of the seemingly inexplicable fact that a good hound can, within a few yards, tell which way his quarry was running. It was a very simple matter to him; let B be the toe scent and A the heel scent; he ran a few yards and because the track kept singing B-A, B-A, B-A, he knew he was wrong; in the other direction it sang A-B, A-B, A-B; so away he went. The difference between the two odors is very slight, so much so that an inferior hound will often run a long way on a back scent, but a dog with a good nose or a wolf is never long mistaken.

My next contention is that the general or body scent of an animal is eminently changeable. While it always retains its individuality, it changes with the physical and mental condition of the animal, with the weather, the temperature and the season, just as surely as does its coat or facial expression.

Abundant proofs of this are at hand, for example: a horse smells stronger after exercise; a mink or weasel, not to mention a skunk, emits a much stronger because more abundant odor on becoming angry; at certain seasons of the year the flesh of goats and of some deer is unfit to eat on account of its disagreeable odor; in the winter the flesh of the Canada grouse becomes redolent of the spruce, and similarly the body of the white hare is strongly tainted with the cedar that forms its winter food; dogs in ill health become malodorous; so does the human breath, etc., etc. But notice that all of these proofs are the evidence of the feeble human nose—it must always be remembered that the nose of the wild animal is inconceivably more acute; if we say 100 times as keen, we have an approximate idea of their relative powers.

As proofs of the effect of the changing odor among the animals themselves: A male animal will pass unheeded the body scent of a female at one time, and at another, when she is seeking a mate, the changed odor sets him in a state of excitement at once; and this is true of all the mammalia, while in the insect world even more extraordinary things are told. There is a record of a Cecropia moth having flown thirty miles in one night, attracted by the odor of an imprisoned female. Similar records with lesser distances are common. It seems incontestable, therefore, that the body scent of an animal varies with its changing conditions and emotions; the only question is as to the extent of this variation. And it is quite certain that the other individuals of the species can recognize these changes, so that it becomes a most important means of intercommunication.

In many species additional effect is given to the body scent by the development of special glands which secrete a strong odor. These glands are usually situated in a part that is habitually brought in contact with the ground or the vegetation. Thus, in a musk-deer they are on the side of the belly; in the peccary on the back; in the deer on the tarsus, between the toes, and in the lachrymal fossa. In some animals, however, the contact with the ground is secured in a different way. The glands are situated within the anal and preputial orifices, so that the natural excretions *in transitu* bear with them the taint which reveals so much to the next passer-by of the same species. Now in order that this second animal may find the depot of intelligence quickly, it is necessary that his discovery of the place be not left to chance, and incredible as it may seem at first blush, there is abundant proof that the whole of a region inhabited by wolves is laid out in signal stations or intelligence depots. Usually there is one at each mile or less, varying much with the nature of the ground. The marks of these depots or odor posts are various; a stone, a tree, a bush, a buffalo skull, a post, a mound, or any similar object serves, provided only that it be conspicuous on account of its color or position; usually it is more or less isolated or else prominent by being at the crossing of two trails.

Now a man returning to town goes at once to his hotel or club, glances over the last three or four names on the register, adds his own, then makes a more thorough inspection. And the behavior of an animal arrived at an odor post is precisely the same. It approaches, hastily sniffs the post, adds its own odor, then makes a more thorough investigation. The attention dogs pay to lamp posts in town is sufficiently known; it is precisely the same habit, a trifle over-developed through idleness, etc., but it will serve to illustrate. I have many times seen a dog approach the post, sniff, then growl, register, growl again, and with bristling mane and glowing eyes scratch fiercely with his hindfeet and walk off very stiffly, glancing back from time to time. Again, it is common to see a dog, after the preliminaries, become keenly interested, trot about the vicinity, and come again and again to make his own record more evident. At other times one sees the animal, suddenly aroused by the news, take up a recent trail or fly to the next signal post, and so continue in pursuit of whatever it was that it scented.

Wolves do precisely the same, but I believe they carry it to a higher pitch, and there can be no doubt that a newly arrived wolf is instantly aware of the visit that has recently been paid to the signal post by a personal friend or foe—by a female in search of a mate; a young or old, sick or well, hungry, hunted or gorged beast, as well as the direction whence he came and whither he went, with all the additional information that a very small faculty of logic would deduce from this. How much more than this he learns, or whether he can again convey the intelligence to the next post, I know not. It seems to me not impossible that, as his own state of mind in a measure modifies his body scent, the effect on him of news obtained at post No. 1 will be recorded by himself to some extent at post No. 2. In any case we are safe to believe that these animals, with their wondrous power of scent, can do far more in this way than we at present suspect.

ERNEST SETON THOMPSON.

A GIANT MOOSE.

MR. W. W. HART, of 5 West Third street, has recently received from Alaska a moose head which in size exceeds any head that we have ever seen. In spread of antlers, breadth of palm and length of prong it seems more nearly suggestive of the head of the fossil Irish elk than any recent head that has come under our notice. The antlers are not of the wide-spreading type, for the horns, starting at right angles to the axis of the skull on rather light shafts, soon turn backward almost at right angles, so that the long diameter of the palm is inclined only at a small angle with the axis of the skull.

The skull has been split for ease in transportation, but fitting the two halves together, the spread of the antlers is 70½in. The length of the right horn, measured from the brow antler to the most distant prong of the palm on the posterior side of the horn, is 55½in.; the length of the palm, measured along the curve, is 41in., and a straight line drawn from the burr to the most distant point of the palm is 40in. The circumference of the shaft of the right antler at 3in. from the burr is 7½in. The width of the palm, measured along its posterior side following the curve, is 43in. The great size of the palms makes the shafts of the horn just outside the burr seem very small. We believe that we have seen many horns of the elk (*Cervus canadensis*) which were heavier at this point.

This moose is said to come from Alaska. Not very much is known about its history, but the locality is given as thirty miles back from Cook Inlet. It is stated that the animal measures 8½ft. at the shoulder; but this, of course, is a mere hunter's statement, and very likely a guess. The teeth of the animal show that it was old, but by no means past the prime of life. The incisors have been mutilated so that nothing can be said of them except that they were all present. The molars are worn by many years' use, but by no means show great age.

It is understood that this head will be exhibited at the Sportsmen's Exposition, where Mr. Hart advises us that he will have an exhibit showing much good work.

The Woodcock's Whistle again.

BRITISH COLUMBIA.—*Editor Forest and Stream:* Having read in FOREST AND STREAM, dated Oct. 17, 1896, Mr. W. H. Harris's explanation of how a woodcock produced that whistle, there is no doubt that almost every sportsman who has had much cock shooting agrees that the whistle is one of the special attractions of hunting this fine game bird; and almost every sportsman that I have hunted cocks with has queried as to how that whistle was produced.

Having hunted woodcocks and grouse some six seasons in Nova Scotia, I have had woodcocks retrieved and caught in all stages of disabled conditions, and I thought that I had thoroughly proved to myself how the woodcock produced the whistle. It is so different from what Mr. Harris has described that I would like to give my version of the case.

Every time I broke the tip of a cock's wing and it fell on smooth ground it would spread its tail, droop its wings, point its beak downward, and walk along just like a gobbler, and when approached would jump off the ground and try to fly, giving a plaintive quack when jumping from the ground and trying to fly.

I could never associate this quacky, plaintive note with the whistle until one day I shot at a cock, and not finding the bird where I expected, I thought I had missed; while the dog was seeking in the grass, I heard what I thought was a faint whistle, as if a woodcock had flushed, and on hearing it the second time I went carefully over and found the cock so disabled that it could by the use of its legs and wings rise about 4ft. off the ground and fly 10 or 15ft. and come to the ground again, each time giving the regular whistle in a very low key.

I kept my dog back and watched the bird carefully and tried to learn how the whistle was produced, and found when the bird got into any long grass or tangled brush so it did not have a chance to jump and use its wings to good advantage, it only got about 1ft. off the ground and then there was no whistle, just that little sound as that given by a bird with a broken wing.

The above circumstance convinced me that the whistle was produced in this way: The woodcock, when startled so as to make it take to wing, gives that low, plaintive quack (as described in the case of a bird with a broken wing); when it jumps and takes to wing at the same time the force of using its wings with great vigor vibrates the whole body and tends to intensify any sound that might be produced at that moment in a very marked degree, thereby producing the whistle.

I do not believe that a woodcock can whistle with its wings, as described by Mr. W. H. Harris, and I think if he had placed his thumb and finger over the cock's nostrils, at the same time holding the beak closed, there would have been no whistling sound produced.

G. B. HARRIS.

Game Bag and Gun.

THE MASSACHUSETTS ASSOCIATION.

BOSTON, Jan. 14.—*Editor Forest and Stream:* When the editor of our favorite sporting paper said in one of the September issues that if he was not mistaken no one of the many game protective clubs organized within the last twenty years has maintained its active work in the field for that entire period, he certainly forgot the existence of the Massachusetts Fish and Game Protective Association. It was originally chartered in 1874 as the "Massachusetts Anglers' Association" for "the purpose of securing and enforcing proper restrictions upon the taking and killing of fish, shellfish and bivalves, the promotion of fishculture, and the introduction of new species and varieties of fish, and to disseminate information relating thereto." In 1879 the name was changed to that which it now bears, and game was added to the list of objects which the Association was to foster and protect. Ever since that time the rolls of membership have borne the names of many of the most prominent sportsmen of the State—men who enjoy fishing and shooting for the true sport there is in it and as a needed relaxation from the cares of a business or a professional life. When the occasion called they put their hands deep into their pockets to carry on the work of restocking our game preserves, our ponds and streams, and to aid in the prosecution of cases of violation of the fish and game laws. During the three years from Jan. 19, 1890, the committee on introduction of game procured and released in 134 different lots and in sixty-two different places about 3,000 game birds, including pinnated grouse, sharptail grouse, Bob White (quail), Oregon mountain quail, Rocky Mountain quail and Northern hares. Many cases of violations of the fish and game laws have been investigated by the proper committees, evidence collected to be used by the State Commission, by the district police, or by special officers acting under the State Commission and paid by the Association. And to-day the society is in fine condition, with a good membership of devoted men, funds in the treasury, and a determination to continue in the good work. So you see, Mr. Editor, the Massachusetts Association is to be taken out from the list of those you speak of in the article of Sept. 12, 1896. On second thought, it can't be taken out, for it was never in it.

I have been led to write the foregoing anent the 24th annual meeting of the Association, which was held last evening at the Copley Square Hotel. There was a good attendance. Mr. B. C. Clark, the president, occupied the chair. Messrs. C. A. Litchfield, Charles H. Cole and Fletcher Pope were elected to membership, and half a dozen proposals were read and referred to the membership committee. The report of the secretary-treasurer showed the receipts for the year to have been $1,940.36, and the expenditures $1,684 67; one-half of the balance has been added to the permanent invested fund, making that fund $2,550.34. Secretary Kimball also reported upon several cases where information had been furnished of violations of the game laws, which, with the aid of the district police, had been successfully prosecuted. Dr. Heber Bishop, on behalf of the committee on annual dinner, reported progress. The affair will take place at the Copley Square Hotel Saturday evening, Jan. 30. Among those who have accepted invitations to be present are Gov. Wolcott, Collector Warren, Rev. Dr. Horton, Judge Edgar Aldrich and Attorney-General Knowlton, from which it will be seen that the after-dinner speaking will be of a high order. Tom Henry's orchestra will furnish music, and the committee on hall decorations will make a fine display of fish and game pictures and the taxidermist's art.

While the committee were counting the votes for the new officers, President Clark took occasion to thank the members for their cordial support during the year, and said he had declined a third term not from lack of interest in the good cause, but because of other duties pressing upon him. The following officers were then declared elected:

President, Horace T. Rockwell; Vice-Presidents, Geo. W. Wiggins, C. J. H. Woodbury, Robt. S. Gray, Benjamin C. Clark, Heber Bishop, J. R. Reed, Loring Crocker; Treasurer and Secretary, Henry H. Kimball; Librarian and Curator, Edward W. Branigan. Executive Committee: Dr. J. T. Stetson, Dr. A. R. Brown, Dr. W. G. Kendall, Charles G. Gibson, W. C. Prescott, Rollin Jones, Charles A. Allen, Sidney Chase, Charles Stewart, Wm. B. Smart, Edward E. Small, William Almy. Membership Committee: Arthur W. Robinson, W. B. Hastings, Thos. H. Hall. Fund Committee: Warren Hapgood, George O. Sears, Edward J. Brown.

Col. Rockwell, on taking the chair, thanked the members for the compliment paid him, and pledged his best efforts to carry on the work of the Association on the lines already laid down; its methods had been tried and proved, and there was no call for any new departure. Col. Rockwell is one of our best known citizens, was one of the original members of the Association, and has served many years upon the governing board in various capacities. He is what may be justly called an all-round sportsman for the sake of sport. With a few friends, he has an elegant camp—the Elderton Lodge—at the Rangeleys, and in the days of long-range rifle shooting he was one of the most expert shots in the country, and a member of the American team which won many matches in England in 1880. The interests of the Association will be entirely safe in his hands. It will be seen that Mr. Clark has a place on the board of government, which is a matter for congratulation to all.

WM. B. SMART.

The Michigan Ducking Law.

LANSING, Mich., Jan. 16.—Representative Bryan, of the State Legislature, has introduced a bill prohibiting the shooting of ducks from steam or naphtha launches in any of the waters in this State. Many of our inland lakes would afford good duck shooting during the fall if it were not that the ducks have been burned out by shooting from steam launches.

JULIAN.

NEW YORK ASSOCIATION.

THE annual meeting of the New York State Association for the Protection of Fish and Game was held in the assembly room of Yates House, in Syracuse, Thursday, Jan. 14. There was a good attendance, although not quite as large as last year. Great interest was manifested in the proceedings and the discussions were spirited at times, but the utmost good feeling prevailed throughout. It was apparent that the desire and aim of the convention was to conform to the wishes of the majority of the true sportsmen of the State, but there was also a disposition to show due consideration to the minority in all cases where opinions differed, and to make concessions thereto, when possible and consistent with the interests of protection. The different organizations represented and their delegates were as follows:

Anglers' Association of Onondaga—D. H. Bruce, Arthur Jenkins, W. S. McGregor, L. S. Morgan, Henry Loftie, Amos Padgham, C. H. Mowry.
Anglers' Association of the St. Lawrence River—G. M. Skinner, W H. Thompson, A. C. Cornwall, G. H. Strough.
Auburn Gun Club—George R. Peck, Charles Curtis, J. E. Brigden.
Black River Fish and Game Protective Association, Utica—W. E. Wolcott.
Canandaigua Rod and Gun Club—Dr. C. T. Mitchell, G. A. McGreevy, C. B. Lapham.
Central New York Fish and Game Protective Association, Seneca Falls—W. S. Gavitt, E. G. Gould, A. M. Schermerhorn
Erie County Fish and Game Protective Association, Buffalo—L. P. Beyer, P. S. Lansdowne.
Genesee Valley P otective and Propagating Fish and Game Association, Rochester—F. J. Amsden.
Honeoye Falls Anglers' Association—A. Mather.
New York Association for the Protection of Fish and Game, New York City—Robert B. Lawrence, George O. Shields.
Niagara County Anglers' Association, Lockport—W. E Hueston, H. K. Wicker.
Oswego and Jefferson County Fish and Game Protective Association, Lacona—William Jay Stevens, H. S. Barker.
Spencer Sportsmen's Club, Lyons—Henry Killick.
Steuben County Fish and Game Protective Association, Bath—Z. L. Parker, Dr. G. G. McNitt.
Assistant Chief Game Protector Mannistee Wertz, of Oswego; Protector Carver, of Wayne county; and Fred D. Divine, of Utica, were also present.

President Frank J. Amsden, of Rochester, in his address expressed the pleasure it afforded him to meet the representatives of the various organizations, and said that during the past year a decided change for the better had been noticed throughout the State in regard to the enforcement of the game laws. The experience at Albany was about the same as the year previous. There was a flood of bills both bad and good, but through the efforts of the representatives of the State Association very few of the bad bills were allowed to go through, and some of the good ones were successful. "The only thing we regretted," continued the speaker, "was the failure to repeal Section 249, but it was found impossible to stem the weight of influence behind it. The treatment accorded the representatives of this Association was gratifying, and the result of our work in Albany showed the benefits of organization. From observation and inquiry from different clubs throughout the State, I find that the enforcement of the law has been better during the past year than ever before. I think the protectors are a fine body of men, but there ought to be twice as many of them. No one seems to know how the proposed forestry amendment came to be passed by the Legislature last year, and submitted to the people. Fortunately this Association learned of it in time, and a letter against it was issued. The people came to the front and buried the proposition. I think this is one of the most encouraging things in the interests of forest and game protection that has ever occurred. There is a strong feeling in favor of much closer protection for deer. The subject of netting in our inland waters has also become a burning one. The trouble is that the privilege of netting food fish has been abused, and there are not protectors enough to prevent it. The feeling is that licensed netting should be done away with. There is a strong feeling that the laws should be uniform, and the seasons for shooting contracted to prevent the utter extermination of game. The work done on the St. Lawrence River has been very good."

The following committee on nomination of officers was appointed by the chair: Gen. D. H. Bruce, R. B. Lawrence, Aaron Mather.

The balance of the forenoon and a good share of the afternoon were devoted to the consideration of the report of the law committee on proposed amendments to the game code, which had been submitted by different organizations. The report was presented by Chairman Cornelius W. Smith, of Syracuse, and each proposed change was acted upon separately. Mr. Smith's associates on the committee were: Elon R. Brown, Watertown; Charles B. Lapham, Canandaigua; Howard H. Widener, Rochester; Z. L. Parker, Bath. The Association manifested its appreciation of the valuable services rendered by Chairman Smith and the other members of the committee by a unanimous vote of thanks. It was decided to recommend the following amendments to the game laws:

Deer Season.—Section 40 to be amended so as to make the open season from Sept. 1 to Nov. 1, instead of from Aug. 16 to Oct. 31, both inclusive, as it now provides. Also to prohibit the killing of deer between the hours of 8 P. M. and 6 A. M.

Venison.—Section 41 to be amended to correspond with the preceding section, limiting the time for the possession of venison to the open season and ten days after its close.

Floating, Jacking.—Section 43, which now permits the use of jacklights in hunting deer from Sept. 1 to 15 inclusive, to be amended so as to prohibit jacking or floating for deer.

Hounding.—Section 44, which now permits the use of dogs in hunting deer from Oct. 1 to 15 inclusive, to be amended so as to prohibit hounding.

Squirrels, Hares and Rabbits.—Section 49, which now permits the killing of black and gray squirrels, hares and rabbits, from Oct. 15 to Feb. 15 inclusive, to be amended so as to make the open season for squirrels from Sept. 15 to Dec. 31, and for hares and rabbits from Oct. 15 to Feb. 15. Also to remove the prohibition in regard to the use of ferrets.

Beaver, Muskrats, Mink.—Section 50, which makes the killing of beaver illegal, to be amended by the addition of a clause prohibiting the killing of muskrats and mink from May 1 to Jan. 1. Also making it illegal to break into the houses of muskrats. A reservation is made, however, of the right to kill muskrats to prevent injury to dams, etc. Traps and snares set in close season can be destroyed by anyone.

Web-footed Wildfowl.—Section 70, which provides that web-footed wildfowl, except geese and brant, shall not be pursued, shot at, killed, possessed or sold between the last day of April and the first day of September, to be amended so that geese and brant will not be excepted from the provision. It was also decided to make the close season begin April 1 and end Sept. 1. In section 71, relating to wildfowl, it was deemed wise to strike out the words "brought to shore."

Woodcock and Ruffed Grouse.—Section 74, which now permits the killing of woodcock and ruffed grouse from Aug. 16 to Dec. 31, to be amended so as to make the open season from Sept. 15 to Dec. 31.

Woodcock, Quail and Ruffed Grouse, when not to be Transported.—Sec. 76, which prohibits the transportation of woodcock, quail and ruffed grouse unless accompanied by the owner, to be amended so as to provide that no person shall transport more than twelve of these birds at one time.

Wild Birds Protected.—Sec. 78, which provides that wild birds shall not be killed or caught at any time, or possessed after the same are dead, to be amended so that they cannot be possessed whether living or dead.

Salmon Trout.—Sec. 108, which makes the open season for salmon trout from May 30 to Sept. 30, to be amended so as to make the season commence April 1, closing at the same time it does now.

Black Bass.—Sec. 110 to be amended so as to provide that no black bass shall be caught from their spawning beds knowingly. Sec. 111, which prohibits the catching of black bass less than 8in. in length, to be amended so as to make the minimum legal length 9in.

Sec. 121.—Amended by providing a close season for striped bass in Hudson River during April and May, the spawning season.

Sec. 132, which now reads: "No fish shall be fished for, caught or killed in any manner or by any device except angling, in the waters of Lake Erie, within one-half of a mile of the shores thereof, or of any of the islands therein; nor in the Cattaraugus Creek, or within five miles of the mouth thereof, or of any island therein; nor in Lake Ontario, within one mile of the shore, or of any island therein; nor within three miles of the mouth of the Niagara River; the waters of Lake Ontario in the county of Jefferson included between Blue Rock Point in the town of Brownville and the town line between the towns of Lyme and Cape Vincent, including Chaumont Bay, Griffin Bay and

FRANK J. AMSDEN.
The outgoing President.

Three-Mile Bay, in the county of Oswego, between the northerly line of the town of Mexico and Jefferson county line, are hereby exempt from the provisions of this act." * * * to be amended so as to prohibit all netting except one mile from shore, in Lake Ontario and all of its bays, in the Niagara River or within three miles from its mouth, or in Lake Erie within one mile from the shore, or within three miles of the Horseshoe Reef Lighthouse.

Meshes of Nets.—Sec. 134, which provides that the meshes of nets used in Lake Erie and Lake Ontario and the Cattaraugus Creek shall not be less than 1¼in. bar, to be amended so as to make the minimum legal size for Niagara River 2in. bar and 4in. mesh.

Fishing Through the Ice.—Sec. 141, which permits fishing for certain fish through the ice in specified waters, to be amended so as to eliminate clauses which permit the spearing of fish, especially as relating to Oneida Lake.

Minnows for Bait.—Sec. 145 to be amended so as to make the legal length of minnow nets not over 25ft. and depth 4ft. Also requiring that all bass, pike, wall-eyed pike or maskallonge caught in minnow nets to be put back.

Nets.—Sections 149 and 151, which provide for the taking of frost

ROBERT B. LAWRENCE.
The outgoing Vice-President.

fish and whitefish from the waters of Otsego Lake and from inland lakes not inhabited by brook trout, during such times as the Commissioners may stipulate, and for the licensing of nets used for this purpose. Both sections to be repealed.

Section 102 to be amended by erasing in line 4 "inland" before "waters;" and in line 3 after "possession" insert "except for transportation, sale or legitimate purposes."

Sale of Game.—Section 249, which permits the sale of game the year round, it was decided should be repealed.

Pickerel.—Section 325 to be amended so as to provide that no pickerel less than 18in. in length shall be taken in the St. Lawrence River.

The convention also voted in favor of making the following additions to the game laws:

1. *To prohibit the sale* of speckled trout, grouse or woodcock killed in this State.
2. To increase the force of State game protectors from thirty-five to sixty.
3. *To give protectors power* to examine any boat, vehicle, car or carriage of any angler or hunter, or person or corporation transporting fish or game, or any box, locker, crate, basket or other package therein or in his possession, for the purpose of ascertaining whether any provision of law has been violated.
4. *To establish a system of bounties* to be paid to private individuals who may take nets in illegal use, graded according to the kind of net; each person to take such net before a justice, sheriff, deputy sheriff, supervisor or two taxpayers, destroy it in his presence, obtain from him a certificate of such destruction, and receive the bounty upon production of the certificate to the county treasurer. Also to provide that any person who may so destroy nets shall have the rights of a protector, and the immunity from damage, and protection from suit, the same as provided in Section 32.

W. E. Wolcott, of Utica, addressed the convention on the subject of forest protection and read an original poem. He said:

I desire very briefly to call the attention of this convention to the lamentable state of affairs which exists in the Adirondack wilderness. Lovers of forest life are both saddened and alarmed at the manner in which lumbering is being carried on in that region. During the past few years strenuous efforts have been put forth by friends of the forest to check the work of devastation which has so long been in progress there, but the march of the lumberman still continues unhindered.

It was confidently hoped for a time that the acquisition of vast tracts of land by clubs for fish and game preserves would have a wholesome effect in retarding the cutting of timber, but experience has taught the lesson that little dependence can be placed on such sources for protection. Some of the most destructive lumbering in the wilderness has been conducted within the limits of one of the largest preserves, and miles of dead timber caused by damming streams and flooding the land, and thousands of acres almost entirely denuded of soft wood, traversed by wide wagon roads and littered with brush heaps and fallen tree tops, now mar the beauty of localities which were for years eagerly sought by hunters, anglers and tourists. Perhaps nowhere is the havoc lately wrought by the lumbermen more noticeable than about the headwaters of the West Canada Creek and Black River, and this is particularly unfortunate from the fact that the latter stream forms one of the main water supplies for the canals of the State.

The Adirondacks have no enduring subterranean springs, for there is no water-bearing stratum of rocks in that region, and no water is found there save that which first falls from the clouds. The soil is light and spongy, being composed of decayed and decaying vegetable matter, a mass which is the product of untold ages. When sheltered by the trees it acts as a vast storage reservoir for the temporary retention and gradual distribution of rains and melted snows, thus equalizing the supply of water in the lakes and streams. But if the forest is removed the soil will quickly dry up and burn like tinder when fire reaches it, or wash away in the rainy season, leaving only the bare rocks or equally barren quartiferous sands. The destruction of the trees means the loss of the soil, and this just as certainly means dry water courses in the summer and disastrous floods in spring and fall. It is poor economy for the State to expend large sums for constructing and maintaining reservoirs and then allow the timber to be removed from the watersheds.

It has come to be a matter of common knowledge that the Adirondack forests are essential to the welfare of the whole people. It has required many years to learn this truth, but that it is now clearly recognized was made apparent in November, when the electors of this State buried a proposed constitutional amendment which meant destruction to the forests under an adverse majority of more than half a million. This action speaks louder than words, and the import seems to be that it is the will of the people that the State should not only retain intact all its present Adirondack holdings, but should continue to purchase additional lands there as rapidly as possible. There is every reason for believing that the same spirit of enterprise and appreciation of public needs which caused the seal of approval to be placed on the proposition to expend millions of dollars in canal improvements would sanction one to purchase woodlands on the watersheds of the State reservoirs which serve as feeders for the canals.

In spite of all that has been said and written of the evils sure to follow if the forests are destroyed, and notwithstanding the efforts made in the interests of protection, the axe and saw of the lumberman are as busy as ever. Of course, lumbering is a legitimate business, but the facts mentioned suggested the following lines as picturing (in case he felt called upon to address the public) what might be:

The Lumberman's Request.

In Adirondack wilds I stand,
With steadfast aim to clear the land.
Buy up the woods, do what you please,
But don't prevent my cutting trees.

I want to chop and saw and hack
The hemlock, spruce and tamarack.
Close canals' locks and lose the keys,
But don't prevent my cutting trees.

I want the balsam, pine and ash;
The maple, beech and birch I'll slash.
Take all the waste land by degrees,
But don't prevent my cutting trees.

Make all the woods a public park;
Make every tourist toe the mark;
Make them obey your wise decrees,
But don't prevent my cutting trees.

Hunters may miss the noble game
That now rewards their steady aim.
Let them lament on bended knees,
But don't prevent my cutting trees.

Anglers may miss the speckled trout
When springs and streams alike give out.
Let them complain and make their pleas,
But don't prevent my cutting trees.

Lakes may vanish, brooks run dry,
Bare rocks and brush heaps greet the eye.
Crops may fail, plagues the people seize,
But don't prevent my cutting trees.

Flood your cities and drown them out.
What care I what thus comes about?
Sweep mills and dwellings to the seas,
But don't prevent my cutting trees.

Droughts, famine, cyclones, lightning, hail,
May each their greatest harm entail.
Let climate change, mercury freeze,
But don't prevent my cutting trees.

Let forest fires with fury rage,
All elements a battle wage.
Let the dire havoc bring disease,
But don't prevent my cutting trees.

The woods are priceless to the State,
'Tis well to see this ere too late.
Think these things over at your ease,
But don't prevent my cutting trees.

After the hearty applause with which the above was received had subsided, Mr. Wolcott offered the following resolution, which was unanimously adopted:

Resolved, That the New York State Association for the Protection of Fish and Game hereby signifies its cordial approval of past legislative enactments which have enabled the State to obtain title to Adirondack lands, establish a forest preserve and protect the timber thereon. It strongly urges the Senate and Assembly to take such further action along this line as in their judgment may be most expedient, with a view to the ultimate acquirement of the whole wilderness region. It is our belief that in the future purchase of lands in the Adirondacks special efforts should be made to secure title to the watersheds of the State reservoirs.

G. H. Strough, of Clayton, offered the following, which was adopted by a rising vote:

Resolved, That as the representatives of a large majority of the various associations in the State of New York for the propagation of food and game fish, and for the protection of fish and game, we are in favor of the establishment of parks and pleasure resorts in such places in our State as nature has favored and made desirable for such purposes; and

Resolved, That we cordially approve of the efforts made and now being continued to establish an international park on the St. Lawrence River, and that we join in the request to have our national government suspend the enforcement of our foreign contract labor law as to oarsmen or guides on the St. Lawrence River.

On motion of Gen. Bruce the secretary was instructed to send copies of these resolutions to the different members of Congress in this State.

R. B. Lawrence, of New York, addressed the convention in regard to Section 249 of the game laws, and stated the result of a conference which a committee from the New York city Association had had with marketmen concerning it. Under certain conditions the latter would consent to the repeal of the law. Mr. Lawrence explained what the marketmen wanted. This included making the open season for quail from Oct. 1 to Dec. 31, possession to be allowed until March 1; the killing and possession of wildfowl to be allowed from Sept. 1 to April 1; the possession of grouse, woodcock and venison to be allowed until March 1; dealing in and possession of bay birds to be allowed the entire year.

The convention decided to endeavor to have Section 249 repealed without indorsing the changes referred to.

Assistant Chief Protector Mannistee Wertz and Protector Carver spoke briefly concerning the work of the State force.

William A. Butler, of Syracuse, read two articles from the FOREST AND STREAM in regard to deer hounding.

A report from the Niagara County Anglers' Club, setting forth the good work accomplished during the year, was read.

The auditing committee reported that the receipts for the past year amounted to $150; disbursements, $73.10; balance on hand, $76 90.

The nominating committee reported in favor of the following officers for the ensuing year, and the same were duly elected: President, W. S. Gavitt, Lyons; Vice-President, George H. Strough, Clayton; Secretary, E G. Gould, Seneca Falls; Treasurer, A. C. Cornwall, Alexandria Bay.

Mr. Amsden thanked the members of the Association for the cordial support accorded him during the year, and introduced the new president. Mr. Gavitt, in assuming the duties of that office, thanked the Association for the honor conferred. He said he was proud of the Association and the work already accomplished. He was sure there was a growing sentiment in favor of protection. He believed the Association should stand by its action in opposing the section permitting the sale of game the year around. He was in favor of a uniform season for game, and believed the resolution regarding nets was in the right direction. The game law should be advertised. He said he would appoint the legislative and auditing committees in a few days.

George R. Peck, of Auburn, said he would like to have the State do something toward the propagation of game, and after some discussion a resolution was adopted to this effect: That the officers of this Association at once serve upon the State Commissioners of Fisheries, Game and Forests suggestions and measures for the establishment of a State hatchery for all game and game birds that can be propagated.

While this subject was under discussion it was stated by different members that Mongolian pheasants had been successfully propagated in the western part of the State and in the Catskills. Charles Curtis said he had kept a ruffed grouse in confinement a year, and believed these birds could be propagated under proper conditions.

Messrs. Lapham, Bierhardt and Peck were appointed to arrange for the printing of the by-laws, and the legislative committee was directed to see if the Association was incorporated, and if not, to have it incorporated. Adjourned.

The .30-30 Shells.

KANSAS CITY, Kan., Dec. 25.—*Editor Forest and Stream:* I would like to know the experiences of some of the shooters of the .30-30 smokeless rifle cartridge in regard to the cartridge case breaking at the neck when fired. In two of the rifles of this city the shells break off at the neck, leaving the small neck in the barrel, preventing another cartride from entering the barrel.

It is very trying to have a large buck running straight ahead in the open for 300yds. and then have a rifle in his hands that can't be used, as was the experience of one of the party using a .30 30.

The rifle is one of the most powerful and accurate arms made. Three deer killed with this rifle were dropped in their tracks, and prairie dogs were hardly recognizable after being shot with this rifle, they being torn in shreds.

H. M. C.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

BOONE AND CROCKETT CLUB MEETING.

THE tenth annual meeting of the Boone and Crockett Club was held on Saturday, Jan. 16, at the Metropolitan Club, in this city. Among those present were: Messrs. Theo. Roosevelt, W. A. Wadsworth, Winthrop Chanler, George Bird Grinnell, Owen Wister, Charles E. Whitehead, W. B. Devereux, Lewis R. Morris, John L. Cadwalader, James S. Watson, Elihu Root, C. Hart Merriam, C. Grant La Farge, Madison Grant, William Lord Smith, W. A. Chanler, Royal Phelps Carroll, Caspar Whitney, De Forest Grant, H. C Pierce, D. M. Barringer, R. H. M. Ferguson, W. Milne Grinnell, Lewis S Thompson, Frank Edwards, James T. Gardner, Albert Berstadt, Thomas Paton, J. E Roosevelt, J. J. Pierrepont, J. L. Seward, H. N Munn, Henry L. Stimson, Walter B. James, S. D. Warren, Frank Lyman, Alden Sampson, John Rogers, Jr., W. K. Draper, F. S. Billings, H. C de Rham, Alexander Lambert and J. Walter Wood, Jr.

The guests of the evening were: Mr. A. P. Low, of the Canadian Geological Survey; Mr. Charles A. Dana, Prof. Henry S. Osborn, E E. S. Thompson, Hon. Wm. Carey Sanger and Gifford Pinchot.

Owing to the death of Gen. Bristow, its president, it was necessary to elect a chairman for this meeting who should preside at the dinner, and Hon. Theodore Roosevelt was chosen.

The minutes of the last meeting were read and approved. The report of the treasurer showed a comfortable financial condition for the club.

The report of the secretary dealt largely with the work which the club has done and hopes to do, and showed that the efforts made by the club looking toward securing legislation prohibiting the unsportsmanlike and destructive methods of hunting deer allowed under the laws of New York in the Adirondack region have been in some degree successful, and that a greater measure of success is hoped for during the coming year. Whatever has been accomplished is due very largely to the efforts of the Hon. William Carey Sanger, who is now a member of the club. Attention was called again, as it has been before, to the wide territory over which the small membership of the club is spread, and this very fact seems to imply great possibilities for the influence of the Association. The plan adopted this year for the first time, of having read before the club a formal paper, such as will be worthy of permanent record, would seem to make the meetings of the club more representative of its purposes. It was recommended that the club should take a more positive stand in regard to the manner of pursuit of our large game animals, and that every effort should be made to discourage improper practices in connection with big-game hunting.

Following the report of the secretary, which was accepted, that officer read some correspondence from members and other persons in the West advocating the enlargement on the south of the Yellowstone National Park, and a committee to consider this question and to take such action in the matter as might seem necessary was appointed, its members being Howard Melville Hanna, George Bird Grinnell and W. Hallett Phillips.

Mr. Theodore Roosevelt reported for the editorial committee, urging members to send in material for the next volume of the club's publication and indicating what the character of such material should be.

Mr. Madison Grant reported for the committee on game legislation. In the New York Legislature of 1896, Senator Malby introduced bills in the Senate to stop the hounding and jacking of deer. These bills passed the Senate without amendment, but in the Assembly, notwithstanding the efforts of Mr. Sanger, the bills were altered and became law. This new law reduces the time for hounding from one month to two weeks, and the time for jacking from ten weeks to two weeks, a substantial gain.

The election of officers followed, with this result: President, W. A. Wadsworth; Vice-Presidents: Chas. F Deering, of Illinois; W. B. Devereux, of Colorado; Howard Melville Hanna, of Ohio; Wm. D. Pickett, of Wyoming; Secretary and Treasurer, C. Grant La Farge; Executive Committee: Winthrop Chanler, L. R. Morris, A. Rogers, H. L. Stimson and Madison Grant; Editorial Committee: George Bird Grinnell and Theo. Roosevelt.

It was resolved that the chairman should appoint a committee, to consist of the chairman of the executive committee, the secretary and three others, who should revise the constitution and report to the executive committee, and that the executive committee be empowered to approve such revision, and that the business of the club should be conducted thereunder pending the ratification of the committee's action by the club at its next general meeting.

Mr. Henry L. Stimson introduced the following resolution:

Resolved, That the Boone and Crockett Club condemns the use of steel traps and the killing of game while helpless in water or deep snow as cruel and most unsportsmanlike. And in view of the rapid decrease in the game of this continent, the club regards the making of large "bags" and the killing of females of any species of horned game as selfish and objectionable practices inconsistent with the objects of of the club.

Resolved further, That the committee on the revision of the constitution be and the same hereby is empowered to incorporate the substance of this resolution in the Constitution and By-laws of the club in such form as it may see fit.

A resolution commemorative of Gen. Benjamin H. Bristow, its late president, and alluding to his services to the country and to the club, was passed.

After the adjournment of the business meeting the club dinner was held, and this was followed by the reading of an extremely interesting paper by Mr. A. P. Low, of the Canadian Geological Survey. Mr. Low has spent a number of years in exploring the Peninsula of Labrador, and the present paper, which was illustrated by lantern slides, dealt with this almost unknown territory.

Few people realize that this peninsula is about 1,000 miles in length and has about the same width at its southern end. It is roughly triangular in shape, and contains about 550,000 square miles. Its temperature ranges from north temperate in the south to arctic in the north, a considerable portion of it being absolutely without timber. Mr. Low's paper dealt with the physical characteristics of the country, its inhabitants, and its quadrupeds, birds and fish. From it we learn that the moose is hardly found in the peninsula, but that both woodland and barren ground caribou occur there in very considerable numbers. The black bear is abundant in the southern part, while the polar bear occurs on the northwest coast and on islands in the Hudson's Bay. The wolf is extremely scarce. There are some fur-bearing animals, and foxes are extremely abundant in some places, the common fox in the south and the arctic fox in the north. The proportion of black foxes found is unusually large. Waterfowl are not abundant in Labrador, but are most so on the shores of Hudson's Bay, and especially on the rocky islets of that water. Broods of geese, however, are found in almost all the little lakes which dot the interior. There are some wading birds found along the shores of Hudson's Bay. Five species of grouse—the ruffed, the spruce, the sharptail, the willow ptarmigan and rock ptarmigan—are found there; the sharptail grouse occurring on the shore of James Bay. The occurrence of the last-named species in Labrador will be news to many ornithologists.

Mr. Low's very interesting paper was listened to with the closest attention, and at its close a vote of thanks was passed by the club for the entertainment he had given them.

Mr. Thompson was called on to speak about the wolf, of which he has made a special study. His remarks were of very great interest and were very warmly received. They are printed elsewhere in this issue.

The meeting broke up at a late hour.

OREGON NOTES.

KLA-HÓW-YA, Podgers! Kár-ta-mi-ka, Podgers? Glad to see you home again in the columns of FOREST AND STREAM. Of course you grow a little at us fellows once in a while, but then I suppose that it is all for the best, for it is the fear of the "Commentaries" that limits the length and breadth of some of our hunting and fishing yarns. However, let us trust that you will be as liberal as Mark Twain was in the matter of limits. You know that he believed in having a limit to everything, even to smoking. "Limit yourself to ten cigars a day, and if you find that ten isn't enough, why, raise the limit." By the way, I wonder if Fred Mather has ever fished with Podgers? If not, it would please the boys mightily if he would take a day off with him and then write him up.

Speaking of fishing, there is just now a great run of salmon trout in the Columbia and its tributaries. Possibly it may be a surprise to many Eastern anglers to know that there is no more gamy trout than the salmon trout. They dearly love salmon eggs, of course, but I have taken them at all seasons of the year on the fly, and let me assure my angling friends that a couple of two-pounders hitched to a 6oz split-bamboo make things very interesting. They take the fly as greedily as do the rainbow, Dolly Varden or black-spotted trout, and fight just as long and hard as either.

And again, speaking of fish, that report of the New York Fish Commission with its sixteen colored lithograph plates of fishes must be a magnificent work. I am truly glad that it fell to the lot of Dr. Tarleton H. Bean to describe the rainbow trout, and I hope and believe he has done the subject justice. He certainly can. Eastern sportsmen will find it a valuable acquisition to their stock of game fishes.

I see by the columns of FOREST AND STREAM that Judge Cheney has done me the honor of permitting me to say something about the ring-neck or Mongolian pheasant in that report, and has accompanied my remarks with a lithograph plate of the bird drawn by Mr. Sherman F. Denton, artist of the United States Fish Commission. Feeling assured, as I do, that Mr. Denton has done his part far better than I, it is more than probable that neither of us have done the bird full justice, for he is a great, grand, beautiful bird.

Speaking of birds reminds me that the boys have not had the duck shooting in our waters this winter that they had anticipated.

While waiting for ducks the other day down at the Jewett, my old friend, J. Roberts Mead, killed a magnificent bald eagle, and captured without injury (to the bird) a beautiful snowy owl. He presented the latter to the city park and it is doing nicely. Another old sporting friend of mine, Mr. Frank Thorn, made rather a remarkable record on swans recently. He caught two on a lap with his right, killed a third with his left, slipped another shell in and got a fourth before they got out of range. This would be something to be proud of were not the victims swans. For my part, I think the killing of swans should be prohibited by law, and I doubt not Frank will agree with the sentiment.

Our legislative Assembly is again in session, and Editor Reynolds, of *Game Laws in Brief*, has my sympathy. He may rest assured of one thing, however: the aforesaid Assembly will sustain the well-earned reputation of its predecessors and "make confusion worse confounded."

S. H. GREENE.

PORTLAND, Ore., Jan. 12.

New York Game Law.

PHILADELPHIA, Pa., Jan. 16.—*Editor Forest and Stream:* In the article headed "New York Game Protection," signed by 16-Bore, I notice the first sentence, "The non-shipping game law is good as far as it goes, but it does not protect us." It seems as if 16-Bore wanted "us" protected a great deal more than the grouse. I think all he is crying about is that he cannot get twenty or thirty birds a day himself.

I have been in northern New York twice this year with friends who knew the ground thoroughly, and we never any one of us killed more than five birds in one day, because we couldn't find them, though our party included one of the best brush shots in the country, and we had three and sometimes four almost perfect dogs.

If a bounty were placed on foxes in the grouse counties it would help the shooting very much, as we found a great many places where foxes had caught grouse and rabbits.

Col. Sanger's bill is perfect in my estimation, except that Nov. 15 is rather early; for a great many years we would have no open shooting, that is, after the leaves are off, but while he is at it why not put in a clause stopping the sale of game, and then it would be indeed perfect.

R. C. F.

MAINE'S PROTECTIVE MEASURES.

BOSTON, Mass., Jan 14.—*Editor Forest and Stream:* Some effective legislation ought to be adopted in the State of Maine to prevent the extermination of moose and caribou. It is the opinion expressed by the best informed hunters and guides there, that not seventy-five bull moose remain in the State. I would like to see a law passed to prevent the killing of any moose for five years, under a penalty of fine and imprisonment. Such a period of exemption from danger would not be too long for needed recuperation.

The newspapers of New England have extended invitations to people everywhere to come to Maine for hunting and fishing, and the railroads now take their passengers to the very hearts of the forest. It has so become possible for a much larger class in our communities than formerly to visit these hunting grounds, for fatigue, delays and expense have been reduced to a minimum. And the peril to the moose has as the consequence been tremendously augmented. The hunters who follow the moose in the snow will pursue him till the last moose or caribou is taken, if they are permitted. These winter hunters bring very little money into the State, and any fair consideration of the subject ought to convince one that the advantages to result from preserving this noble game far outweigh any benefit to be derived from the December visits of the hunters.

It would be the part of discretion to shorten the open time for hunting of all game, partridge included, say to the interval between Sept. 20 and Dec. 1, instead of to the end of December, as it is now established. Even with this additional restriction the protection will probably prove insufficient; and the sportsman who cannot be satisfied with seventy days of hunting should simply be invited to go to some other State for further sport.

If it is possible to pass a law to prevent carrying any firearms into the woods during the close time, it would be more efficient legislation than some adopted in the past. No man carries a gun weighing 7 to 9lbs. at that time unless he intends to use it. It is idle to suggest that he carries it for protection, for there is no animal in the State of Maine of which he need be afraid. Even a bear will attack no man unless first wounded, or unless cubs are molested. The best way to prevent an improper use of the gun is to prohibit its being carried at all during the closed period.

The Legislature would be wise to make more liberal appropriation for the protection of fish and game. There is much work to be done to enforce present laws, and the State owes it to herself that they should not become inoperative or only occasionally operative. Present supplies of game and fish should not be diminished, and the appropriations by the State ought to be sufficient to prevent all fishing through the ice, and to protect trout and salmon on their spawning beds as thoroughly as possible.

D. H. BLANCHARD.

FOXES ON THE EASTERN SHORE.

I CANNOT refrain from saying a word on the subject of fox hunting since seeing our Jersey friend having such nice fun in this the most rational of all amusements. When he hears the hounds even an old plug will break from his stall and go fox hunting, while not one has ever been known to go quail or duck shooting of his own will.

Our country, the Eastern shore, presents perhaps the best advantages for this sport of any to be found. The country is as level as a billiard table; there are no rocks, nor any difficult streams to ford, while the red fox is plentiful and can always be raised if one gets out by 6 or 8 A. M.

Caged foxes afford but poor sport. They seem to get stiff from confinement, which is, however, due more to their efforts while in captivity to escape than it is to being cramped. I have never known a caged fox to hold on longer than three hours and cover more than thirty miles, while in a large majority of cases if the dogs are fleet the chase amounts to no more than a rabbit hunt.

Fox hunting to me is equally interesting whether I study the habits of the fox in evading his pursuers or the sagacity of the dogs in settling highly important questions as to which way reynard has gone. And then the music in worth to me far excels that of Ole Bull and Blind Tom. In fact, everything connected with fox hunting is good matter-of-fact common sense.

To determine on a cold trail which way the fox has gone is a thing that can only be done by a thoroughbred, well-trained hound, and the man is yet to be born who can satisfactorily tell how the hound does it. I recall one hunt in Upshur's Neck, and it was on this occasion that I became so deeply interested in animal sagacity. It was a cold, bleak morning, and already past 6 when we reached Matchapungo Creek shore, where a trail was sure to be found. We had twenty dogs, among which was Ames's dog Ruler. On reaching the usual place of striking a trail, Ruler was seen to raise his bristles, almost burying his nose in the half frozen sand.

"There is a trail," said Ames, but Ruler had not yet made the fact known. When he finally opened the other dogs were attracted, but not one could touch it; not even a whine came from a single one of them. Here the huntsman had an opportunity of selecting the best dog to breed from for nose, a very important matter. The whole party were present, sitting on their horses watching the dog's actions.

The creek shore runs north and south. The dog would go north 100yds. perhaps from where we stood, then south, passing us the same distance; doing this half a dozen times perhaps, and occasionally opening. Not another dog gave utterance yet to a whine. Finally the old fellow had made his prognosis, and slowly sauntered down the creek shore, occasionally opening. Leaving the bleak sand, which the fox had done many hours before, no doubt, Ruler entered a skirt of pine where Turlington's bitch Fury began crying, and on down four or five miles they raised the fox, and caught him in five or six hours. Now this instinct—for it is certainly not an acquirement—is a fit study for learned men, and is an interesting part of the sport.

The fox's habit of retracking himself is a very interesting part of the hunt. This is an admixture of instinct nd sagacity. The fox has never acquired the knowledge ossessed by the rabbit of making a circle and running the rear of the dogs; still the fox has his tricks. On e occasion of a certain hunt I did not get off. The ys, however, raised a fox, and knowing pretty well where I could get to get a sight of the chase, I walked through a woods road half a mile, and after waiting a short time heard the fox breaking brush. Soon it came in view, crossed the road, entered a piece of very open timber, and going 200yds. or so, stopped, turned and to a line retraced his track, coming to where I could get a full view of him; he leaped to the windward of his track and passed on out of my sight. Of course he did not see me.

The dogs soon came up. Having run but about a couple of hours, they were on nettles and drove right on until they reached the end of the track, where the fox had turned. Here they scattered in every direction, and would have lost the day's sport but for old Dick. He was a powerful black and tan, with the best of an English bull dog, and ears that would have half-soled a pair of No. 10 plantation brogans in ante-bellum times. For us this sight was a feast. Old Dick was some half mile behind the pack. He had traveled; he was not there for a frolic; he was there to do his work well. I remained motionless. Dick came up, not trailing to leeward, as dogs generally do, but right down on the very footstep of the fox. He passed on, followed the trail out to where the fox had turned—I pledge my word that he did not go 5ft. beyond—turned and trailed back to where the fox had left his track, and just so far beyond as seemed necessary to detect that something was going on wrong, made a close circuit, picked up the trail and drew the dogs together. The result of his work was a good day's sport and a dead fox.

T. G. ELLIOTT.

KELLER, Va., Jan. 7.

MAINE VS. WISCONSIN.

Editor Forest and Stream:

Mr. Hough has something to say in your issue of Jan. 9 about Maine as compared with "our deer country of Wisconsin" which seems to indicate that he is laboring under a misapprehension regarding the big-game country Down East.

We are willing to let him brag about the size of his town of Chicago, but when it comes to claiming that they have more of a wilderness in Wisconsin than we can produce in the East we rise to expostulate.

Compared with Maine, Wisconsin is a public park, and if I am not mistaken it was Mr. Hough himself who told us of the bicycle trips that have recently been so popular through the pine woods country there. As a matter of fact, there are no large areas in that State or in the upper peninsula of Michigan that are not rendered accessible by railroads or where you cannot go with a team of horses.

The average distance from a railroad station on one line to a similar station on another line is perhaps thirty miles, and nowhere can a place be found where a man is more than twenty-five miles from the means of access to the outer world afforded by the steam engine. This is not much of a wilderness according to our ideas in this part of the country. They can do better than that in the Adirondacks.

In Maine things are arranged on a larger scale. There you can go 130 miles in one direction and 150 in another on a course at right angles with the first without finding a railroad, and you won't travel by bicycle either. In fact this particular bit of wild land lying in Maine and across the border in Quebec which is nowhere crossed by railroads is upward of 20,000 square miles in extent, or about ten times the size of any corresponding tract in Wisconsin or Michigan. Large portions of it are altogether inaccessible except by boat or on foot, and nowhere has it any permanent population of consequence aside from the deer, caribou and moose. Imagine what a sensation it would create in Wisconsin if a moose should suddenly appear in that State! But the thing is impossible even to imagine.

They never could get a moose in Wisconsin unless they took him there in a box car. Such game is only found where there is real wilderness and a back country.

They have plenty of deer in Wisconsin, but what does that signify? According to the accounts I have read in FOREST AND STREAM, there are just as many on Long Island within fifty minutes' ride of New York city. Deer will live anywhere, even in a man's back yard, if they are not molested. An extended range is not necessary to their existence.

No, Brother Hough, you have to go west of the Mississippi to match our Maine wilderness, and even there you will hardly at present find any corresponding area where the game is so thick, square mile for square mile. You yourself are constantly telling us of the decreasing game supply in the favored localities of the great West. In Maine big game of one kind or another is increasing faster than it can be killed off, and one cannot go anywhere in the wilderness proper at any time of year and not see game. In the far West, on the other hand, you can travel over miles and miles of wilderness and mountains without seeing a living thing worth shooting a rifle at. The game is somewhere else or else it is dead.

Finally, if Mr. Hough wants his moose he had better turn his face to the rising sun (provided he wants to kill him on American soil). There are still enough moose left in Maine to supply hunters as far west as Chicago, and if your Chicago-and-the-West man comes this way next fall we will try to show him one. Also what a real wilderness is like.

MAINE.

FLORIDA GAME AND FISH.

SARASOTA, Fla., Jan. 6.—The weather here is very warm and pleasant. Mr. E. Webster, of New York, left the Hotel De Soto on Saturday, 2d, at 10:30, returned 6:20, having caught four bluefish of good size, one redfish weighing 32lbs., two tarpon, largest 48lbs., small one 16lbs.

Monday, 4th, walked to jacksnipe grounds, shot thirty-two snipe and thirteen quail; walked both ways; left at 10 A. M., returned at 6:30.

GEO. H. MACKIE.

PAMASOFFKEE, Fla., Jan. 11.—This part of Florida and other more southern points, with which I am well acquainted, were never more plentifully stocked with deer, bears and turkeys. Several parties of us in this neighborhood have been out lately and never failed to bring in from one to two deer in a half-day hunt. New Year's Day we killed two large bucks, 145lbs. and 166lbs., dressed; largest deer killed in this country or Florida in years. Our season is up March 1. We have good black bass fishing.

JAKE MARSH.

MAINE AND BOSTON.

BOSTON, Jan. 16.—That there is a boom in hunting matters one need not doubt who will take the trouble to look into the shop of any live taxidermist. Heads of game—mounted heads—for relics and ornamentation are to be seen without number. It is stated, on good authority, that nine out of ten of the moose killed in Maine the past season were wanted for their heads only, and but very few of the bodies were saved. The weight of these animals is great, and they are usually killed a long way into the forest, with no roads, and the getting of the entire body out would cost hundreds of dollars. But the head can be towed out by the guides and mounted at the taxidermist's shop. If one is not lucky, or is not hunter enough to secure his own moose, deer or caribou head, there is plenty of opportunity for buying. One could but think of such things, especially if he saw a load of fifty caribou heads and horns that passed along the streets of Boston the other day, piled high upon a big wagon, a most peculiar load, with the great antlers sticking out in every possible direction. Some of the antlers were very large and spreading, with the two prongs in front of the nose very pronounced. They were the property of M. Abbott Frazar, and were purchased, together with the skins of the heads, in Newfoundland.

The last legal moose hunting trip of the season for Boston sportsmen is over, and no moose were taken. Dr. Heber Bishop, W. T. Farley and Mr. Stevens left Boston the night before Christmas for a moose hunt in the Moose River Valley. They reached Lowelltown at 3 or 4 o'clock in the morning, and here their troubles began, with the mercury down below zero. They had to spend the night in the station for want of better accommodations. The next morning they started on a tramp of many miles over Caribou Mountain, with the snow 1½ft. deep. The guides were against attempting the tramp, but the hunters were bound to proceed. At nightfall not more than half the way had been accomplished. After several miles of weary plowing through the snow, ending in darkness, they came to an old camp deserted some time ago by Dr. Bishop and his friends. On entering they found that gummers had been there, and had left wood and kindlings. It did not take long to start a fire, but there were no facilities for sleeping beyond a couple of old wire mattresses without bedding of any kind. They curled about the stove as best they could, and managed to get a little sleep, taking turns at watching the fire, lest they freeze. They had no food beyond a slight lunch found in Mr. Farley's pack, for the team with their baggage was miles behind. The guides were for keeping on, but finally consented to worry out the night in the old camp. The next morning they started in good season, and reached their permanent camp in the valley near the Canadian boundary early in the afternoon.

After a rest, with plenty of food to eat, and a night when it was possible to keep from freezing, the second day dawned with plenty of fresh snow for tracking. That day Mr. Farley started an enormous moose, and it stopped in easy range. The rifle came up instinctively, but none too soon the hunter saw it had no horns—an enormous cow, that Mr. Farley would not shoot. The guide, a hunter of many years' experience, pronounced it the largest cow moose he had ever seen. Two or three other cow moose were started, but no bulls. In one case a calf was with the cow, but was not shot. When the hunters found that they were to get no moose they gave their attention to getting a couple of deer each. This they say was easy, the deer being very plenty. But curiously enough the bucks had already begun shedding their antlers, two having been shot with both horns gone. Dr. Bishop found a horn, freshly shed, in the snow. It has generally been supposed that the Maine deer held their horns till the end of January at least, and even into February. The hunters came out at the end of the open season, and were on the way home Jan. 1.

Pickerel fishing is good on many of the celebrated Maine pickerel lakes and ponds. Winthrop Ponds are being well fished, but with fewer pickerel than usual. Norway Lake is heard from in the way of big strings of pickerel. Lewiston and Auburn fishermen are bringing many pickerel to the markets of those cities. Boston market receivers say that they can have all the pickerel they will take, but prices are low and they do not encourage the sending of them in.

The tomcod fishermen are in evidence along the Massachusetts shore. The wooden tongs with braided ends are in order, and the poor tomcod surrenders because he is obliged to. At Ipswich River a good many are being taken. Parker River is being tonged for tomcod as usual. Tarbox and the Baileys have been out once or twice from Byfield, and each time have taken about a bushel from the Parker River. They fished just below the woollen mill. Along the banks of the stream the operatives live, but probably never think of fishing. One day they saw the boys taking up the tomcod with their wooden tongs, and soon a pretty little girl came out of one of the houses. She says:

"My mamma wants to know if you will sell her some fish?"

The fishermen told her that they had no fish to sell, but they would give her some. She ran into the house, and soon emerged with a big pan in both hands:

"My mamma wants three dozen," she piped.

The boys gave her six good-sized fish, feeling that they had other friends whom they would like to make happy.

Fish and Game Commissioner Carlton's bill to license guides has been introduced into the Maine Legislature, say the dispatches to the daily papers. It provides that every guide shall take out a license, the annual cost of which shall be $3. The penalty is not less than $25 for the failure to take out such license by any person pretending to guide or accompany hunting and fishing parties. The guide so licensed shall wear a badge and shall also act as fire warden and keep a record of all fires. Any guide breaking the game laws shall be punished by a fine of not less than $50 and shall not engage in guiding for a term of one year. But the most peculiar feature of the bill is that he shall keep a record of all persons he guides, their names and residences, the amount and nature of the fish and game taken, and immediately forward the same to the Commissioners.

Well, has the sportsman anything to say about all this? Who can compel him to employ a guide? Has a citizen of the United States a constitutional right to work for whom he pleases at any legal calling?

SPECIAL.

AN ARKANSAS OUTING.

A JOLLY company of twenty good and true sportsmen have recently had a nice trip to Mississippi county, Ark., for the purpose of chasing the wi d deer, possum and the coon. They had good luck and lots of fun. They killed ten deer, twenty or more turkeys, arms full of squirrels, scads of fish, and everything else they wanted.

The crowd was composed of men from Kentucky, Tennessee, Missouri and Illinois; with preachers, doctors, lawyers, tobacconists, bankers, railroad men, druggists, and farmers, as to their avocations; and with Baptists, Methodists, Presbyterians, and Campbellites, as to their religion; and with Democrats, Republicans, Populists, and Prohibitionists, as to their politics; and both married and unmarried men as to their domestic relations; and a sober, decent, civil crowd in every respect as to their behavior. Of course we had a good time with such a company.

On the first morning after our arrival in camp we scattered out over the woods, and before 9 o'clock that morning had a nice deer hanging up in camp. When all hands had reported for the rest of the night we found we had two deer, ten turkeys, about 50lbs. of fish, lots of squirrels, some opossums and raccoons—plenty of meat to do us most of the two weeks we expected to be in camp.

We had no dogs with us, and did not undertake to run the deer. What success we had came from the skill of the sportsmen as they still-hunted through the swamps. We found the residents of that section very bitterly opposed to the running of dogs, and as we want to go again into that same section we sought to create no prejudice against ourselves by our conduct. The day for the hounding of deer in Arkansas has about passed. The citizens will not suffer it. Those who run their dogs there now will do so at the risk of the dog's life, for they will kill such as run in the woods.

We found game very plentiful. I suppose I am safe in saying that we did not hunt one single day that we saw less than twenty-five deer, and sometimes as many as fifty. We killed ten that we got, and seriously wounded some that we did not get. We got all we wanted and became indifferent about killing more. The wild turkeys were very numerous. We kept no count of the exact number we did kill. The woods were torn up by the turkeys everywhere we hunted. It has possibly been many years since this noble bird could be found in such great abundance in any section of this country. But the light rains, and freedom from great overflows in the river for several seasons, are no doubt the reasons of the abundance of game. The laws for a close season on game in Arkansas are being closely observed, and this contributes in no small degree to the supply of wild animals. A few more years of such protection and good breeding seasons, and Arkansas will be the game paradise of the whole nation.

These annual outings are greatly enjoyable to overworked men, and our crowd will go again next year into the same locality, for we ask for nothing better.

J. N. HALL.

KENTUCKY.

CHICAGO AND THE WEST.

Texas Deer.

Near San Marcos, Tex., a deer has just been killed which has a seventeen-point set of antlers. The head is on exhibition.

At Encinal, near Laredo, market-hunters have killed seventy deer in four days. This is no guess and no exaggeration. One train took sixty deer out for this party. My informant says, "We Texans depend on FOREST AND STREAM to kick long and loud, and so formulate a strong popular opinion, for we intend to go to hanging a few market-hunters before long." I wish they would. We would mourn their vacant chairs, but we would try to struggle along without them for a while.

Advice on Camping Out.

I have just been reading a nice green book on camping out, written by an Englishman. That is, I read it up to the place where the man said any camping party would find a pair of bellows an indispensable article in building the fire. I didn't read any more after that. Why, oh! why was man given his old hat, if not to blow the fire therewith? And why, oh! why do men write things, as the bellows advice, anyhow?

Moose and Buffalo Coat.

Mr. Thomas Johnson writes from Winnipeg that he is coming down to Portage, Wis., this winter to curl a few lines when the ice gets good, and that then he will come to Chicago. I hope he will bring his curling iron along and make himself at home.

Mr. Johnson sends in the story of a moose, a tame moose, not a wild one, which recently attacked a Winnipeg gentleman who was going by wrapped up in a big buffalo coat. It evidently took him for some strange and dangerous creature, and before it got done with him there came near being material for a funeral, and it wasn't a moose funeral either.

Tennessee Quail.

Messrs. C. S. Wilcox and Walter Dupee, both of this city, will start soon for a Tennessee quail hunt, going to Trenton, that State, where they anticipate a pleasant time.

Garden City Club.

Garden City Club, of Chicago, holds its annual meeting this week. It has a membership of neary eighty, and is one of the largest of the Chicago shooting clubs.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Vermont Game, Modes and Seasons.

Editor Forest and Stream:

On looking over the game laws recently passed by our Legislature one finds but little to give promise of a very marked increase in the game supply for 1897. I find only two new points worthy of mention; one is that the fine for killing pheasants has been increased from $10 to $25 for each bird killed; the second, a provision prohibiting the shooting of ducks with the aid of jacks or artificial light. We would be pleased to learn why this was not carried a little further to prohibit all night shooting for a time, allowing our northern flight of ducks a chance to feed on the marshes that nearly every fall yield a large crop of wild oats.

As the law now stands, night shooting is practiced on these marshes from the beginning of open season (and before) until the grounds are frozen over. The result of this is plain. Very few of the ducks shot at are brought to bag, but many are crippled and the rest are soon driven away.

Another law could have been passed which would have been of great benefit to the game supply in this part of the State, viz., to prohibit the use of dogs for hunting birds, for five years at least. I do not know of a sportsman's dog (pointer or setter) for a radius of ten miles from here, but nearly every man is the possessor of from one to three yelping spaniels or cur dogs, which are brought into use as soon as the birds are large enough to take wing, and the grouse are continually hunted, being shot out of trees like chickens off a roost. Not contented with killing every ruffed grouse, the poacher with his dog is often seen in the covers frequented by pheasants, and many of them are bagged too. To prohibit the use of the dog means an increase in marked degree to our pheasants, for in a cover selected by them it is seldom one is flushed without a dog. I am credibly informed that in a village of a few hundred inhabitants not many miles from here ruffed grouse were brought in in such numbers that the supply was much greater than the demand (at 50 cents per pair), and many shipments were made to other places. So much for a dog, gun and game hog.

Let us hope that the State League will see that a change is needed, and take a hand in the matter before it's too late.

FERRIS.

Game Protection by Button.

STAMFORD, Conn.—*Editor Forest and Stream:* I am and always have been interested in reading the multitude of letters published in your valuable paper in relation to the preservation of our stock of game, and I confess that it amuses me in some cases to read some of the plans and devices advocated to accomplish that end. Not that I do not believe that they are honestly meant to meet the requirements of the case, but at the impracticability of some of them.

Now I do not think I will live long enough to ever see your plank nailed down, but there can be no harm in keeping the question agitated.

Everything must have a beginning, and I propose you make the start in this case by securing the aid of a few well-known sportsmen in your city and forming a society or organization, the motto of which shall be, "Sell no Game." Let the membership fee be $1—or whatever you may decide. Every applicant for membership sending in his fee to receive a badge or button, to be inscribed with the motto of the brotherhood, and also dated the year it is issued. These buttons could be gotten up at a small expense—say 10 or 15 cents each—the balance of the fee to go to paying the salary of a secretary, whose duty it shall be to keep track of the members and keep them posted on all matters that may interest them; at the end of the year a new button to be issued upon the payment of dues. In unity there is strength, and I think it will surprise some people to find how many buttons will be worn. If nothing else comes from it, we at least will know when we meet a man in the woods or fields whether he is a butcher or a sportsman. CONNECTICUT.

[It would be more effective to fasten the buttons on to the game.]

A Bear's Vitality.

Editor Forest and Stream:

About three months ago there was a deal of argument over the question as to which was the best cartridge for big-game shooting. I have heard many hunters give their opinions on this subject myself, and while they don't all agree on the cartridge and gun, the general idea is: A big, heavy gun and a cartridge with from 70 to 120grs. of powder and a good, heavy ball.

I always leaned toward a 45-90 myself, and my belief has been materially strengthened by some news I heard the other day.

Two men living near town went up in the Sierras on a deer hunt. Both had '86 model Winchesters, one a .38-56 and the other .38-70. They were hunting quite a distance from camp when they spied a large brown bear about 50yds. off and began firing at once, when, to their surprise, the bear started for them on a dead run.

They didn't stop to think much about this, however, but pumped the lead into the old fellow as fast as they could, and as a result he dropped dead within 20ft. of them, and just as they were about to run.

After they had cooled off a little they examined the carcass, and found that of the eleven shots fired every one had passed through the body, and the first one had pierced both heart and liver.

Now, as some hunters say, a .44 may be large enough to hunt bear and moose with, but when *I* shoot a bear through the heart I want him to die before he eats me up.

WALROD.

New York Free Lectures.

NEW YORK furnishes an example to other American cities by her liberal-minded enterprise in conducting a course of free lectures for the people, which, while intended primarily for the benefit of working men and working women, are of such a character that no one can fail to be entertained and instructed.

The work is carried on by the Board of Education, and an idea of its scope may be gathered from the fact that during the present season 300 lecturers will speak on various topics to audiences that in the aggregate will number nearly half a million persons.

This winter Dr. Leipziger, supervisor of lectures, aims to make American subjects the feature of the course; and along with American history, biography and kindred subjects, American sport is given a place. Among the names of lecturers familiar to readers of the FOREST AND STREAM are those of Mr. Fred Mather and Dr. Bashford Dean, who lecture on "Fish and Fisheries;" Mr. F. M. Chapman, whose subject is "Birds;" and Mr. R. L. Ditmars, "Snakes;" Mr. J. B. Burnham, "Camp Life and Hunting;" Mr. H. L. Bridgman, G. O. Shields, Hon. Theo. Roosevelt and others.

It is worth noting that while these lectures are not the least instructive of the course they are among the most popular, proving that the love of nature and outdoor life is common to all—even to those who are cut off from active participation in the pleasures of field and stream.

Maine Guide Licenses.

Editor Forest and Stream:

I notice in issue of your paper the question brought up of licensing guides in Maine. I wrote on this subject about three years ago, in the Phillips *Phonograph*. At that time the idea was not received with favor, but sentiment is changing. It is the best plan that has been offered, and the State should handle such matters and no special favors be shown.

To protect the best interests of all concerned, all guides should pass an examination, and if fully qualified should take out a license; and then aliens, non-residents, boys and every stranger could not, on short notice, palm themselves on sportsmen as full-fledged guides on the strength of having worked in the country a month or so.

The best guides stand the best show, you may say. Not in all sections, for sportsmen are not all in love with one particular spot (if it suits them ever so well while there,) but are looking for the ideal. A few come season after season, and the old guides are always employed by them; but the newcomers, not being posted, cannot tell on short notice one grade of guide from another. So sometimes their outing is a failure, and they give the whole section a bad name, not realizing just where the blame belongs. Licensing the guides will not prevent our order being formed; our association will be needed just the same to see that the law of license is complied with, and to many other matters of importance. Protection must be had in many channels of the sporting business, and Maine, as a State, can afford to show a greater money interest in a business that brings a number of million dollars to the inhabitants every year.

It is said by some of those against a license law that we must work some new guides in. Of course; but let it be understood that they are new and learning, and not glut the market with half-learned men and boys, while guides that have grown old in the business are forced to stand back. Let the beginners be taken from the guides' own families and from the families of the old residents, as they are mostly natural woodsmen, and learn the A B C of woodcraft while boys on the farm.

Maine, license your guides.

Guides, join your interests.

H. R. HORTON, Guide.

EUSTIS, Maine.

Where are the Ducks?

STOCKTON, Md., Jan. 10.—So far we have had the poorest ducking year ever known in Chincoteague Bay. There are miles and miles of shoals, rich with grasses the wildfowl love so well, and the weather all a man could wish for, but there is hardly a duck on the wing. Why should these thousands of acres of choice feeding ground be abandoned to geese and brant? We have had the finest goose shooting anyone could ask for. A long series of east winds and high tides drove them from the shoals to the island ponds, making from sundown to dark shooting that all who were in it will remember. Every evening for over a week we scored from five to fourteen geese to the gun, all large, fine, and very fat. But the ducks! Last year thousands of redheads and bluebills blackened the shoals in every direction, bunch after bunch trading through the great coast bays. From Isle of Wight to Cobb's Island, between eighty and ninety miles of bays and shoals were covered with a restless, changing flight of wildfowl. Where are they? I have looked carefully in FOREST AND STREAM for some word from the many points and bays of the Eastern shore, but find almost nothing about the wildfowl. I think our paper is intended to throw light on just such strange movements of game as this case presents, for there is no doubt that a cause exists for the quick passing of the great body of redheads and bluebills. Coots and squaw ducks are in countless numbers, but we do not bother them. There are also a good number of whistlers and dippers, but the fine ducks—the choice ones—the redheads and bluebills are not here.

O. D. FOULKS.

William Lyman.

Editor Forest and Stream:

I have not been so saddened for years past as I was by the announcement of the death of Wm. Lyman in your paper of Dec. 26. Although we had occasionally corresponded upon the subject of rifle sights, I never had the pleasure of seeing Mr. Lyman until the autumn of 1895. He was then on a visit to Europe, and I went to London in order to become personally acquainted with him. We spent a long evening together discussing various matters connected with firearms, and also social and political questions, upon most of which we found our opinions to be very similar.

As long as the rifle continues to be used for either war or sporting purposes, the name of Mr. Lyman will be remembered for his great improvements in the method of sighting it. His last invention of a rear aperture sight will, I fully believe, have more effect in increasing the deadliness of infantry fire than that caused by the change from muzzle to breech-loading. It may indeed, in combination with smokeless powder and other modern improvements, ultimately produce a revolution in war of which few people have at present any conception.

J. J. MEYRICK.

DEVONSHIRE, England.

Iowa Game and Fish.

ESTHERVILLE, Ia., Jan. 11.—I am pleased to state that prairie chickens and quail have been increasing during the last few dry seasons, ducks and geese being scarce.

We have had some very favorable legislation for the protection of our fish during the last two years, and stand a good show to have our fish preserved for legitimate sport, instead of being sacrificed to the greed of the professional fish hog, with his seine and dynamite. Mr. Delevan, State Fish Commissioner, is doing good work in this line, and deserves the support and assistance of every true sportsman in the State.

E. H. S.

Quail in South Carolina.

CHEROKEE INN, Blacksburg, S. C., Jan. 11.—Quail are superabundant here, and fields have been shot over very little. Any one seeking sport in this line can feel assured of finding it here.

G. H. GREENE.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Sportsman, Guide and Game.

Editor Forest and Stream:

In your issue of Jan. 9 I have read: "Who Owns the Game Killed by the Guide?" as discussed by Mr. Shaganoss. Without going into details in regard to his opinions and conclusions as to who owns the guide's game, I wish to bring the matter at once to a common-sense business point of view.

First. The same relations exist between employer and employee in the relation of hunter and guide as in any other business the world over.

Second. Some amateur sportsman wishes to take a week's vacation grouse shooting. He goes to some favorable locality. He finds he will have to pay: $2 per day for his board, $2.50 per day for his guide and dog, $2.50 per day for his team and wagon—a total of $7; and at the end of the week he finds that his shooting venture has cost him $42, besides his railroad fare and incidental expenses, and the net result of his week's shooting has been fifteen grouse. He has killed three himself and his guide has killed twelve. He has paid his hotel bill, $12; his livery bill, $15, and the daily wages of his guide, $15; and when he supposes he has paid everybody a good price for everything that has been done for him, up steps his guide and demands that he must be paid $1.25 per pair for all the grouse he (the guide) has killed. In my opinion this guide has no more right to demand and receive pay for the grouse killed under the above circumstances than a highway robber has to stop his victim on the road at the muzzle of a shotgun and demand his money or his life.

Third. If the sportsman makes a definite bargain with every man he comes in contact with, that settles the question at once.

Fourth. My shooting experience extends back over twenty-five years, and I never heard of a guide making a demand for the pay of birds killed as above until last fall, when the fact came to my notice. I suggested to my friend that we hunt close up each side of our boarding-house keeper's market-shooting guide, and the result was that at the end of two days' shooting the guide failed to bag a single bird. But there is no satisfaction in shooting under such circumstances, and I do not care to come in contact with that sort of people a second time.

Fifth. If any boarding-house keeper or his hired guides wish to shoot any grouse or woodcock for the market, they are free to do so at any time and in any way they choose, as they are simply pot-hunters pure and simple for the money there is in it; but not after they have bargained and sold their day's services to some sportsman for two or three dollars per day and received the money in payment for the same.

A BUSINESS MAN.

JERSEY CITY, N. J.

Iowa Needs Game Wardens.

Editor Forest and Stream:

Iowa has good laws for the preservation of game within her borders, but unfortunately no game wardens. Consequently the laws are about as useful as a watch would be to a hog, for what's no one's special business is truly no one's business, and the violator works his own sweet will. The killing of quail and prairie chickens is practiced, I think, without many exceptions, in every county in the State in the closed season. There needs to be great education along these lines in Iowa. I wish it were possible to place the FOREST AND STREAM in the hands of every shooter in the State. I do not use the term sportsmen, since there are within the State of Iowa "true sportsmen," and to class the game hog and pot-hunter as sportsmen would inflict needless injury on deserving men who observe the laws and give the game a chance for its life.

In Iowa there are more quail and chickens than for many years previous. Cannot something be done to have a game warden and deputies in each county to protect the rights of those who do not shoot in the closed season? Is there not a sportsmen's association in the State who will take the initiative in this? I feel sure they will be ably assisted in any way by all gun clubs to secure such officers as are necessary to enforce the laws. I presume this vicinity would represent a good portion of the State. Here we have violators, two of whom are very persistent and offensive, having shot and killed quail all last winter up to as late as March. This winter promises to be a repetition of last. I am in favor of having a closed season on all game, and have it all closed during the same time. Then no one can go to kill quail out of season under pretext of going to kill rabbits, which are not protected. Any other Iowa sportsman got anything to say?

ONE WHO OBSERVES THE LAW.

Long Island Ducks.

SAYVILLE, L. I., Jan. 16.—Large bags of ducks, most of them redheads, have been killed in the Great South Bay from here this week. The outlook is for birds here in the open water to give good shooting. SAY.

Camp-Fire Flickerings.

"That reminds me."

Neither Gun Kicked.

SPEAKING of geese reminds me of the famous shot made by Uncle Charles and Evan Richmond. One windy day in the fall Uncle Charles saw a flock of geese that were evidently very tired struggling against the wind, and he judged from their course that they would alight on a lake some three miles distant. So he loaded up the old gun with a fox charge and a little more, as he afterward acknowledged, then rolling up the gun in the horse blanket he harnessed up his horse and was soon on the road to the lake. Evan also had spotted the geese and had loaded up his gun, as he said, with a rouser, and started on foot after them, and was overtaken by Uncle Charles when about halfway to the lake. They entered into a treaty of alliance and agreed to join forces for the campaign.

Arriving at the head of the lake, the horse was hitched and they started along the shore in quest of the game, which was finally discovered at just about the proper distance below a brush fence, all of them in line along the sandy beach, pruning their feathers. After a consultation it was decided that Evan was to hold on to the second goose, while Uncle Charles should draw a bead at about the middle of the line, and then on hands and knees they crawled up to the fence, and, poking their guns through and getting a good aim, there was a whispered one-two-three and then two reports that seemed but one. There was a struggling mass of geese on the sandy beach, with but one solitary one in the air; all the rest were either killed outright or disabled. One, wing broken, swam out into the lake, and one other, also wing broken, took to the woods; both of them being captured within a few days. When our two Nimrods had secured the remainder they took account of stock and found that they had fourteen on hand, with two more that were disabled, making sixteen in all out of a flock of seventeen, which was a pretty good average for two single-barrel guns.

When Uncle Charles came home and showed his seven geese and told his story, I asked him if the old gun kicked. With a queer grimace he said, "No-o, not much, but Evan got knocked heels over head."

A few days later I saw Evan, and after he had told me the story I also asked him if his gun kicked. "No-o," said he, "but you ought to have seen Charles, with his face all covered with dirt as he crawled out of that brush heap that was more than 10ft. from where he was when he shot." SHADOW.

Sea and River Fishing.

PENNSYLVANIA ASSOCIATION.

PHILADELPHIA, Jan. 16.—The annual meeting of the Pennsylvania Fish Protective Association was held Saturday evening, Jan. 9, 1897, at the rooms, 1020 Arch street, Philadelphia, and was well attended.

The annual report of the executive committee, containing a detail of the operations for the year 1896, was ordered to be printed for distribution.

The legislation committee submitted a lengthy report of its work in coöperation with a similar committee of the Fish Commission to secure the codification of the laws for the protection of fish, and recommended numerous changes, among which were fixing the minimum size at which trout could be taken at 6in. instead of 5in., and black bass at 9in. instead of 6in.; making the open season for the capture of pickerel from May 30 to Jan. 1; and that penalties be made mandatory instead of discretionary throughout; also, to have an act passed establishing auxiliary hatching stations in different parts of the State by permitting individuals or organizations to erect them on closed streams, a proportion of the fry to be retained by the organization and the remainder to be distributed free under the direction of the Fish Commissioners in open streams, thereby giving opportunity for a stricter law governing trespassing; the committee will also present a bill to prevent the pollution of streams.

The committee are endeavoring to secure reciprocal legislation with the State of Delaware for the protection of fish by restricting in some measure the use of pound nets in the lower Delaware River and Bay, which is so taken up with them that fish have little chance to reach their spawning beds.

The death of George W. Reader, one of the oldest members of the Association, well known to anglers in Philadelphia and New York, was announced, and a committee appointed to prepare a suitable memorial.

The press, membership and legislation committees presented resolutions, which were adopted, authorizing the printing of a number of circular letters urging concurrent action in behalf of the fishery interests, copies of which will be forwarded to all local organizations of kindred character and the newspaper press of the State. The following resolution was adopted:

Whereas, The steady increase in size and number of what are known as pound nets along the seacoast of the State of New Jersey has recently been so great as to be truly alarming, and in a marked degree detrimental to the interests of the people of that State, and in the most extended sense injurious to the natural increase of food fishes along the almost entire seacoast of that State; and

Whereas, The erection and maintenance of such pound nets is clearly and unmistakably an infraction of the rights of the people of the State of New Jersey as well as of the people of adjacent States, who have in all past time derived their supply of fresh food fish mainly from the waters in which said destructive devices have been placed, giving the organization or trust which owns and controls them the power to make prices to suit themselves, and which prices, it is conceded, are much higher than they would be if fair competition prevailed; therefore, be it

Resolved by the Pennsylvania Fish Protective Association, that it regards the erection and maintenance of such large and so many pound nets in the waters named as an indefensible outrage upon popular rights, and at the same time the most destructive agencies ever devised for the capture of gravid fish, and the consequent impairment of the natural products of the waters of the sea, which will ultimately lead to the final extinction of the various kinds of fish that do their spawning in the estuaries.

Resolved, That the Pennsylvania Fish Protective Association heartily approves of the energetic and determined efforts of the State Fishery Commissioners of New Jersey to induce the Legislature of that State to enact a law which will compel the removal of said pound nets, and throw the fishing interests of the State open to free competition.

Resolved, That a copy of this preamble and resolutions be forwarded to the presiding officers of the Senate and of the House of Representatives of the State of New Jersey; also to the Governor of said State, and the Board of Fishery Commissioners thereof.

The following officers were elected for the ensuing year: President, Edwin Hagert; Vice-Presidents: Dr. Bushrod W. James, Geo. T. Stokes, Wm. P. Thompson; Secretary, Marion G. Sellers; Corresponding Secretary, J. P. Collins; Treasurer, Alfred Hand; Executive Committee: Howard A. Chase, Wm. H. Burkhardt, Dr. W. W. McClure, Wm. E. Meehan, Edw. A. Selliez, Charles H. Thompson, Bernard L. Douredoure, Wm. P. Ogelsby, S. E. Landis; Trustee (three years), H. O. Wilbur.

M. G. SELLERS, Sec'y.

Fisheries and Game Committee of the New York Legislature.

THE Fisheries and Game Committee of the Assembly are: Messrs. Hobbie, Washington; Dudley, Niagara; Mackey, Delaware; Rounds, Cayuga; Laimbeer, New York; Gorham, Otsego; H. T. Andrews, New York; Ten Eyck, Onondaga; J. J. Sullivan, New York; P. J. Andrews, New York; Fritz, New York.

Death of John Watt.

PORT ARTHUR, Canada.—*Editor Forest and Stream:* I am sorry to inform some of the readers of FOREST AND STREAM of the death of John Watt, the famous guide on the Nipigon River. He was much sought after by the sportsmen tourists who took a pleasure in fishing the Nipigon, and will be very much missed by his old friends.

JOHN E. NEWSOME.

FISH AND PAIN.

Editor Forest and Stream:

Now that winter is upon us in earnest, we of rod, of gun and of paddle can only watch the hearth fires snap and flash, and dozing think on the far-off summer days. Assorting and laying away for the winter a lot of fishing tackle the other night, I was reminded of a prolonged discussion in FOREST AND STREAM not long ago as to the sensibility of fish to pain. My last day's fishing of the season brought out some instances of seemingly striking disregard for wounds. We were after sea bass off Execution Light in the Sound, and were bothered by innumerable "cunners," or burgalls. These bait thieves were tossed back again by the score, until we began to suspect that some were coming up for a second toss, like the Sunday-school boys at a picnic sneaking back again into the ice cream line. So we watched carefully. First I landed one hooked just in front of the tail. The big hook tore a long gash when removed, and in less than five minutes a fish of the same size and shape and similarly wounded bit and was brought up hooked squarely through the lip. Two other wounded fish were landed, and then one which I had hooked through the belly just back of the pectoral fins so that the entrails protruded was brought up again, having deeply swallowed the point of the big bass hook.

Earlier in the season I hooked a black bass one morning at Lake Waramaug and almost landed him when he broke away, tearing his under jaw so badly that a piece of it hung on the hook. Again he bit and I had him in the net and near enough to observe the wounded mouth when a quick flip restored him to liberty once more. After casting a fresh minnow over by the same lilypads I felt something take hold, and after a hard tussle landed, and this time kept him of the lacerated jaw. I am prepared to swear that this was the same identical bass.

Last April a friend and I fished a Connecticut brook for trout, and he fishing after me in a deep pool hooked and landed a ½ pounder which still had deep in his maw my No. 2 snelled Aberdeen with a couple of feet of my silk line attached.

This incident was firmly fixed in my mind by the fact that I was prepared to tell him how I hooked and lost a 1½lb. trout in that hole, when he produced the very fish and applied a 66⅔ per cent. discount.

Many somewhat similar events in past seasons convince me that whether the fish feel pain or not, the suffering is slight as compared with the cravings of hunger, and their actions seem to indicate rather that the injuries inconvenience or retard them than that they cause any actual agony. H. PRESCOTT BEACH.

JAN. 13.

The Ursuline Convent at Roberval.

Editor Forest and Stream:

No lover of the "Treatyse of Fysshynge wyth an Angle" who credits its authorship to Dame Juliana Barnes will hesitate to acknowledge his deep indebtedness therefor to the dear old Prioress of the Benedictine Nunnery of Sopwell, and few visitors to Roberval, on their way to fish for ouananiche in the Lake St. John waters, have failed to see and hear of the Ursuline Convent at that place, or to be told what is owed to the good sisters of that institution by the wives and sisters of the younger generation of guides and the daughters of the older settlers of the Lake St. John district.

The daily papers have made known to many of your readers the awful catastrophe that befell the Roberval Convent on Jan. 6, when the entire building with its contents became the prey of the flames and seven of the nuns were burned to ashes. Most of the survivors returned to Quebec. A few remain at Roberval, declining to desert the mission they had undertaken. They are at present at Du Tremblay's Hotel, but are looking for means to rebuild, and unfortunately had but little insurance on the old building. The Government of the Province will give them some small aid. Protestants and Catholics alike in Quebec are manifesting their practical sympathy with the sufferers.

A few of us Canadian anglers will offer a brick or two for the new building as a mark of sympathy, not only for the good nuns themselves, but for the sturdy, yet respectful and obliging French-Canadian population of Lake St. John, to whom they minister.

It has occurred to me, Mr. Editor, that you might permit me, by means of this letter, to suggest in the columns of FOREST AND STREAM that there are possibly brother anglers of mine in the United States who would like to do the same.

E. T. D. CHAMBERS.

QUEBEC, Can., Jan. 11.

Will Black Bass Rise to the Fly in September and October in New England Lakes?

MANY claim they will not take flies except in June, the spawning time.

I have been to Maine for many years in June. Not being able to go that month in 1895, I fished the two large lakes at Belgrade Mills, Me., about Sept. 9, for a few days, and caught a fair number, but no large bass. Best flies were silver-doctor, ibis, yellow-may, Ferguson, Parmachenee-belle and Lord Milford; found dark flies of little value. All the fish were under 1½lbs. weight; they fought well, being in better condition than in June, and were taken among boulders in coves and off rocky points; islands not as good; medium length casts, a good ripple not seeming as necessary as in June. Three other anglers there had similar success.

I have talked with many anglers and guides in Maine about September bass fly-fishing, but few seem to know anything about the subject. The Lord Milford I have made by taking a yellow may that had lost its wings and tying on two scarlet feathers, thus making a fly with yellow body and hackle with scarlet wings, which proved a good fly.

I quote authorities from notes taken since 1892 from different books and papers read. In "American Game Fish" Dr. J. A. Henshall says: "The best season for fly-fishing for black bass in the central and northern States is in May and June, also September and October."

Hallock's *Sportsman's Gazetteer:* "Black bass from Sept. 15 to Oct. 31 are found in water (rivers) 2 to 4ft. in depth near boulders out in the stream."

In *American Angler*, W. C. Harris, speaking of East Branch, N. Y., says: "In dusk of evening as late as Sept. 15, if weather is mild, the bass feed in shallow water and take flies with avidity." In the same journal a writer, speaking of black bass of the Potomac River, tells of fly-fishing in September by several Washington anglers with ibis and brown hackle, and states that about all are bait fishers in this locality. This was in June;

In the *New England Magazine*, writing of New England bass, Charles F. Danforth says: "In lakes and ponds, after spawning on the shoals or along the shore, he may be found in the same localities through July. Then, as the weather becomes warmer, he retires to deeper water, visiting the shoals and shores at night and morning for food. In September look for him on the shoals and reefs, where he stays the most of the day, unless in shallow water. Later in the fall, in October and November, these fish begin to congregate on sunken reefs and around logs and rocks in very deep water, and hibernate and lie dormant."

Shooting and Fishing says, Sept. 3: "At Lake Madison the bass are rising to the fly early and late in the day. * * * The bass taken are small-mouth."

In FOREST AND STREAM, Oct. 17, E. Hough reports: "Mr. G. Harris has been having some late fly fishing for bass, taking ten nice ones one day last week in the Kankakee River near Davis, Ind.; he used scarlet ibis."

I wish readers would give their experience, stating what part of September and October they found the best time, naming flies and circumstances under which the bass were taken I am inclined to think that bass fly-fishing in the autumn would be better on rivers than on ponds; that the late afternoon would be best; that from Sept. 15 to Oct 3 would be the best time, and that the larger bass will not take flies.

LORD MILFORD.

The Kankakee River.

KANKAKEE, Ill., Jan. 5.—The fishing in the Kankakee River has been first rate the past season, better than usual. Something out of the ordinary was fishing on New Year's Day. Mr. J. Willman thought he would try his luck on that day and caught four black bass that weighed over 8lbs. total weight. The weather had been quite warm for a week; New Year's was cloudy and rainy. He has had fine sport the past season, some of his catches running as high as thirty-five and forty fish in one day, mostly black bass—some fine salmon, 4 and 5lbs. One of his nicest strings was of seventeen black bass weighing 38lbs. He knows every hole in the river.

BRUNSWICK FUR CLUB.

THE eighth annual winter meet of the Brunswick, Me., Fur Club was held at Brunswick, Jan. 11–16. The absence of any snow on the ground had a great deal to do with the attendance, the hopelessness of anything like a successful or satisfactory week of fox hunting under the existing circumstances being apparent to all. With the ground frozen as solid as a rock, with a sandy dust flying into the air on the slightest provocation, with the thermometer hovering around zero mark and with a strong wind blowing, it was slight matter for wonder that many members stayed at home and prayed for snow instead of venturing out into the wide world with the idea of landing finally in Brunswick and of being in at the death of one of her red foxes

Still there were several that came to Brunswick, and, if the weather was bad for fox hunting, spent a pleasant few days under the roof tree of Brunswick's popular hotel, the Tontine. Among the number were: Dr. A. C. Heffenger, president of the club, and W. A. Bragdon, of Portsmouth, N. H.; N. Q. Pope, of Portland, Me.; A Macgregor, of Poland, Me., a gentleman who has charge of Mr. Pope's kennels at Poland, and who knows as much about hounds, their ailments, etc., as any man living—at least that's my opinion of Mr. Macgregor based on information and belief. G. R Hunnewell, of Lewiston, Me., was also on hand, as was C. L. Higgins, of Bar Harbor. Others present were Bradford S Turpin, of Roxbury, Mass.; R. D. Perry, of Philipston, Mass., the club's M. F. H.; Noel E. Money, of Oakland, N. J.; J. H Gaffney, of Petersham, Mass.; Chas. L. Wellington, of Waltham, Mass.; S. Williams, of Maldonville, Mass.; T. H. Gledhill, Lewiston, Me.; Marshal Parks, of Bradford, N. H., and others whose names slipped my memory and my pencil.

Being unable to leave New York earlier than Monday night, I missed not only the annual meeting and election of officers, but also the first day's hunt and the competition for the meerschaum pipe presented by Mr. Perry to the club, the pipe to go to the party telling the best hunting story during the evening sessions of the week. For a report of the annual meeting I am indebted to Mr. Turpin, the club's secretary.

Annual Meeting.

The annual meeting of the club was held on Monday evening, Jan. 11, in the "Green Room" of the Tontine Hotel. Dr. A. C. Heffenger, of Portsmouth, N. H., president of the club, occupied the chair. Bradford S. Turpin, of Roxbury, Mass., secretary of the club, performed the duties of his position as usual.

After the reading of the secretary's and the treasurer's (W. A. Bragdon) report, three new members were elected. These were: Chas. P. Wendell, of Portsmouth, N. H.; C. L. Higgins, of Bar Harbor, Me.; A. Macgregor, of Poland, Me.

Election of officers resulted as follows: President, Dr. A. C. Heffenger; Vice-Presidents, L. O. Dennison, Waltham, Mass.; O. F. Joslin, Oxford, Mass.; E. A. Graves, Brunswick, Me.; Secretary, B S. Turpin; Treasurer, W A. Bragdon, Portsmouth, N. H.; Master of Foxhounds, R D. Perry, Philipston, Mass.; Executive Committee, Dr Heffenger; A. G. Hall, Brunswick, Me.; Noel E. Money, Oakland, N. J.; A. B F. Kinney, Worcester, Mass.; George E. Carr, Holliston, Mass.

The following committees were also appointed:

Field trials: R. D. Perry; H. W. Stetson, of Brunswick; and L. O. Dennison.

Committee on judges: W. A. Bragdon; S Knight, Jr., of Brunswick; and G. E. Carr.

The annual field trials of the club will be held on Oct. 25 next, and Barre, Mass., was named as the scene, provided satisfactory arrangements can be made.

Medals for competition at these trials were promised as below: Endurance, W. A. Bragdon; hunting, Dr. A C. Heffenger; trailing, N. E. Money; speed and driving, O. F. Joslin. N. Q. Pope also donated a medal to go to the winner of the Derby.

It was also decided that the Brunswick Fur Club should give a special prize—a gold medal—to be awarded to the best American foxhound, dog or bitch, shown at the next bench show of the Westminster Kennel Club in New York.

President Moore, of the Buckfield Fur Club, of Monmouth, Me., who was present at the meeting, tendered a cordial invitation, on behalf of his club, to the members of the Brunswick Fur Club to attend his club's annual meeting at Canton the following week. President Moore also urged that the Brunswick Fur Club take action with a view to the better protection of foxes. A motion was made and carried that a committee of three be appointed to go to Augusta and to act in conjunction with a like committee from the Buckfield Fur Club for the purpose named. The committee appointed was: F. H. Wilson, H. J. Given and F. E Roberts, all of Brunswick.

Another feature of the evening's business was the presentation of a meerschaum pipe to the club by R. D Perry This pipe was donated as a prize for the best hunting story told in the "Green Room" during the week of the club's meeting. The meeting, having no further business before it, adjourned in order that the competition for the pipe might be commenced.

First Day's Hunt.

As nearly as I can gather, twenty-three hounds were taken out the first day, Tuesday, Jan. 12. These were owned as follows: Dr. Heffenger's Torment and Joe Forest; Noel Money's Welsh foxhounds Medlar and Madcap, both fifteen-months-old puppies; N. Q. Pope's Clay, Samson and Strive; W. A. Bragdon's Doc, Sancho, Scot and Gypsy; Marshal Parks's Billy; C. L. Wellington's Dot; T. H. Gledhill's Badge; J. H Gaffney's Goss and Sport; Dr. Fred Wilson's Wanda and Drake; R D. Perry's "little white hound" (I never knew her by any other name); C. L Higgins's Don; S Williams's bitch, and a handsome dog known to me and others as the "Thompson boys' dog;" he was a Brunswick dog, as were also Dr Wilson's hounds.

The hounds were taken out about a mile along the Durham road, a trail being struck a short distance beyond the standpipe. This fox was jumped and the hounds did their best under the adverse circumstances to keep him moving Other foxes were also jumped, the pack soon getting split up, a few hounds finally landing in what is known as the "thousand acre" swamp, where one or two of them made a night of it. One of the foxes made a circle or two around by Rocky Hill, but no one managed to get a shot at him or any other fox that day; thus the pool for the first fox was carried over until the second day.

During the evening a special meeting of the club members present was called to order by Dr. Heffenger, the president of the club. The object of the meeting was to consider the advisability of paying all entrance fees at the annual field trials into the club's treasury with a view to defraying the expenses of the trials. A vote on the subject was taken and a motion to the above effect was carried unanimously, the general opinion of the club seeming to be that if a man would not run his hounds for medals and certificates, the trials could get along without him.

All the club's meetings during the evenings of the week were held in the "Green Room," a room the walls of which were hung with pine and spruce boughs until not an inch of the paper underneath was visible. The resinous odor of the pines was delicious, that is, until the dozen or more cigars had gotten in their fine work. In regard to the decorating of the room, this was only one proof of the interest taken in the club and its guests by the management of the Tontine. Mr. L. P Huntoon, the proprietor, and Messrs Harmon Orr and George Knight, the clerks, all did their utmost to make things comfortable. (I want to go there again.)

Second Day.

It was just about 5° above zero when we started out on the second morning. The wind was not so strong to-day as it was on the first day, but there was enough of it to make it hard to hear hounds when they got away down wind. It was far pleasanter, too, to hug the sunny side of a stone wall instead of standing on a runway and freezing to death. One fox was killed to-day, Mr. Higgins, the new member of the club from Bar Harbor, being the lucky man As nearly as I could learn, he killed the fox in front of Mr. Perry's Clinker, a black hound that was not out on the first day, and Billy and Dot, two hounds that were never far apart

We started out to-day with only eleven hounds: Billy, Dot, Clay, Samson, Sancho, Scot, Badge, Goss, Sport, Clinker and Medlar. Dr. Wilson's hounds and "the Thompson boys'" dog were not taken out to-day. Of the others that started on the first day, the following were still missing at roll call on this Wednesday morning: Torment, Madcap, Strive, Doc, Gypsy, Don and Mr. Williams's hound

The bulk of the pack went with us to Rocky Hill, but Messrs. Wellington and Parks walked out from town, and Billy and Dot soon had a trail that turned out satisfactorily later on At Rocky Hill a hot trail was struck and the fox was jumped in less than no time. Being a stranger in the country and a complete stranger to the hounds, it was a little hard to know what to do and to tell what hounds were doing the best work when they did come my way. As I want to tell the story of this and Thursday's shoot in detail next week, I will only say that thanks to good luck and to Rich. Hunnewell's guiding hands I had lots of fun and saw about all there was to be seen—except foxes. I heard a good story too about Noel Money's fox hunting in the vicinity of Lewiston last fall, but that story will keep a day or two and lose nothing if I can help it.

Several foxes were jumped to-day, there being apparently no lack of them around Brunswick. A special feature of the day was a sight race that was enjoyed by Noel Money, Turpin and, I believe, Perry. It was late in the afternoon when Money spied what he thought was a fox crossing behind a house about 100yds. from him. It was a fox, and Sancho, who had just come up, saw that it was just what he had been looking for. The sight race started at once, with the fox well in the lead and apparently gaining at the start. He went straight for the river, a mile and a half away, and disdained to enter a wood until he had covered that distance, although he had plenty of chances to do so By the time he took to the woods Sancho was close at his brush. Other hounds joined in and it was only a short while before he went to ground.

The evening session in the Green Room was marked by the narration of some excellent hunting stories, Dr. Wilson being answerable for more than one good one, among the number a goose story.

Third Day.

It is only necessary at present to mention briefly the happenings of the third day's hunt. The thermometer was down to zero, but there was no wind to speak of, making it much more favorable for hearing the hounds. Twelve hounds and twenty men made up the attacking force. The men were: N. E. Money, S. Williams, Jr., R. D. Perry, A. Macgregor, W. A. Bragdon, C. L. Higgins, M. Parks, C. E. Wellington, E. H. Bragg (a new arrival who hailed from North Sidney, Me.), Fred H. Wilson, E. B. Nickerson, H. J. Given, Oscar Nason, Ed Toothaker, Fred Shaw, Will Stetson, S. A. Knight, two of "the Thompson boys" and Edward Banks.

The body of the pack, consisting of the following hounds, were thrown in at Rocky Hill: Clay, Samson, Scott, Doc and Sancho. These hounds had a fox going at once, and carried him well over to South Durham, bringing him right up to the main body of men who had gone in the second wagon with Billy, Dot and Medlar, starting in at Coffee Hill, near a cross road known by various titles. Billy, Dot and Medlar had a good trail, and were working up to their fox when the other pack could be heard running to the northeast; Medlar harked to them and had lots of fun while Billy and Dot stuck to their trail and jumped their fox, taking him over to the village of South Durham. What became of them after that I cannot say, but I understood they had a fox going (along with other hounds) in the "thousand acre swamp" when the shades of night had fallen.

Dr. Wilson came out with his two hounds, Wanda and Drake, and "the Thompson boys" came along with him, birnging their hound. They arrived on the field rather late, but were in evidence when it came to the final round-up and "apple social," near Coffee Hill.

The story of how Billy stalked Will Stetson, how Nickerson missed the fox, the trials of Doc Wilson when his hounds were working out a cold trail and other people would bother them, the hunting of the bob-tailed black fox by some of us, etc., all this shall be told.

The proprietor of the Tontine, Mr. Huntoon, made this evening one of the pleasantest of the week. Besides unlimited music from the throats of City Marshal H. E. Teal, of Lewiston, and Ed Snow, assisted by others with good lungs and tuneful vocal chords, Mr. Huntoon sprung a surprise on the boys by calling them about 10:30 to a supper of steaming hot clams, dragged that very day from the bottom of one of the arms of Casco Bay.

Fourth Day.

Business compelled my return to New York on this day; Noel Money also had to leave for the city at 11:25 A. M. A snow squall was holding out hopes of an inch or two of snow when we left, but as far as I can learn hopes were about all that it amounted to.

Bragdon and Macgregor did not go out with the hunting party this morning, but went on a hunt after some of their missing dogs about 10 o'clock. When the hunting party left the hotel at 7:30, nearly all the dogs that had been missing the night before were still absent. Clinker, Orator and Linda were all that were ready to start; Billy, Marshal Parks's dog, arrived at the hotel just as the team was starting, so he was taken along to make another. Billy's firm friend, Dot, was still out. I am indebted to Mr. Ed. Toothaker for the following brief review of the day's sport:

"Threw in on the high hill west of where we ate the apples yesterday afternoon, given the name of Coffee Hill by members of the club. Our dogs were Clinker, Linda, Billy and Orator. They winded a fox on the side of the hill, and drove him for one hour toward the northwest. They separated out there, and came back with two foxes ahead of them. At 10:45 Rob Perry shot at a fox ahead of Clinker, and scored a miss, Clinker quickly driving the fox to ground. Billy, Linda, Orator and Dot (who had joined the pack) sent their fox to earth at 1:30 in the same burrow that Clinker had previously driven his fox.

"At 2 o'clock the boys were called together and it was decided to dig the foxes out. Securing the proper tools, we started for the den, which is the same den into which a fox was driven on Wednesday by Mr. Graves's Hunter and an unknown hound. We dug until dark, and then, securing a lantern from a resident farmer, and building a large fire at the mouth of the den, kept on digging until 7 P. M., when the tunnel caved in upon us, nearly pinning Capt. E. B. Nickerson and Perry's hound Orator. Thinking it dangerous to dig further, we started for home, reaching the hotel at 8:10."

A postscript to the above letter states that the meerschaum pipe was awarded to Dr. F. H. Wilson for his story of the "three geese he didn't get." Mr. Toothaker also adds that Capt. Nickerson has started a cheese factory at Coffee Hill.

EDWARD BANKS.

Irish Terrier Club of America.

BOSTON, Jan. 12.—The Irish Terrier Club of America has been organized. The following officers were elected: President, Oliver Ames; Vice-President, W. L. Beadleston; Treasurer, Samuel D. Parker, 50 State street, Boston; Secretary, O. W. Donner, 70 State street, Boston. The governors of the club are: Oliver Ames, W. L. Beadleston, Samuel D. Parker, O. W. Donner, G. M. Weld, Edward Brooks, B. L. Sackett and W. A. Thomson.

The outlook for the club is very encouraging, a large number of applications for membership having already been received. Printed club rules and other particulars can be obtained by application to the secretary.

O. W. DONNER, Sec'y.

THE C. F. T. C.'S TRIALS.

THE field trials of the Continental Field Trials Club were run at Tupelo, Miss., commencing on Jan. 11 and ending on Jan. 15. Tupelo is situated in northwestern Mississippi, at the junction of the Mobile & Ohio and Kansas City, Fort Scott & Birmingham railroads. The surrounding country is admirably adapted to field trial purposes, the fields being large, with wide stretches of open and cover, with gentle hills and vales all spread before the eye so clearly that there was no difficulty experienced in observing the work of the dogs, whether they were far away or near. With all their natural advantages, the grounds had some serious objections, first of all being the scarcity of birds, after which came the annoying interference of wire fences and large ditches. As to the birds, certain signs, such as empty cartridge cases lying here and there on he grounds, wounded birds and broken bevies, denoted that there had been shooting done instead of preserving.

The resident sportsmen did all they could to make the visitors welcome and comfortable.

The horses were of a much higher grade than those put in service at the average trials, and the charges for them were reasonable.

While there was some bad weather in the way of heavy rainstorms, it interfered but little with the competition. There was a fair sprinkling of visitors, among whom were T. P. Mingst, Evansville, Ind.; P. T. Madison, Indianapolis; G. E. Griswold, St. Paul; Dr. M. F. Rogers and W. G. Bias, New Albany, Miss.; A. P. Gilliam, Stanton, Tenn.; J. N. Seale, Jackson, Tenn., and a number of others.

The judges were Prof. Edm. H. Osthaus, Toledo, O.; Messrs. W. S. Bell, Pittsburg, and B. Waters, New York. The dogs were given a most thorough trial and the awards were well received.

As to the quality of the competition, both stakes were excellent, the Derby being exceptionally strong both in respect to the number of starters and their high class of work.

Progressive euchre parties in the evenings served to divert the field trial contingent most happily, and this new feature evoked much praise. The prizes were all of a useful character, so that the diversion combined the amusing and the useful. All the prizes were paid promptly, and the consensus of opinion was that the trials were eminently successful in every respect.

All Continental prizes and expenses were paid in full.

The Derby.

An excellent lot of dogs competed in the Derby. After the winners had been selected, there was as good material left as is to be found in the winners of the average Derby. Of course there were a few ordinary performers, but the percentage was small. What with the unmistakable scarcity of birds, the lack of information as to the grounds incident to the first use of them for field trial purposes, and the obstruction to the running caused by wire fences, the competition was excellent.

Pin Money, first, ran well in every heat. Her performance was consistently good throughout. She ranges wide and fast, takes her range with good judgment, stays out well at her work, and is sweetly obedient and observant of the gun. She is a merry, pleasing worker, style good, and her pointing and locating are sharp and accurate, both on bevies and singles.

Dave Earl pressed Pin Money very closely for first. His range was wide and fast, his judgment excellent, and his point work clean and accurate, save for two errors in his first heat. His second heat was an admirable display of skillful finding, rare judgment and sharp point work.

Josie Freeman, third, was a most resolute competitor, diligent in searching, and a very successful finder. She also was skillful in her point work. She fell off somewhat in her last heat in range, but she made a very close competition for the honors. She is a bitch of rare excellence.

Count Gloster divided fourth with Rodfield's Boy. He has good judgment in searching the likely places, is a successful bird finder, and fairly free from error in his point work, though some false points and flushes lowered his rating. His range is not always uniform, though he was always industrious. He worked unremittingly in the interests of the gun.

Rodfield's Boy displayed an excellent nose, and some of his point work was admirable; but he would self-hunt at times, and was difficult to handle. He knew how to find birds, but at times forgot that his work was not for his own pleasure.

The stake was open to all pointers and setters whelped on or after Jan. 1, 1895. Purse, $500: $200 to first, $150 to second, $100 to third, $50 to fourth; $10 forfeit, $10 more to start.

There were nineteen starters, drawn in the following order:

Charlottesville Field Trial Kennels' liv. and w. pointer bitch Rupee (Delhi—Selah), C. E. Buckle, handler, with P. H. Essig's b., w. and t. setter bitch Saragossa Belle (Gleam's Pink—Maud), J. H Johnson, handler.

Mayfield & Gude's b., w. and t. setter bitch Josie Freeman (Antonio—Nellie Hope), J. A. Gude, handler, with P. Lorillard, Jr.'s, b., w. and t setter bitch Olivette (Eugene T.—Beryl), C. Tucker, handler.

H. S. Smith's l. and w. pointer bitch Ripple (Rip Rap—Pearl's Dot), J. H Johnson, handler, with P. Lorillard, Jr.'s, b., w. and t. setter dog Count Gloster (Eugene T.—Gloster Girl), C. Tucker, handler.

J. P. Green's b., w. and t. setter dog Sarsfield (Rodfield—Opal), J. H. Johnson, handler, with T. W. O'Byrne's b. and w. pointer dog Moerlein (Rip Rap—Belle of Ossian), N. B. Nesbitt, handler.

Theo. Goodman's b., w. and t. setter dog Dave Earl (Count Gladstone—Dan's Lady), J. H. Johnson, handler, with Charlottesville Field Trial Kennels' b. b. setter bitch Pin Money (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler.

H. R. Edwards's b., w. and t. setter bitch Rod's Pell (Rodfield—Opal), Geo. Gray, handler, with S. P. Jones's b., w. and t. setter dog Hurstbourne Zip (Tony Boy—Dimple), D. E Rose, handler.

Fox & Blythe's b., w. and t. setter bitch Caroline (Antonio—Countess Rush), J. H. Johnson, handler, with P. Lorillard, Jr.'s, b., w. and t. setter bitch Merry Maiden (Eugene T.—Maiden Mine), C. Tucker, handler.

T. W. O'Byrne's liv. and w. pointer dog Redskin (Louis Bent—Fleety Fay), N. B. Nesbitt, handler, with John T. Mayfield's (Agt.) b., w. and t. setter dog Rodfield's Boy (Rodfield—Sue Gladstone), owner, handler

J. J. Kinnane's b., w. and t. setter dog Gleam's Roy (Gleam's Sport—Marie Avent), J. T. Mayfield, handler, with H Ames's b., w and t. setter bitch Christina (Blue Ridge Mark—Lou R), D. E Rose, handler.

H. Ames's b., w. and t setter bitch Guenn (Blue Ridge Mark—Lou R.), D. E. Rose, handler.

Monday.

The weather was clear, bright, and with a temperature invigoratingly cool without being uncomfortable. The day was not productive of an abundance of birds. The bevies found were far fewer in number than they should have been, and empty shotgun shells found in parts of the grounds would seem to indicate that there had been shooting, though ostensibly the grounds were preserved. Nevertheless the dogs made an excellent showing.

First Round.

RUPEE AND SARAGOSSA BELLE started at 9:02. Belle showed medium range and fairly good judgment in beating out her ground. She made a good find and point on a bevy. Rupee showed but fair work on scattered birds, but her range was narrow and purposeless, and she came in often to her handler. She seemed to be in a frivolous humor. Down 35 minutes.

JOSIE FREEMAN AND OLIVETTE began at 9:42. Josie took a cast in bottom and pointed a bevy; Olivette coming up backed nicely and without any prompting. As her handler came up she broke her back, pressed in and flushed. Josie pointed a bevy in the bottom of a ditch and made two points on the scattered birds in corn. She showed very good range and was speedy, but she was lacking in style, having no tail action. Her work on birds was accurate and quick. She was ordered up at 10:28, and Olivette was sent on alone to work on some marked birds. On a single she pointed it well, but broke her point and flushed it bunglingly. Up at 10.33.

RIPPLE AND COUNT GLOSTER were cast off at 10:39. Each one scored a bevy point, finding nicely and locating quickly. Ripple made two sharp points on scattered birds. She ranged fairly wide, though narrower at the last part of heat, and beat out her ground with fair judgment. Her work was spirited. Count was industrious, range medium, save for a wider cast now and then. He showed good judgment. Both were industrious. Up at 11:24.

SARSFIELD AND MOERLEIN began at 11:24. Sarsfield marred a good point on a bevy by breaking shot and chasing. He did some sloppy work on another bevy. He was difficult to handle. His natural ability to find birds was good, but he lacked finish. Moerlein's performance was commonplace throughout. Up at 12:22.

The party next went to lunch.

DAVE EARL AND PIN MONEY started at 1:36. Both dogs ranged wide and fast, covering a great deal of ground with excellent judgment. Dave made two points to which nothing was found, Pin Money backing nicely. They were ordered up at 2:23. No birds were found. Some unfavorable ground was worked. Wire fences obstructed the course frequently. The excellent searching powers displayed kept both dogs in the second series.

ROD'S PELL AND HURSTBOURNE ZIP were cast off at 2:30. In the open in sedge the dogs came on birds. Owing to cover the judges could not see the work till the dogs had set, Zip down wind of the birds, Pell up wind of them, so that it seemed as if the former was pointing, the latter backing. Sent on, Pell next pointed nicely a bevy near the edge of a ditch. Up at 3:11. Both were diligent, Zip the better in range and judgment. It was a good working heat.

CAROLINE AND MERRY MAIDEN began at 3:15. The heat was marked throughout by an excess of false pointing and no true pointing. They struck the trail of a bevy, which they were unable to locate. On the scattered birds marked down they succeeded no better. Up at 4:11. Maiden was the better ranger.

REDSKIN AND RODFIELD'S BOY started at 4:22. Rod was lost for some minutes. Brought together and sent on, Rod pointed a bevy; Redskin backed. Rod made a point on a single, which flushed wild. Sent on, Rod pointed at the foot of a hill. Redskin about 20yds. ahead crossed the trail and pointed, then roaded awkwardly to a point on the bevy a few yards ahead; the find was Rod's. Rod made two good points on singles. Up at 5:05.

Tuesday.

The morning was clear and pleasantly cool, with a cloudy sky. Later a breeze sprung up. The day was good throughout for work. Birds were too scarce for satisfactory competition. The most diligent work was rewarded with meager finding. The second round was continued.

GLEAM'S ROY AND CHRISTINA were cast off at 8:32. While they made a competition of fair merit, they were not equal to several others in the quality of their work. A bevy was seen to flush from a hollow where both dogs were out of sight of the judges. On the scattered birds Christina pointed, and a moment afterward Roy pointed or backed. Up at 9:50, after a long search without finding till near the close of the heat.

GUENN, the bye dog, began at 10:03. Down about 30 minutes. She found two bevies which she pointed nicely. Her manner of work was pleasing. Her range was middling, speed good and she worked industriously.

Second Round.

Ten dogs were kept in this round.

JOSIE FREEMAN AND HURSTBOURNE ZIP were cast off a 11:07. Both pointed a few yards apart in woods or backed each other, or one was pointing and the other backing, but circumstances indicated that it was Josie's point; however it was as to the dogs, there was a bevy of birds close by the dogs which was flushed when they were ordered on. On the scattered birds Josie pointed nicely. Zip made two flushes, Zip was running in poor form, showing over caution and but moderate range. Josie ran fast and wide. She pointed in good style, but while she carried herself well she showed no tail action.

RODFIELD'S BOY AND ROD'S PELL were next to run, but the latter being absent Sarsfield was called up to run instead. They were cast off at 12:10. Boy pointed a bevy, then in drawing on he flushed it. Sarsfield secured a point on two remaining birds. At times they were both difficult to handle. On some scattered birds of a bevy in woods each secured two points. Next Boy roaded nicely to a point on a bevy by a fence, the work of both dogs on these birds being very good indeed. Each next secured a point on singles. Boy had much the better of the heat in range, judgment and point work. Up at 1:15.

The party went to lunch.

SARAGOSSA BELLE and COUNT GLOSTER were started at 2:17. Some indecisive work was done on two birds on a ditch bank. Count half pointed at the same time Belle was in the ditch. A single bird flushed from the bank not far from the dogs. Belle came out and backed Count, the latter then steadying to a point, to which Tucker flushed a single. Sent on, Count pointed a single well and made two flushes on singles which were partly excusable. Next he made two points to which there was nothing. Sent on, Count found and pointed a bevy nicely, and on the scattered birds in woods he made one point, Belle two. Up at 3:27. Both ranged fast and wide, though Count shortened his range a few times, while Belle maintained hers well to the end. On birds Count had the better judgment, and also the better judgment in seeking in the likely places. Belle ran a very commendable heat. Both ran in better form than in first round.

RIPPLE AND PIN MONEY started at 3:42 and ran till 4:32. The latter was troubled with a lame hindleg, but she ran gamely nevertheless. Both ranged fast and wide, Pin Money the better in range and judgment. Pin Money found and pointed two bevies and made two points on singles. Ripple made a point on singles. The point work was clean and accurate.

DAVE EARL AND GUENN started at 4:37, and ran till 5:05. Dave found and pointed three bevies, the last of which was roaded a long distance before it was located and pointed. He ranged wide and fast and intelligently. Guenn was industrious, but entirely outclassed.

Wednesday.

The morning weather indications were that the heavy rains of the night were not ended, but a start was made nevertheless. Rain set in soon after the start was made, and gradually settled into a steady downpour. As the round had been begun in the rain, it was decided to finish it, so that the conditions would be alike for all concerned.

Third Round.

PIN MONEY AND JOSIE FREEMAN started at 9:02 and ran 15 minutes in a steady rainfall. Pin Money went with her usual dash and range. Josie fell off from her range of preceding heats, though still fast and diligent. No birds were found.

RODFIELD'S BOY AND RIPPLE were started at 9:38. Boy broke away from control twice. The second time he kept away from his handler till he secured a point on a bevy, the judges in the meantime waiting till he was brought back. Ripple in the meantime was ordered up to await his return before a start was made on some scattered birds marked down in woods. When sent on together Boy pointed a single and it flushed wild. He next flushed one and pointed a single which was a few yards behind him. Sent on, Boy pointed at the edge of woods. Ripple backed, broke her back and both drew swiftly into woods, and in about 100yds Ripple flushed a single, then pointed the bevy. Up at 10:23. Ripple ran in much lower form than in her preceding heats. She seemed to be in a frivolous mood during a large part of the heat, giving more attention to bird seeking toward its close. Boy showed a good nose, but at times he would self hunt, and often when ranging at the correct distance he was disobedient and more inclined to range at his own pleasure than that of his handler. There was a cessation of the downpour in the beginning of the heat, but it soon began again, and was raining heavily at the close.

DAVE EARL AND COUNT GLOSTER were started at 11:02 and ran 25 minutes. Dave cut out the range after the first few minutes, he seemingly disliking the wet till he was well into it, when he was unconcerned. He took wide casts and led Count out several times, though the latter was going well and seemed to like the rain and the heavy going. A bevy flushed by one of the handlers was followed. Count dropped nicely to a point on it. Dave ran close by him a moment afterward and also pointed. An effort was made to find the scattered birds again without satisfactory result This heat ended the stake.

The All-Age Stake.

This stake had twelve starters, exceptionally good dogs, drawn to run as follows:

H. B Ledbetter's b., w. and t. setter dog Marie's Sport (Gleam's Sport—Marie Avent), Geo. Gray, handler, with D. E. Rose's (Agt.) b., w. and t. setter dog Domino (Antonio—Ruby's Girl), D E. Rose, handler.

T. T Ashford's liv. and w. pointer dog Von Gull (Kent Elgin—Fannie Croxteth), D E. Rose, handler, with H. H. Edwards's b., w. and t setter dog Harwick (Topsy's Rod—Opal), Geo. Gray, handler.

J L Adams's liv. and w. pointer dog Crackerjack (Lad of Rush—Cyclops), J. H. Johnson, handler, with W. H. Beazell's b , w. and t. setter dog Harold Skimpole (Whyte B —Nettie Bevan), Geo Gray, handler.

R. V Fox's b , w. and t setter dog Tony's Gale (Antonio—Nellie G.), J. H Johnson, handler, with Del Monte Kennels' b , w. and t. setter dog Rod's Chaff (Roderigo—Gladstone's Girl), A C. Waddell, handler.

A L. Shonfield's b , w and t. setter dog Leo Noble (King Leo—Minnie T.), N. B Nesbitt, handler, with R. V. Fox's b., w and t. setter dog Forzando (Gath's Mark—Countess Rush), J. H Johnson, handler.

N. T. de Pauw's liv. and w. pointer bitch Sister Sue (Jingo—Rooney), N. B. Nesbitt, handler, with C. P. Mingst's b. and w. setter dog Æolia's Rex (Antonio—Columbia), J. Mayfield, handler.

This stake was open to all pointers and setters which had never won first in any All-Age Stake in any recognized field trials in America. Purse, $500: $200 to first, $150 to second, $100 to third, $50 to fourth. Ten dollars forfeit, $10 additional to start.

Nearly all the dogs had achieved fame in former competitions, and were an exceptionally high class of dogs.

Harold Skimpole, winner of first, made an excellent competition, sustaining his work well in every heat. He was very closely pressed by both Marie's Sport and Tony's Gale. He carried himself with dash and spirit, was quick and correct in his bird work, and in range he covered a wide scope of ground. He worked to the gun withal and was obedient.

Marie's Sport, second, at one time seemed the winner, but he fell off in the class of his first work, was disposed to stay in the woods too long at the end of his casts or when out of sight, and he frittered away some time on worthless scents now and then in his last two heats. He also shortened his range occasionally in those heats. Nevertheless he showed himself to be an excellent dog, his best work being admirable, and the margin between first and second was not wide.

Tony Gale, third, also was a very strong competitor for first. His range was wide, and his speed fast; his bird work

was good, though marred by inaccuracy once in a while, and he was not properly obedient at all times.

Fourth prize was won by Von Gull, a pointer of merit. Some of his work was of real brilliancy, but it was not sustained in other than one heat. He displayed an excellent nose, pointed and roaded with a high head, and ranged wido at times, though his average range was medium.

The work of all the winners was conspicuously dashing, and of an order rarely se n at a field trial. There were no gross errors made by them. Only by the most thorough trial were the winners determined, as will be noted from the length of time and the number of times the dogs were run.

Thursday.

Clouds light and heavy obscured the sky during the day. The temperature was moderately cool. Muddy, heavy grounds were a consequence of the Wednesday's heavy downpour of rain, and added somewhat to the difficulty of the competition. Birds apparently were not moving much in the morning hours. There was much obstruction to the running of several heats, caused by the long wire fences.

First Round.

DOMINO AND MARIE'S SPORT began at 9:16. Both dogs started industriously and ranged wide and fast, Sport the better in judgment, and he sustained his performance to the end of the heat Domino feel off in speed the latter half of the heat. He made one point to which nothing was found. Sport found and pointed two bevies. Up at 10:29, with the heat decidedly in favor of Sport.

VON GULL AND HARWICK were cast off at 10:40. Both started their work in excellent form, Von showing the more judgment and knowledge. Both were found backing each other apparently. Ordered on, Von started promptly, while Harwick held his point stanchly. Nothing found. Sent on, Von pointed a bevy nicely and was backed In woods on the scattered birds, Von made a rare exhibition of sharp, accurate point work on singles, going at them with a high nose and locating swiftly at the first effort. He made four points in succession, one of which ended with a flush as he moved to get the wind a bit better, and as he wheeled rapidly on a fifth he slipped, fell over on his side and the bird flushed. Harwick failed to score a point, though he backed prettily. Sent on, he made a point to which nothing was found His judgment seemed faulty as to the meaning of scents. Up at 11:15.

CRACKERJACK AND HAROLD SKIMPOLE were cast off at 11:24. Harold seemed disposed to waste time working on worthless scents betimes, and did not take his range with the best of judgment. He dropped to a point on a bevy, and Crackerjack backed to caution. Sent after the scattered birds; Harold pointed a bevy in woods and Jack backed. Next he pointed a single bird, which flushed wild. He was ordered up at 12:01, and Crackerjack was sent on alone to work on some scattered birds in woods. He pointed a single well. He was difficult to handle. His range was wide and he ran at good speed. Up at 12:06.

The party waited about an hour for the lunch wagon to arrive, failing which the competition was resumed.

TONY GALE AND ROD'S CHAFF were cast off at 1:10. The heat was in parts cramped a great deal by wire fences. Chaff dropped to a point in the open field; Tony backed; nothing found. Sent on, both were found set in sedge grass, the indications being that Tony was pointing the bevy and Chaff backing. Sent on, and again after ranging a while, both were found on point, so that it was difficult to determine which had made the find. Chaff moved on to locate, flushed a bird excusably, then roaded accurately to the bevy and pointed it. Tony backed at will. On the scattered birds in woods Chaff made two points. Tony was the better ranger, though Chaff made a good showing. Up at 1:57.

The lunch in the meantime had arrived, those entrusted with the delivery of it having missed their way

FORZANDO AND LEO NOBLE began at 2:45 Leo was lost several minutes in the early part of the heat. He pointed a bevy in a half hearted manner, though close on it, and Forzando passing by him refused to back, excusably so, as Leo was wagging his tail. Forzando passed close to the bevy, then passed on. Sent on, Leo pointed; Forzando backed; nothing found. Leo often worked out of bounds, and was difficult to handle. Forzando had a medium range, and his judgment in beating out his ground was ordinary. Up at 4:05.

SISTER SUE AND ÆOLIA'S REX were cast off at 4:07. Rex pointed a bevy, Sue roaded on the trail of it some moments after the point was made. On the scattered birds Rex pointed a single nicely, Sue making game at the same time. Sue roaded a long distance on a rabbit. She made a point next on a single bird. Rex pointed a bevy, Sue backed, crawled on her back till she passed by and stole the point. Sue pointed a rabbit and Rex backed to order. Sent on, both were found on point on a single bird. Up at 4:52.

Rex displayed the best nose and judgment. Sue frittered away much time on false scents. Her work was mixed, a little good work with many faults.

Friday.

Another downpour of rain on Thursday night made the grounds muddy on the high grounds and both muddy and sloppy in the lowlands, but a clear sky most of the day and moderate warmth made good conditions for bird finding. It was the best day of the trials so far as numbers of birds and good work on them are concerned.

Second Round.

TONY GALE AND DOMINO were started at 8:42. Both ranged fast and wide, Tony the better in judgment and the wider in range Both recognized scent and made game rapidly and earnestly, but they failed to locate. Sent on, both were casting wide. Tony found and pointed a bevy nicely in open sedge. It flushed wild before Domino could be brought up to back. On the scattered birds, Domino pointed, moved on and a single was flushed by a horseman afterward. Tony pointed near a ditch in cotton. Domino, called up, joined independently in the point The bevy was afterward flushed across the ditch. Tony pointed a single. Each made a point to which nothing was found. Up at 9:11. Tony classed higher in every way than Domino.

HAROLD SKIMPOLE AND LEO NOBLE were started at 9:23. Leo soon pointed a bevy and Harold backed, and here his advantage ended, for Harold quickly disposed of his chances thereafter. Harold next pointed a bevy and Leo refused to back. Leo pointed in weeds; nothing found; next he flushed a single His range was poor. Up 9:39 Harold ranged wide and fast, his judgment was good and he completely overshadowed his competitor

MARIE'S SPORT AND ROD'S CHAFF were started at 9:47. Both pointed the same bevy in the open. Sent on, Chaff found and pointed two bevies well. Sport found and pointed two bevies, made two good points on singles, a flush on a single and a point to which nothing was found. Both backed well. Up at 10:42. Sport was the wider and better ranger, and seemed to be a bit weary at the end of his heat. He carried too much flesh for the best condition for running, though he made a very commendable competition.

VON GULL AND ÆOLIA'S REX started at 10:46. Von pointed; nothing found; Rex refused to back. Set on, Rex pointed a bevy and was backed nicely. Von pointed a single and Rex joined in the point. Von pointed in corn; nothing found. Rex pointed a bevy; Von backed. Von pointed sparrows. He ran a very inferior heat, showing but ordinary interest in his work and making errors of judgment in ranging and in pointing. Rex was wholly unreliable in back setting, and would steal the point on every opportunity. Up at 11:28.

Third Round.

TONY GALE AND HAROLD SKIMPOLE were started at 12:56. Harold pointed a bevy; Tony was disobedient and could not be brought in to back. On the scattered birds each made a point on a single. Next Harold drew to an excusable flush on a single. Sent on, there was a joint point on a single bird. Next both made game; nothing found. Harold pointed a bevy nicely. Both backed well. Tony was disobedient and hard to handle on single birds. Up at 1:26.

MARIE'S SPORT AND ÆOLIA'S REX were started at 2:06. The former outworked and outclassed Rex in every particular. Rex made a point to which nothing was found, joined in a point on a bevy found and pointed by Sport, flushed one bird and pointed another. Up at 2:55.

VON GULL AND ROD'S CHAFF started at 3:02. Von pointed a bevy, Chaff not near to back. The latter shortened his range and speed during this heat. Von was running in fairly good form. Chaff made much better than an average showing.

Final.

HAROLD SKIMPOLE AND MARIE'S SPORT were cast off at 3:38 Both dogs started well, going fast and wide, Harold maintaining his pace more uniformly, and going wider than his competitor. Sport pointed a bevy. At the same time Harold was lost, and was found in sedge about 300yds. away pointing a single. Sent on, Harold flushed a single. Sport contracted his range toward the last of the heat and was going slower. Harold was not going quite so strong at the finish as at the beginning. Up at 4:04, and the trials were ended.

WEST POINT, Miss., Jan. 18.—[*Special to Forest and Stream*]: The Champion Stake will be run next week, beginning on Tuesday. The judges will probably be W. S. Bell and N. Wallace. The pointer Derby was finished today. Winners: First, Young Rip Rap; second, Elgene; third, Ripple. Setter Derby begins to-morrow.

B. WATERS.

The New York Show.

THE premium list of the W. K. C. show is now ready and will be sent by Supt. James Mortimer, Nos. 66–70 Beaver street, New York. In our notice of the premiums last week the second prize of $15 was omitted from classes in which the first prize is $20. Entries will close Feb. 8. Of the premium list Mr. Mortimer writes:

We offer in most important breeds, including pointers, English, Irish and Gordon setters, collies, bull dogs and fox terriers (smooth), in open classes, $20, $15, $10 and $5 as first, second, third and fourth prizes. We have made field trial classes for all breeds of dogs that have taken part in field trials in the United States and Canada, including pointers, the different setter breeds and beagles; and have made an increase of twenty classes on that of last year, our present classification being 266 as against 246 in 1896, besides offering a special cash prize of $20 for the best exhibit of four of nearly every breed. The money prizes in St. Bernards amount to $480, pointers $430, setters $930, spaniels $690, collies and sheep dogs $470, poodles $275, bull dogs $370, fox terriers $520, and so on. Our actual cash premiums amount to nearly $8,000, a larger amount than we have given before, and twice as much as that offered by any other show on the continent of America.

The Westminster Kennel Club offers at the coming show a challenge cup, value $250, for the best exhibit of five couples of English foxhounds, the property of any recognized hunt club in the United States and Canada. Hounds to be entered in their regular classes, and shown with the huntsman or whip in livery. This cup will not be awarded unless there are two or more competitors, and must be won three times by the same club before becoming its absolute property.

Messrs. C. Albert Stevens and Perry Tiffany offer $20 for the best bull terrier stud dog shown with two of his sons, whose merits alone are to be considered, and which may be the property of different owners. This prize will not be awarded unless there are two or more competitors.

International Fox Terrier Club.

DETROIT, Jan. 13.—A meeting of fox terrier breeders was held at Detroit, Jan. 11, for the purpose of organizing a fox terrier club, which resulted in the election of the following well-known terrier fanciers: President, Chas. Backus, Detroit, Mich.; Vice-President, Thos. Ollette, Detroit, Mich.; Secretary and Treasurer, J J. Lynn, Port Huron, Mich.; Board of Governors: Geo. M. Hendrie, Chas. Backus and Thos. Ollette, Detroit, Mich.; Wallace Waken, Chicago, Ill.; Geo. S. Sinclair, Toledo, O; J. J. Lynn, Port Huron.

This club is sure of success, with a good list of membership on its books. It is proposed that during 1897 two shows shall be given, and after 1897 four shows a year shall be held. Specials will be offered at all the leading shows in the West. It was decided that the club would be known as the International Fox Terrier Club, which will of course take in its membership many Canadian breeders. The first show will be held at Port Huron during the spring months. Specials and championship cups will be added in the different Breeders' Stakes. J. J. LYNN, Sec'y.

Foxhound Trials.

INDIANAPOLIS, Ind., Jan. 15.—The Hoosier Kennel Club has generously set aside to be competed for by foxhounds: $35 for best all-round dog or bitch, $10 for second and $5 for third. The trials to be held on Friday and Saturday, Feb. 5 and 6, on suitable grounds some distance from Indianapolis, and in a good fox country. Our red foxes are noted for their running qualities. Trailing, hunting, speed, endurance and fox sense, in fact all the elements combined in one dog as nearly as possible to make the perfect dog, the fox to be jumped wild on his native heath.

These points to be decided by three judges of known foxhunting experience.

Dogs to be eligible for this contest must be entered in the Hoosier Kennel Club show and pay their entrance fee, and be in their kennels at said show from Feb. 1 until Feb 6, unless competitors in the field, when they will be excused by the committee during the trials. An additional fee of $1 will be charged to competitors in the trials. Ten entries to fill. We find this necessary as a bar to many dogs that would otherwise be entered who lacked training and experience, and would be a detriment to the trials. Rabbit chasers will be penalized.

All classes of dogs will be largely represented at this show, and lovers of the foxhound and beagle want to see the hound classes head the list. Enter your dog and come along with him. Let's see who really has the best dog in Kentucky, Ohio, Illinois or Indiana.

Entries close Feb. 1.

Drop me a line and entry blanks will be mailed.

P. S.—The above, with exception that $30 will be given in prizes, divided $20, $5, $5, to be run on rabbits in braces, will govern the beagle trials.

F. W. SAMUELS,
Chairman Foxhound and Beagle Committee.

Milwaukee Show Abandoned.

MILWAUKEE KENNEL AND PET STOCK ASSOCIATION, Milwaukee, Wis., Jan. 11.—It had been agreed upon to hold a show following Chicago, but as Louisville also claims the same dates so Milwaukee withdraws in favor of Louisville.

LOUIS STEFFEN, Sec'y.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desira ble

BICYCLE ADJUSTMENT FOR BOYS.

DR. EDWIN HOWES, of Louisville, Ky., gives some good advice to bicycle manufacturers with regard to wheels sold to boys. There is no sensible reason why the bicycle should not be a health-giving and invigorating means of exercise for boys; but, like other good things, it is open to abuse.

Dr. Howes writes:

"Cycling can be the healthiest or the unhealthiest of all exercises, as the rider chooses to make it.

"The abuses to which I refer are among the boys from ten to fifteen years, who are not capable of judging what is best for themselves. The fathers being ignorant of wheeling in most cases, and the agent thinking only of making a sale, allows the boy to select a machine to suit himself, regardless of hygienic effects.

"The boy invariably chooses drop handle bars and a high gear. The result will be a large crop of weak lunged or consumptive youths with valvular enlargement of the heart and a deformed personal appearance, *i. e.*, round shoulders and humped backs; the first and last condition being produced by the position necessitated by the handle bars (drop), the heart trouble by the high gear combined with the position of riding.

"A man's (or boy's) principal breathing is by or with the abdominal muscles, so that, when he is doubled up on the wheel, his lungs are not only compressed by the shoulders and chest walls, but it is impossible for him to inflate his lungs on account of the doubled-up condition of the abdominal muscles.

"The result of this will be congestion and consolidation of the spaces of the lungs, which will make weak lungs, if not consumption. Quick motion of the limbs of a child is natural, therefore not harmful. But nature never intended that a child should be put under a continual heavy muscular strain, such as is necessary to propel a high-geared machine.

"The effects of the high gear, combined with the cramped position of the lungs, which prevents a free flow of blood through them, will most certainly produce enlargement of the valves of the heart. The result of this injudicious selection and riding will become manifest in the next two or three years. The physicians will not stop to think that this is the result of the abuse of what should be a good, healthy exercise, but will simply attribute it to wheel riding in general, and will at once raise a great hue and cry against wheel riding through the medical and daily press, and in the families. You can judge the effect it would have on the wheel trade if the fathers were convinced by the family physician that it was detrimental to the health of their boys.

"I would suggest that you put a chapter in your catalogue incorporating these facts (and any doctor, after trying the positions and thinking on the matter, will say they are facts), with advice as to the correct way to ride a wheel. I would also suggest that you instruct your agents that they advise the fathers to select high handle bars and a low gear, informing them of the evil results likely to follow the other selection. The boys would then have to make their speed by fast foot movements, which will do them no harm."

Up to Date.

SOUTHERN resorts nowadays to be abreast of the times advertise their attractions from the wheelman's standpoint. The Florida resorts, for example, all have something to say in their descriptive pamphlets of the excellence of the roads or sea beaches in their immediate vicinity for cycling, or of the bicycle paths which have been constructed for the benefit of their patrons. Some of these hotels conduct riding academies under the supervision of competent instructors, and rental rooms in connection with hotels are now almost as common as bowling alleys or tennis courts.

That there is a reason for giving wheeling this prominent mention is shown by the illustrations from photographs which go along with the text, for in a large percentage of the cases where human beings appear they are shown in some relation to a bicycle. No sea beach scene seems complete without groups of cyclists, and the roads through the pine forests or under the palms are given perspective by the arrangement of riders in foreground and middle distance. To the traditional "boating, bathing and fishing" which appears in announcements of these hotels must now be added "wheeling."

Misdirected Ingenuity.

ONE of the recent inventions reported from the Patent Office is a combined mud guard, skirt holder and rest for bicycles. Its practicability may be judged from the fact that the attachment is made in the form of an eagle, in which the body serves as a mud guard, the wings as a skirt protector and the legs as a rest for the bicycle. The wings are attached to the body by spring hinges to prevent injury in case of a fall, while the legs are operated by a combination of levers and slide rods. It would be interesting to know just what the inventor had in view when evolving this monstrosity. He could hardly have expected that it would come into universal use, or even that a limited number of the attachments could be sold The vast majority of female bicycle riders are sensitive about their appearance, and we opine that it would not be an easy matter to find a single individual who could be bribed to ride the flapping eagle in public.

Were this an isolated case, an explanation would be forthcoming, but the records of the Patent Office teem with just such impractical devices, proving that misdirected ingenuity is common enough.

During a single period of three months last year 1,100 patents were applied for for improvements in connection with the bicycle. Tires alone were responsible for 550. Two hundred were asked for on features of general construction, fifty-six for saddles, fifty two for brakes, thirty-one for chain improvements, twenty-two for valves, twenty-five for lubricators, nineteen for locks, fourteen for devices for securing women's dresses, twelve for lamps, seven for bells, two for devices for carrying pipes and matches, and one for a luncheon carrier; while ice bicycles, chainless bicycles, hill climbers and other ideas figure largely.

It is estimated that two-thirds of all the patents issued are valueless to the manufacturer, and in the line of bicycle improvement no doubt the percentage is immeasurably greater. Take for example the item of tires. From the reports it appears that more were patented in a week than have been successfully introduced upon the market in the last six years, and it is the same way with the other classifications. Theories whose practicability have long since been exploded still continue to lure the inventive mind by way of wasted funds and energy to ultimate disappointment and failure. When we consider the great odds that oppose the introduction of articles of real merit, it is little wonder that so many fall by the wayside.

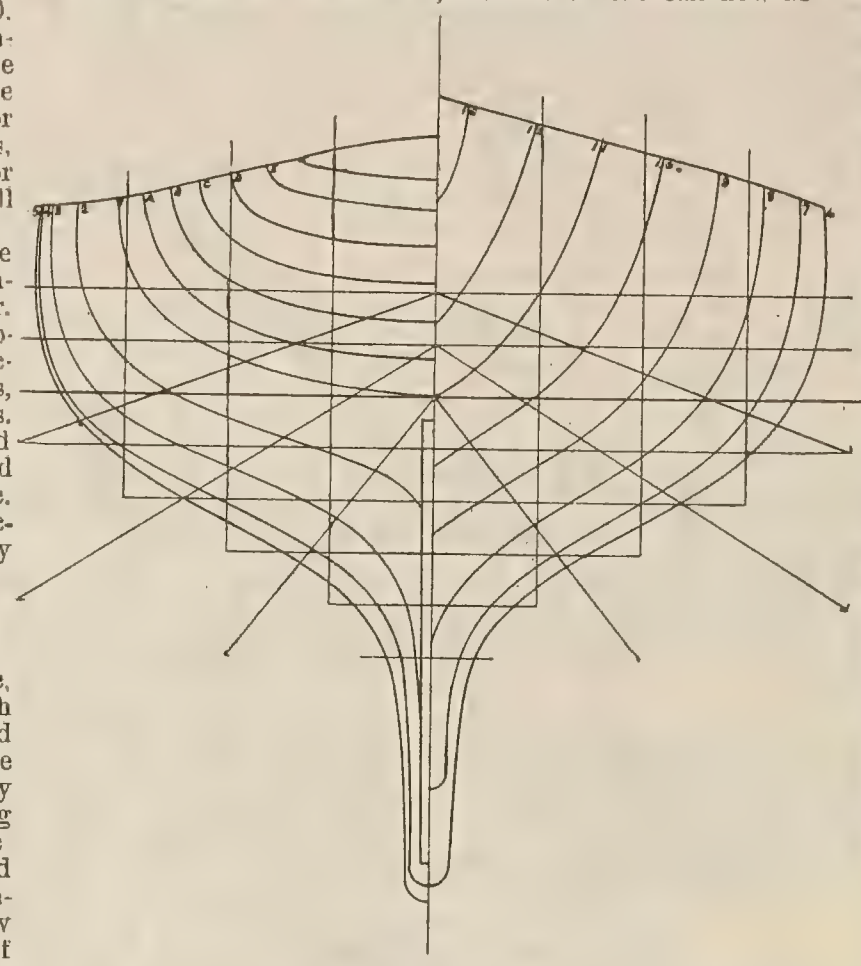
New Models.

THE new models for 1897 have a more finished appearance, as a rule, than any bicycles heretofore turned out. Flush joints have been adopted with remarkable unanimity, and the frames are more richly and smoothly enameled. The option of wood handle bars in place of steel is generally given, and improved crank shaft mechanisms all aiming toward simplicity of parts are almost universal. Manufacturers are also practically unanimous in condemning the old style of oil holes, which were frequently dirt traps, and improved methods of oiling are found in nearly all the new models. Attention has been given to the perfection of sprocket wheels, and there has been a general increase in their size, while either one or both sprockets are made detachable. Many manufacturers have adopted D-shaped tubing for the rear forks, which allows a greater clearance for the tire, and permits the use of larger sizes.

Ball retaining devices for bearings are common, while arrangements are made for adjustment independent of frame.

Considerable attention has been paid to improving the general appearance of the new wheels, and fork crowns, rims, spokes, handle bars, name plates, etc., show more pleasing lines than formerly. It seems to be the general policy this year to give the widest possible range in options. Brakes will be put on when requested, and special saddles and tires may be had without difficulty.

As a result, we will have handsomer and more perfectly finished bicycles, and the amateur will be better able to take care of his own wheel and keep it in good condition than heretofore.



Yachting.

THE report of the race committee of the Seawanhaka Corinthian Y. C. was prepared solely for the members of the club, and was not intended for publication. With the permission of the committee, however, we publish it entire for two or three reasons which will be appreciated by yachtsmen. In the first place, we consider this report a model for every club and race committee in the country, just such a clear and pointed statement as should be laid before every club at the end of each racing season, solidifying and preserving the observations and the experiences of the men who, not even excepting the racing owners, are most closely in touch with the racing work of the year. Invaluable as it is, this experience is almost invariably allowed to go to waste In any club, no matter how small it may be, which can boast of races through the season, there is the opportunity offered to the committee to make a report of this nature that shall at the same time bring home to the members the exact conditions of the racing, and shall excite a new interest in the sport.

The report is valuable in another way in that it bears on its face the evidence of the vast amount of work which is done, not in this club alone by any means, but in a great many clubs, for the encouragement of yachting and yacht racing; and, we regret to say, of the lack of support on the part of the individual owners of the club. Only those who have been concerned with such work can appreciate the amount of time and labor, all freely given, that is necessary to carry out a complete season's racing, especially with the trial and cup races of the past two years thrown in. That racing is in other than a flourishing condition to-day is, in our opinion, in no way due to the yacht clubs or to their active agents, the race committees. The present report shows a condition of affairs in one club which is almost universal and by no means a solitary instance. On the part of the club generous sums are appropriated for prizes and incidental racing expenses; on the part of the committee, time and labor are freely given in the preparation of a long racing programme, in the arrangement of details and the management of each race, in measurement, protests, etc. As stated by the committee in this case, the support from the racing owners, for whom all this work is done, is not what might reasonably be expected, and the result is too often a disappointment to the committee.

Apart from these general considerations, the report is valuable because it deals with a large number of the actual issues in modern yachting: the measurement question, the regulation of extreme features, the lack of interest in the larger and the growth of racing in the smaller classes, and kindred subjects. Its value in this respect is in no way impaired by the fact that it is suggestive rather than positive on many important points; that it indicates difficulties without providing at once practicable means of surmounting them. In this it is only in the position of many thoughtful yachtsmen, who fully appreciate the difficulties and drawbacks of the existing state of affairs in yachting, and yet are not clear as to an effectual remedy. We hope that this report will be the means of awakening, both within and without the club, a deeper interest on the part of individual yachtsmen in the many vital questions of the times.

THE Seawanhaka C. Y. C. has followed the Y. R U. in adopting the draft limits of the Larchmont and New York clubs. The summary of the race committee voices an opinion that is very general among yachtsmen, that in spite of obvious faults of construction, the amendment can now do little positive harm, and something better may be suggested before much building is done. It is worth while to note that the numerous yachts promised in October are not materializing now that the building season for large vessels is well advanced.

BODY PLAN.

IF the reports that are now current about Mr. Howard Gould's projected steam yacht are anything near the truth, this craft will be a fitting mate to the other great American steam yachts, Atalanta and Nourmahal She is to be a purely American craft, with all that the term implies in a steam yacht, beyond which we need not go into details. Mr. Gould has here an opportunity to help the cause of steam yacht designing in America and at the same time to save money. If he has really decided upon the general size and type of boat which he desires, let him institute an open competition among designers, limiting it, as it may please him, to those of purely American birth, to them and those of foreign birth resident in this country, or to all without regard to nationality. The cost of adequate prizes for such a competition would be a small item compared with the half million dollars or so that the yacht will cost, and which from appearances is more than likely to be wasted on a faulty design The value of such a competition as a stimulus to and a test of American designing should weigh strongly, in addition to the mere saving of money.

APROPOS of nothing in particular, but merely as a bit of private malice, the Boston *Herald* of January 10 makes the following statement: "In the last Cup race the Seawanhaka club's pleasure steamer got in the way of the Defender and Valkyrie III." The "*Herald* man" is in error in assuming that the Seawanhaka C. Y. C. owns the Old Dominion Line of steamers. The club chartered for the Cup races of 1895 the steamer Guyandotte, of that line, which was a long distance from the yachts on the occasion of the unfortunate collision. The offending steamer, Yorktown, of the same line, was run by its owners as a public boat in charge of her regular captain.

THE result of the special meeting of the Lake Y. R. A. can hardly be considered satisfactory, as matters are still in a very mixed condition. The proposal to limit the midship section has been adopted, with a smaller limit than desirable, but still the difference is not material. The sequel will appear to most yachtsmen as an absurdity; the opponents of this measure in the larger classes now appear as its champions in the smaller, and have succeeded in having the rule extended to cover them as well. Using the original arguments of the other side, that they wished to bar freaks and extremes and promote the building of wholesome and useful boats, they have proposed a minimum of 19 per cent. in the 27ft. class and 15 per cent. in the 22ft. class. Considering the patent facts that the extreme fin-keels could not carry the necessary displacement to float their fins and bulbs on a much smaller section, it may seem that these limits and the arguments in support of them were intended as sarcasm, but both were put forward soberly and in good faith. It will be interesting to watch the development of wholesome and useful yachts under such limits.

Another similar matter was no less amusing. The Hamilton delegates seriously defended the limit of 125lbs. as a fair average for the weight of crew on lake yachts. The absurdity of such statements in the actual presence of such men as Com. Lucas, Æmilius Jarvis, George Webster, George Goodesham, Elliott Mott, Com. Downey, E. A. Burroughs, Com. Hower and many more, never seemed to strike the advocates of light weight in yachting.

The proposal to measure with crews on board was unfortunately lost through the opposition of the Hamilton delegates.

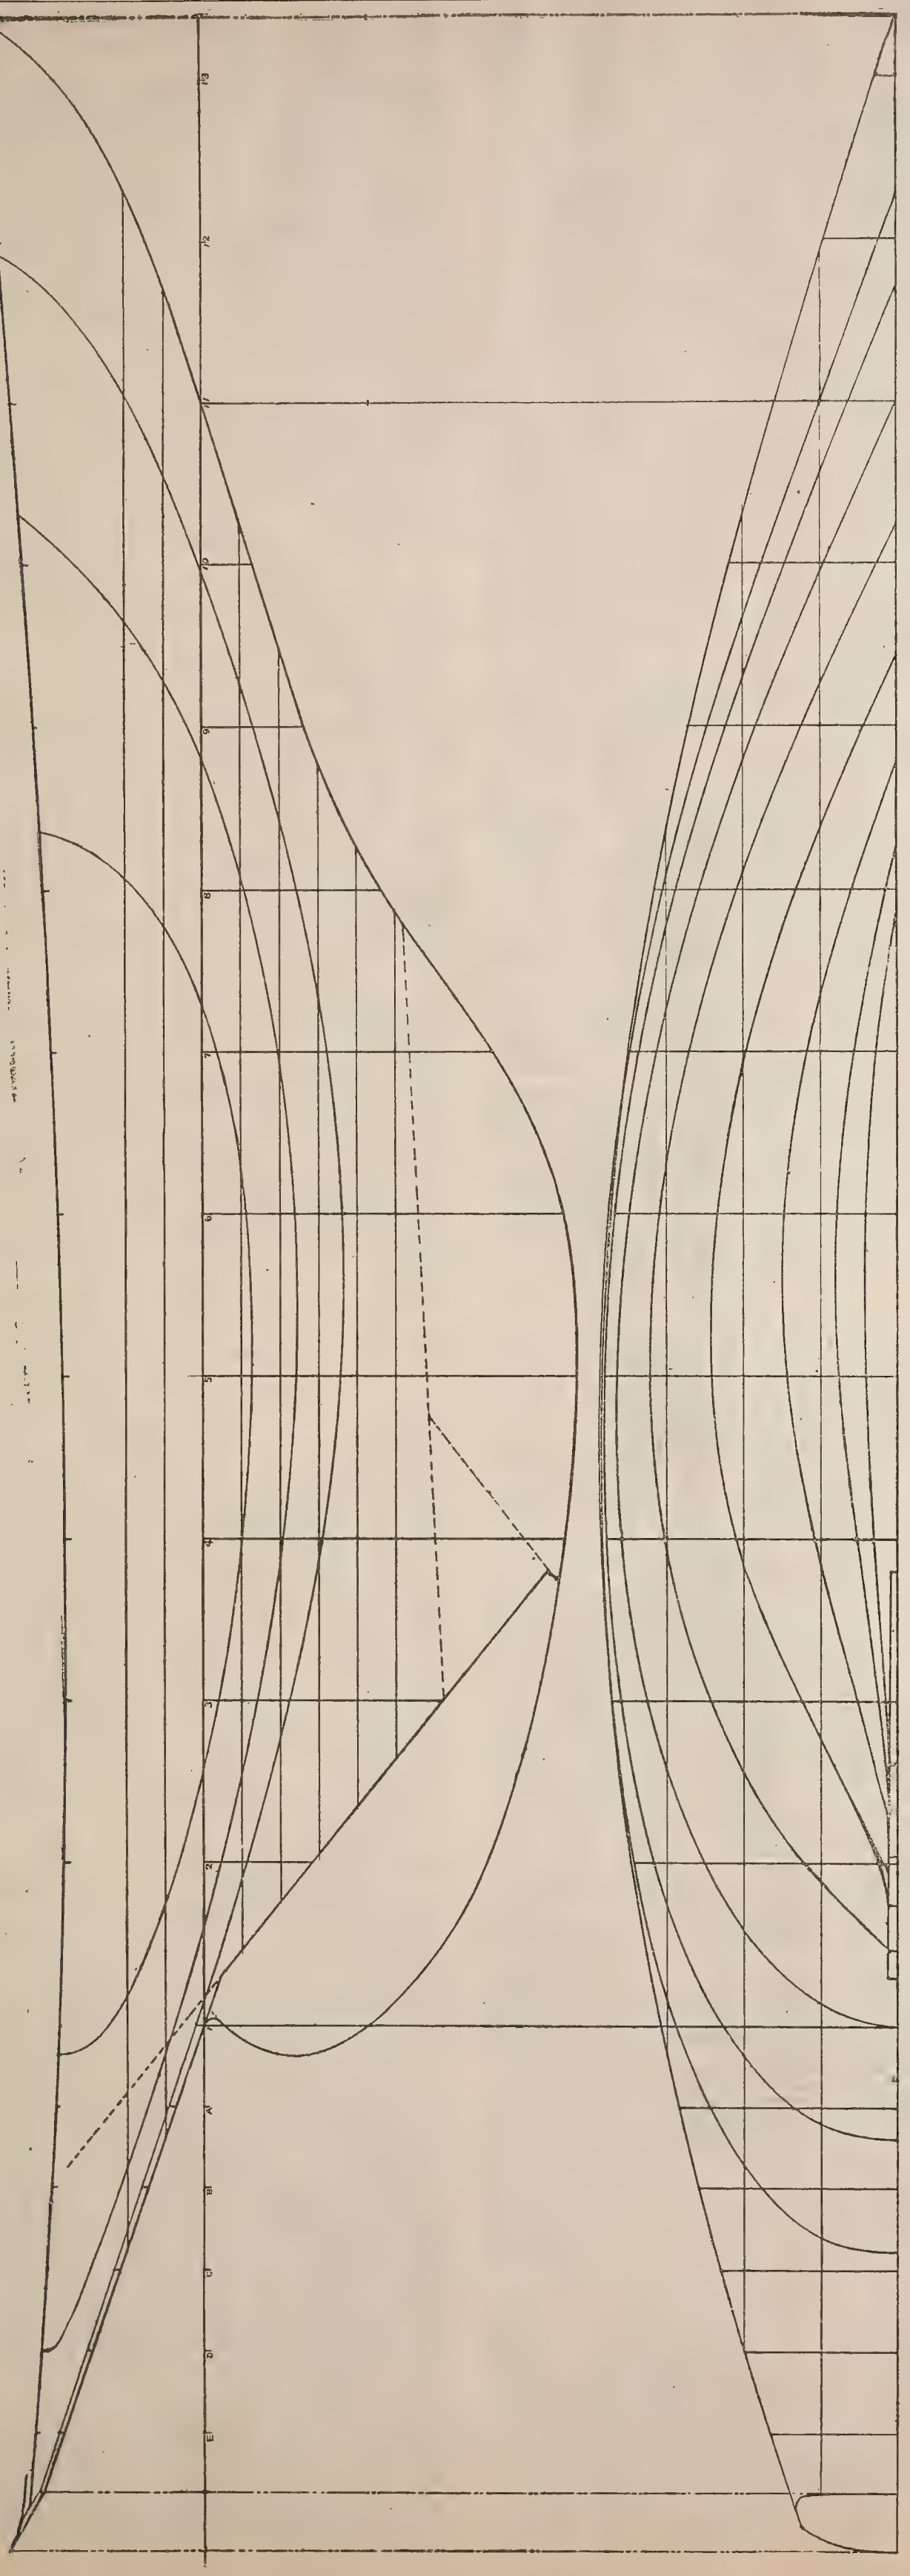
Two new yachts of large size are now assured for the English racing, one for Chas. Day Rose and one for A. B. Walker. They will be of about 90ft. linear rating. The former will be designed by J. M. Soper and built by Fay & Co., at Southampton; the latter will be designed and built by Will Fife, Jr., at Fairlie.

MR. CLINTON H. CRANE, owner of El Heirie, has been in Boston during the past week arranging with Lawley & Co. for the construction of a 20-footer of his own design, the work now being under way.

A MODERN CRUISER.

THE handsome little craft which we here present, through the courtesy of the designer and builder, Mr. W. B. Stearns, of the Marblehead Yacht Yard, belongs to a class long since made familiar to the readers of the FOREST AND STREAM. It is interesting and instructive in the extreme to compare this finished design, with its artistic lines and light construction, with such experimental boats from the same locality as the first little Carmita and Witch, built nearly fifteen years ago and illustrated when new in the FOREST AND STREAM. With all their sterling qualities as safe and handy cruisers and single-handers, these little boats were crude in the extreme in model, construction and rig. The modern boat of the same type, of which the craft here shown is an excellent example, is in all respects a model, the same skill and care being expended upon her as upon the largest and most expensive yachts.

The present craft, now building at Mr. Stearns's yard, is intended for day sailing about Massachusetts Bay and for cruising on the Maine coast; for these ends the designer has aimed to secure a good, easy sea boat, with plenty of room below and on deck, a fair turn of speed, and ample strength for hard service through an indefinite period, as in the older and much heavier boats. In that secondary but indispensable attribute of a yacht, appearance, nothing has been sacrificed, and the design shows a notably graceful and shipshape craft, and one free from all freak features. For the intended use, a few inches of draft more or less is no objection, but if circumstances should call for it the draft might be somewhat reduced by a straight line for the bottom of the keel and the bulbing of the lead. The very easy profile has a special advantage in that the yacht is not liable to be brought up suddenly by nets, surface lines and similar obstructions that are so serious in the case of the fin type. The dimensions of the yacht are as follows:



Length over all	32ft.	9in.
l.w.l.	21ft.	
Overhang, forward	5ft.	
aft	6ft.	9in.
Beam, extreme	7ft.	8in.
l w.l.	7ft.	2½in.
Draft, extreme	4ft.	10½in.
Freeboard, least	1ft.	9½in.
Sheer, forward	1ft.	1in.
aft		6in.
Displacement, long tons	3 48	
pounds	7,800	
Ballast, lead, all outside, tons	1,71	
pounds	3.840	
Sail area	499sq. ft.	
Mast, from stem at l.w.l.	5ft.	9in.
deck to hounds	26ft.	6in.
Boom	24ft.	9in.
Gaff	13ft.	8in.

The construction is fully illustrated in the plans The frame is of oak, with all bent timbers 1in. square, spaced 10in. Covering the lead keel are 2in. oak floors, with four steel strap floors extending 18in up the sides. Forward and aft of the lead the floors are of 1in oak boards The clamps are of oak, 1¼×2½in., with oak bilge clamps 3×1½in., bent in cold. The deck beams are part of white oak, ⅞×1½in., and part of red oak, 2×1½in. and 1½×1½in. The topstrakes are of white oak, bright finished; the remainder of the planking is of hard (yellow) pine, ¾in. The deck is of rift-sawed white pine, absolutely free from imperfections, ¾in. thick and 2in. wide, bent to deck line and fastened with blind nails and dowels.

The sides of the trunk are of oak bent to shape and the top is of ¾in. butternut with lipped seams, these and the deck seams payed with marine glue. The cabin joiner work is of mahogany and butternut, handsomely finished The forecastle is finished in white pine. The upholstery and furnishings are all of the best quality.

All of the blocks, turnbuckles, chain plates and deck fittings are of phosphor or Tobin bronze, from the yard's special patterns, and the iron work is of Norway iron, neatly forged and galvanized. The standing rigging is of best quality steel tiller rope, ¼in. diameter, with metallic splices on the shrouds and backstays, the headstay being seized back. The running rigging is thoroughly stretched and seasoned before reeving off. The sails are of special yacht duck, 6oz., unbighted, with cross-cut cloths except in the jib

The cabin is 8ft. 6in. long, with 5ft. headroom under companion and skylight, and 2ft. breadth of floor. It is fitted with two large and comfortable lockers, with wardrobe and sideboard at the ends of each. The forecastle is fitted with ice chest, dish lockers, shelves and folding berth. The cockpit is quite roomy, with wide seats inside the coaming, the seats also forming lockers for stowage. From the above general specifications, it will be seen that the yacht is remarkably complete in her construction and fittings, everything being of the best, and expense not being considered. The same boat of less elaborate finish, but with first-class workmanship throughout, can be built for about $1,200, which would not include cabin furnishings and cruising outfit. Unlike the original knockabout, this boat is not strictly ot a local type, but adapted for many places on both fresh and salt water, the sail spread and other details being, of course, modified as the conditions and intended use may demand. Mr. Stearns is a young Boston man whose tastes, even as a young boy, led him to designing, after studying under Prof. J. H. Biles, at Glasgow, he has established himself at Marblehead as both designer and builder, and, as this design shows, with much promise of success. The construction and sail plans will follow next week.

TWENTY-ONE FOOT CRUISING YACHT DESIGNED BY W. B. STEARNS, 1897.

Building from Sailing Models.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* At the annual meeting of the Philadelphia Model Y. C. on Jan. 7 the following officers were elected to serve for the ensuing year: Com., Wm. Porter; Vice-Com., F. Warren Snow; Sec'y Treas., Arthur B. Carles, 859 West street, Philadelphia, Pa.

The club is in a prosperous condition, having an enrollment of fifteen active members, nineteen sailing models and four steamers, with a magnificent sailing station on the Delaware, located at Beideman Station, Camden & Amboy Division, Pennsylvania R R., where all visiting model yachtsmen will be welcomed on any Saturday afternoon or Sunday after May 1.

In the FOREST AND STREAM of Jan. 9 it is stated that the American Model Y. C. is going to build a 20-footer from the best performing model yacht. This will not be the first thus built, as in 1889 Prof. Koenig, University of Pennsylvania, an enthusiastic model yachtsman and a member of the Philadelphia M. Y. C., had a small cutter (28ft. 6in. l.w.l.) built from the lines of his model Viking. There were no changes made, the lines were followed faithfully, and the result was a perfectly seaworthy cruiser, the owner and his son making the passage from Cooper's Point, Camden (where she was built), to Bar Harbor, Me., touching at Vineyard Haven, and shipping a man to act as pilot around the Cape. He was left at Marblehead and Viking proceeded to Bar Harbor, experiencing heavy weather coming around Cape Cod, but "never parted a rope yarn."

The owner stated that the only mistake made was in her sail plan. She was under-canvased. This defect was remedied the following summer, and for two years she held her own around Bar Harbor with boats of her class, eventually meeting an untimely end on the rocks in a fog, being sailed for the first time by a new owner. I merely call attention to the above facts to show that if the A. M. Y. C.'s boat is a success, she will not have been the first by eight years.

ARTHUR B. CARLES.

YACHTING NEWS NOTES.

The annual meeting and dinner of the Columbia Y. C., of South Boston, was held on Jan. 6, the following officers being elected: Com., F. J. Powers; Vice-Com., Hiram Patterson; Rear-Com., George H. Lloyd; Secretary, W. C. Le Petrie; Clerk, Theodore O. Nicholson; Treas., A. E. Justice; Meas., Fred Pfund. Trustees: Charles J Rushton, Charles E. O'Donnell and Charles W. Nodwell.

The Old Colony Y. C., of Boston, has elected the following officers: Com., William Fessenden; Vice-Com., William V. Baker; Rear Com., Peter Schurch; Sec'y, George A. Hall; Treas., E. K. Pratt; Directors, the above and Samuel Ware, R. W. Davenport and H. E. Jipson; Regatta Committee: Samuel Ware, H. H. Linnell, Earl D. Gay, Charles A. Anthony and George A. Hall; Meas., Thomas Archibald.

The annual meeting of the Indian Harbor Y. C. was held on Jan. 13 in New York, the following officers being elected: Com., Charles T. Wills, slp. Daphne; Vice-Com., George G. Tyson, schr. Nirvana; Rear-Com., Robert B. Carpenter, schr. Glendoveer; Sec'y, Charles F. Stewart; Treas., Richard Outwater; Meas., W. O Bourne; Trustees (for three years): R. F. Downing and H. E. Doremus. Regatta Committee: F. S. Doremus, C. S. Somerville, Richard Outwater, F. Bowne Jones and Charles E. McManus. The amendments to the racing rules recommended by the Yacht Racing Union were adopted. The club has now 155 members and a fleet of 64 yachts.

The annual meeting of the Brooklyn Y. C. was held at the town quarters on Jan. 13, at which the following officers were elected: Vice-Com., Joseph L. Constant, slp. Alaris; Pres., P. H. Jeannot; Treas., William Graham; Sec'y, William Cagger; Trustees: Richard Neville, Albert Cluman, George C. Schafler, E. H. Chandler, S. S. Golding, William T. Murphy and John J. McCue; Regatta Committee: Frank L. Townsend, Louis Wunder and H. H. Stanwood; Membership Committee: A. S. Richoffer, C. H. Frost and Joseph N. Gaus Two amendments, to increase the dues and to abolish the office of president, were voted down. The retiring commodore was nominated for re-election, but not being now a yacht owner, the matter was postponed until a subsequent meeting in order that he might properly qualify for the office by the purchase of a yacht.

The annual meeting of the Williamsburgh Y. C., on Jan. 7, was held at the new club house, the following officers being elected: Com., James Schuessele; Vice-Com., John Lawes, Jr; Rear-Com, S G. Poole; Rec. Sec'y, William Martin; Cor. Sec'y, William Schlucher: Treas., James Northrop; Meas., William Stebbins; Steward, J. Phil Haffner; Sergt.-at-Arms, Warren Traver; Board of Trustees, James Lang, Chairman; Rheinhard Perino, Larry Rice, Michael Donnelly, Louis Rave; Regatta Committee: John Lawes, Sr, H. P. Schneider and John Engel.

The Lynn Y. C. held its annual meeting on Jan. 8, electing the following officers: Com., J. A. Clough; Vice-Com., R. J. Williams; Sec'y, P. E. Newhall; Treas., W. A. Estes; Directors—J. W. Haines, E. B. Newhall, W. H. Russell, R. J. Williams, W. H. Hollis; Regatta Committee—A. Larrabee, C. J. Blethen, W. H. Russell, C. D. Mower, C. A. Mansfield.

The Horseshoe Harbor Y. C. held its annual meeting on Jan. 11, electing the following officers: Com., E. L. Hopkins; Vice-Com., L. S. Knevals; Treas., H. T. Shriver; Sec'y, R. O'Gorman; Trustee, B. C. Lockett.

The annual meeting of the South Boston Y. C. was held on Jan. 6 at the United States Hotel. The reports showed a membership of 2 5 and a balance of $1,500 in the treasury. The arrangements for a new club house are progressing satisfactorily, and the club will be ultimately housed in a fine building on a new location. The following officers were elected: Com., C. F. Morrill, str. Navarch; Vice-Com., E. H. Lansing, cutter Thelma; Rear-Com., Mr. Bruce, slp. M. F. Swift; Sec'y, D. F. Carew; Treas., T. Christian; Meas., J. Bertram; Fleet Surgeon, Dr. T. G. Reed; Trustees—J. C. Merry, C. McKenna, H. L. Stickney; Regatta Committee—F. H. Borden, J. H. Corrigan, G. P. Field, N. B. Stone, E. B. Walbridge; Finance Committee—A. Fuller, W. H. Godfrey, D. Kinnear.

The Hudson River Y. C. held its annual meeting on Jan. 12, electing the following officers: Com., E. Langerfeld; Vice-Com., D. W. Chute; Sec'y, A. G. Buchholz; Treas., E. S. Peets; Meas., W. Arndt; Fleet Surgeon, Dr. D. B. Spence; Steward, J. T. Hufnagle; Trustees—Dr. E. J. Ranhofer, A. G. Roussell, T. H. Hall, W. Arndt, W. Lutters, M. Schnellbacher, J. O'Shaunnessy, T. Henderson, Dr. D. B. Spence and E. S. Peets.

The annual meeting of the Hull Y. C. was held on Jan. 9, the following officers being elected: Com., Wm. H. Crane, str. Senator; Vice-Com., Harry B. Torrey, cutter King Philip; Rear-Com., William O. Gay, knockabout Tautog; Sec'y, William Avery Cary; Ass't Sec'y, Caleb Nichols; Treas., John L. Amory; Meas., William E. Sheriffs; Executive Committee: James R. Hooper, Joaquin J. Souther; Membership Committee: Loring Crocker, Jr., Herman W. Friend; House Committee: T. E. Jacobs, Norman F. Greeley, Charles A. Cooley; Regatta Committee: T. E. Jacobs, Louis M. Clark. The club adopted the measurement rule of the Mass. Y. R. A. It has now a membership of 294.

The annual meeting of the Massachusetts Y. C. was held on Jan. 8 at the Rowe's Wharf club house, Boston, Com. Edwin P. Boggs presiding. The following officers were elected: Com., Edwin P. Boggs; Vice-Com., Nathaniel L. Francis; Rear-Com., Louis M. Clark; Sec'y, John S. Clark, Jr.; Treas, Charles G. Cutter; Directors: Henry W. Savage, John Shaw, Robt. C. McQuillen, Jacob A. Barbey, Jr.; Meas., William E. Waterhouse; Ass't Meas., Charles H. Dodd; Race Committee: William S. Crosby, C. Edwin Bockus, William E. Robinson, Albert E. Schaaf, T. W. King; House Committee: George M. Whitcomb, A. M. Blinn, Albert W. Randall, Lyman Sise, Louis C. Whiting. Com. Boggs's re-election is for the fifth time. The club has a membership of 250.

The Cleveland Y. C. held its annual meeting on Jan. 13, electing the following officers: Com., Geo. H. Worthington; Vice-Com., Percy W. Rice; Rear-Com., W. R. Huntington; Sec'y-Treas., Burton D. Munhall; Meas., O. P. de Mars; Ass't Meas., David Moore; Surveyor, Henry Richter; Fleet Surgeon, Dr. E. E. Beeman; Board of Directors—Geo. H. Worthington, Percy W. Rice, W. R. Huntington, Dr. E. E. Beeman, Wm. L. Otis, John Barth, Jos. Leon Gobeille, R. D. Aikenhead, H. K. Lyman, J. R. Miller, G. H. Gardner, Richard Carleton, John Harkness Brown, F. G. Overbeke and Burton D. Munhall; House Committee—Messrs. Aikenhead, Otis and Overbeke; Regatta Committee—Messrs. Gardner, Overbeke and Huntington; Auditing Committee—Messrs. Miller, Brown and Gobeille. Com. W. J. Connors, of Buffalo, was elected an honorary member of the club.

SEAWANHAKA CORINTHIAN Y. C.

THE annual meeting of the Seawanhaka Corinthian Y. C. was held at the town club house, 19 East Twenty-second street, New York, on Jan. 12, with Com. Rouse in the chair. The ordinary routine business of the annual meeting, the reports of officers and committees, election, etc., was carried through, the following officers being elected: Com.. Henry Clark Rouse, schr. Iroquois; Vice-Com., S. Van Rensselaer Cruger, slp. Indolent; Rear-Com.. Henry A. Van Liew, steam yacht Aquilo; Sec'y, Charles J. Stevens; Treas., Walter C. Hubbard; Meas., John Hyslop; Fleet Surgeon, Valentine Mott, M.D ; Fleet Chaplain, George R. Van De Water, D.D.; Race Committee: Oliver E. Cromwell, D. Le Roy Dresser, Walter C. Kerr, Charles A. Sherman and C. W. Wetmore. Trustees: William Foulke, Walter C. Hubbard, Walter C. Kerr and Bayard F. Foulke. Committee on Lectures and Entertainments: Clarence Goadby, Herbert L. Satterlee and Walter T. Owen; Committee on Lines and Models: John Hyslop, A. Cary Smith and W. P. Stephens. Law Committee: Alfred Ely and F. de P. Foster.

The retiring secretary, Mr. H. W. Hayden, has held the office for three years; except in this office and that of rear-commodore but few changes appear in the officers and committees. The trustees announced the election of Messrs. T. A. Lord, S. T. Shaw, P. T. Dodge, Chas. Olmstead and Wm. Phelps Eno, making the present membership 359, with a fleet of 194 yachts. As part of the miscellaneous business, the club accepted with thanks several recent donations; Com. Rouse has presented a very fine crayon portrait of the late Robert Center; Mr. Cornelius Roosevelt, one of the old members, presented a handsome oil painting, by A. Cary Smith, of the first Corinthian match between the sloops Addie V. and Vision in 1875; and a non-member, Mr. J. S. Muckle, of Philadelphia, tendered to the club in a gracefully worded letter a silver cup as a special prize for the winner of the trial races of the club in the 20ft. class next summer. The club formally adopted a pattern for a hat ribbon, of blue with small white stars.

The various reports showed a much more prosperous condition of the club's affairs than at the end of last year. The sub-committee on club boats and transportation presented a very complete and satisfactory report covering the work of the year in its department The location of the club station, on an island, involves at best a heavy expense for steamer and launch service, and makes the matter of transportation a difficult one. It would appear from the report that much has been done toward a satisfactory solution of it.

The proposed amendments to the racing rules, to conform to the amended rules of the Sound Y. R. U., were passed without discussion.

The most important feature of the meeting was the report of the regatta committee, a lengthy document, but nevertheless listened to by all present with an attention seldom accorded to papers of this sort. The report was accepted with a vote of thanks to the committee for the report itself, as well as for its work during the year, and ex-Com. Benedict made a motion, which was carried, that a sufficient number of copies for distribution to yacht clubs and others who might be interested should be printed and distributed at his personal expense. We give the report in full, as follows:

Annual Report of the Race Committee of the Seawanhaka Corinthian Yacht Club for the Year 1896.

NEW YORK, Jan. 12, 1897.

To the Seawanhaka Corinthian Yacht Club:

The following specified races were sailed under the auspices of the club, and under the direction of the race committee, during the yachting season of 1896:

RACES.

Dates.	*Description of Race.*
May 30, Decoration Day	15ft. class and club catboat race.
June 6, Saturday	Club catboat race.
June 13, Saturday	Club catboat race.
June 20, Saturday	Club catboat race.
June 22, 23, 24, 26	International challenge cup trial races.
June 27, Saturday	Annual race.
July 4, Saturday	Club catboat race.
July 11, Saturday	Club catboat race.
July 13, 14, 15	International challenge cup match races.
July 18, Saturday	Alfred Roosevelt Memorial cup race.
July 18, Saturday	Club catboat race.
July 25, Saturday	Ladies' club catboat race.
Aug. 1, Saturday	Club catboat race.
Aug. 8, Saturday	Club catboat race.
Aug. 15, Saturday	Club catboat race.
Aug. 22, Saturday	Club catboat race.
Aug. 29, Saturday	Commodore's and Rear-Commodore's cups race.
Aug. 31, Monday	Robert Center Memorial Cup, and Special 20ft. class race.
Sept. 5, Saturday	Club catboat race.
Sept. 12, Saturday	Club catboat race.
Sept. 19, Saturday	Club catboat race.
Sept. 30, Wednesday	25ft. sloops race.

SUMMARY.—Number of races sailed, 27; number of yachts starting, 211; number of prizes awarded, 46; value of prizes awarded, $2,640.

PRIZES.—Through the generosity of individuals, your committee have been enabled to offer, in addition to the regular club prizes, the special prizes mentioned below, for competition during the past yachting season:

Commodore's Cup, value $500, presented by Com. Rouse; won by schr. Colonia, Aug. 29, 1896.

Vice-Commodore's Cup, value $250, presented by Vice-Com. Cruger; won by schr. Elsemarie, June 27, 1896.

Rear Commodore's Cup, value $250, presented by Rear-Com. Tod; won by Hera, Aug. 29, 1896.

Robert Center Memorial Cup, value $500, presented by Mrs. M. C. Ludlow; won by schr. Colonia, Aug. 31, 1896.

First prize ladies' club catboat race, presented by Com. Rouse; won by Mrs. D. Le Roy Dresser, July 25, 1896.

Helmsman's prize for trial races, presented by Capt. T. C. Zerega; awarded to Charles Olmstead, Esq., sailing Riverside.

Helmsman's season prize club catboat races, presented by C. A. Sherman, Esq.; won by D. Le Roy Dresser, Esq., May 30 to Sept. 19, 1896.

Your committee desire to record their personal appreciation of the generous spirit which prompted the giving of these prizes, and recommend that the thanks of the club be formally extended to the several donors.

Comments on Races.

DECORATION DAY RACE, SATURDAY, MAY 30, 1896.—The principal race for the opening day of the club's racing season was appointed for the 15ft. class, with the view of giving an early impetus to the racing in that class, in anticipation of the trial races set for June 22, 23 and 24, to select a defender of the Seawanhaka International Challenge Cup in the match with the Royal St. Lawrence Y. C., of Montreal, which was to follow on July 13, 14 and 15.

There were eight starters, namely: Hope, Trilby, Willada, Two Step, Paprika, Olita, Gnome and Terrapin, and the race was won by Hope, Capt. Arthur Iselin; with Trilby, Capt. G. G. Tyson, second.

TRIAL RACES TO SELECT THE DEFENDER FOR THE SEAWANHAKA INTERNATIONAL CHALLENGE CUP, JUNE 22, 23, 24, 1896.—On the first day of the trial races there were twenty-nine starters, which is believed to be the largest number of yachts ever started in a single class in these waters. Many widely different and some extraordinary types were represented, and there was every evidence that the event had aroused widespread interest, and had greatly stimulated originality and ingenuity in design and rig.

The number of starters diminished somewhat on the second and third days, but on each day it was sufficiently large to afford a most interesting and beautiful spectacle. Five of the contestants, namely: Riverside, Capt. G. G. Tyson; Ideal, Capt. H. O. Havemeyer, Jr.; Vesper, Capt. Paul Butler; Paprika, Capt. Sherman Hoyt, and El Heirie, Capt. C. H. Crane, were selected, because of the excellence of their performances in the three races, to compete again on June 26 in a final contest. The races were sailed in a variety of weather conditions, ranging from calms to fresh breezes, so that the committee were able to select the yacht which seemed to them under all conditions to be the best performer. The result was the choice of El Heirie, owned and designed by C. H. Crane, Esq., of this club, and sailed by him and his brother.

The entry of such a large fleet was conclusive evidence of the lively interest in small yacht racing aroused by the establishment by this club of its international challenge cup, and of the popularity of the 15ft. class, which has practically been created by this club. Your committee regard these small classes as the nursery for future Corinthian yachtsmen, and recommend that they should be liberally recognized during the coming season, both in the number of racing events and in the allowance of prizes.

ANNUAL RACE, SATURDAY, JUNE 27, 1896.—In this race there were fifty-five entries and fifty starters in thirteen classes, ranging from the 95ft. classes of schooners, represented by Colonia and Emerald, to the 15ft. class, in which there were seven starters. The largest number of starters in any class was eight, in the 30ft. special class.

The Vice-Commodore's cup was offered for schooners of 75ft. racing length and over, competed for by Colonia, Emerald, Iroquois, Amorita and Elsemarie, and won by the last named.

The number of entries and starters was larger than in any annual race ever held by the club, and it promised to be a most interesting contest. Unfortunately, however, the breeze, which was light at the start, fell to a calm before the completion of the second leg of the triangular course, and the result was a tedious drift and a fluky and unsatisfactory contest. Only about one-half of the starters finished, many of them not until after 8 o'clock in the evening. Had the weather conditions been favorable, this race would have been the most successful one in the recent history of the club. The number of entries and the interest aroused evidence the beneficial effect upon the club's racing, of its association with the Yacht Racing Union of Long Island Sound, to which special reference is hereafter made.

SEAWANHAKA INTERNATIONAL CHALLENGE CUP MATCH, JULY 13, 14, 15, 1896.—Won by Glencairn, the representative yacht of the Royal St. Lawrence Y. C., of Montreal, against El Heirie, in three straight races. Glencairn was the property of Com. James Ross, of the challenging club, and was sailed by G. H. Duggan, Esq., with F. P. Shearwood, Esq., as crew, members of that club.

Prior to the race a long correspondence had been conducted between your committee and the sailing committee of the Royal St. Lawrence Y. C. of Montreal, relating to the conditions and details of the proposed match, and the final agreement governing such details is found in the documents hereto annexed.

Messrs. Duggan and Shearwood were received upon their arrival as the guests of the club, and facilities for transporting Glencairn from Morris Dock (the place of consignment) to Oyster Bay were provided by the club. The privileges of the club were extended during their visit to Rear-Com. Fitz Gibbon and J. C. C. Almon, secretary of the sailing committee of the Royal St. Lawrence Y. C.

The match was sailed on the three consecutive days, under conditions varying from the lightest airs to a fresh southwest breeze and a sharp squall, and the decided superiority of Glencairn under all conditions of weather and on almost every point of sailing was conclusively proved. The match was lost to a faster yacht, and not because of any want of care or skill in the preparation or handling of the defender. Great praise, indeed, is due to the captain and crew of El Heirie for the patience and care with which every detail of preparation was made, and for the seamanship and steadiness with which they sailed a losing match.

No doubt Glencairn is the fastest craft of her dimensions and sail spread ever produced on this side of the Atlantic, and represents the most extreme development of power on a given waterline yet attained—a type which her designer, it may be remarked, emphatically condemns, and which has to some extent been legislated against in the regulations for the coming match.

After the match our Canadian guests were given an opportunity to see the start of the postponed Larchmont annual regatta and to participate in the Alfred Roosevelt Memorial cup race, on Saturday, July 18. In the evening of that day a dinner and reception were given to them at the club house, and the international challenge cup was tendered by Vice-Com. Cruger, who presided at the dinner, to Mr. Duggan as the representative of his club. This was the last formal incident of the match.

Upon the conclusion of the match a challenge was immediately issued on behalf of the club by Com. Rouse for a match to be sailed in the season of 1897. A copy thereof is annexed hereto.

This challenge has been ratified by the club, accepted by the Royal St. Lawrence Y. C. for the 20ft. class, and will be sailed about the middle of August next on Lake St. Louis, St. Lawrence River, near Montreal.

After full correspondence and personal conferences with Messrs. Duggan and Hamilton in New York, the conditions governing the match for the coming season have been agreed upon in every detail, the trial races to select the representative yacht of the club have been set for July 12, 13 and 14, and your committee have issued and distributed to the yacht clubs of the country a circular giving extracts from the Declaration of Trust, the regulations governing the match and a full programme for the trial races.

Simple as the regulations governing the match seem to be, the limits of sail and draft, and the details of measurement, were agreed upon only after the most elaborate discussion of every phase of the questions involved; and it is believed that the result will be productive of a type of yacht more wholesome and satisfactory than Glencairn and most of the American 15ft. class.

Several 20 footers are already designed and in course of construction, and it is hoped that members of the club will specially interest themselves in encouraging the building of others to compete for the honor of representing the club on the St. Lawrence.

While we regret the defeat of the American yacht, and the consequent loss of the cup, in every other respect the match has been a source of the greatest satisfaction. It was conducted upon a high level of fair, generous and considerate rivalry, without a single incident occurring to mar the pleasure of the event. We also desire to place on record our appreciation of the liberal and sportsmanlike spirit exhibited by the Canadian committee in arranging the details of these matches and our pleasure in the establishment of such cordial relations with the Royal St. Lawrence Y. C. The match of 1896 may well serve as a model for future matches.

ALFRED ROOSEVELT MEMORIAL CUP RACE, SATURDAY, JULY 18.—For the last two years this race has been opened to all yachts belonging to the club of 50ft. racing length and under, and has been sailed over the inside course, starting and finishing off the club house. While this regulation has admitted of the entry of boats of great disparity in size, which under recent racing conditions might not ordinarily come in competition, and for some of which the course is perhaps not well suited, the purpose has been to bring into the contest especially the racing yachts in the harbor of Oyster Bay which belong to the old friends of Alfred Roosevelt, whom he often met in friendly contests, and to sail the race in the waters with which he was so long associated, with the view of identifying the event more fully with his memory. We think that this result has been effected, and that the interest thus aroused has made the event really a memorial.

This year the race was won in a smart breeze by El Heirie after a most remarkable exhibition of speed. We feel sure that to all the other participants the disappointment of failure to win was lightened by the feeling of gratification that the prize had gone to our associates of the El Heirie, who tried so ably and conscientiously to save the challenge cup for the club.

COMMODORE'S CUP AND REAR-COMMODORE'S CUP RACE, SATURDAY, AUG. 29, AND ROBERT CENTER MEMORIAL CUP RACE, MONDAY, AUG. 31, 1896.—The first of these races was appointed for a time which it was thought would best suit the convenience of racing yacht owners near the close of the season; and when, after this date had been fixed, the Robert Center memorial prize was placed at the disposal of your committee, it was believed that by bringing these two events together the value of the prizes awarded and the affectionate interest attaching to the memory of Robert Center would result in a large number of entries. Special invitations by letter were sent by your committee to the owners of all the eligible schooners from New York to Boston, and no effort was spared to make these events successful. The result was a disappointment. In each contest only three schooners were entered—Colonia, Emerald and Amorita in the first, and in the second Amorita, Colonia and Ramona.. In view of the importance of these events, the conclusion seems to be clear that the superiority of Colonia over her competitors, which had been so effectually established in the earlier events of the season, had outweighed substantially the other considerations which your committee believed would lead to a conspicuously successful event.

CLUB CATBOAT RACES, SATURDAYS, MAY 30 TO SEPT. 19, 1896.—The offering of the Sherman cup for the helmsman winning the highest percentage of races during the season aroused decided interest. Fourteen races were started, two failing for lack of wind. Many of the contests were most spirited and interesting, and the series was greatly enjoyed by the contestants. It is to be noted, however, that the number of helmsmen who tried for the prize was altogether smaller than it should have been. It seems to your committee that these races deserve more liberal support than they have received, and that if members generally had appreciated the pleasure which was afforded, the patronage would have been much larger. The conditions governing the cup were so arranged that a participant in only three races might have won the prize, and thus regular attendance was unnecessary. We intend that the catboats shall next season be put in thorough racing trim, and that these races shall be made more of a feature than ever before.

In this connection it may be stated that on every Saturday during the season, unless some more important event had been previously announced, your committee offered a prize for the local yachts in the harbor, and that only once was this offer availed of, namely, on Sept. 26, when Meteor, Nameless and Secret sailed. It is a matter of much regret that the persistent efforts we have made to establish successful Saturday racing among the local yachts have met with so little encouragement.

RACING RULES.—The experience of the past season has more than ever emphasized the probability that racing in the larger classes, both of sloops and schooners, will continue to be limited to a very small number of contestants, if indeed it does not cease altogether, unless some legislation can be secured which will correct the faulty tendencies of recent racing designs and establish some basis upon which the older and more wholesome type of yachts can meet the extreme racing types of the season with at least the *possibility* of occasional success.

On Sept. 17 last Com. Rouse addressed a letter to your committee, a copy of which is annexed to this report, emphasizing the importance of this subject and suggesting, among other things, a formula for a modification of the present rule of measurement, by which the features of excess of depth and overhang fore and aft over the normal would be taxed, and advising that the matter be taken up; the incidental purpose being that this club, which had originated a rule of measurement so admirable at the time and until lately so satisfactory, should, when that rule seemed no longer adequate, take the initiative in reforming it, and formulate and propose the adoption of a new or modified Seawanhaka rule of measurement. Your committee acted at once on this suggestion and called the expert designers of the club to their aid. Conferences were held and the elements and difficulties of the problem were evolved and thoroughly analyzed, starting with the formulæ proposed by the commodore and Mr. Irving Cox as a basis. Meantime it became known that a modification of the racing rules, merely imposing certain arbitrary class limits upon draft of hull, was about to be adopted by the New York and Larchmont yacht clubs. Feeling that a comprehensive and scientific revision of the rule of measurement which this club would be willing to propose, with the expectation of general adoption and permanence, involved so much consideration and difficulty that it would be impossible to formulate a satisfactory conclusion in time to influence the winter's building or to secure its general adoption to govern next season's racing, your committee have thought it wise to acquiesce for the present in the action taken by the clubs referred to, which has since been followed by the Yacht Racing Union, and not to attempt immediately to prepare a new rule of measurement. We feel, however, that the active consideration of the subject should be pursued with the definite purpose in view above referred to. To that end it is our intention to formulate a rule for practical trial in the next annual race and possibly in some special events, which, if found to be satisfactory, may then be proposed for general adoption. The recommendation made by the commodore in his letter, above referred to, that if a race be not started promptly at the designated hour it shall be started only on the half hour or even hour thereafter, falls within the jurisdiction of the race committee and will be adopted in next season's racing. The other recommendations of the letter, not specifically touched upon, will receive full consideration at a later day

Annexed to this report are certain amendments and additions to the racing rules which have been adopted by the Yacht Racing Union, the most important of which regulates draft of hull, and has just been alluded to

Touching this amendment, while it does not seem to be a correct principle to limit arbitrarily any dimension, and while the limits fixed seem too liberal, if the object be to discourage the present extremes of the canoe body and fin keel type, and on the other hand to be comparatively unfair to the keel type, in that the draft of centerboard is unlimited, yet your committee feel that for the sake of uniformity and harmony with the Union and the clubs that have already acted in the matter, these objections should not prevail against it.

The amendments reducing the number of classes and abrogating time allowance seem to us in the line of improvement. The same may be said of the minor changes which need not be specifically alluded to.

Your committee therefore recommend the adoption of the amendments as proposed. In concluding this subject, it may be said that the Yacht Racing Union has adopted the restrictions on draft for the sake of uniformity and as a temporary expedient only, and not because it believes that a permanent and satisfactory solution of the problem involved has been reached.

GENERAL REVIEW.—The organization of your committee has continued with but one change since January, 1895, and we feel that it is not inappropriate at this time to review briefly our administration and to allude to some of the purposes which we have had in view. At the time of our appointment racing had fallen to a low ebb, and the club was in danger of losing the position of influence and respect which it had so long occupied. It seemed to us that the trouble lay largely in the want of co-operation with other clubs and in the neglect to cultivate the racing in smaller classes, the school of development for the Corinthian or amateur spirit which the club was founded to promote. We sought, therefore, for opportunities to return in this regard to the best traditions of the past. It happened, fortunately, that a movement was on foot for an organization of the clubs of Long Island Sound into a union for the promotion of the interests of yacht racing. While the credit of originating this movement does not belong to your committee, it so happens that its members have been instrumental in aiding the organization of the Yacht Racing Union and that the chairman of your committee has been the chairman of the Council of the Union, and we have continuously given to it our active support. From timid beginnings the Union has come to a position of acknowledged strength and influence. We need not dwell upon the results that have been accomplished in establishing uniformity of racing rules and numbers, harmonious arrangement of dates for open races, and in the general stimulus given to the sport, but desire only to emphasize the fact that the cordial support of the Seawanhaka Club, its considerate treatment of its younger and less powerful associates in various matters and its hospitable attitude have won for it the confidence and esteem of its fellow members in the Union, with the result that on their part they have generously contributed to the support of our racing events and acknowledged even a greater sense of obligation to us than is perhaps our due. Thus the purpose alluded to, of establishing co-operation with other clubs, has been accomplished. A continuance of this policy is strongly recommended.

We are also indebted largely to good fortune for throwing in our way an early opportunity of re-establishing the club as a patron of Corinthianism.

As you will remember, in January, 1895, a letter from England was received, addressed jointly to several members of the club and of the New York Canoe Club, suggesting an international race in the so called half-rater or 15ft. class. Your committee eagerly and promptly accepted the suggestion, as affording the opportunity which was needed. Quick and generous response was made to the appeal for subscriptions, and the Seawanhaka International Challenge Cup was established under a formal declaration of trust, which was framed in the spirit of generous encouragement of international competition in the smaller classes. The history of the matches which followed need not be again alluded to. We feel that the result of the establishment of this trophy has so far been indeed remarkable. A great class has been established, which, even if it does not develop further, has certainly afforded great pleasure and aroused the liveliest interest; new problems in designing have arisen and been solved, new ideas evolved, and above all the true Corinthian spirit has been aroused, as is most strikingly exemplified in the history of last year's defender, designed, superintended in every detail of construction and fitting, and sailed by her youthful owner; and also in the rapid development of young boys to a degree of seamanship qualifying them to compete with men of long experience and established reputation as racing helmsmen and sailors.

While the club certainly has reason to congratulate itself on the results that have been accomplished in the directions indicated, yet the club's racing as a whole has fallen far short of the success which should have attended it. To some extent, no doubt, this is due to the unfortunate business conditions which have prevailed for the last three years, and to the effect of the progressive cost and refinement of construction, and to the development of extreme and undesirable types in racing yachts; but it seems to us that it is also largely due to a want of interest on the part of the members of the club. There have been races and prizes enough to make a brilliant yachting season, if only the members of the club generally had lent the aid of their attendance and enthusiasm.

It is a fact that they have not done so, and that the measure of success which has attended the club's racing has been due more largely to the members of other clubs than to our own.

It seems to us that the difficulty lies largely in the fact that many members of the club who were active racing men a few years ago have more or less withdrawn from the sport, and their places have not been filled by younger men, and that the great necessity of the club is young blood—boys in their early enthusiasm for the sport, who will be easily inspired by the best traditions of the club, and whom a few years of association and experience will qualify to take the places of leadership in the conduct of the club's affairs. We hope the importance of thus developing our membership will be realized, and that an earnest effort to that end will be made.

We annex hereto a statement of receipts and expenditures of the committee. Respectfully submitted.

OLIVER E. CROMWELL, Chairman,
D. LE ROY DRESSER,

The Lake Associations.

As previously announced, the annual meeting of the Council of the Yacht Racing Union of the Great Lakes, with the special meeting of the Lake Y. R. A. and the Council meeting of the latter body, were held on Jan. 16, at the Tifft House, Buffalo, N. Y. A number of yachtsmen from the different Lake ports arrived in Buffalo on the previous evening and were entertained at dinner at the Hotel Iroquois by the Buffalo Y. C., Com. Hower presiding at the table.

The meeting of the Y. R. U. Council was called to order at 10:30 A. M. on Saturday, with Mr. Jarvis as temporary chairman. Those present were: S. H. Jones, of Toledo; E. W. Radder, Cleveland; E. H. Ambrose, Hamilton; Com. Hower, Buffalo; Æmilius Jarvis, Toronto, and E. A. Burroughs, Rochester. The first business after the reading of the minutes was the election of permanent officers, Mr. Jarvis being nominated and unanimously elected chairman. Mr. Radder was nominated for secretary, but refused to accept the office, nominating Mr. Fry, of Toledo, who was finally elected. Applications for membership from the Interlake Y. R. A., of Lake Erie, and Lake Y. R. A., of Lake Ontario, were considered and accepted.

The following amendments were then taken up in order:

AMENDMENTS NOTICE OF WHICH HAS BEEN GIVEN BY THE INTERLAKE YACHTING ASSOCIATION.

1. That the following be added to Rule XIV. as Section 4 thereof: "In yachts of the first and 52ft. classes one guest or owner may be carried; he shall not, however, assist in working the boat; also a cook and waiter if regularly employed during the season."

2. That Rules IV., VI. and VII. and Definition II. be amended by adding the words, "or brought to the Lakes after that date," after "1896," in each of these rules.

3. That the word "immersed" be inserted before the word "midship" and before the word "vertical" in Rule IV.

4. That the following be added to Rule XIV., Section 3: "but no yacht under and including the 42ft. class shall carry more than two professionals."

5. That Rule III. be amended by striking out the second paragraph of Section 2 and substituting therefor, "All yachts shall be measured for load waterline length with the same number of persons on board as constitute her crew, or in the absence of any person a dead weight of 150lbs. to be used."

The first and second were passed as printed; the third was then taken up. Mr. Jarvis proposed a different wording of the clause relating to the coefficient of the midship section, as follows: "The largest transverse section shall be taken as the midship section, and the parallelogram shall be taken to the lowest part of the vessel at this point, or forward of it. Of any greater depth which may be found aft of this point, one-third shall be added to the depth of the circumscribing parallelogram." He also introduced a new provision, that the Council may require that any yacht built prior to Nov. 6, 1896, and which shall fall below the limit of midship section called for in her class, shall give extra time in proportion to the formula established for the special 34ft. class of the Larchmont Y. C. In the case of Canada, with a coefficient of 28 per cent., the proposed standard being 35 per cent., the measurement would be increased 7 per cent., making an extra allowance to Zelma, with a 35 per cent. section, of 4½m. in 30 miles. This was carried, after a discussion, by a vote of 4 to 6, Messrs. Andrews and Burroughs, both under instructions from their clubs, voting against it.

The consideration of the fourth amendment was postponed until after the L. Y. R. A. meeting, and the fifth was taken up, in connection with the proposal of the Royal Hamilton Y. C. to limit the average weight of crew to 125lbs. Mr. W. P. Stephens was present, and on motion he was requested to give his views on the question of measurement with or without crew. After a great deal of debate the meeting adjourned at 12:50, to meet again in the evening after the meeting of the L. Y. R. A.

Immediately following a meeting of the Council of the L. Y. R. A. was held, most of the yachtsmen, not being engaged in this meeting, taking the opportunity for luncheon in the hotel.

The special meeting of the L. Y. R. A. was called to order at 2:30 by President Ambrose, there being present delegates from the Rochester, Oswego, Victoria, Royal Canadian, Royal Hamilton, Buffalo, Queen City and Kingston clubs. The Buffalo and Kingston clubs have just joined the Association, and as it was known that they would vote with the Royal Canadian Y. C., an objection was made to their recognition on the ground that they had been elected after and not prior to the annual meeting; but it was not sustained. The amendments to be considered were as follows:

AMENDMENTS NOTICE OF WHICH HAS BEEN GIVEN BY THE LAKE YACHT RACING ASSOCIATION.

1. That Section 2 of Rule I. be struck out.

2. That the second paragraph of Section 2 of Rule III. be amended by substituting "1?5" for "150" and adding the following to such paragraph: "But any yacht built prior to Nov. 7, 18 6, which by reason of being required to measure with crew on board shall exceed the upper limit of the class in which she has previously sailed shall be permitted to continue to sail in such class provided her measurement has not been increased since that date, but shall give time allowance from her actual r. l., notwithstanding any provision to the contrary in Rule VII."

3. That Section 3 of Rule III. be amended by striking out the words "fore side of the mast" in the second paragraph of measurement "J" under head sails, and substituting therefor "heel of the spinnaker boom when shipped in its place."

4. That Rule IV. be amended by inserting after the word "yacht" in the second line "over ?7ft. r. l.," and by striking out the words "extreme draft wherever found" and substituting therefor "draft at such section."

5. That the following be added to Rule V., Section 2, "except as provided in Rule III., paragraph 2."

6. That the following be inserted in Rule VII. after the word "other" in the fifth line: "except as required in Rule III., paragraph 2."

7. That the word "built" be substituted for the word "launched" in Rules IV., VI. and VII., and in Definition II.

8. That the following be added to Rule IX., Section 2: "A yacht chartered for the season shall be considered the property of the person or persons chartering it."

9. That the following be added to Rule XI., Section 3: "The regatta committee may in their discretion suspend this rule in the case of special races."

10. That Section 3 of Rule XIV. be amended by inserting after the word "yacht" in the first line "of 3?ft. r.l. or under," and striking out "and must be manned by Corinthians, except that any yacht may carry and use her regular professional crew."

11. That Rule XXX. be struck out.

12. That the following be inserted as Rule V. and the present Rule V. be numbered as Rule VI., etc.: "The frame, timbers, keels and planking in all wooden yachts built after Nov. 7, 1?96, or brought to the Lakes after that date, shall be restricted to the minimum sizes fixed in the table below;" and that the Council be recommended to employ an expert to advise on said table, and that the table, when prepared in this manner and notification of its approval given to the secretary by two-thirds of the members of the Council, be inserted in the said rule and become part thereof.

13. That Definition II. be amended by inserting after the word "section" in the last line "and size of timbers, keels and planking."

The situation when the meeting was called to order was no less complicated, and the various parties no less hostile than at the annual meeting at Rochester last month. The Royal Canadian Y. C. supported several propositions that the area of the midship section of yachts in the 32ft. and larger classes should not be less than 35 per cent. of the coefficient, as determined by the formula devised for the Larchmont special 34ft. class, at the same time agreeing that no limit should be placed upon the two smallest classes, 27 and 22ft.; that existing yachts of the 3?ft. and larger classes whose sections fell below the limit should give extra time according to the Larchmont formula or some other; that all yachts should be measured with crews on board, the average weight of crew being 150lbs., existing yachts being retained in their present classes. Incidentally, the R. C. Y. C. representative carried a deed of trust under which the owners of Canada proposed to establish the cup won by her from Vencedor as a permanent challenge cup for international competition. With the R. C. Y. C. were the Queen City, Rochester, Buffalo and Kingston clubs.

The Hamilton men, representing the Royal Hamilton and the Victoria Y. C., were, from their statements, in a very different position from that which it was supposed that they occupied at the Rochester meeting. It would appear that they are very strongly in favor of the restriction of the midship section according to the method proposed by Mr. Jarvis, and that they are in every way in favor of discouraging extreme types and encouraging a wholesome yacht. In evidence of this they went even further than the other party in proposing to restrict the coefficient of section in the 27 and 22ft. classes, naming a limit of 19 per cent. in the former and 15 per cent. in the latter. These figures were based on the two Hamilton boats, Hiawatha and Carull, both fin-keels, and the latter a Dyer boat of the extreme fin type, practically the same as Koko, whose lines have appeared in the FOREST AND STREAM. In addition to this, they proposed a minimum of 33⅓ per cent. for the larger classes and 30 per cent. for the 32ft. class. The amendment carried at Rochester by the Hamilton and Oswego delegates provided for a zigzag series of standard sections for each class, these standards being taken from existing boats of various types and ages in the Royal Hamilton or Royal Canadian yacht clubs. As it was practically necessary that the standards adopted by the L. Y. R. A. should also be adopted by the associations of the other lakes, the utter absurdity of the original amendment is plain on its face. The new proposal was more reasonable, with limits of 33⅓ per cent. and 30 per cent., but at the same time was inferior to the original proposition of 35 per cent. in the 32ft., 37ft., 42ft. and first classes.

In the matter of measurement of waterline, the Hamilton delegates opposed strenuously the proposal to measure with crew on board, and in the event of its passage were prepared to fight for a reduction of the limit to 125lbs. per man, instead of 150. These matters had already been the subject of dispute in the two clubs, the Royal Hamilton and the Victoria, the majority favoring them and binding the delegates rigidly to support them; the discussion in one club reached a point where it threatened to disrupt it, and one club had resolved to leave the Association in case its amendments were defeated. The position of the united delegates was that they would go no further under any circumstances than what they considered the compromise amendments offered by them.

The Oswego Y. C. had also held a meeting and instructed its delegate on two points: one being to introduce and support to the last a resolution that in future international races there should be no restriction whatever to the midship section except by mutual agreement; the other being the amendment to Section 10, by which professionals are freely allowed in all classes, except at the stick in the 32ft., 27ft. and 22ft. classes. So far as the limitation of section in all classes is concerned, the sentiment of the Oswego Y. C. seems to be in favor of no restrictions whatever on these points, the encouragement of the extreme fin-keel machine, and the employment of professionals both at the stick and about the deck, the club being in accord with Commodore Berriman, of Chicago. In order to secure the support of the Hamilton delegates for the resolution as to the unrestricted midship section in international races, the Oswego delegate pledged himself to vote for all of the proposals of the Hamilton club.

It is simply impossible to give even an outline of the discussion and action through the four hours' session of the Association; proposals of all kinds were brought forward, amended two or three times, and then voted down. The only motion which was carried unanimously was that of Sec. 12, calling for the establishment of a scheme of minimum scantling. The proposal to measure with crews aboard was voted down by the Hamilton and Oswego delegates, failing to obtain the necessary two-thirds vote, and the Oswego proposition as to international races came to an early end in the same way.

Com. Owain Martin, Queen City Y. C., offered several amendments in favor of limitations of scantling and the requirement of certain minimum weights of ballast in the smaller classes. Com. Martin stated in his remarks that the proxies given by the Queen City Y. C. delegates to the Rochester meeting only empowered the holder to oppose the restriction of section in the 27ft. class, and that the holder had exceeded his powers in voting on them against the restriction in the larger classes.

The situation soon resolved itself into a deadlock, the key being the Oswego delegate. He had fired his gun, the amendment calling for an unrestricted midship section in international races, with the aid of the Hamilton men; but it had missed fire, being voted down by a considerable majority. In return he was pledged to all of the points of his colleagues, and they held him to his pledge, thus preventing the other side from obtaining the two-thirds vote. A recess was taken for general lobbying, but apparently to no purpose, and it looked as though the meeting would adjourn with matters in such a state as would seriously impede the success of the general union on the Lakes. At about 6 o'clock an agreement was finally reached, that the coefficient should be 33⅓ per cent. in the 32ft. and higher classes, 19 per cent. in the 27ft., and 12 per cent. in the 22ft. The meeting then adjourned.

At 7:30 the Council of the Y. R. U. reconvened to complete its work by acting on the postponed amendments. It was resolved that Mr. W. P. Stephens be employed to draw up a scheme of scantling for all classes. The cup won by Canada was presented to the Union under conditions which we will give next week.

Canoeing.

Canoes for the Paddling Trophy.

KINGSTON, Ont., January.—*Editor Forest and Stream:* I am glad to see that Mr. Scott is not content to leave his motion regarding the dimensions of a paddling canoe to the tender mercies of the regatta committee, but has appealed to canoe men generally through your columns.

The object of the A. C. A. is to encourage the canoeist to learn all there is to know about canoeing, and if this object is to be attained his admission to the races at the meet must be made as easy as possible. Under present conditions those of us who do not possess a racing canoe, by which I mean a boat that is of no earthly use outside of a race, will hardly find it worth while to go into training if winning races is our aim. On one point, however, I do not entirely agree with Mr Scott. Where the canoes used are serviceable boats it may be very interesting to paddlers to see which one will develop most speed under the same conditions. Builders have, under the existing rules, constructed their boats either for speed or safety, but in not more than two or three models have the two qualities been combined, although nothing more desirable can be imagined on a cruise than a canoe which will carry two men and a light outfit and still be propelled with a minimum of exertion. The general idea of a cruising canoe is that of a decked boat too slow to sail races in; but, in Canadian waters at least, most of the cruising is done in open canoes, so that a fast boat of large carrying capacity is what is most needed. Such a craft can be built at a cost well within the means of every canoeist.

I think an exception should be made in the case of the "club fours paddling" event, because a 16ft. canoe, even with a depth of 14in., is hardly suitable for four men to paddle in, and the same objections do not apply to this as to the other races. It is not necessary that the canoe for this event should be owned by an individual, while it is desirable that a club should possess a boat capable of standing a good sea when manned by more than two men.

It must be evident to everyone who has attended the meets that the number of entries for the paddling races is ridiculously small when compared with the number of men in camp who can paddle, and it can do no harm to try the experiment for two or three years of restricting the races to safe, serviceable canoes. It is the opinion of all the racing men and practical canoeists with whom I have spoken that this class of canoe cannot be built of less dimensions or weight than those proposed by Mr. Scott.

R. EASTON BURNS.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Police Revolver Shooting Notes.

ON Jan. 12 and 13 the picked men from the first and second platoons of the New York police force met at the school for revolver practice in the Eighth Regiment Armory in competition to decide the captaincies and a composition of the two teams for the first six months of 1897. Three strings of five shots each were fired, and in each platoon the man making the highest score was appointed team captain. Following are the scores:

FIRST TEAM - FIRST PLATOON.

Jan. 13.	Rank.	Precinct.	Total.
Henry J Ebermann	Ptl	11	214
John Leddy	Ptl	34	202
Henry Schryver	Rds	4	199
Wm H Ward	Ptl	29	198
Henry J Stennes	Ptl	12	197—1,010

FIRST TEAM—SECOND PLATOON.

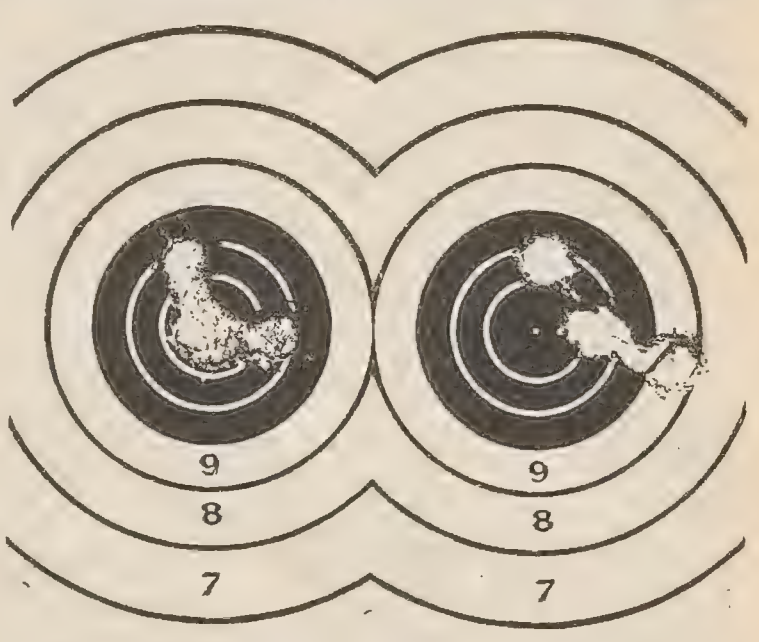
Jan. 12.	Rank.	Precinct.	Total.
Milton Woodbridge	Rds	35	216
George Brown	Act Rds	C O	203
John Townsend	Sergt	24	197
J J McNally	Sergt	27	196
George H Eckhoff	Ptl	10	182—994

As a result of the competition, Patrolman Henry J. Ebermann was appointed Captain of the First Platoon team, and Roundsman Milton Woodbridge Captain of the Second Platoon team.

In view of the fact that Capt. Petty and his assistants are barred out, Roundsman Woodbridge, with the highest score of the competition, 216 out of a possible 225, is virtually champion of the department.

Patrolman Ebermann has challenged him to shoot for the championship, and the match will probably take place at the time of the Sportsmen's Exposition. Sergt. Townsend is also a crack shot, but has not recently been shooting up to his usual form.

It has been decided to give medals to all members of the police force who qualify as marksmen or sharpshooters. The marksman's medal will be given to those who qualify by scoring 65 out of a possible 75 at 15yds. (Creedmoor target, 4in. bull), and the sharpshooter's emblem to those making 70 out of a possible 75 at 20yds.



Hereafter all teams representing the department will be chosen from the lists of those qualifying as sharpshooters. All matches will be at the 20yds. range, 4in. Creedmoor target, and four consecutive strings of 5 shots each will be fired by each man making a score of 100, the individual highest possible. Only the regulation police revolver with a length of barrel not exceeding 4in. exclusive of cylinder and plain open sights will be permitted. The regulations also call for plain open sights and a trigger pull not less than 3lbs. The regulation cartridge will be used.

Accidental shots count in the score, and no excuses are accepted except in case of misfires. Shots touching lines count for highest value in scoring.

On Monday, Jan. 18, teams from the Thirty-fourth and Thirty-eighth precincts shot a friendly match at the Armory.

Pocket Revolver Scores.

LAST week mention was made of some extremely good scores made by Capt. Petty at 10yds. with the new .32cal. police Colt, 4in. barrel and plain open sights. Through an oversight the targets which should have accompanied the note were omitted. We print them herewith without additional comment:

Cincinnati Rifle Association.

CINCINNATI, O., Jan. 10.—The following scores were made by members of the Cincinnati Rifle Association to-day. Conditions: 200yds., off-hand, at the standard target, 7-ring black. The day was a perfect one for good scores, and as a result some top scores were made. Capt. Gindele made two more 90s, and Wellinger made a clean score of 88 and also a 91 to his credit. Strickmeier is coming to the front, and bids fair to be one of the cracks. Roberts has three scores for the gold medal to day. Payne wins the gold badge.

Columbia Rifle Club.

SAN FRANCISCO, Cal., Jan. 12.—The opening shoot of the Columbia Club was held yesterday at Shell Mound, and much enthusiasm existed. The annual meeting for election of officers, adoption of programme, etc., was held on the 8th inst. Dr. L. O. Rodgers was re-elected President; M. J. White, Vice-President; F. O. Young, Secretary (reëlected); E. Hovey, Assistant Secretary; A. B. Dorrell, First Shooting Master, and J. E. Gorman, Second Shooting Master. The programme is a long and varied one. Medals are offered for target rifle, military rifle, .22cal. rifle, pistol and revolver. The medals are all made of gold and vary in value from $15 to $100. In addition, cash premiums from $5 to $25 are given on all targets to second, third and fourth men at the end of the year. Ladies are hereafter to be admitted to full membership. The club is developing some fine shots, and at all-round shooting would like to shoot any club in the United States. A resolution was adopted at the annual meeting extending the thanks of the club to the FOREST AND STREAM for publishing our scores. Scores of to-day's shoot:

Rifle, 200yds., class medals, for members only, 10 shots: Champion class—F. O. Young 54, D. W. McLaughlin 59, F. E. Mason 80, A. H. Pape 86, S. Ingalls 161.

First class—E. Jacobson 62, O. Bremer 74, H. Hellberg 99, A. Gehret 109, J. E. Klein 127, A. B. Dorrell 159.

Second class—J. E. Gorman 66, F. H. Bushnell 77, M. J. White 100, G. M. Barley 114.

Third class—H. J. Wicker 64, A. Hintemann 111, C. F. Waltham 149, W. Unfred 170, G. Manuel 172.

Rifle, re-entry, all-comers' matches, Bushnell medal, 3-shot scores, best ten scores to win, cash prizes: A. H. Pape 9, 11, F. O. Young 15, H. J. Wicker 20

Glindemann military medal, 10-shot scores, best ten scores to win, cash prizes, military count: E. Hovey 46, F. H. Bushnell 46, F. O. Young 45, C. F. Waltham 49, L. Barrere 42

Young rifle record medal, 10-shot scores, best single score to win: A. H. Pape 57, A. Gehret 65, F. E. Mason 74.

Pistol, 50yds., class medals for members, 10 shots: Champion Class—E. Hovey 39, A. B. Dorrell 42, F. O. Young 50, E. J. Gorman 50, A. H. Pape 56, C. M. Daiss 66.

First class—D. W. McLaughlin 74, Capt. J. E. Klein 78, E. Jacobson 84, M. J. White 84, F. E. Mason 85, A. Gehret 91.

Second class—G. M. Barley 59, O. Bremer 98, F. H. Bushnell 97.

Third class—A. Hinteman 85, R. W. Forest 132, H. J. Wicker 140, J. R. D. Gruff 151, W. Unfred 169.

Re-entry, all-com ers' matches, Blanding medal, 3-shot scores, best 10 scores to win, cash prizes: J. E. Gorman 9, F. O. Young 12, 12, F. H. Bushnell 11, A. B. Dorrell 26.

Carr revolver medal, any revolver, 6 shots, best 10 scores to win, cash prizes—C. Roberts 56.

Diamond pistol record medal, 10 shots, best single score to win—F. O. Young 39, E. J. Gorman 43, C. M. Daiss 46, A. H. Pape 47.

Roos .22-caliber rifle medal, 50yds, 5-shot scores, best 10 scores to win, cash prizes distributed on flags (shots in the 1in. center)—Mrs. L. J. Crane 16, Mrs. C. F. Waltham 16, Mrs. M. J. White 18, S. Ingalls 12, 12.

ROEEL.

Rifles and Pistols at the Exposition.

A NEW feature will be introduced this year at the Sportsmen's Exposition in the shape of contests for rifles and pistols. The plan of action will be decided this week, meetings having been called as follows: Committee on pistol contests, Thursday, 3 P. M.; committee on rifle contests, Friday, 3 P. M. The meetings will be held in the Sportsmen's Association's new quarters, 377 Broadway, corner Broadway and White street, tenth floor.

Trap-Shooting.

FIXTURES.

Jan. 20-21.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club. Sparrows. Royal Robinson, Sec'y.

Jan. 21.—BRANCHPORT, N. J.—Elkwood Park inaugural shoot.

Jan. 22.—YONKERS, N. Y.—Tournament of the Harriott Gun Club. Live birds and targets.

Jan. 23.—HACKENSACK, N. J.—Shoot for the E. C. cup. C. O. Gardner, Sec'y.

Jan. 23.—RUTHERFORD, N. J.—Invitation handicap sweepstake, 20 live birds, $15 entrance, birds included. Shoot will be held under the auspices of the Boiling Springs Gun Club.

Jan. 25-29.—SAN ANTONIO, Tex.—Second Texas Midwinter tournament. Targets and magautraps. $2,000 added. Under the management of J. M. George, Albert Steves and O. C. Guessaz, at San Pedro Springs grounds. Open to the world.

Jan. 29.—YONKERS, N. Y.—Tournament of the Harriott Gun Club. Live birds and targets.

Feb. 8-20.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live-bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Feb. 10.—HACKENSACK, N. J.—Second contest for the *Recreation* cup, under the auspices of the Bergen County Gun Club. C. O. Gardner, Sec'y.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK.—Interstate Association's fifth annual Grand American Handicap (live birds), at Elkwood Park. $1,000 guarunteed in the main event, all surplus added. Entries close March 20

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

It is by no means unusual for a shooter to protest some decision of the referee. Two cases came to our notice quite recently: One occurred at Detroit, Mich., on Jan. 6, in the Renick-Corbett match, reported in our issue of Jan. 16; the other was in the Winston-Mosher match at Yardville, N. J., on Jan. 16, when Winston protested against the scoring of a dead bird to Mosher, as mentioned in our report of that match given elsewhere in these columns. What strikes us as peculiar is that protests should be lodged when there is no tribunal before which such cases can be brought. The American Shooting Association, the organization under whose rules most of the matches in this country are shot, is dead. It would be quite feasible for the Sportsmen's Association to appoint a committee to criticise and decide protests made in matches shot under the set of rules it proposes to issue; but until there is some such tribunal it would be well for shooters to remember that the referee's decision "shall be final." At present, if the referee gives a decision any of you may think improper and not warranted by the facts, the only satisfaction you can enjoy is to tell him what you think of the decision in language couched only in terms formulated by books on etiquette. What the referee says, goes! See?

We regret that the programme for the Audubon Gun Club's first annual midwinter tournament at Buffalo, N. Y., reached us too late for any notice of it to be of benefit to the club. We regret this fact more particularly since the club has been kind enough to give FOREST AND STREAM a free advertisement in its programme, thus showing that it recognizes the good FOREST AND STREAM has done for it in the past. The tournament is open to all, but the club has also arranged a programme of five events each day open only to those who average 75 per cent. and under. The Rose system will be used, but the club reserves the right to change back to the "old system" whenever it may deem it advisable to do so. This applies only to target events. On the last day, in the live-bird events, the "old system" will prevail, but we presume the "droppers" will be watched.

On our way to Brunswick, Me., last Tuesday (Jan. 12) we met O. R Dickey at Boston, Mass. Dickey was looking just as well as ever, and inquired a good deal about the new grounds at Elkwood Park. The winner of last year's Grand American Handicap says that he will be on hand when time is called to start the Grand American Handicap of 1897. The Boston shooters display quite an interest in live-bird shooting considering that the laws of the State forbid the trapping of live birds. We also had a talk with Capt. Wadsworth, of the Boston Shooting Association, and it is more than probable that Capt. Wadsworth, Dickey and two or three friends will visit Elkwood Park the latter part of February for the purpose of looking over the grounds and doing a little live-bird shooting.

The Louis C. Kistner Gun Club was organized Jan. 12 with the following members: August Kistner, President; George Froeligh, Vice-President; Louis C Kistner, Secretary and Treasurer; Conrad Kistner, Trap Manager; George F. Back, Score Keeper; Samuel Winternitz, Wm. L. Ruhe, Albert Rose, George Young, Dr. Smith, Adam Young, John W. Buchta, Wm. Penn, Chester B. Lewis, C. Schlunis, Chas. Winternitz, Dr. George McAby, Dr. W. Roberts. The club will hold weekly live pigeon shoots at their grounds, Kistner's Locust Grove.

We regret to state that Eddie Hill, of Trenton, N. J., is dead. Our informant, Charlie Zwirlein, does not mention in his note to us the cause of his death, nor the date. Eddie was one of the best shots in New Jersey, and was but very little short of being in the front rank. It was always a pleasure to see him shoot a match; his quiet, gentlemanlike behavior being in marked contrast to that so often displayed by others.

Shooters in the vicinity of New York should not forget that the Elkwood Park's inaugural shoot takes place on Thursday next, Jan. 21. Messrs. Daly & Chanfrau, managers of the grounds, have arranged a programme to suit the occasion. A better opportunity of seeing the grounds and viewing the workings of all three sets of traps could not be offered. Bad weather would be but a slight bar to thorough enjoyment of the day's sport, still it is to be hoped that the day will be fine.

The testimonial shoot to Neaf Apgar gotten up by the Boiling Springs Gun Club, of Rutherford, N. J., on Jan. 16, was a pleasing success to its promoters. It is no easy matter to get thirty-nine shooters together nowadays, unless solid cash inducements are held out to them. Yet that number put in an appearance and shot along merrily, simply for the purpose of showing Neaf that they appreciated his labors in the past for the benefit of trap shooting

On Jan. 9 Hawkins and Hood Waters shot a race with Gent and Jones on the grounds of the Baltimore, Md., Shooting Association, of which all four shooters are members. The conditions as originally decided upon were: 25 live birds per man, losing team to pay for the birds and a wine supper. At the end of the 20th round, however, Gent and Johnson withdrew, being hopelessly out of the race. The scores for the 20 birds were: Hood Waters 19, Hawkins 19—38; Gent 12, Jones 16—28.

The Interstate Association's offer to hold a tournament at Lewiston, Me., during the coming summer has awakened the enthusiasm of the members of the local club. While at Brunswick, Me., during the past week, we had the pleasure of meeting G. R. Hunnewell, one of the moving spirits in matters of sport in that city. Mr. Hunnewell told us that he and the other members of the club would make that shoot the banner one on the Interstate circuit for 1897.

Lee Helgans, of Brooklyn, N. Y., did some good shooting at Dexter Park, L. I., on Jan. 13. The occasion was the monthly shoot of the Parkway Rod and Gun Club. Helgans, Tom Short and James Bennett had tied for the club badge with 7 straight. On the shoot-off miss-and-out Bennett retired after losing his third bird. Short and Helgans kept scoring bird after bird until Short lost his 14th bird, having run 20 straight; Helgans scored his bird, making it 21 straight for him.

The shooting committee of the Oritani Field Club, Hackensack, N. J., has organized for 1897 as follows: George Ricardo, Jr., captain; John R. Banta, secretary and treasurer; Robert B. Smith, president, chairman. Following are the fixtures: Regular club shoot, every Saturday; Oritani cup handicap, once a month; Oritani badge handicap, twice a month.

In New York city the tide of business is steadily flowing up-town. The W. Fred Quimby Company has now gotten in the stream and has floated up to 310 Broadway, one door below the W. R. A. Company. The firm will occupy one-half of the large store now bearing the name of "Conroy's," and will have ample room for its display of Smith guns and Hunter bicycles.

The Baker Gun Company, of Batavia, N. Y., will have two good representatives on the road this year. Their names are C. A. Damon and John Carraher. Charlie Damon will be well remembered in Western cities as the popular representative of the Burgess Gun Company, of Buffalo, N. Y.

At the regular annual meeting of the Greenville Gun Club, of the Pennsylvania and Ohio Border League, held on Tuesday, Jan. 5, the following officers were elected for the ensuing year: President, Dr. C. A. Miller; Vice President, Mr. King; Secretary, J. M. Reed; Assistant Secretary, Wm. F. Krighler; Treasurer, Ernest Whitmer; Directors, C. B. Shrom and J. A. McNary.

Mr. Haywood, representative of the Haywood-Spalding sporting goods house, Denver, Col., was one of the spectators at the Winston-Mosher match on Saturday, Jan. 16, at Yardville. On his way back, and while leaving the train at Jersey City, he was "touched" for his pocketbook, which contained the nice little roll of $98 in bills.

In our last issue we announced that the Auburn (N. Y.) Gun Club claimed the dates of June 8-11 for the annual shoot of the New York State Association. Auburn promises some good things, and there is no question but what all those good things will materialize under the guiding hands of Messrs. C. W. Tuttle, Geo. Corning, Jr., etc.

The migration of shooters to San Antonio, Tex., began last week. Ferd. Van Dyke, Rolla Heikes and O. R. Dickey have started for the Midwinter tournament, taking in the Limited Gun Club's sparrow shoot at Indianapolis. The trio will probably be heard from when the Hot Springs tournament starts on Feb. 8.

The South Side Gun Club, of Newark, N. J., elected the following governing committee at a recent meeting: L. Thomas, W. R. Hobart, I. H. Terrill, Asa Whitehead and J. H. Dawson. Mr. Thomas is president of the club, W. R. Hobart secretary-treasurer, and I. H. Terrill manager.

The West End Club, of Richmond, Va., will probably accept the offer of the Interstate Association for a tournament in that city. The schedule of dates for the Interstate circuit is not yet completed, but will be given to the public as soon as possible to avoid all clashing of dates.

Jim Elliott is certainly shooting live birds in great form. He did not have much margin to play on when he met J. D. Gay, of Pine Grove, Ky., on Saturday last, Jan. 16. Scores of 93 to 96 are good ones, no matter what class of birds were trapped. Elliott stood at 31yds., Gay at 29yds.

Manager Shaner, of the Interstate Association, writes us as follows: "In response to numerous inquiries for information relating to the Grand American Handicap tournament of 1897, I desire to state to the readers of FOREST AND STREAM that programmes containing detailed information will be ready for distribution on Feb. 10.

The first four entries for the Grand American Handicap are: No. 1, Old Hoss; No. 2, Sandy McPherson; No. 3, W. S. King; No. 4, J. G. Messner. All the above are from Pittsburg, and it is safe to say that the Smoky City will be represented by at least as many more shooters when the event itself is shot off.

The Harriot Gun Club, of Yonkers, N. Y., will hold shoots on its grounds on Jan. 22 and Jan. 29. Both live birds and targets will be trapped. The club's grounds are at Oak Hill Park. The secretary of the club is G. Banyer, and further information can be obtained from that gentleman.

On Wednesday, Jan. 13, Rolla Heikes and J. L. 147 Winston shot a friendly race at targets on the grounds of the Climax Gun Club at Fanwood, N. J. The conditions were: 100 targets, expert rules, one man up. Scores were: Heikes 81, Winston 79.

The Garden City Gun Club, of Chicago, has elected officers as follows: President, W. S. Cutler; Treasurer, Henry Levi; Secretary, R. W. Rixford; Captain, J. A. Ruble; Directors, F. E. Adams, J. C. Murphy and George Groll.

The King's Smokeless Gun Club will give their second annual tournament at East St. Louis, Ill., on May 26, 27, 28 and 29, the week following the Missouri State Game and Fish Protective Association, of Kansas City. W. Benckman, Secretary.

The following officers have been elected for the year 1897 by the Rockaway Point Rod and Gun Club: President, Joseph A. Bourke; Vice-President, Com. Edw. Spott; Secretary, J. H. W. Fleming; Treasurer, Edw. F. Bourke.

Justus von Lengerke is getting a little practice preliminary to entering for the Grand American Handicap. He shot well in the miss-and-outs at Zwirlein's after the Winston-Mosher match, scoring 17 out of 19 on good fast birds.

The invitation handicap live-bird race at the Boiling Springs Gun Club's grounds on Jan. 23 (Saturday next) promises to be a popular event. Entries must be made to Gus Greiff, at 8 Murray street, not later than Thursday, Jan. 21.

George Mosher made a good race of it with Winston for the Du Pont trophy. His score of 45 out of the last 50 looks very well on paper, but was even better than it looks, judging from what one hears as to the birds George drew.

King's Smokeless will be well represented at San Antonio. Miltl Lindsley, Wanda, Tom Keller, Jack Parker and John H. Mackie will all be there when the time comes for the first event to be started.

The West Chester Gun Club will give an all-day live-bird shoot on Thursday, Jan. 21, at the club grounds, West Chester, Pa. Shoot will commence at 10 A. M. F. H. Eachus, Secretary.

The Cleveland Target Company's advertisement in this week's issue tells another tale: Magautraps will be used at the New York State shoot at Auburn next June.

JAN. 19. EDWARD BANKS.

Oritana Field Club.

HACKENSACK, N. J., Jan. 9.—The regular shoot of the Oritana Field Club was held here to-day. Event No. 1 was at 15 known and 15 unknown angles, Nos. 2, 3 and 4 were at unknown angles, and No. 5 was at 5 pairs, unknown traps and angles. Scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

ROB ROY.

Le Roy Gun Club.

LE ROY, Pa., Jan 11.—The Le Roy Gun Club was organized here to day, with the following officers and members:

Robt. B. Holcomb, President; James Holcomb, Vice-President; Samuel D. Loyd, Secretary; Anson B. Carney, Treasurer; Clarival H. Holcomb, Chas. Whipple, Andrew Percival, Martin Morse, Chas. Dodge, Clarence Selleck, L. W. Quick, Chas. Walbourn, S. W. Harris, B. F. Smith, Rolley Holcomb, Artie Kelley, Scott Fellows.

We owe our existence as a gun club to B. F. Smith, who has worked for quite a while to get a club together. He has been visiting here for the past three months, and has done considerable practicing at the traps.

Most of us have never shot over traps before, and some never saw them. Scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

S. D. LOYD, Sec'y.

West Newburgh Gun and Rifle Association.

NEWBURGH, N. Y., Jan. 7.—We have started 1897 with weekly contests for two cash prizes, each prize to be won three times. To-day was the first contest, J. S. Taylor winning first and Dickson and Wood tieing for second. Another prize was also shot for at the same time. This was one of Laflin & Rand's silver kegs of W-A powder. Taylor won this, but as he won one of these trophies at our fall tournament in 1896, he kindly returned this prize to the club, and the same will be shot for on Jan. 14. The handicaps were awarded by Capt. J. A. Wood and gave general satisfaction. Scores were:

J S Taylor (4).1111011011110111101110111111101111111111111111111—43

No 15 was the club shoot for prize cup.

J. M. REED, Sec'y.

Charley Grimm on Championships.

CLEAR LAKE, Ia., Jan. 16.—*Editor Forest and Stream:* Your trap editor evidently thinks there is danger of trouble in regard to championships at live birds. Now I don't see how there can be any, nor why there should be any. He also says there is only one champion target shot in the United States, and that is true; all intelligent people here in the West concede this. The Schmeltzer trophy, or the Kansas City medal or trophy, as you choose to call it (and, by the way, the Kansas City medals are quite numerous), I understand represents the championship of America at reversed pull on targets; that is the way I read it somewhere, and that is the style that it is shot at.

Now then, for live birds we have the cast iron medal that Jim Elliott, Jack Brewer, Dr. Carver, myself and others helped to pay for, and pledged ourselves that it should hereafter represent the championship of the United States, and thus settle all disputes; for it was then and there that several claimed the championship of America, and also of the world; and the shooters put it up to settle this. I don't see how they can claim anything else for it now.

Then there is the Du Pont trophy, representing the championship of America with Du Pont powder, which is proper. Also the Kansas City *Star's* medal; I don't know just what it does represent, but it might be called the Star medal, or the Championship of the Stars. Your editor might think it all right to shoot for the two medals, not knowing the circumstances, but under the existing circumstances, as he will find them if he looks the matter up, I don't think he wants a new medal recognized every year or at every shooting match; too much like cutting their heads off with a hatchet. This would be pulling the live bird championship into the quicksands deeper, would it not?

C. M. GRIMM.

Joplin Gun Club.

JOPLIN, Mo., Jan. 10.—Below are the scores made on live birds to-day. All our shooters are amateurs on live birds, hence the comparatively low scores. The birds were a good lot, there being very few sitters among the lot. Scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Birds:	10	25	10	..	..	Birds:	10	25	10	..	..
Van	10	22	9	5	4	Cox	10	20	8	4	1

Morgan	9	20	7	5	5	Wetheral	..	..	..	0	..
Sergeant	9	23	10	1	2						

Nos. 4 and 5 were miss-and-outs.

W. G.

The South Side Gun Club,

Of Newark, N. J., has made an innovation. Hereafter the price of targets will be one cent each, and the governing committee hope that the increased attendance will prove the truth of the saying, "Large sales and small profits." Few clubs have better facilities for shooting than the South Side, either in convenience of access or promptness in service. So come along, boys, buy 100 empires for $1 and help the club to prove that a 50 per cent. reduction these hard times is a good thing for all.

W. R. HOBART, Sec'y.

IN NEW JERSEY.

AT ELKWOOD PARK.

Jan. 9.—Noel E. Money, of the American E. C. Powder Co.; his other-in-law, Mr. Kennard; Capt. Haywood, of Denver; Capt. anmer; J. L. 147 Winston, of the Austin Cartridge Co., and H. S. elles, of Spaldings, had a pleasant afternoon's sport at the Elkwood Park traps to-day. Sweeps were shot at both pigeons and ackbirds, and as the scores given below show, the number of blackds that escaped from the shooters was rather more than a fair erage. Sweeps at pigeons resulted as follows:

	No. 1.	No. 2.	No. 3.
inston	2222—4	222222—6	2020202022— 6

* Re-entries.

Jan. 16.—Nineteen events were shot off this afternoon at Elkwood rk. No. 1 was a 10-bird event, Patten and Toland being the only es to shoot out their scores. Nos. 2 and 3 were 5-bird events; the in No. 3 was shot off, Toland and Ellison dividing at the end of the st round of the ties. The tie in No. 18 was shot off in the next ent, Hoey winning at the end of the second round. Scores were:

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

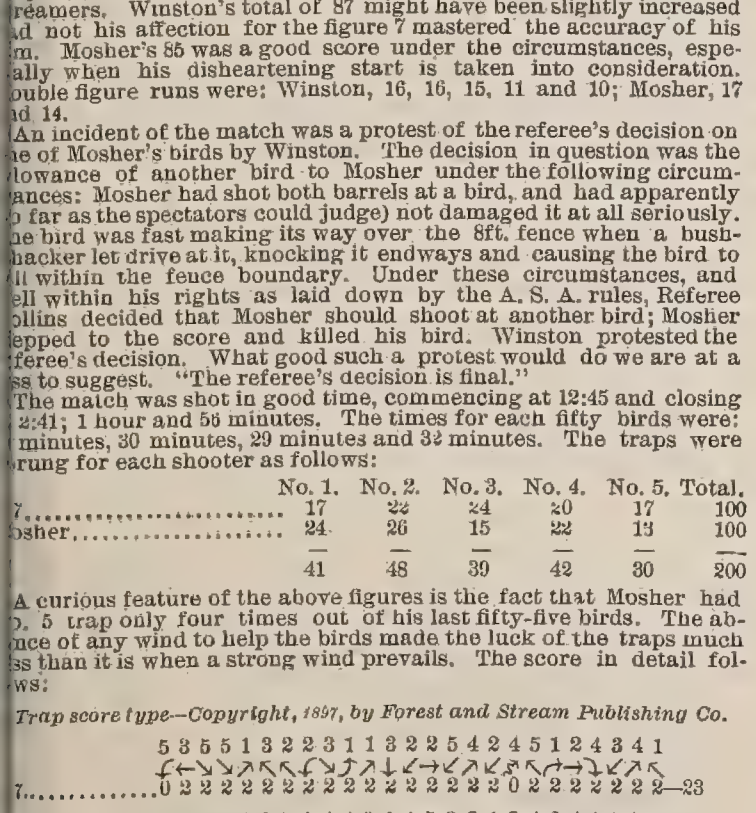
147 VERSUS MOSHER.

Jan. 16.—The match between John L. 147 Winston and Geo. A. sher, of Syracuse, N. Y., representative of the Syracuse Arms mpany, manufacturers of the Hollenbeck gun, took place to-day Yardville, N. J. The contest, as every shooter knows, was for the ssession of the Du Pont trophy, won by Winston from George Roll, Chicago, last December on John Watson's grounds. It will be remembered that there was some slight disregard of the conditions verning the challenges for this trophy when the Mosher challenge as made public, the irregularity having been quite unintentional on e part of either Winston or the challenger. This deviation from e rules, which prescribe that each challenger shall notify E. I. du nt de Nemours & Co. of his intentions, was passed over by the mpany in its anxiety to throw the competition for the cup "wide en," and to do away with any suspicion of an intention of making e challenges for the trophy a sort of "close corporation" business. further mistakes or irregularities are possible now. Mr. H. P. llins, the company's representative from Baltimore, Md., made an nouncement to-day that no challenges would be recognized except ien made in the regular way; that is, by depositing a forfeit, and tifying the company or its representative in due form. No chalge would be recognized if made upon the grounds after a match r the trophy, unless the challenger himself was present. (The ove is as the matter was reported to us by our representative.)

For to day's match Charlie Zwirlein had provided 250 all-blue birds, all in size and clean as to wings and tails. There was absolutely wind to help the birds at all, but still some of them left the traps th a rush that caused several ciphers to be registered on the score eets. Mr. H. P. Collins acted as referee on behalf of the company. It was generally supposed that Mosher would be an easy victim for s antagonist, but the result shows that when he once struck his it he pounded out 45 out of his last 50; and that too when he was pelessly in the rear. The luck of the birds decidedly favored Winon; 147 himself is authority for that statement. As a matter of ct both men had 58 birds that showed an outgoing tendency, but osher had ten twisters as against seven that fell to Winston. Dividg the best birds into "fast," "very fast" and "screamers," the ore sheet handed to us tells the following tale: Winston, 12 fast, 10 ry fast and 1 screamer; Mosher, 12 fast, 16 very fast and 2 reamers. Winston's total of 87 might have been slightly increased d not his affection for the figure 7 mastered the accuracy of his m. Mosher's 85 was a good score under the circumstances, espeally when his disheartening start is taken into consideration. ouble figure runs were: Winston, 16, 16, 15, 11 and 10; Mosher, 17 d 14.



An incident of the match was a protest of the referee's decision on ne of Mosher's birds by Winston. The decision in question was the lowance of another bird to Mosher under the following circumances: Mosher had shot both barrels at a bird, and had apparently far as the spectators could judge) not damaged it at all seriously. he bird was fast making its way over the 8ft. fence when a bushhacker let drive at it, knocking it endways and causing the bird to ll within the fence boundary. Under these circumstances, and ell within his rights as laid down by the A. S. A. rules, Referee llins decided that Mosher should shoot at another bird; Mosher epped to the score and killed his bird. Winston protested the feree's decision. What good such a protest would do we are at a ss to suggest. "The referee's decision is final."

The match was shot in good time, commencing at 12:45 and closing 2:41; 1 hour and 56 minutes. The times for each fifty birds were: minutes, 30 minutes, 29 minutes and 32 minutes. The traps were rung for each shooter as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
7	17	22	24	20	17	100
osher	24	26	15	22	13	100
	41	48	39	42	30	200

A curious feature of the above figures is the fact that Mosher had . 5 trap only four times out of his last fifty-five birds. The abnce of any wind to help the birds made the luck of the traps much ss than it is when a strong wind prevails. The score in detail fols:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

Other sweeps were shot as below, each being a miss-and-out; retry allowed in first round:

THE APGAR TESTIMONIAL SHOOT.

Jan. 16.—The Apgar testimonial shoot, gotten up by the Boiling rings Gun Club, of Rutherford, N. J., was a thorough success, notwithstanding the fact that the weather was damp and unpleasant. The attendance was good, thirty-nine shooters taking part in the various events shot off during the afternoon. It is a hard matter to get any shooters in New Jersey to put in an appearance at the traps any time before noon; hence, although the shoot was announced to commence at 10 A. M., it was well on to 1 P. M. before there was a full squad on hand. From that time until it was too dark to see a target flying over the meadows there was some rapid work at the traps. Almost 4,000 targets were thrown before the word to quit was given.

Among those who came to pay their respects to Neaf were: Dr. Mason, H. P. Dain and J. B. Halsted, from Peekskill, N. Y.; Noel E. Money, of the American E. C. Powder Co.; Ed Taylor, of the Laflin & Rand (W-A) Powder Co.; Colin R. Wise and a strong delegation from Passaic, N. J., including Capt. Hall, C. F. Lenone, Bowes, Coman, etc.; Frank Butler, from Nutley, N. J., with regrets from Miss Annie Oakley at her inability to be present; Eddie Collins, G. H. Piercy, A. R. Strader and L. Piercy, from the Endeavor Gun Club; J. S. S. Remsen, from Brooklyn, N. Y.; Warren Smith, of the Maplewoods, and a goodly number of the home club.

Scores ruled high, but W. H. Huck was the only one to make a 25 straight. L. Piercy, the fourteen-year-old son of G. H. Piercy, distinguished himself by scoring 24 out of 25 in event No. 10, and leading the whole of the 30 entries in that event! Everything was done by the club to make matters comfortable for Apgar's guests; the luncheon set out in the club house by Mrs. Rock, wife of the club's superintendent, playing an important part in the proceedings of the day.

In the last four 25-target events the seven highest totals for the 100 targets were: Collins and G. Piercy 91, Edwards and Mason 89, Warren Smith 88, Wise 87, Dain 85. Ed Taylor shot well in every event he took part in with the exception of No. 10; he attributes his improvement in form to the use of a certain load of his firm's W-A powder, loaded by the W. R. A. Company to a formula prepared by Ferd Van Dyke after exhaustive tests of the same at the company's works at New Haven. Noel Money shot in something like his old form when he "tried" real hard, and was as pleased as Punch to find that he could break 24 out of 25 occasionally. Jack Halsted was not in form at all, but his running mates, Mason and Dain, held up the Peekskill end in great shape. Warren Smith, president of the Maplewood, N. J., Gun Club, has been somewhat of a stranger at the traps for a long time; that he has not forgotten how to shoot is shown by his score of 88 out of 100. Taken altogether, the gathering was a very pleasant one, while the large attendance shows that Neaf is as popular as ever.

Owing to Ferd. Van Dyke being called away to attend to business for the Winchester Co., the team match arranged for to-day could not take place. The teams were: Van Dyke, Apgar and Wise against Remsen, Piercy and Edwards. Rolla Heikes had also intended to try his hand against time for 100 targets, but had to send his regrets owing to similar business arrangements with his company. Rolla's absence was a serious loss, several spectators having come to the grounds for seeing how the "daddy of 'em all" could break targets.

The scores in to-day's events were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	25	25	20	25	10	15	15	20	25	25	25	25

Lenone	..	..	..	..	..	..	..	..	..	18	17	20
Brown	..	..	..	..	..	..	..	..	..	..	6	4
Lancom	..	..	..	..	..	..	..	..	..	..	18	19
Coman	..	..	..	..	..	..	..	..	..	..	..	20

No. 3 was at 10 pairs; No 9 at known traps and angles; all other events were at unknown angles.

Event No. 13 was one of the regulation "moonlight excursions" that usually bring such shoots to a close. It was too dark to see the targets, and several referees were required to accurately report the result of each shot. The conditions were 25 targets, unknown angles. The scores were: Apgar 19, Wise 18, Edwards 16, G. Piercy 14, Strader 13, Lenone 11.

EDWARD BANKS.

BERGEN COUNTY GUN CLUB.

Jan. 9.—The Bergen County Gun Club held its weekly shoot on its grounds at Hackensack this afernoon. The day was bright and pleasant, and the home talent made a good showing, both as to numbers and in enthusiasm. Thirteen shooters faced the traps, and about 1,500 targets were thrown. The best scores on 25 targets were as follows: Horton 16, Van Keuren 21, Warner 13, Johnson 16, Packard 13, Ward 16, Jackson 18, Gardner 13, Chaffee 15, Lefferts 21, Banta 19, Bell 13, Brackett 15.

Under its new management this club is making an effort to get out some of the Hackensack field shots and to get them interested in trap-shooting; so far it is meeting with success. The assistance the club has received and is receiving from expert shooters, the members of other clubs and from the sporting goods houses, has infused it with considerable ginger and with quite a perceptible spirit of emulation among its members. When it is stated that (with only two or three exceptions) all the above-named shooters are less than 60 per cent. men and many are less than 50 per cent. men, the scores recorded are very creditable. By continued energy on the part of the management and the co-operation it is receiving, this club will at no distant day have among its members a home talent composed of new men in good substantial numbers, men to whom any good club man would gladly extend the right hand of fellowship. It will be a long time before they (the new men) can successfully compete in a long race with the expert trap-shooters of the old-established clubs, and we have much to learn from the old men; but we are in the field to learn all we can, and before long some of the old experts will smell our powder mighty close behind them.

E. G. HORTON, Captain.

A Prominent Sportsman.

CHICAGO, Ill., Dec. 31.—Speaking of newspaper work reminds me of a brilliant bit that was pulled off here in Chicago last week. The trap editor of an esteemed contemporary, or one of the trap editors, wound up a column of wisdom by quoting what a "prominent sportsman" of this city had said in corroboration of the position of the aforesaid trap editor or editors. The remark of the "prominent sportsman" had no quotation marks about it, nor anything else to convey the idea that it was not produced at first hand. But it did have a familiar look about it, and I looked in the columns of a daily paper here printed some days before that, and there found the original. Nothing very strange about this, of course, for all newspaper men know it is wise to take one's own no matter where it may be found, but the funny part of it follows. The suppositious sportsman in any good newspaper handling should have had a local habitation and a name. I found the reporter of the daily who had written the interview with the "prominent sportsman," and he admitted with a grin that there wasn't any such a man; that he had, in the parlance of the perfesh, "faked" the interview with the aforesaid "prominent sportsman" which the Chicago sporting paper had faked from him. This is a very easy way of getting news and facts, and an easy way, albeit not quite a new one, of finding support for one's own beliefs. But I beseech the trap editor or editors of the paper in question not to so afflict us. The great and good individual known as the "true sportsman" has had many sins committed in his name. Let us give the "prominent sportsman" a better show than that, and let us depart from such old and gauzy schemes of saving labor and dispensing with the truth. A newspaper should occasionally dispense the truth, not dispense at it or with it.

E. HOUGH.

Trap Around Pittsburg.

HERRON HILL GUN CLUB.

PITTSBURG, Pa., Jan. 11.—Two interesting matches were shot to-day on the grounds of the Herron Hill Gun Club at Davis Island. The first was between McPherson and Farmer, the result being a tie on 84 out of the 100 birds they each shot at. McPherson was clean out of form on the first 50, scoring only 39 to Farmer's 42. In the second half Sandy pulled up well, and scored 45 to 42. At the end of the 75th round he was only 1 behind Farmer, but went to the front when the latter lost his 78th and 79th birds. The score was a tie at the end of the 97th round, and when Farmer lost his 98th bird it looked as if Sandy was bound to win; he made it a tie by losing his last bird. Scores:

McPherson	2222222000222222222022—	21
	2222022200222020002222222—	18
	2222222222222222202222222—	24
	2222203222022222220121220	21—84
Farmer	2120022222204001222222122—	20
	2222202202222222222022222—	22
	2222022222222222202022222—	22
	2200202222220222222222012—	20—84

Fargo and Strong also shot a 50-bird race, Fargo winning easily by 5 birds with a score of 48 to 43. Fargo made a great run and looked like scoring his 50 straight; he spoiled his chances by dropping his 48th and 49th birds. Scores:

Fargo	2211212212212112222212222—	25
	2222222122222222222222001—	23—48
Strong	2222222202312221212122212—	24
	1102222202120220012220122—	19—43

Jan. 12.—Parker and Large shot a team race to-day for the suppers and the cost of the birds, their opponents being Moyer and Colt. The Parker-Large combination was a winner, Colt being badly out of form. The conditions were 15 live birds per man. Scores:

Parker	110110111111001—11	Moyer	011111111011111—13
Large	111111010110111—12—23	Colt	101100100011010— 7—20

Two other events were also shot, as below:

No. 1, 15 live birds: Parker 13, Moyer 12, Colt 11.

No. 2, 10 live birds: Moyer 9, Parker 9.

CROSSLAND VS. EWING.

Jan. 13.—Doc Ewing and John M. Crossland shot a race to-day at 25 live birds per man for $50 a side. The match took place on the old fort grounds, Marshall avenue, Allegheny. Crossland won by 23 to 18, Ewing having four of his birds fall dead out of bounds. The birds were a good lot of flyers. Scores:

Ewing	22111•021120111222••0122•—	18
Crossland	2122212222202212222211220—	23

AT BEAVER.

Jan. 13.—An interesting target shoot took place to-day at Beaver, the contestants being Elmer Jones, of that city, and E. L. Dunham, of Rochester. Both men are members of the Rochester (Pa.) Gun Club. The match was at 25 bluerocks each, Jones winning by a single break. Scores:

Jones	1111111111111111111011110—	23
Dunham	1111111111111111011010111—	22

Olathe Gun Club.

OLATHE, Kan., Jan. 1.—The Olathe Gun Club is an organization that knows how to enjoy itself. To-day the members turned out in force and faced the traps in a team-race made of "picked-up" sides. Many of the shooters had never shot at a target prior to to-day, while some of them said that they had never fired a gun off in their lives. No excuse was taken once the sides were chosen, so the boys went at it until it was too dark to see the targets. When the scores came to be figured up it was found that Captain Stevenson's team was winner by five targets, Captain F. Hodges's team scoring 135 to 140. Full scores follow, some of the shooters being unable to complete their scores on account of darkness:

Captain Stevenson's Team.

Ed Adair	0000110010000000009080000—	3
E D Warner	0001000001	— 2
Jim Orr	0000000101	— 2
John Woods	0001000110	— 3
Bert Gilbert	0000000111	— 3—135

During the evening thirty-eight members of the club and guests sat down to a banquet served at the Hotel Olathe, Capt. Hodges presiding. There was much interest evinced in the future of the club, and it may be taken for granted that much good resulted to the club from the carrying out of to-day's programme.

F.

New Haven Gun Club.

NEW HAVEN, Conn., Jan. 13.—The members of the above club held their regular monthly shoot this afternoon. This being the first shoot of the year, a large attendance was expected, but the cold weather kept away a number. The main event was the handicap at 30 singles for three merchandise prizes, with scores as follows:

		Hdcp.	
Van Dyke	1111111101111111111111111111—	29	0—29
Ortseifer	1110110110111111111111111011—	26	2—28

ROCKAWAY POINT ROD AND GUN CLUB.

Jan. 11.—The Rockaway Point Rod and Gun Club, a trap-shooting organization composed of New York and Brooklyn shooters who hold their monthly shoots at Rockaway Point, L. I., during the winter months, held its annual meeting and election of officers this evening. The foll wing offi ers were elected: President, Joseph A. Bourke; Vice-President, Major Edward Spott; Secretary, J. H. W. Fleming; Treasurer, Edward F. Bourke. The treasurer's report showed that the club was in excellent condition financially.

M'ALPIN DEFEATS WORK.

Jan. 12.—George S. McAlpin added another victory to his already long string by defeating George Work in a 200-bird match shot to-day on the grounds of the Westminster Kennel Club. The boundary was a short one, only 30yds.; this, added to the strong gale from the northwest that sent the birds away from the traps at an immense rate of speed, is the chief explanation of the otherwise low score. Taking the birds at their best, and also taking into consideration the extra good quality of George Mott's pigeons, McAlpin must surely consider himself lucky to have won from Work with the score of 151 out of 200, no matter how strong the wind was.

Work started out badly, losing 5 out of the first 8 shot at. Although he then pulled himself together and made a run of 13 straight, he was barely in it at any stage of the game, although he certainly had many chances of gaining on McAlpin time and again. The fact that the best he could do at any time was 19 out of 25 shows that Work is not in anything like his true form. His one big score at the Riverton grounds is about the only good shooting he has done this season.

McAlpin, on the other hand, has been making a record for himself in the past few months, and has done some extra good work with the gun. The short boundary to-day had unquestionably a great deal to do with the low scores, the number of "dead out of bounds" being respectively: McAlpin 13, Work 11.

The most interesting point of the match was at the end of the 93d round. Work was then 7 birds behind. McAlpin with 4 consecutive misses quickly reduced that lead to 3 birds, the score at the end of the 100th round standing 74 to 71 in McAlpin's favor. Although McAlpin lost his 101st bird, still further reducing his lead, Work once more began to lose birds in quick time, and was never again within good hailing distance. Scores:

PHENIX GUN CLUB.

Jan. 12.—Nine members of the Phenix Gun Club took part in the monthly live-bird shoot of the club held this afternoon at Dexter Park. The club event is at 15 live birds, and the badge this afternoon was won by Moses Chichester, who scored 14 out of his 15. He was closely pursued by W. Hughes, who scored 13, losing his 8th and 13th birds. Scores were:

M Chichester	111111102211121—14	J Smith	0111122021211101—11
W Hughes	111221.01212021—13	J C Henry	0?2?001022?1211—10

A Botty	0122202221210.0—11		

At the annual meeting of the club, held last night in the club's rooms, 232 Court street, Brooklyn, the following officers were elected for 1897: Pres., David Freleigh; Vice-Pres., Moses Chichester; Sec'y, J. H. Chasmer; Treas., John Akhurst. One of the members, Abram Rutan, having resigned from the club, Dr. C. B. Parker was elected in his place, the membership of the club being limited to 10.

ERIE GUN CLUB.

Jan. 13.—The regular monthly shoot of the Erie Gun Club was held at Dexter Park to-day. Four shooters scored all their birds in the club shoot, as below:

Chas Plate	1222222—7	J H Plate	21?0?22—6
H Dohrmann	2222212—7	Geo Fuchs	1011111—6

FOUNTAIN GUN CLUB, OF BROOKLYN.

Jan. 14—The annual meeting of the Fountain Gun Club, of Brooklyn, was held this evening in the club rooms, 361 Flatbush avenue, the president, Abel Crook, being in the chair. The election of officers for 1897 resulted as follows: President, Abel Crook; Vice-President, William R. Brixey; Secretary-Treasurer, John A. Carney; Trustees, Dr. A. Eddy, Dr. W. Wynn, L. T. Duryea, James E. Orr, Charles W. Wingert and William Siebert; Official Scorer, W. H. Lair. The presentation of the Brixey cup to the winner, W. H. Lair, was to have taken place to-night, but owing to Mr. Lair being confined to his home through sickness, the presentation was deferred to a future date.

The system of handicapping adopted for the ensuing year is as follows: Class A men, 29yds. and upward; class B men, 29yds. and below. There will be prizes donated by the club for competition in both classes.

NEW YORK GERMAN GUN CLUB.

Jan. 15—The New York German Gun Club, an organization which holds regular monthly live-bird shoots at Dexter Park, held its annual meeting and dinner this evening at 12 East Eighth street, New York city. The following list of officers were elected for the ensuing twelve months: President, August Schmitt; Vice-President John W llbrock; Treasurer, John P. Dannefelser; Secretary, G. A. Leutheusser; Captain, Fred Sauter; Auditing Committee, Wellbrock, Sauter and John Rockey; Handicapping Committee, John Schlicht, J. P. Dannefelser, Fred Sauter, J. Wellbrock and G. A. Leutheusser.

NEW UTRECHT GUN CLUB.

Jan. 16.—The regular weekly shoot of the New Utrecht Gun Club was held on Dyker Meadow to-day. The club shoot, which was at 25 targets, known traps, unknown angles, was won by Deacon, with 24 breaks to his credit. Sweeps Nos. 1, 2, 3 and 4 were at targets, unknown angles; Nos. 5, 6 and 7 were at 5 pairs. Scores:

Answers to Correspondents.

No notice taken of anonymous communications

H. F. B., Boston, Mass.—There is no reason why wild rice would not grow in your locality. See answer to J. P. C., Jr.

G. B. HILLERS—Grand American Handicap was shot at Dexter Park twice: April 5, 1893, and April 6, 1894; at Willard Park, Paterson, N. J., April 3–5, 1895; and at Elkwood Park, N. J., March 24–26, 1896.

ENGLAND, New York City. Please inform me what kind of rifle is most used for hunting in Africa? Ans. Double express rifles are commonly used for big game in Africa, though American repeating rifles and the new small-bore smokeless rifles are coming into more general use.

J. P. C., JR., Council's Station, N. C.—1. We see no reason why your wild rice did not grow unless it is that your seed was old. Wild rice seed soon loses its vitality, and it is always safest to plant in the early fall, as soon as the fresh seed can be obtained. Beginning with the latter part of September, you will always find the names of a number of reliable dealers in our advertising columns. 2. The bezoar stone found in deer is a calculous concretion which frequently appears in the intestines of certain ruminant animals, which used to be regarded as an antidote for poison, and a remedy for eruptive diseases.

J. A., Frankford, Pa.—1. Would you consider a 12-gauge gun, weight 7lbs. 13oz., reliable for shooting swans, geese and ducks? 2. The gun was targeted at 40yds. on a 30in. circle, loaded with 1⅛oz. of No. 7 Tatham chilled shot, 89grs. Du Pont's powder; each barrel threw 245 pellets in the circle. What kind of a target would you call that? 3. Would 32in. barrels have the advantage over 30in. for close and hard shooting? 4. Would there be very much advantage in having a 10-bore, weight 9 to 9½lbs., over the above-described gun for the above game? 5. Also, is it advisable to use light buckshot in a gun heavily choked? Ans. 1. Yes. 2. Good. 3. No; aside from the fact that they would burn heavy charges of black powder somewhat better. 4. For ducks, geese and swans the heavier gun is to be preferred. 5. Buckshot may be used in a choked gun, provided they chamber properly. Lay on a table the number of buckshot comprising a layer in one of your shells and invert your gun barrel over them. If they fit tightly or wedge it would not be safe to shoot them.

PUBLISHERS' DEPARTMENT.

The New York and Florida Limited.

A THROUGH route to southern Florida is afforded by the Florida Short Line, via the Pennsylvania R. R., Southern Railway, Florida Central & Peninsular R. R., and the Florida East Coast Railway. The new New York and Florida limited train reduces the time nearly two hours over previous running time, and makes the 1,000-mile journey in less than twenty-eight hours.

From winter to summer in a day's luxurious journey! From snow to the tropical palm in a day, with the fatigue of traveling having been rendered almost impossible by the wonderful management of one of the world's most progressive railroads. It sounds like an impossibility—a leaf from a fairy tale—but that is what the winter schedule of the Southern Railway Company means. Leave New York at noon to-day and to-morrow afternoon, at 4:40, you step off this superb Limited Pullman Vestibuled train at St. Augustine in a garden of flowers, and within view of the most beautiful hotels on this continent.

Unceasing and untiring in its efforts, the Southern Railway, with its ambition to provide absolutely perfect transportation between the North and the South, has, with its '96-'97 schedule, added another chapter to railroad history. Beginning Jan. 18, the Limited, between New York and St. Augustine, composed exclusively of a dining car, sleeping car, compartment car, library and observation car, will leave New York daily, except Sunday, at 12:10 noon.—*Adv.*

The J. Stevens Arms and Tool Co.

THE J. Stevens Arms and Tool Company and Wiebusch & Hilger, Ltd., announce that by mutual agreement the relationship of manufacturer and agent for many years existing between them is dissolved.

Hereafter Mr. Charles Folsom, 79 Chambers street, will be the New York agent for the Stevens Company.

The London, England, office of the J. Stevens Arms and Tool Company is 960 Tabernacle street, Finsbury, E. C.—*Adv.*

The Theory of Success.

THE New York Central management evidently proceeds on the theory that the more care there is taken of a traveler the more he will travel—witness its "Limited" trains, block signals, free attendants and the comfort and luxury surrounding one from beginning to end of a journey on "America's Greatest Railroad."—*Adv.*

A Treat for Artists.

THE autumn scenery of the Hudson River and Mohawk Valley lends additional charm to a trip over the New York Central at this season. Fourteen fast trains every day between New York and Buffalo and Niagara Falls.—*Adv.*

WHEN YOU GO SOUTH to the great Texas midwinter shooting carnival at San Antonio, or to the Arkansaw Traveler's annual winter tournament at Hot Springs, Ark., remember the Missouri Pacific R. R. When you go South for a bit of the best shooting in America, to the Texas Gulf Coast or the Indian Nations, remember the Missouri Pacific R. R. Elegant through trains out of St. Louis, with all the luxuries of modern travel. Special tournament rates. Address H. C. Townsend, G. P. A., St. Louis, Mo.—*Adv.*

CINCINNATI, Indianapolis, St. Louis reached quickest and most comfortably by the superb Southwestern Limited of the New York Central.—*Adv.*

A MODEL LIFE INSURANCE REPORT

THE first of the large life companies to publish its annual report for several years past has been the New York Life Insurance Company. This year it appeared in the afternoon papers of Jan. 9, with ample details of income, disbursements, policies issued and paid, and a complete list of its bonds and stocks owned. The list comprised 257 lots, with full particulars of name, date, rate of interest, date of maturity and market value. Of these securities the Company holds $113,446,867, over $10,000,000 of which are United States bonds.

We refer to this feature of the report at length because we think the Company is wise in thus taking the public into its confidence. A great corporation that appeals to the confidence of men—that asks them to place in trust with it funds for the maintenance of their families when they themselves shall have passed from earth—must give some tokens of being worthy of confidence. A great Life Insurance Company claims to have millions of dollars invested—nearly two hundred in this case—and it increases a man's interest and confidence at once when the Company says: "Here are our investments; look them over and see if they are not worth all we claim for them." The Company prints this list for distribution, together with a full description of every piece of real estate owned by or mortgaged to the Company. These lists are sent to any policy-holder who asks for them, and are freely used by agents in soliciting business.

The legitimate fruits of such methods in the management appear in the other portions of the report. Although 1896 was a hard year for business men generally, for reasons which are well known, yet the New York Life reports over $121,000,000 of new insurance paid for during the year, and an increase of paid-for insurance in force of over $27,000,000, the total in force on Jan. 1 being over $826,000,000. The total income for the year was over $39,000,000, total payments to policy-holders over $18,000,000, total assets Jan. 1, 1897, over $187,000,000, of which over $26,500,000 was surplus. The total number of policies now in force in the Company is about 300,000.

Another noticeable feature of the report is a comparison of the figures of the Company five years ago, when President McCall took office, with those of the present time. This comparison shows an increase of $61,000,000 in assets, $11,500,000 in surplus, $7,000,000 in annual income, and $251,000,000 insurance in force. The substance of a great company—greater than some that are fifty years old—has been added to the New York Life in the brief space of five years. Probably the most potent factor in the Company's growth has been the liberality of its policy contracts.

Five years ago it introduced the Accumulation Policy without restrictions of any sort, and with the one condition that the premiums be paid as agreed. During the past year the Company has added an annual cash surrender value feature to this policy, its aim being that its policies shall embody the best there is in life insurance. An Adjustable Accumulation Policy for sub-standard lives was also introduced in 1896, which provides insurance for those who are unable to pass the rigid examination necessary for acceptance on the ordinary plan. One of the new features introduced five years ago was that of loans to policy-holders upon their policies, after a certain number of premiums have been paid, and the Company publishes the statement that during 1896 it loaned direct to 4,250 of its policy-holders, on the sole security of their policies, upward of $3,000,000, at 5 per cent. per annum, without fee or other charge. Five years ago the Company's loans upon pledge of bonds and stocks were $4,551,000, and upon its own policies $521,700; now the loans upon pledge of bonds and stocks are $984,200, and the loans upon its own policies are $6,996,391.97. It is thus carrying out in good faith the declaration of President McCall when first elected, that he should "aim to conduct an administration of the policy-holders, by the policy-holders and for the policy-holders."

The Company's Accumulation policy, first announced in 1892, is now issued with guaranteed cash values or annual loans in any year after the third; allows a month's grace in the payment of all premiums after the first; provides for a reinstatement during the five months following the month of grace if the insured continues in good health; is automatically non-forfeitable after three years' premiums have been paid; is incontestable after one year and payable immediately upon approval of proofs of death. This policy contains no restrictions upon the insured, the one condition being that the premiums be duly paid.

Life insurance was never more important than now and the policy contracts were never so favorable to the policy-holder. If competition has not lowered the cost of insurance, it has at least provided a better article, in proof of which one has only to compare the iron-clad contracts of a few years ago with such a policy as that outlined above.—*Adv.*

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

ON A FISHERMAN.

A fisher, while he angled in a brook,
A dead man's skull by chance hung on his hook;
The pious man in pity did it take
To bury it, a grave with 's hand did make;
And as he digg'd, found gold; thus to good men,
Good turns with good turns are repay'd again.

Alexander Brome, 1664.

SNAP SHOTS.

AMONG the interesting game protective and game exploiting schemes of the day is the one just entered upon by the Province of Quebec. The system hitherto in force has been to exact a license fee from resident sportsmen, a permit to kill birds and animals costing $30; one to trap fur-bearing animals $25, and one to kill only birds $20 Under the new order, the entire unoccupied territory of the Province suitable for fishing or hunting will be divided into tracts of territory varying from 20 to 400 square miles each, and these individual tracts will be leased to sportsmen at certain fixed annual rentals. The leases will carry with them the exclusive right to hunting and fishing, and to trapping the fur-bearing animals. One who leases a tract of land for hunting purposes will control it absolutely, having the right to fence it, to employ wardens for keeping other people off, and in every way to maintain his exclusive privilege upon it. The non-resident license being abolished, the lessee of a tract will have the privilege of inviting all his friends to share in his privileges without cost to him or to themselves. The Government will give such protection as its newly organized service will secure to protect the lessee in his exclusive rights. A Government survey is now in progress marking out the boundaries of the territory which is to be leased, and the several lots will be sold at auction in March or April of this year. The territory comprises all of Labrador, a part of Gaspe and a portion of Ottawa Superior. So far as the Quebec authorities shall be successful in renting their wild lands they will convert their territory into one vast game preserve made up of individual tracts, upon which, as each club or individual shall protect his own grounds, better protection will be secured for the entire area than could ever be attained if the wild country were to be controlled by the Provincial authorities alone.

Scientific circles in Europe are shaken to their foundations, their centers and their peripheries, over the discovery of a learned psychologist. This psychologist has discovered that fishes possess the faculty of remembering, and this discovery brings grief and perplexity in its wake. The trouble lies here: It appears that all investigators of mental phenomona are unanimous in believing that the seat of the memory lies in the coating of the brain; hence a brain without a coating cannot possess the power of remembering. But the brains of fishes have no coating, hence fish cannot have memory—and yet they do. The learned psychologist believes that his investigations demonstrate that a fish remembers the prick that he has received from the hook, and may remember an individual who has fed him, as well as the place and the time where he has been accustomed to receive food. He implores the observations of other persons interested in fish to confirm or disprove his belief. What now are the other, presumably not less learned, investigators of mental phenomena going to do about this? Obviously only two courses are open to them to choose from: Either they must demonstrate that the learned psychologist is in error and that fishes have no memory, or they must acknowledge that they are wrong in their conclusions and that the seat of the memory is not in the coating of the brain, but is somewhere else. Until they have done one or the other of these two things scientific circles will continue to be shaken. Meantime we think that many of our angling readers will agree with the conclusions of the learned psychologist.

One of the most successful fish stocking enterprises lately entered upon is the transferring of fish from the Chesapeake and Ohio Canal to the waters of the Potomac River. This, as we have already recorded, is under the direction of Dr. Geo Massamore, of Baltimore, the Chief Deputy Game Warden of Maryland; and the work has been well done. Thousands of fish, comprising white perch and black bass, have been taken from the canal, whereas otherwise they would have been seined unlawfully for market or would have perished as the canal dried up in the spring. The work is receiving high commendation, particularly from the anglers of Washington, who are warm in their praises of Dr. Massamore's management of it.

Assistant Secretary of Agriculture Chas. W. Dabney, Jr., has prepared a plan for the consolidation into one great department of science of all the existing several Government bureaus which are maintained at public expense for the promotion of science and the development of the country's resources. These include the Department of Agriculture, with its Bureau of Economic Mammalogy and Ornithology, and the Fish Commission. Mr. Dabney's argument for the proposed change is that such a reorganization and placing of the different bureaus under one head would add to their individual and collective efficiency.

One of the first bills introduced into the Utah Legislature by a female representative was a measure to forbid the wearing of high hats in theaters; the Governor of Utah or some other Western State was importuned by a woman to introduce into his message a recommendation to forbid the wearing of corsets; New York has a bill to punish by imprisonment or fine anyone who publicly mutilates, tramples upon, or otherwise defaces or defiles the flag of the United States or the flag of the State; and Maine has a bill proposing the license of sportsmen's guides. One may readily appreciate and sympathize with the motive which probably is at the foundation of the proposed guide license law. The commissioners of Maine are quite well aware of the systematic and prevailing lawlessness of guides and sportsmen in the woods in the close season. The guide license system would involve on the part of the guide returning from an excursion to the woods a detailed statement of the happenings of the trip with respect to time, locality and game killed; and under the system the guide would be made responsible for any violation of the law committed with his connivance and consent. It is readily to be understood that if this rule were in operation it would go far toward putting an end to such unlawful game destruction. The average guide would not be so ready to kill a moose before the season opened, that he might preserve its head for the sportsman who came in after the law was off; nor would he be so willing to conduct a visitor into the woods in close time, that the employer might himself do the unlawful deed, if he knew that upon his return out of the wilderness he would be compelled under oath to make returns of what had been done.

For instance, we have the names of several individuals who with their guides killed moose in Maine in 1896 before the the law was off; we saw the other day a photograph of one man and his guide standing beside a moose they had killed in September. Now these men went into the woods and killed their game, and in defiance of the law, only because they were confident that the employer could escape from the State without detection. If the guide had been compelled to make a sworn return of the circumstances, we are sure that in the case of this particular individual who had himself photographed with his illicit booty the killing never would have taken place. As a game protective measure the proposed license system has very much in its favor, and it is possible that if it were to be proposed and were to be adopted purely as a game protective expedient it might be upheld by the courts as a constitutional measure. We have by no means yet determined fully in this country what may or may not be done for game protection. The decisions of the higher courts are all in favor of giving State authorities almost unrestrained power to hedge about the killing of the game with rules and regulations as strict as those which a private individual may exercise for the protection of his own live stock.

Aside from the purely protective aspect, however, the license system may have little said in its favor. The contention that a guide's occupation is one of skill and responsibility, in a degree calling for a license as a test of fitness, is idle talk The guide's is not a skilled occupation demanding civil service examinations and merit systems. The work of paddling a canoe, packing duffle across a carry, building camp and cutting firewood, no more ranks with the skilled arts than do the guide's home farm work of raising potatoes, foddering stock, churning and chores.

As for the reports which licensed guides would be required to give of their doings and the doings of their employers in the woods, these would be hardly less distasteful to the law abiding sportsman. Such a system of rule, regulation, inspection and detail would rob an outing of its satisfaction. For what is the chief compensation of a plunge into the woods, a free holiday of wildness in the wilderness, if it lies not in the throwing off of conventionalities and restraints? The invigoration of body and spirit comes not of the ozone and the sunlight alone, but of the abandon as well. It is this delicious freedom—freedom, not lawlessness—which is menaced by a proposed system calling for official details of the trip There is danger that with our multitudinous statutes governing the minutiæ of sport, with our artificial and fantastic and often in a growing degree ridiculous code of what is and what is not truly sportsmanlike, we are likely to forget the fine old arts of shooting and fishing. If we must regulate our every coming and going by meddlesome rule, impertinent regulation and a wet-blanket code, the peculiar delight of the woods will have been lost to us forever.

Things will have come to such a pass by and by that a man will have to show a civil service certificate before he can tell a fish story.

There has recently been established in this town a society for the reviving of ancient mysteries, and it is given out that a temple will be built at an enormous cost as a fitting shrine for the oracles and priests of the new order. The most ancient mystery in the world probably is how that grouse got away. It is one which has puzzled and baffled successive generations of mankind from the time of the cave dwellers down through the flint-spear, sling, arquebus and flint-lock stages to our own hammerless and smokeless arms of to-day.

Senator Sanger has introduced in the New York Senate a bill to repeal Section 249 of the game law, permitting the sale of game all the year around. This is the most important game measure of the entire list likely to come before the Legislature this session. It should have the support of sportsmen throughout the State; and one effective means of showing this support would be for each interested citizen to address his Senator and Assemblyman urging the passage of the Sanger repeal bill.

It will be recalled that the New York (city) Association for the Protection of Game has come to an understanding with the marketmen by which the two interests agree to a compromise as to game selling. The proposed seasons for possession and sale as assented to are: For venison, Aug. 31 to Oct. 31 for deer killed in the State, and Aug. 31 to March 1 for venison from other States. Wildfowl, April 1 to Sept. 1; quail, Oct. 1 to March 1; woodcock and grouse, Aug. 16 to March 1. This involves an opening of the quail season one month earlier than now, and an extension of the selling seasons of all game named beyond what the statute would provide if the laws were amended simply by the repeal of Section 249. The State Association at Syracuse the other day refused to unite with the city society in approving such a compromise.

The tenth annual banquet of the Megantic Club in Boston last week was, as always, a most enjoyable occasion. The banqueting hall was elaborately and fittingly decorated with trophies of the hunt; the attendance of members and guests was large, and the after-dinner speaking was most happy in its spirit. The Megantic membership is full, with many on the waiting list; the club's possessions are being improved every year, and the organization is in a prosperous and flourishing condition.

STORIES OF AN HEROIC AGE.

THE RETURN OF A WAR PARTY.

A Reminiscence of Charley Reynolds.

IT was in the autumn of 1875 that we were traveling westward across the buffalo-trodden plains of Montana. The days were hot and dusty, and on this day especially we had started very early. It was a long, hard march, but we pressed on, for we wanted to make Camp Lewis that night, and it was yet an hour or two before sundown, when the cottonwoods that fringed the Warm Spring Fork of the Judith River began to be seen. On the hills beyond and to the north of the point that we had headed for we could see far off many feeding animals, and as we drew a little nearer the different colors showed that they were not buffalo, but were either horses or cattle. We knew that there were no cattle in the country and that these could only be horses, and Indian horses, and that somewhere near at hand there must be a big camp. Charley Reynolds and I talked it over as we rode along, and decided that the Indians were probably Crows, though it was possible that they were a camp of Blackfeet, or even of Prairie Gros Ventres.

When we rode down into the valley where the white tents of the soldiers shone, and crossed the creek to the solitary building occupied by Reed, the post trader, we learned that the camp was one of 300 lodges of Mountain Crows, who had moved in only the day before. They had come just in order to take a hand in the excitement of the last twenty-four hours.

For several days a small war party of Sioux had been hovering around the soldiers' camp and trying to drive off the Government mules. As this was an infantry post, the soldiers could do nothing except look on at these attempts and guard their stock as carefully as possible. Two days before the eighteen Sioux had made another dash. They failed to get the mules, but had succeeded in driving off some horses belonging to Reed and to some men who were stopping with him. They had also killed a couple of recruits who were fishing at a big pool in the river quite close to the post.

One of the men at Reed's was Yellowstone Kelly, and when the Sioux were charging down on the camp, with one or two others he had run out to try to drive in the horses. The Sioux were too quick for them, however, and they had been obliged to content themselves with firing a few shots at the enemy at 500 or 600yds. distant, and then had seen the horses rounded up and driven away into the hills.

This was the story of the loss of the herd as Kelly told it to me afterward. He said: "We had just finished eating dinner when one of the boys in the store yelled: 'Indians, boys! Hostiles!' At the cry we grabbed our rifles and cartridge belts and rushed out of the cabin. Along the foothills, stretched out in loose order, we saw about eighteen or twenty Indians riding at an easy gallop in the direction of the pony herd, about three-quarters of a mile distant. Most of them had blankets wrapped closely around them, over or under the shoulders, and their every action was graceful as they rose and fell to the movement of their swift and agile ponies. They were so near that we could see their motions and could tell that their faces were turned toward us. They seemed to be watching our movements with an indifference that was very irritating. All this we saw at a glance.

"With us were two Prairie Gros Ventres—modest, unassuming young men, for Indians—who were stopping at the trading post for a few days. They had seven or eight ponies in that herd, and I suppose it flashed across their minds that they would have to give an account of those ponies when they returned to camp. Although our own ponies were safely cached in a coulee, I know that we—that is, Jack Mail, John Lee and myself—were instantly seized with a strong desire to frustrate the purpose of the Sioux. We all raced madly to cut them off. But running afoot at full speed just after eating is very disastrous to wind, and we never got closer than about 500yds. to the war party, who watched us, but kept on their way.

"As they bunched up a little before rounding up the herd, we threw ourselves on the ground and popped it to them with our rifles. It seemed as if some of the shots must have told, but the Indians paid no attention to us, and rounding up the herd struck for the foothills. Then we turned and plodded back to the cabin, but the Gros Ventre boys, who had followed our actions, rose from the ground and set out after the Sioux at full speed, and the last I saw of them they were rising a distant hill, still going along at the same steady dog trot."

WOODCOCK.

From the original photograph.

Not very far from Reed's two villages of Mountain Crows were camped, one being a day's ride to the northward, the other not so far to the west. To the first of these camps Kelly and another man rode to try to get the Crows to follow the Sioux, but for some reason the Indians declined to move. Long Horse's camp, however, which was further to the west, heard of the raid and at once moved up near to the post, and about 150 warriors started out on the trail of the Sioux. It was the horses of these Crows that we had seen on the hills. There were about 5,000 of them, and among them many spotted horses and mules. The pursuing warriors had not yet returned to the village when we arrived at the post.

Charley and I were hot, dusty and tired from our long ride, and the rush of the cool waters which flowed down from the mountains and by the camp was very attractive to both of us, and we agreed to go up the creek a little way and take a swim. Two or three kindly disposed individuals called out after us that we had better look out or we might lose our hair, as the recruits had done the day before; but we had our rifles with us and thought that we could take care of ourselves.

We went up to the deep pool where the recruits had been fishing when they were killed, and saw on the bank just above the pool the poor fellows' graves. It took but little time to strip and plunge into the sparkling water, and the pool was deep enough to swim in. It was delightfully fresh and cool, and we were swimming about, now and then dipping under like a couple of ducks—or perhaps geese—that had long been deprived of water, when suddenly on the bank above us a shot sounded, and we pulled for the shore and for our guns.

We seized our rifles and cartridge belts and looked for cover. There was no time for dressing, and with guns and belts in hands we crossed the stream, climbed up the bank and peered over it on the other side, where the two graves were. What we saw there at once showed that there was no danger for us. Galloping down the valley, and flanked on either side by a man dressed in superb war clothing, rode a naked Indian on a naked horse, carrying in his hand a pole to the end of which was tied a stretched scalp, the long hair of which blew out behind him in the breeze. His face was painted black and he was singing a song of war and triumph. The men who rode beside him were clad in shirts and leggins of white buckskin. Long war bonnets of eagle's feathers hung down behind them and blew out over their horses' hips. As they rode they sang, and as they sang they fired shots in the air. They were the *avant couriers* of the returning and triumphant war party.

We watched them down the valley, and then returning to our clothes dressed and clambered up on the bank just in time to see men, women and children swarm up the valley from the camp to meet the returning warriors, who now began to appear over the distant hills and to come down toward their home. On either hand the sight was a fine one. The women of the camp who had relations in the war party had bundled on all their finery and arranged themselves on either side of the valley so that the warriors could pass between them. Buckskin dresses heavily trimmed with elk teeth and beads and red cloth and fur, and painted robes, that today would be worth a small fortune, were common here. Many of the men carried bows and arrows, but there were a few sawed off needle guns, a few old Henry rifles, and a good many muzzleloaders. If the clothing of the women was fine, that of the men who were coming back from war was much finer. Before starting out in pursuit of the enemy the Crows had had time to dress and paint themselves and their horses most elaborately, and each man was equipped in his finest war costume.

The Mountain Crows a stark and sturdy race, the men big and fine looking as any Indians I have ever seen, except perhaps among the Cheyennes and Arapahoes. Their hair is long and often hangs down so that it rests upon the back of the rider's horse, and you can imagine that these splendid men attired in all their finery made a good appearance as they rode down toward us. They came in little groups. Eight, ten or a dozen would be clustered about some man who bore a scalp upon a pole; others went before, behind and on either side of some man who held an enemy's rifle. The captured war ponies ran loose among the throng, neighing to each other in shrill tones. From each group came the sound of singing, now loud, now low, and the burden of the 150 voices mingled with the high-pitched chant of the onlook-

ing women was pleasing and full of melody. All about us, as we stood there viewing this savage procession, were the men, the women and the children from the camp. Some of them sang, others chatted excitedly, while others still stood silent, impressed by the pageant and glorying in it.

Asleep in the arms of a sturdy Indian at my side lay a tow-headed baby two or three years old, as fair as any white child leading an outdoor life would have been. After the procession had passed I touched the Indian's shoulder and questioned him by signs, asking him if the baby was *Psá ra ka*, to which in reply he signed yes. As he turned to go the child awakened, yawned and stretched itself, and when it looked at me its eyes were as china blue as of the blondest baby in America. It was hard to believe that the infant had a drop of Indian blood in it veins, and I wondered if it might not be a captive or a stolen white child.

The procession passed on and the throng of onlookers duly trailed away in its wake, as, in the city, street boys follow close upon the heels of marching soldiers. We too were turning to go, but as I paused to light my pipe I glanced up toward the hills again and saw that something else was coming. Down the narrow trough of the valley walked a shock-headed Indian boy clad only in a shirt, leading a mule, and on the mule's back was a bundle done up in a green blanket. Not far behind the mule rode a man and woman and a well-grown boy. This was the body of Long Horse, the Crow chief, who had been killed in the battle and was now being brought back to the camp that he had ruled; and those following him were his father, his mother and his brother. Very melancholy were the songs of mourning which floated to us through the clear air, at first in disjointed quavers, but later, as the group drew nearer, in the connected form of a mourning chant.

We turned and walked down the valley toward the post not far from them, and as the mule with its burden passed the trading post the old man and his wife drew up and dismounted by the side of a wagon standing there. Each drew out a butcher knife, and the old man, resting the forefinger of his left hand on the pole of the wagon, chopped off the finger, and then remounting rode away. The old woman hacked off two fingers from her left hand, and then drew the knife three or four times across her head from crown to forehead, gashing it deeply so, that the blood followed the knife and streamed down over her countenance.

"There, you see," said Charley, as we watched the pair ride away, "these people are truly sorry for their friends who die."

It was an hour later, and we were still lounging at the store talking to Reed and Kelly, when the young brother who had been following Long Horse's body strode into the store, and, resting his left forefinger on the counter, chopped it off with his butcher knife and then went away.

So now in the Crow camp there was mourning for their loss, tempering the joy that came to them through the defeat and death of their enemies; and there were no public rejoicings over their victory until Long Horse had been buried.

The next morning early Charley and I got into the saddles and continued our journey, and we saw no more of these Crows. Later we heard from Yellowstone Kelly that Long Horse had been buried near the post in a lodge, that before it many horses had been killed for him to ride in the land of the shadows, and that over the fireplace in the burial lodge hung the scalp of one of the Sioux taken on that eventful day. GEO. BIRD GRINNELL.

TREASURE HUNTING.

Editor Forest and Stream:

I see that the columns of your paper are being taken up with treasure-hunting stories, and as I have been one of the hunters I can contribute my mite to the general fund. All the fools are not dead, and until that dismal day arrives treasure hunting will be followed.

Something like a year ago a half-breed Indian woman opened up an alleged silver mine some miles north of the city. She had some trouble with her title, which called in the services of myself and another illustrious attorney whom we will call the Judge. That resulted in our learning the history of the treasure. According to her story, she was the daughter of Chief McIntosh, who sold the tribal lands of the Creeks in Georgia to the United States Government. McIntosh was half a white man, and being a thrifty individual thought it a pity that so much good stuff should be wasted on redskins, and immediately departed for the territory, taking his family and, in a moment of forgetfulness, the treasure with him. But for some reason the Indians objected to the proceeding, and following him up eliminated him, but not till he had buried the treasure, consisting of 112 kegs of gold coin. She and Harry McGee, her cousin, were the sole surviving heirs of McIntosh, and held the secret. She had a map showing the location of the treasure at the junction of two creeks, the landmarks being a mountain, four white oaks, two walnuts and two Indian mounds. It was only eighteen miles away, so we concluded we would investigate.

At the appointed time she came with another woman we will call the Widow, and two of her miners, H. and M. The Judge and I made up the rest of the party. A trip of half a day over the worst of hill roads brought us to the promised land, only to find the place cultivated in a crop of cotton which had been lately gathered. A little negotiation with the owner, a thrifty Dutchman, arranged the question of search and board for the party, and then began the search. Harry McGee was to have met us there, but was conspicuous by his absence then and at all times, and I have never been satisfied of his existence at all.

The map was very accurate and showed Mamelle and Nowlin creeks, Pinnacle Mountain and all the other landmarks; but the trees were gone and the mounds had been plowed to the level. After long search we found traces of two stumps, and Mrs. Mack, our half-breed, located the spot. The Judge was an old Dakota miner, and by this time he had the jimmies. He and the miners went to work, while I directed the strategic part of the campaign, and during M.'s resting spells watched him make love to the Widow, who seemed no way averse. They were evidently at work on an Indian mound, for they dug up pottery, arrow heads, dead Indians and other relics; but no gold met our anxious eyes. Mrs. Mack and the Widow then held a consultation, at which we poor white trash were not allowed to be present. The result was that she announced that she could not locate the treasure in the absence of the landmarks without the help of McGee, and that M. and the Widow must go to his camp across the Arkansas River and bring him. M. would have gone to the devil if the Widow was going with him, and they took the team and departed, while the rest of us prepared for a day in the country waiting for their return. And it rained and we stayed in doors and lived on *kraut*.

About 9 o'clock the next night M. and the Widow returned. They had not found McGee, who was reported to have gone to the Territory, but brought back a female traveling fortune teller about the size and general appearance of a Dutch tobacco hogshead with a pumpkin on top for a head. She immediately went into conference with the women, while the rest of us said, "Bless it, we will hope." Hunting with a map was one thing and hunting with a fortune teller quite another. The women had all retired for a consultation, a sun dance or something like that, and after a while we were summoned to the presence of the freak. She delivered us a monologue about how she could summon spirits from the vasty deep, and how she had found a strayed mule in Argenta, and then proposed to find the treasure for $500 cash in advance. I had been elected spokesman and informed her that we were not as big fools as we looked, and that all we would do was to pay her $500 if she found the treasure, and if that did not suit her she could walk back where she came from, as she could not have our team. She was too fat to walk, and she consented to my terms after calling down on us the vengeance of her spirit guides for our obstinacy. I will say in passing that the aforesaid vengeance has not yet materialized.

The next morning came cold and foggy, and we proceeded to the field. The old girl waddled around it like a walrus on a piece of ice, and said a dark-complected man with long hair had been on the ground and his magnetism bothered her, and also that mine was very bad, and unless I left the field she would do nothing. So I took the boys out of the field and left the women in full possession. Our full-blown daisy then made some cabalistic figures on the ground, called the spirits—who were evidently busy somewhere else—and then called us back. She pointed out two stumps about 300*yds.* apart and said the treasure was on the line between them and about 3ft. deep. The state of my health did not require that I should take out any of that red clay, but the Judge and the two miners were full of the true mining spirit that goes out every morning with a brown-stone front in its eye and comes back at night with an empty belly. So they soon had the ditch laid out and went to work. All day they labored, and when night came the ditch was done and the daisy was $500 short.

The next day Mrs. Mack proposed to go to some rocks sculptured with hieroglyphics and get new landmarks. But there are some things I know, and one is when I have had enough treasure hunting and *kraut*. The rest went to look for the rocks and found them with undecipherable inscriptions on them, they said, and spent two weeks more in the search. What happened in that time I only know by hearsay, but for myself I am persuaded that three days' treasure hunting is an ample sufficiency, and that I can make more money replevying a blind mule than I can at that business. I am persuaded that treasure hunting is not my forte. UNO.

LITTLE ROCK, Ark., Jan. 19.

TIM, INTEGER VITÆ.—II.

THE railroad town of Deming had just sprung into existence. Slowly but surely the reign of the teamster was passing away in the great Southwest. Tales of the Santa Fe and Red River trails would soon live only in the traditions of nation building. I was a thorough "tenderfoot" on my way to Silver City. Thence as some passing whim in my search for health might direct me. The trip to Silver was a business proposition. That finished, my time was my own. Others had found strength and wealth in this unexplored country, old in the legend of Spanish padres and prehistoric Pueblos; why should not I?

It was with a mingled feeling of relief and disgust that I landed in a low, one-story building—hotel, lunch room, dance hall, gambling dive and office of the Silver City Forwarding Co. A freighter was going out in the morning and would be glad of company, so Manager Martin informed me. I looked around the throng of miners that were blowing in their hard-earned dust, of raw-boned, cursing bull-whackers and cowboys, of bedizzened Mexican women, of flashy faro dealers and poker sharps.

"Will you please point out the man?"

"Oh, you won't find him here. The cuss never drinks, and he's as hard to deal with as chaparral. If you strike him right he may take you for nothing. If you don't, he'll charge you a sackful, but he'll do anything in reason so long as there's money in it."

Through the livelong night there were riotous sounds of fights and carousings. The pistol crack was lost in the shrill accompaniment of harmonica and fiddle. Laughter and imprecation went side by side. As the sound of revelry died away I fell asleep. It was bright morning when I awoke. On all sides the frontier settlement was surrounded by a waste of sand, relieved on the north and west by gigantic yuccas that seemed palms in the allurement of distance. A hasty breakfast, followed by a few inquiries, brought the news that my charioteer had not yet put in an appearance, but all arrangements for my transportation had been made. I would walk along the trail to the northwest, leaving him to follow. So long as I kept the track we could not miss each other.

It was comparatively cool when I started. The air seemed life-giving from the mountains, not scorching from the deathly desert. At all events, it was in marked contrast with the foul atmosphere of the night. In half an hour I had reached the yucca grove. Yesterday amid the snows of the Raton Range; to-day in flowerland! Was there ever a more marvelous change? The sun rose higher and the heat became intense. I lay beneath the shade of a huge pyramid of creamy bells and waited. Up to this time there had been a strange dearth of animal life, but now long, spotted lizards came out, basked in the glow, and peered at me with their jeweled eyes. A tarantula wabbled toward me and I gave the gentleman right of way. After this I thought it unsafe to doze, not knowing what the tawny sands might bring forth. Tired nature, however, was not to be balked, I nodded, rested my head in my hands and—

"Hello, thar! I guess you're the feller I'm ter take ter Silver!"

The speaker pulled up his two span of mules and stuck his head from the dirty canvas protection of a prairie schooner. His red hair, yellow from years of exposure; his weather-beaten countenance, lank form, all seemed familiar, but where I had seen him I could not tell. After the outfit had resumed its course he opened the conversation.

"Wha're ye frum, stranger?"

"New York."

"Oh! I didn't know but yer come frum Noo Jarsey. No 'fense in askin', only I like to know the fellers I pack."

I looked him square in the eye, and the remembrance of that June day on the headwaters of the Raritan came to me like a flash.

"Tim!"

"Walt!" Then he paused, afraid to ask the question that was uppermost in his mind. "Hev ye seen Cynthy lately?"

"I saw her Christmas Sunday, singing in the choir just the same as ever. All the other faces were new, but she looked as sweet as she did twenty years ago—only a little older"

"Thank the Lord for that! It's jest the way I dream uv her on a Sunday arternoon. I kin see old hilltop an' her a-comin' frum meetin' ez plain ez ef it was right afore me eyes. She ain't married yit?"

"No, nor even keeping company. They say in Mendham that she's waiting for some one to come home to her."

"Waal, I guess she won't hev ter wait much longer. Say, Walt, I'm powerful glad ter see ye, powerful glad. Yer trip won't cost ye a durned cent, an' ef ye ain't tew busy I'll show ye the pootiest ranch in the mountains. Guess Cynthy 'll be tickled when she sees it," and he chuckled to himself at the very thought.

"What have you been doing, Tim, all these years?"

"It's a long story, boy, an' I don't talk much; but I almost feel like I wuz hum at seein' ye. Cynthy knows, but she don't say much nuther. Let me see. Ye know I never c'u'd git ahead tew hum, so I jest bucked the traces an' started West. I had enough ter git to Chicagy, an' then, bein' ez I war dead broke, I 'listed. They sent me daown to Tennessee, an' I wuz with Thomas tew Nashville; but the war didn't last long arter thet. Then I went over tew Missoury an' built me a cabin in the Ozarks. I trapped fur a couple o' winters, but thar ain't no money in trappin', an' besides it ain't a life fur a civilized human. Arter I'd saved a little stuff I bought a mewl team an' tuk ter freightin'. Been at it ever sence, allers keepin' ahead uv the railroads. That pays best. Four years ago I tuk up a little walley on the San Francisco River, between Silver an' Fort Wingate. Pootiest spot on 'arth. I kin raise garden sass an' sech, an' ye've got all God's kentry fur a range. Why, the deer come right tew yer door tew git a drink. Then I begun ter put my money inter stock, an' naow I hev two hundred head of beef critters, ez pooty ez ever wuz loaded on the keers. The only trouble is the ranch is tew plaguey close tew the Apaches ef they should ever break loose."

"But don't you get terribly lonesome?"

"Not so awrful. Ye see, I'm a-workin' fur Cynthy. The first thing I hear in the mornin' is the birds a-twitterin' 'Cynthy, Cynthy,' an' last thing at night is the water runnin' past my cabin still a-singin' 'Cynthy, Cynthy.' When I git tired uv meself I take a load of stuff tew Silver or tew the post. Miners an' sojers hez hard cash an' is free-handed. Mostly when I git lonesome is when I'm tew the camps. Sometimes it's plagued cold uv nights, an' in summer the hot sand sifts inter yer blankets most uncomfortable like. Then the boys comes out an' they sez, 'Come in, Tim, an' hev a little red licker an' a time with the gals, an' be sociable like.' But, somehow, I allers thinks to meself, 'What 'ud Cynthy say?' an' so I stay outside."

It did not take long to transact the necessary business in Silver City. Tim kindly waited for me, and then we started for his mountain-walled paradise. For a day and a half we journeyed slowly over the desert, which gradually became more rocky, but all the time with a heavy up grade. About noon of the second day vegetation changed. Yucca and cactus gave way to oak chaparral. There were signs of verdure in the cañons above us. New flowers bloomed beside the trail; new birds were building their nests and the breezes came fresh from unseen snowbanks. At 3 o'clock we halted at Oak Springs for lunch. To my surprise Tim belled one mule and hobbled two more.

"We'll git a deer in an hour. Thar'll be plenty a-feedin' araound afore long. This 'ere spring runs dry in April, but naow it's a reg'lar game presarve. It's only a short drive over the divide, and by noon we'll be hum."

Dinner over, Tim drew out something that betokened the same old hunter. It was a .40 90 Ballard. He knew that I had its mate among my traps. Our route led up to the pines, above which was glistening whiteness, but on the lower side they were fringed with succulent grama grasses and evergreen laurel.

"You jest lay here an' keep your eye peeled. I'll go yender an' wait for 'em. Don't wait on me an' don't get flustrated," with which parting injunction he stole, noiseless, out of sight.

It seemed as though I kept one position for an hour. My body was immovable, but I craned my neck and scanned every favorable nook. Then I heard a rustle behind me, followed by a clucking gobble. I looked. There were a drove of hen turkeys enjoying themselves and probably awaiting the coming of their leige. It was a great temptation, but I thought Tim would not like it, especially as he was stuck on getting venison.

A hundred yards or so from my stand was a cliff overhanging the trail, down which I expected the deer to appear on their way from upland glade. A movement on the rock caught my eye and completely diverted attention from the turkeys. A big, lithe, tawny object was crawling to the edge, crouching, quivering and switching his tail with expectancy. He saw something that I did not. It was my first view of a mountain lion. Drawing as fine a bead as possible, I blazed away. There was none of the fiendish shriek of a wounded cat of which I had heard so much, only an aimless spring into the gorge below. As he fell a doe bounded with a crash from the thicket and ran between Tim and myself. In the excitement I forgot that I needed not only a fresh shell, but that I should have ejected the empty one. So I foolishly

pulled the trigger as the crack of Tim's gun brought the young lady to the ground.

"You missed entirely," said Tim, as the smoke cleared away.

"I did not."

"Why, man, can't ye see thar's only one hole?"

"In the deer? Yes, but I've got a lion."

"The devil you have! Where is he?"

"Just up the trail."

The Rocky Mountain terror was too badly injured to get up, but he clawed and spit most horribly as we approached. Tim said that as he was my meat I should give him his *coup*. This time I remembered to put in a cartridge. This lion incident raised me 50 per cent. in Tim's estimation, and he offered me a ranch as good as his own if I would only join him permanently.

What a supper we had that night; what a breakfast in the morning, and with what glee Tim harnessed his mules for the last stage of the journey! It took but a short time to get over the divide, and then we swung down the long cañon of the upper San Francisco. The trail wormed in and out so that we could see but a few rods ahead. Suddenly Tim reined in his leaders. From far below came the sound of several men singing a wild cowboy song. Then we caught the refrain:

"She's a most attractive creature.
She is known both near and far;
An' she's called by those as love her
The Rose of Rocky Bar."

Tim seemed worried.

"That's the M. J. outfit drivin' aout thar steers when they orter be drivin' 'em in. I wonder what's up?"

We were not kept in long suspense. Great, gaunt, wide-horned Texans blocked our way. We halted for them to pass. The drivers did not wait to be interrogated.

"Better turn back, Tim; the 'Paches hez broke out again. More'n likely they'll strike your ranch to-night. If you hurry you kin round up a few head, maybe, an' get out with them. We ain't got time ter stop."

On sped the mules down the cañon at breakneck speed. If it had not been for the excitement I should have been terrified into jumping from my seat.

"We can see the ranch from the next turn," said Tim, slackening pace as he spoke. "Good God! what's that?"

The turn was made, but instead of cabin and stacks there was smoke and flame and the brutal yells of demonized savages. Tim grasped his field glass.

"Ef it warn't fur you an' Cynthy I'd go daown an' fight them Injun devils. We can't turn 'raound har, an' ef they see the wagon kiver we're gone. Take yer knife an' cut loose them leaders. Thar' used to ridin', both on em. Don't try to save the harness. Thar's a saddle in the back end. Git it. I kin ride bareback. Take yer gun an' fifty shells an' anything ye kin pack on ye. Be spry! We ain't got no time ter lose."

Even while he was talking it was done, and he and I were mounted, headed back on the Silver trail. As we started a louder shout proved that the wagon was discovered. Tim did not seem to care. He turned, shook his fist at the approaching Apaches; he was safe, for they were a full half mile away—and, for the first and only time in my acquaintance with him, I heard him utter a curse. Then we galloped back. Passing the cow punchers we gave them the startling news, but did not pause to see its effect. On, on, on! Half an hour's rest at Oak Springs for the mules to water and get a bite, then boots and saddles again, back over the desert that we had traveled so joyously the day before. It was in the gray of dawn that our steeds brought us into Silver. The news of the raid was before us. The whole camp was alarmed, and fugitives were constantly arriving from their herds or prospect holes.

"Walt," said Tim, as we dismounted, "the stage is jest a-goin'. She's full inside, but you kin climb on top. Thar naow, not a word! I'm a-goin' back tew save what I kin. I'll hev a hum fur Cynthy yet. Tell her—" A tear stood in his eye. "Tell Cynthy that I wuz powerful glad to see ye—powerful glad."

One pressure of the hand and Tim had disappeared in the crowd as completely as though the ground had swallowed him. A whip crack! I was riding back to Deming, the railroad and civilization. SHOSHONE.

AS IN THESE SIX STATES, SO THROUGHOUT THE UNION.

From Indiana.

I INCLOSE my check for another year's subscrip ion to FOREST AND STREAM. Although a little late, I had no thought of not renewing; could not do without it. Fred Mather's "Men I Have Fished With" has alone been worth the yearly subscription. JOHN G. MOTT.

From Ohio.

Your card of 18th inst. advising me that my subscription to dear old FOREST AND STREAM has expired is at hand. I am "chained to business," hence am compelled to do the next thing—read your delightful, entertaining and instructive journal. Push along extension of Yellowstone National Park and send FOREST AND STREAM with unfailing regularity, for which I inclose check for $4.

L. B. YAPLE.

From Kansas.

As I get old the reading of your delightful paper grows more and more interesting. My children gave me for Christmas "Uncle Lisha's Shop" and "Sam Lovel's Camps," both of which I had read in FOREST AND STREAM, but was glad to get them in book form. I wish I could thank Fred Mather for his late letters. They breathe the kindly spirit of fellowship. I love him for the friends he has made. O. S. WOODWARD.

From New York.

I inclose check for renewal of my subscription. To live without the weekly treat I get from this paper would be worse than to have to live on one meal a day. JNO. BOULTON SIMPSON.

From Maine.

Inclosed I send check for $4 to renew my paper. This will make twenty years I have been a constant subscriber and reader of FOREST AND STREAM. T. H. WYMAN.

From Pennsylvania.

ERIE, Pa.—Inclosed please find $1 for six months' subscription for the old paper. It's hard times, and I'm out of work; but I have taken and now have every number since 1880. F.

Natural History.

BENDIRE'S LIFE HISTORIES OF N. A. BIRDS.

ORNITHOLOGISTS everywhere have extended a hearty welcome to the second volume of Major Bendire's great work, which appeared some little time ago. Yet it is not the ornithologists only, but everyone who is interested in birds or in facts about natural history, who will wish to see this second part of the work.

Like its predecessor, this second part is published as a Special Bulletin of the United States National Museum, and, like the first volume, it bears the title, "Life Histories of North American Birds, with Special Reference to their Breeding Habits, Nests and Eggs." Of course, Major Bendire is best known to a large section of the public as an oölogist, but nowhere in this work has he confined himself to this branch of his subject. Instead of this he gives us life histories, and as a part of each life history has to do with the reproduction of the species, we are of course given a full account of the breeding habits, the home and the eggs.

The processes of reproduction, though they occupy only a short time, may not be separated from the general account of the bird's life. The same law that brought about the development of life upon the earth decrees that life shall continue here until such time as it shall have ceased to play a useful part on the fragment of the universe which we know. As the existence of the individual is brief, the continuance of the life of any species depends wholly upon its reproduction of its kind, and it seems certain that the reproductive function is the most important one of life; that it is the chief end of the species.

Among our wild birds the whole existence of the individual is a preparation for this function and its accompanying duties. The spring is spent in finding the breeding place, in nest building, and in bringing forth the egg; the summer in caring for and rearing the tender young; the autumn in recuperation from the fatigues of the breeding season and in a deliberate journey toward the winter home; the winter in resting and in accumulating vigor.

Major Bendire's first volume contained, as will be remembered, the game birds and those which are commonly termed rapacious. Thus the grouse, partridges, turkeys, curassows, pigeons and doves shared the volume with the vultures, eagles, hawks and owls. It is about four years since we called attention in the columns of FOREST AND STREAM to this important work, which contains the only modern biographies of the species noticed, so far as we are aware.

The present volume carries on Major Bendire's work from the parrots to the grackles, and thus covers about 200 species and sub-species, the groups treated being the parrots, cuckoos, trogons, kingfishers, woodpeckers, goatsuckers, swifts and hummingbirds, fly-catchers, larks, crows and jays, starlings, blackbirds and orioles. The volume contains more than 500 printed pages, together with seven beautiful lithographic plates. It is a large quarto.

Major Bendire's very extensive knowledge of the species described is supplemented by testimony and notes from his very wide circle of friends and admirers among ornithologists all over the country. He has thus brought out and published in its pages almost everything that is known about any species up to date.

Though perhaps it has not the same popular interest, the present work fully equals in importance the earlier part, and it undoubtedly represents considerably more labor than that, for the reason that the number of species considered is greater, and that many of them are but little known, and so require much time and investigation in order to give anything like a complete history of the life of the species.

These splendid volumes are not only enduring monuments to Major Bendire's energy, patience and assiduity in the accumulation of material, but they also show how much a man may accomplish in his leisure moments, if his devotion to the occupation of his leisure is real. Major Bendire has been all his life a soldier, yet it is not as a soldier that he has made himself famous, for while Bendire the soldier may be forgotten, Bendire the ornithologist will have an enduring remembrance. It is unfortunate that the second of these volumes could not have appeared earlier, but it is well understood that this is not the fault of the author. He was prepared to furnish in quick succession the material for this and other volumes, if only the meshes of governmental red tape could have been untangled or cut. The delay has been a real loss to science.

It is certain that the demand for this most valuable work will be very great, and the completion of the second part has laid ornithologists under fresh obligations to Major Bendire.

Some time ago in FOREST AND STREAM we were permitted to print Major Bendire's extremely interesting paper on the magpie, and those of our readers who remember this, as well as the extracts printed from his earlier volume, can appreciate the charming style in which these biographies are written. There is about them nothing that is sentimental. It is a plain, straightforward statement of facts, chiefly the recording of observations, though now and then the author does announce his own beliefs, especially when they are at variance with those of other observers. Although they are in no sense sentimental, at the same time these biographies are full of feeling, and no one can read them without coming to share with Major Bendire his love for the birds he has studied so long.

We cannot convey what this charm is in any other way so well as by quoting one of the biographies which Major Bendire has given us, and for this we select the first in the book, the Carolina paroquet. This species possesses an exceptional interest on account of the rapidity with which its numbers are decreasing. The day is not far distant when it will be extinct. Major Bendire says:

"The range of the Carolina paroquet, the only representative in the United States of this numerous family, is yearly becoming more and more restricted, and is now mainly confined to some of the less accessible portions of southern Florida, and to very limited areas in the sparsely settled sections of the Indian Territory, where it is only a question of a few years before its total extermination will be accomplished. Formerly this species had quite an extensive distribution in the United States, ranging from Florida, the Gulf, and the South Atlantic States generally, north to Maryland, Pennsylvania, Ohio, Indiana, Illinois and Nebraska, and casually even to Michigan and New York, while west it reached to Texas and eastern Colorado. It was especially common then throughout the entire Mississippi Valley and the heavily timbered bottom lands of the larger tributaries of the stream.

"With the more general settlement of the regions inhabited by these birds, their numbers have gradually but steadily diminished, and even as early as 1832 Audubon speaks of their not being nearly as common as formerly. As late, however, as 1860 they were still comparatively numerous throughout the Gulf States and the Mississippi, Arkansas and White River valleys; and I well remember seeing large flocks of these birds throughout that year in the vicinity of Fort Smith, Ark., and near several of the military posts in the Indian Territory.

"At present it is very doubtful if the Carolina paroquet can be considered a resident anywhere excepting the localities already mentioned, and it is rapidly disappearing from these, especially the Indian Territory. Occasionally a pair are still seen in southern Louisiana, and as late as the fall of 1891 Mr. Thurman S. Powell saw a couple at the Linchpin camping grounds, Stone county, Mo. Although rather restless birds at all times, they can generally be considered as residents wherever found, roving about from place to place in search of suitable feeding grounds, and usually returning to the same roosting place, some large hollow tree, to which they retire at night, hooking or suspending themselves by their powerful beaks and claws to the inner rough wall of the cavity.

"Previous to the more extensive settlement of the country, their food consisted of the seeds of the cocklebur (*Xantheum strumarium*), the round seed balls of the sycamore, those of the cypress, pecan, and beechnuts, the fruit of the papaw (*Asimina trilobata*), mulberries, wild grapes, and various other wild berries. According to Mr. J. F. Menge, they also feed on the seeds extracted from pine cones, and those of the burgrass or sand bur (*Cenchras tribuloides*), one of the most noxious weeds known. They are also rather fond of cultivated fruit, and in Florida they have acquired a taste for oranges and bananas. They are also partial to different kinds of grain while in the milk. Mr. Frank M. Chapman states that while collecting on the Sebastian River, Fla., in March, 1890, he found them feeding on the milky seeds of a species of thistle (*Cirsium lecontei*), which, as far as he could learn, constituted their entire food at that season. He says: 'Not a patch of thistles did we find which had not been visited by them, the headless stalks showing clearly where the thistles had been neatly severed by the sharp, chisel-like bill, while the ground beneath favorite trees would be strewn with the scattered down.'*

"According to the observations of Mr. August Koch, published in FOREST AND STREAM, Sept. 24, 1891, they also feed on the red blossoms of a species of maple (*Acer rubrum*). In the vicinity of Fort Smith, Ark., during the fall and winter of 1860–61, I frequently saw flocks of these birds in osage orange trees, which attain a large size here, biting off the fruit and feeding on the tender buds; here they were also accused of doing considerable injury to Indian corn while still in the milk, and many were shot for this reason, and there is no doubt that they do more or less damage to both fruit and grain.

"Although clumsy-looking birds on the ground, it is astonishing how readily they move about on the slenderest limbs in trees, frequently hanging head down like crossbills and redpolls, nipping off the seed bulbs of the sycamores, etc., and swinging themselves, with the assistance of their powerful beaks, from the extremity of one branch to another.

"Their flight, which is more or less undulating, resembles that of the passenger pigeon, and again that of the falcons; it is extremely swift and graceful, enabling them, even when flying in rather compact flocks, to dart in and out of the densest timber with perfect ease. Their call notes are shrill and disagreeable, a kind of grating, metallic shriek, and they are especially noisy while on the wing. Among the calls is one resembling the shrill cry of a goose, which is frequently uttered for minutes at a time. Formerly they moved about in good-sized and compact flocks, often numbering hundreds, while now it is a rare occurrence to see more than twenty together, more often small companies of from six to twelve. When at rest in the middle of the day on some favorite tree they sometimes utter low notes, as if talking to each other; but more often they remain entirely silent, and are then extremely difficult to discover, as their plumage harmonizes and blends thoroughly with the surrounding foliage.

"They are most active in the early morning, and again in the evening, while the hotter parts of the day are spent in thick-foliaged and shady trees. They are partial to heavily timbered bottom lands bordering the larger streams, and the heavy cypress swamps which are such a common feature of many of our Southern States. Social birds as they are, they are rarely seen alone, and if one is accidentally wounded the others hover around the injured one until sometimes the whole flock is exterminated. This devotion to one another has cost them dearly, and many thousands have been destroyed in this way.

"Mr. E. A. McIlhenny has kindly furnished me with the following notes on their habits as observed by him in southern Louisiana, where the species was still comparatively abundant a few years ago, but has now nearly disappeared:

"'The Carolina paroquet may be looked for in this section about April 25, or when the black mulberries begin to ripen. This fruit seemed to be their favorite food, and in the morning from sunrise to about 7 o'clock, and in the evening from 5 o'clock to sunset, at which hours they feed, they were to be found in the mulberry groves. They spent the rest of the day and roosted at night in the live oak timber. In the morning, just before sunrise, they mounted the tallest trees, congregating in small bands, all the while talking at a great rate. As the sun rises they take flight for the nearest mulberry grove, where they partake of their morning meal amidst a great amount of noise. After they have eaten their fill they generally go to the nearest stream, where they drink and bathe; they then go to some dense oak timber, where they pass the heat of the day. After they get in the oaks they rarely utter a sound. In the afternoon they go through the same performance, with the exception of going to the water.

* Proceedings of the Linnæan Society, New York, for the year ending March 7, 1890.

" 'The flight of the Carolina paroquet, once seen, is never o be forgotten; it is undulating, somewhat like the wood-ecker's, but very swift. While on the wing they chatter nd cry continually; this cry sounds like *qui*, with the ising inflection on the i; this is repeated several times, he last one being drawn out like *qui-i-i-i*. These birds re rarely met with in the summer, and I do not think hey nest here. They are most plentiful in May and Sep-ember. In the fall they feed on the fruit of the honey ocust, and are then more often seen on the ground.'

"The total extermination of the Carolina paroquet is nly a question of a few more years, and the end of the resent century will probably mark their disappearance. ivilization does not agree with these birds, and as they ertainly do some damage to fruit in sections where they till exist, nothing else than complete annihilation can be ooked for. Like the bison and the passenger pigeon, heir days are numbered.

"Considering how common this bird was only a few ecades ago, it is astonishing how little is really known bout its nesting habits, and it is not likely that we will e able to learn much more about them. The general pposition is that they breed in hollow trees, such as ypress, oak and sycamore, and that they nest rather arly in the season, while others think they nest rather ate. There are two eggs in the United States National luseum collection, No. 17,709, in rather poor condition, hich are entered as having been taken in St. Mary's arish, Louisiana, March, 1878. I have endeavored to btain some further particulars about them, but have een unsuccessful. One egg, laid in captivity by a bird in he possession of Mr. R. Ridgway, was deposited in Au-ust, 1877, and another in July, 1878, and one in Septem-er, 1883. There are also a couple of eggs in the collection f the American Museum of Natural History, New York ty, collected by the late Dr. S. W. Wilson, of Georgia, hich I believe are genuine; these are said to have been aken on April 26, 1855, from a hollow tree, the eggs being eposited on a few chips in the cavity; the exact locality here they were obtained is not given, but the collection as chiefly made on St. Simon Island, and in Wayne and cIntosh counties, Ga.

"Mr. William Brewster, of Cambridge, Mass., ever alert obtain new information of the habits of our birds, hile on a visit to Florida elicited the following, published him in the *Auk* (Vol. VI., 1889, pp. 336, 337), which is ell worth inserting here. He says: 'While in Florida uring February and March, 1889, I questioned everybody hom I met regarding the nesting of the parrakeet. Only ree persons professed any knowlege on this subject. he first two were both uneducated men, professional unters of alligators and plume birds. Each of them laimed to have seen parrakeets' nests, which they de-ribed as flimsy structures built of twigs and placed on the anches of cypress trees. One of them said he found a st only the previous summer (1888) while fishing. By eans of his pole he tipped the nest over, and secured o young birds which it contained. This account was widely at variance with what has been previously corded regarding the manner of nesting of this species at I considered it at the time as a mere fabrication, but terward it was most unexpectedly and most strongly rroborated by Judge R. L. Long, of Tallahassee. The tter gentleman, who, by the way, has a very good gen-al knowledge of the birds of our Northern States, as-red me that he had examined many nests of the parra-et built precisely as above described. Formerly, when e birds were abundant in the surrounding region, he ed to find them breeding in large colonies in the cypress vamps. Several of these colonies contained at least 000 birds each. They nested invariably in small cypress ees, the favorite position being on a fork near the end a slender horizontal branch.

" 'Every such fork would be occupied, and he has seen many as forty or fifty nests in one small tree. Their sts closely resemble those of the Carolina dove, being milarly composed of cypress twigs put together so osely that the eggs were often visible from the ground neath. The twigs of the cypress seemed to be pre-rred to those of any other kind of tree. The height at hich the nests were placed varied from 5 or 6ft. to 20 or ft. Mr. Long described the eggs as being of a greenish-hite color, unspotted. He did not remember the maxi-um number which he had found in one set, but thought was at least four or five. He had often taken young ds from the nests to rear or to give to his friends. He ew of a small colony of parrakeets breeding in Wau-lla Swamp, about twenty miles from Tallahassee, in e summer of 1885, and believes that they still occur ere in moderate numbers.

" 'It seems difficult to reconcile such testimony with the tements of Audubon, Wilson and others that the Caro-a parrakeet lays its eggs in hollow trees. It may be, wever, that, like the crow blackbird and some of the ls, this parrot nests both in holes and on branches, ac-rding to circumstances; at all events the above account s seemed to me to rest on evidence sufficiently good to rrant its publication.'

'It is quite possible that the Carolina paroquet, from exceedingly social nature, was compelled where very merous to resort to open nesting sites from necessity, suitable cavities are rarely found in sufficient quanti-s close to each other to accommodate any considerable mber of pairs. We find this to be the case with *Bol-rhynchus monachus* (Boddärt), the green paroquet of raguay, Uruguay and the Argentine Republic, which spends its nests from the extremities of branches, to hich they are firmly woven. Mr. Gibson describes their sts as follows: 'New nests consist of only two cham-rs, the porch and the nest proper, and are inhabited by ingle pair of birds. Successive nests are added until ne of them come to weigh a quarter of a ton, and con-n material enough to fill a large cart. Thorny twigs mly interwoven form the only material, and there is lining in the breeding chamber even in the breeding ason. Some old forest trees have seven or eight of ese huge structures suspended from the branches, while e ground underneath is covered with twigs and remains fallen rocks.'*

"Another species, the Patagonian parrot, *Conurus pata-nus* (Vieillot), found in the Argentine Republic and in tagonia, excavates its nests in perpendicular banks, like r kingfisher; while the ground parrakeet, *Pezoporus rmosus* (Latham), of Australia, nests in tall grass.

"Although nearly all the species of this numerous family st in hollow trees, as stated above, there are exceptions to this rule; and it is quite probable that some of our Carolina paroquets nested at times in Florida as Judge R. L. Long described, and again both in communities in large hollow trees, and singly, as Alexander Wilson states, all of these different assertions being probably correct.

"We have no positive information about the number of eggs laid by this species in a wild state.

"Dr. Karl Russ, of Berlin, Germany, in his interesting article on this species in his work on "Die Fremländischen Stubenvögel, die Papageien" (Vol. III., 1879, pp. 221–236), mentions several instances of the Carolina paroquets breeding in captivity in Germany, where the eggs were depositied in June and July, two being the number laid; but in his "Handbuch für Vögelliebhaber" he gives the number from three to five, and he describes these as pure white, fine grained, very round, and quite glossy, like woodpeckers' eggs, measuring 38 by 36 millimeters, or about 1.50 by 1.42in.

"Mr. Robert Ridgway's birds would not use the nesting boxes provided for them, and both females deposited their eggs on the floor of the cage; they were laid in July, August and September respectively. None of these eggs can be called round; they vary from ovate to short ovate, and are rather pointed. They are white, with the faintest yellowish tint, ivory-like and quite glossy; the shell is rather thick, close grained and deeply pitted, not unlike the eggs of the African ostrich (*Struthio camelus*), but of course not as noticeable. Holding the egg in a strong light, the inside appears to be pale yellow.

"These eggs measure 36.32×26.92, 34 54×27.18, and 33.27×26 92 millimeters, or 1.43×1.06, 1.36×1.07, and 1.31×1.06in.

"The deep pitting is noticeable in every specimen, and there can be no doubt about the identity of the eggs. The other eggs in the collection, about whose proper identification I am not so certain, and whose measurements I therefore do not give, have a much thinner shell, and do not show the peculiar pitting already referred to. There is no difficulty whatever in distinguishing these eggs from those of the burrowing owl or the kingfisher, both of which are occasionally substituted for them."

*Argentine Ornithology, Vol. II., 1889, pp. 43-46.

ANOTHER OTTER AND HIS WAYS.

LANSING, Mich., Jan. 20.—Tommy, the tame otter, was caught on the Sauble, in northern Michigan, and owned by a saloon keeper at Grayling. He was a great pet with the village people, and visited the kitchens of that quiet little burg with a constantly increasing regularity. His regular beat up and down the Sauble for a distance of three or four miles afforded him abundant opportunity for fishing and hunting. In town he was a great friend with every dog and cat in the village. He would play with them on the streets for hours at a time. Once in a great while some cat would offend Tommy, and then the scene would be changed instanter. Tommy would grab the cat by the back, and in much less time than it takes to tell it the cat and Tommy would be under water in the Sauble, and that was the end of the cat. Tommy never had time to fool with a cat after it was dead, but he would hunt up another cat and have his play spell out.

THE RECORD MOOSE HEAD.

Dogs Tommy liked, and he spent all of the time playing with them that he could find dogs willing to put up fun for him. One day a big bull dog happened along when Tommy was playing with some of his home dog talent, and the bull dog, not familiar with the Grayling pet, picked Tommy up and nearly killed him before he could be choked off. Tommy soon got over his scrap, and was on the lookout constantly for the big bull dog. One day the bull dog came to town again, and right in the middle of the village he met a dog with a chip on his shoulder, and the fun began. Just as the fight was well under way Tommy put in his appearance, and while the town dog held the bull dog down to business Tommy nearly ate him up. He would rip great mouthfuls of flesh out of him, and pull and lug him about till he had about killed the dog, when the town boys took Tommy off.

It would be hard to make a Grayling man believe that an otter had not a first-class memory for matters and things. Tommy knew all of the fishermen up and down the river, and was always ready for a fishing trip when an opportunity offered. He could catch more fish than all of the town fishermen put together, and when he was one of the party and had got all that he wanted to eat he would catch fish to supply the whole crowd. One day he broke his record and landed a big trout that weighed nearly 3lbs. When the party moved they would take Tommy into the boat, and he would curl up under the seat, but when the boat stopped he was out and in the water like a flash.

Tommy often went hunting and fishing alone, and on one of his excursions he was shot by a man who says he mistook Tommy for a wild otter. While the man knew Tommy well and saw him almost every day, yet he shot him, and the shooting led to a big law suit, for Tommy had lots of friends.

If anybody doubts the truth of the life history of Tommy, and believes that what I have told about his doings is not true, and he will write to Mr. Alexander, lawyer, at Grayling, he will furnish him enough material regarding Tommy and his doings to fill a big book. I have two more otter to write you about. JULIAN.

COMMUNICATION AMONG ANIMALS.

Editor Forest and Stream:

Mr. Ernest Seton Thompson has done the students of the ways of animals a service the value of which does not seem computable at present, but which is very great in any event. The idea of a newspaper edited by wolves will not lie idle, and to the mass of testimony that will be added to Mr. Thompson's I hasten to call attention to other and quite similar bureaus of information, namely, the traces which otter and mink leave of their presence, usually conspicuously on rocks, logs and other elevations, but frequently in the grass and bushes led to by regular and well-trod runways.

Now that Mr. Thompson has called attention to odors as a means of communication, the strong scent of muskrats around caves or bayous and on streams has special significance.

In this connection I would like to ask, why is it that a school of whales sporting in the ocean near the surface suddenly and all together lift up their tails and disappear? By what means are the whales able to do this all together? Schools of whales covering twenty-five square miles have been seen to dive simultaneously when unalarmed, so far as could be known, and a similar thing may be witnessed in schools of minnows. What tells them to?

And how do young birds know what to do in migrating time? Birds that wouldn't know Florida from the South Pole and who never saw snow travel south with the rest, only birds that were willful remaining behind to freeze their toes. How do these birds talk to each other, as they certainly must do? They don't rub bills, as dogs rub noses, before going somewhere. There are certain "call notes" heard in the fall that may appear a partial solution, just as the robin sings "I'm in love" every spring. Bluejays get up alongside of each other in the spring and don't make a noise hearable five rods away, though they do make some subdued sounds, love talk, most likely.

To my mind there is nothing more interesting in nature than the methods by which her creatures talk to one another, and now that Mr. Thompson has called attention to it I hope the FOREST AND STREAM will sift the matter as deeply as may be. RAYMOND S. SPEARS.

A GEOLOGICAL MAP OF THE YELLOWSTONE PARK.

THERE has recently been printed, under the supervision of the United States Geological Survey, folio No. 30 of the Geologic Atlas of the United States, which is the Yellowstone Park folio. This embraces the greater part of the Yellowstone National Park, and, while not a complete geological map of the Park, it yet does cover that portion of the reservation which is of especial interest to geologists.

This folio will be of very great interest as well to many people who read the FOREST AND STREAM, and who have visited or hope to visit the National Park. It contains five pages of description of the geography and geology of the region by Mr. Arnold Hague, geologist in charge; one page on the Igneous Rocks, by Mr. J. P. Iddings; a number of remarkably handsome half-tone pictures of characteristic Park scenery, two contour maps of the central portion of the Park, extending from near the northern boundary south almost to the head of Jackson's Lake, and two geological sheets covering the same portion of the Park, so colored as to indicate the different geological formations and mineral deposits which appear in the various localities.

As will be remembered, the geological work of the Park for a good many years has been under the charge of Mr. Arnold Hague, who has long been known to our readers as an enthusiastic well-wisher of this great pleasure ground. He has been assisted by Professors Weed, Iddings, Pirsson, and by others whose names are well known to FOREST AND STREAM readers. Thus it is certain that the scientific details of this map have been attended to by men eminently qualified to perform the work.

On the mechanical side this folio deserves high praise, and in this respect it is probably the best that has ever been issued by the United States Geological Survey, as from our point of view it is the most interesting.

Mr. Hague has long been at work on a monograph of the Yellowstone Park, and when this is issued there will be published with it a map of the entire Park.

Indian Mounds in Tennessee.

KELPIE writes from Grand View, Tenn.:

"Towstring is not far from the mouth of White's Creek, where we went to look for Indian mounds and ducks. The ducks had gone South, but the mounds were there, and we saw seven, some of which had been excavated, some not. Within ten miles of this point are a large number of mounds scattered along the Tennessee, and I should have been glad to spend a good deal of time among them had it been convenient. It is a good chance for somebody."

The Record Moose Head.

LAST week we gave some particulars regarding the giant moose head which is here illustrated from a photograph made by FOREST AND STREAM. The spread of horns is 70½in., and the weight of the skull and horns 68lbs. The horns are rather light in color, and curiously fluted. The head belongs to Wm. W. Hart, the New York taxidermist, and will be mounted and exhibited by him at the coming Sportsmen's Exposition.

Twenty Years.

HEREWITH find my check for $4 in payment of another year's subscription of your most estimable paper. This makes twenty years that I have been permitted to sit at your table and sip the wine of your vintage. How the months and years have glided away, and with them taken so many of the bonny lads that were our cherished companions in forest and on stream! How many of the guests of '76 are still at your board? R. S. IREDELL.

OHIO.

Men I Have Fished With.

THE DETROIT JOURNAL, EDITORIAL ROOMS, Jan. 20.—I am deeply interested in Fred Mather's reminiscences, which are of a high order of merit, and one of the best features you ever offered.

W. J. HUNSAKER, Mg. Ed.

Game Bag and Gun.

A WINTER CAMP ON WADLEIGH BROOK.

Part I.

ONE day last November a New York doctor himself in need of doctoring, a farmer from that part of Lake Champlain where the Adirondacks and Green Mountains come closest, a business representative of a great fence company manufacturing the one and only elk high, fawn tight and buffalo strong fencing for parks, and lastly a FOREST AND STREAM man, came together by prearranged plan in the waiting room of the Boston & Maine Railroad in Boston, bound for the northern Maine forests.

The doctor, the farmer, the fence expert and the newspaper representative dumped in one colossal pile their blankets, rifles and the miscellaneous assortment of boots, moccasins, heavy clothing and camp duffle that figured in their baggage and exchanged greetings, while the omnipresent station loafers debated among themselves whether they were "recruits for Cuby" or "only another lot of North Pole cranks."

It was a cold, raw day—that Nov. 21—and the air had a penetrating chill that suggested snow, resembling in this respect the corresponding day in 1895, when the writer left Boston at the same hour and with the same purpose in view. Then the snow had begun falling a little before noon, before Portland was reached, and continued all the afternoon and evening and well on into the night. History repeats itself, and in this case the parallel was striking.

At a corresponding point on the journey before Portland was reached, one of the party looked up from the game of cards we were playing, in which the train boys' cinnamon wafers were utilized as chips, and announced that it was snowing, and when Portland was reached the ground was already white.

Here we had hoped for a chat with Mr. Harrie B. Coe, of the Maine Central, who but for the exigencies of a presidential election would have been a member of our party, and who afterward was of invaluable service to us in the recovery of some lost baggage, but fate willed otherwise. North of Portland the snow fell merrily as per schedule, and at Bangor there was already a venturesome sleigh or two on the streets. This was the first snow of the season of any consequence, and we couldn't help feeling that it had been precipitated for our especial benefit.

In only one respect did our journey differ from that of the previous year, in that instead of a cold, cheerless wagon ride from the main line of the Bangor & Aroostook R. R. to Patten, we went this time by train. Otherwise the snow was about the same as last year. We enjoyed equally good hotel accommodations at the Patten House, and Herb Brown was on hand with the same intelligent team of black horses to take us back to camp.

Sunday morning dawned bright and cold, with a shrewd wind blowing across the open fields through which the first part of our journey lay, and the road blown bare of snow for long stretches, which necessitated traveling on wheels instead of runners.

At noon we stopped for dinner at Louis Cooper's house, twelve miles from Patten. Mr. Cooper has accommodations for sportsmen both here and at a camp on Sebois Stream, a few miles away, and those who come for deer rarely go away disappointed. In summer there is good fishing in the two Shin Ponds, which are no great distance off. The next cleared land is at Sebois House, ten miles beyond. This is kept by George Cooper, a brother of Louis Cooper, and here we spent the night. Under favorable conditions we might have gone through to Trout Brook Farm, ten miles further, in one day, but we had struck particularly bad traveling. The road had been worn deeply by heavy toting, and in places was full of water covered by ice that, while not strong enough to bear buckboard and team, was sufficiently thick to make it both hard and dangerous work for the horses pulling through.

In this respect the following day saw a condition of affairs still worse. The horses were obliged at times to plunge through mud holes, breaking through viciously tough ice and sinking to their bellies at every jump. Under such conditions it was no wonder that they fell down repeatedly and were badly cut by the ice, and that we were the best part of a day in going ten miles. The remarkable thing was that we got through at all.

That was a cold ride, but in the woods, despite the fact that the thermometer registered 20° below zero, the air did not feel so chill as it had in the open country at the start of our journey.

Big Game vs. Small Guns.

At Sebois House we met Frank McKinney, who has a camp at Hay Lake in a good moose and deer country, six miles or so south of this point. McKinney is the man who killed a bull moose last fall with a .22cal. Stevens pistol, shooting the short cartridge and a charge of smokeless powder.

He heard the moose coming, and standing behind a tree let him approach within 30ft. before firing. His first bullet went through the moose's heart, but the great animal stood perfectly still, apparently uncertain of his enemy's whereabouts, till McKinney had fired a number of additional shots, all hitting near the same spot. Then he started to run, and the hunter followed, firing at every opportunity, till finally the moose succumbed and fell. The shots varied greatly in penetration, some sticking in the tough skin on the side from which they were fired, while others went completely through the animal.

McKinney has the proud distinction of having killed his moose with the smallest regular cartridge made, and if any one wants to beat his feat he will have to try a BB cap or an air gun; but he is not the only man who has killed this king of our game animals with a pistol. Wm. Cuvrins, the lumberman, a year or two ago shot and killed a large moose with a .32cal. Smith & Wesson hammerless revolver, with a 3½in. barrel and the coarse factory sights. Cuvrins is a man who travels through the woods a great deal in connection with his business, and he is a first-class shot with either pistol or rifle. He killed this moose at ten rods and only fired one shot. McLain, Jr., at Sourdnahunk Lake, shot and killed a large buck this fall with a .22cal. pistol at a distance that would be a fair rifle shot. This deer was shot through the heart and went no further than if hit by a rifle ball. There is food for reflection in the possibilities of these little weapons in the hands of expert hunters.

Harvey's and Trout Brook Farm.

Five miles or so after leaving Sebois House we had our first view of the East Branch Grand Lake. This is a beautiful sheet of water, surrounded by hardwood ridges and good hunting country, and also affording a magnificent mountain view south toward Katahdin and the Traveler Range. At the head of the lake is Samuel Harvey's camp, and here we found deer tracks in the clearing right up to within 50yds. of the house, so thick that we thought they had been made by a drove of sheep. Harvey keeps no sheep, however, and his mutton is spelled with a v, except perhaps during the summer months.

Four miles further, having meanwhile crossed the East Branch of the Penobscot above the lake, we swung across the bridge over Trout Brook, were whisked up a hill and down again, and with the customary flourish drew up in front of the hospitable door of Trout Brook Farm, here nestled behind a perpendicular mass of trap rock. This is a favorite point for sportsmen, within striking distance of moose and caribou and surrounded by an unexcelled deer range. On our way out we found at this place two genial Worcester sportsmen, Messrs. J. D. Morton and C. A. Middlemas, who killed three big bucks in less than a week.

Jock Darling and Natey.

Here also we found Jock Darling and his grandson, Natey Fogg, than whom I doubt if the Pine Tree State produces a better hunter for his years, or a better camp companion. Natey is a chip of the old block and has the same natural aptitude for the woods that characterizes Jock. Like poets and other geniuses, woodsmen are born and not made; also with the woodsman it counts for a good deal to come from the right stock. I suppose Jock is descended direct from Robin Hood, and the strain is the same with Natey.

Jock and Natey had walked across from Sebois Lake, and at the farm secured a river driver's tent, 16ft. long, which was constructed like an Adirondack camp (or half of an A tent cut in two along the ridge) and a number of heavy quilts and blankets, cooking utensils and camp supplies.

We shivered a little at the thought of sleeping out in that tent, which was all front door and the epitome of open-handed hospitality to the elements; but we had a good deal of confidence in Jock and were ready to take his word for it that we would not be uncomfortable. Fortunately we had taken especial precautions before leaving to provide ourselves with an ample stock of heavy clothes and the warmest Jaeger underwear that could be purchased, and plenty of it; so that in the coldest weather we could wear two or three suits at a time. As an actual fact, we were more often too hot than too cold, and the time the mercury went down to 22° below zero the fence man got up in the middle of the night and, standing under the cold, glittering stars, shed a layer or two of his surplus clothes, remarking that the night was so warm he could not sleep comfortably as he was.

First Game.

That afternoon we all went out for a short hunt, and twenty minutes after leaving the house Dr. Wright got a shot at two deer. They were on the jump, however, when he fired, and he did not score. To the fence man fell the honor of securing the first game. It was the following morning, and we had almost reached the spot selected for our camp on Wadleigh Brook, half a mile in from the tote road, when Hoisington, who was walking ahead of the team, saw some fresh tracks crossing the road. He followed them a short distance to investigate, and presently saw a small buck standing under a tree 50yds. away, looking back over his shoulder. He knew that the deer was likely to take alarm at any instant, as he could hear talking and the noise made by the team behind; so he took a quick aim and fired. Several other deer near by dashed off at the sound of the shot, but the particular one at which he had fired fell within 40ft. of the spot where he first stood. The ball had entered back of the near shoulder and quartered through, breaking the opposite shoulder. It was an ugly wound, and though the bullet had missed the heart, it had killed much more cleanly than the average of such shots, and thus at the very start vindicated the effectiveness of the little 6½lb. .30-30 Winchester from which it was fired.

For supper that night we had juicy venison steaks, albeit not so tender as other cuts were later, but vastly preferable to anything else our larder afforded.

The buck was very fat, and I doubt if venison was ever more truly appreciated. We began at the hindquarters, and little by little, through the medium of the frying-pan and boiler, converted the various parts to our use, till every shred of flesh had been devoured and only the bones remained. It took us a little more than four days to accomplish this result.

In Camp.

Our camp was pitched directly in the old tote road up Wadleigh Brook, and if any future visitor finds a particularly smooth spot 12ft. or so in length in the road he will recognize our bed. Roads in this part of Piscataquis county are nothing to brag on as a rule, but we will back that 12ft. section to be equal to anything in the State, and we know whereof we speak, for we all labored individually for its improvement.

The foundation for our bed was of balsam fir boughs, and over this several sacks of straw were laid on, and on top of all a heavy quilt. The bed was about 7ft. in width, and the tent roof slanted upward from where it was pinned to the ground at the back to a height of 6ft. or so in front. Opposite and also at one end Jock erected wind breaks of boughs, supported by pole frameworks and slanting in toward the center, and on the fourth side a piece of burlap was stretched as a sort of door.

In the center of the open space between windbreak and tent the fire was built, and on cold nights the camp resembled a miniature volcano, belching a steady stream of fire and sparks from the opening in the top.

In daytime the moosebirds were a constant source of amusement about camp. They made themselves at home from the moment camp was pitched, and investigated our belongings with their characteristic easy familiarity. Soft things that they could swallow seemed to interest them most, and they sampled every such article from Pears's soap to "moccasine." These birds, though their confidence is constantly abused, never seem to learn distrust of man. They perch upon the lumberman's balanced stick just as confidingly as they did a hundred years ago, and when this backwoods humorist gives the other end of their seesaw a rap with his axe that shoots them 20ft. into the air they are just as much surprised as ever.

We let the birds eat their fill of the soap, for we had plenty of that, and anyhow soap was not altogether essential to our life in the woods, but it was different with the moccasine. Our boots and moccasins needed constant greasing both to soften them and make them waterproof, and we used it for a thousand other things as well, so our one box of this precious article was carefully guarded.

It was a specific for chapped lips and noses, though it must be acknowledged that it smelled better than it tasted, and this fact prevented our using it as butter when that staple gave out, although the question was seriously considered. It also proved a good gun grease, and we found it to be a superior lubricant for bullets when we came to reload some of our ammunition with light charges for partridges.

The Burnt Lands.

For a day or two we hunted about camp, seeing deer, but for one reason or another not meeting with success. Du Bois, while walking up the main tote road, saw two large bucks across Trout Brook, and wounded one very badly. This buck lay down almost immediately, proving the seriousness of its wound, but the approach of night obliged the hunter to leave it, and a snowstorm that followed obliterated the trail before morning.

The first good hunting day, however, all hands, including Jock, who, though in fairly good physical condition, has not since his long confinement in the hospital regained his old hardiness, set out for the burnt lands. A mile and a half up Wadleigh Brook from our camp we had our first view of them, and here we jumped a large deer that went bounding off up a hillside fifty rods away.

At this point the party separated. Natey, Dr. Wright and Du Bois crossed the brook with the intention of working along the north side of the burnt mountain, and then circling back and striking the brook near the upper dam; while Jock, Hoisington and myself were to hunt the country nearer the brook and perhaps eventually circle around outside the others.

Shortly after the parties separated we jumped three deer that ran east through the big open. As we watched them disappearing 500 or 600yds. away, looking for all the world like good-sized rabbits, we suddenly heard a volley of shots, and realized that we had driven them on to the other party.

That night around the camp-fire they did not seem particularly anxious to tell about the occurrence, but they finally acknowledged shooting in self-defense at some deer that tried to run over them. They said they were satisfied to have frightened the deer off and to have escaped the threatened assault, but there was a certain tone of aggravation in their remarks that belied their words. Later, at the station restaurant in Bangor, the Doctor was noticed critically examining some murderous looking clubs carved from birch roots. He said he was thinking of sending one to Natey, but no doubt he was also regretting the fact that he did not have one along himself that day in the burnt lands.

Jock soon gave up the hunt, as the walking was hard and his strength not equal to the task.

Hoisington and Natey, while hunting independently, both found fresh tracks of several moose, and in each case a large one was among the number. Both followed their game till dark, and saw signs of recent feeding, but neither got a shot.

None of the rest of us saw moose tracks, but while making my way back to camp late that afternoon I stopped a fair-sized buck with a bullet through the neck.

The Small-Bore Hunting Rifle.

Much has been said and written regarding the value of the small-bore smokeless powder rifle as a hunting weapon. Personally I am a firm believer in its effectiveness, though I do not by any means go to the extreme of calling it the best hunting rifle on the market. There were two .30-30s in our party, both carbines with shotgun butts and Lyman sights, weighing 6lbs. and 6oz. apiece. These guns with the soft nose ammunition possess tremendous hitting power, considering the light weight of the bullet, great accuracy, and an extremely flat trajectory, and moreover are free from any annoying recoil. Smokeless powder and steel-jacketed bullets have made possible the former paradox of accuracy combined with flat trajectory, and killing power in connection with lightness. Smokeless powder also makes possible short barrels, for the ignition is much quicker than with black powder, and as I like a carbine on account of its ease of handling in the woods, I have an additional reason to be grateful to the new compound.

Accuracy of sighting is of course dependent on the distance between sights, but as I use Lyman sights I can afford to shorten my barrel considerably and still preserve a sufficient distance for all practical purposes.

The .30-30 carbine will shoot into the same mark at 100 and 125yds., and at 200yds. the drop is so slight that a sight well up on the animal is sure to count. Owing to the flip of barrel these carbines shoot higher at 125yds. than they do at 25. At short range they shoot an inch or two low. So much for trajectory. As to striking force, the results obtained in actual service were thoroughly satisfactory. I have already mentioned the effect on Hoisington's deer. The other deer mentioned had a hole torn directly through the spinal column that one could put his whole hand into. In view of the trifling size of the bullet the result was nearly incomprehensible. Minute fragments of lead were scattered everywhere buried in the bone, but no single piece of any size except the steel jacket could be found, though the skin on the opposite side was not broken, showing that the ball had gone no further. The bullet apparently had exploded, and every separate grain of lead and steel had joined in the work of destruction.

In the case of the caribou which Mr. Hoisington killed later on a different effect was observed. Here the ball, mushrooming on a rib, had torn a hole through the animal's heart that would easily have permitted the passage of a silver dollar.

J. B. BURNHAM.

[TO BE CONTINUED.]

MAINE GAME AND FISH.

[From the report of the Commissioners of Inland Fisheries and Game for the year 1896.]

Moose.

IT would seem from the best information obtainable that more moose have been killed this year than in any one year for a great many years previously, notwithstanding the fact that no cow or calf moose can be legally taken. This is due mainly to the largely increased numbers who have hunted them.

We are convinced that in order to preserve the moose from extinction more stringent laws for their protection should be enacted.

The visiting sportsmen, or hunters from out of the State, come to us in ever-increasing numbers. Skilled guides are employed, a tent is pitched or camp erected in their very home, and weeks—and sometimes months—devoted to their capture by one hunting party, and it is not therefore surprising that with this vast outlay of money and time devoted to their capture, the bulls are becoming increasingly scarce.

Nor are these efforts confined to the close season. Hundreds and hundreds of hunters visit the haunts of the moose in August and September, and during the "calling period," kill their game, hide it till October, and then bring out the head alone, leaving the carcass to decay in the forest. Any law calculated to remedy this state of affairs will have the hearty approval of the commissioners.

The rich poacher cares nothing for a fine, so long as he can secure a good head, and August and September are very favorable months for their operations. Our forests are so vast that no system of wardenship could be arranged to successfully stop summer killing. The law should step in and do it. Complaint was made and a warrant issued for one of this class of poachers in October last, and a requisition for his arrest and return to Maine was asked for of his Excellency, Gov. Henry B. Cleaves, on the Governor of Massachusetts, to which State he had gone after killing a moose in September. This procedure had never before been tried in the history of the enforcement of the game laws. His Excellency, Gov. Cleaves, without hesitation granted the requisition, and it was duly honored by the acting Governor of Massachusetts; thereby the poacher was brought before our courts for trial, plead guilty and paid the usual fine—$100 and costs. This object lesson has taught the rich poacher from other States that he is not safe from arrest and trial even though he may escape arrest while within our borders, and it is believed will have a very wholesome effect.

A leading manufacturer in Pennsylvania writes: "I have spent $500 in hunting for moose legally in your State and have not seen one yet." And this man is only one in many hundreds who have done likewise, and so long as we have moose in our forests people in large numbers will come to hunt them lawfully, spending their money freely, and to prevent unlawful killing nothing should be left undone that we can do.

Large as the State of Maine is, extensive as our forests are, as much game as we have, our State is not big enough, our forests are not extensive enough, we have not and cannot have game enough for seventy-five millions of people.

Every railroad running our way, every steamboat line running our way, every newspaper in the State, and many out of it, every hotel, hunting camp, and nearly every guide, have been for years and years advertising the great opportunity to shoot moose, caribou and deer in our State, and the ease with which this could be done. The photograph of every moose killed is taken and sent all over the country; expositions are yearly held in New York advertising this in the same way, and the result is that each year sees a very great increase of hunters over the preceding year, so that this year at least 25 per cent. more came than ever before, and if the weather had been favorable for hunting there would not have been a bull moose left in Maine suitable or fit to kill.

We have been giving three months in the year in which to kill our game, and, with the enormous amount of advertising which is being done and has been done, the result is that there is no boy now but what dreams of the time when he can kill his moose. Something must be done, or else in a very short time not a moose will remain; there will be only the echo of his last "call" to remind us of his former existence.

Caribou and Deer.

There is no question but that at least 10,000 deer have been killed in Maine during the year 1896, quite a proportion of them by our own citizens. This is not merely guess work, but based on actual count of the numbers transported by the common carriers, and records kept by various sporting proprietors scattered over the State.

Deer are now found in each of the sixteen counties of the State, and there seems to be no great decrease, notwithstanding the great numbers killed. In some localities, however, there is a marked decrease owing to the fact that but slight, if any, attention has been paid to the game laws by residents and non-residents alike. Complaints have been made in several instances to us by farmers that their crops had been destroyed by deer. In each case reported to us we have requested to be furnished with the exact facts and a statement of the amount of damage done. We are convinced that the damage is not great, though, doubtless, very annoying.

From the best information obtainable, from the most reliable sources, the caribou is fast disappearing, and will very soon be practically extinct, unless a close time, for a series of years, is put on them, or more stringent laws enacted for their protection. Summer and winter killing has accomplished this. Every effort should be made to preserve this species of our big game, because of its vast importance to our citizens.

We are aware that this expression of opinion as to caribou, and possibly deer, is not in accordance with what the public has been led to believe from various statements from guides and others published in the press of this and other States.

Guiding has become a regular occupation by a large number of our people. Three dollars a day and board is the regular price paid for their services. At least 1,500 men are thus employed. Hunting camps are everywhere where fish and game abound; attractive circulars are sent broadcast by their proprietors, and an ever increasing multitude is attracted to our State.

Ten thousand, at least, visited the Rangely region this year; more than 50,000 souls have come to Maine in 1896 to fish, to hunt, to enjoy our unparalleled scenery and climate in spring, summer and autumn; more than $5,000,000 have been expended by them along our railroads, in our hotels, pay for guides, etc. It is an industry Maine can ill afford to lose. Business prudence and foresight demand that every means in our power be employed to retain it. This can only be done by propagating our fish and protecting our game. The Department of Inland Fisheries and Game is one of the greatest and most important departments in the State. It takes the whole time and attention of at least two members of the Board. The correspondence connected with the office is something enormous, coming from all sections of the Union. A clerk should be provided for the Board, as well as an office, and most liberal appropriations made to successfully carry on the work of our fish hatcheries and adequately protect our game. Only in this way can we hope to preserve our game from utter extinction and continue to reap these rich harvests.

Wardens.

There are forty-eight commissioned inland fish and game wardens in the State, all under bond for the faithful discharge of their duties. We have employed, nearly constantly, twenty, at an average salary of $2 per day and expenses, all that the means at our command would permit, but this number is entirely inadequate. The vast area of our fishing and hunting grounds renders it utterly impossible that this number can adequately protect the fish and game from the depredations of the poacher. More prosecutions for the infractions of the fish and game laws have been instituted this year than ever before, and more convictions had. Public sentiment is, more and more, in favor of a thorough enforcement of the laws.

As stated, guides receive $3 per day and board in most instances; to be a successful warden, especially to protect the big game, one must be a thorough woodsman, familiar with the woods and the hunting regions, and also familiar with the methods of poachers. In order to get the best we must pay as much, at least, as is paid for guiding. This we have been unable to do on account of lack of funds, and have consequently been unable to do as much as ought to be done. We have devoted practically our entire time to the work during the year.

Inland Fish.

We have the pleasure of reporting a larger run of trout and salmon this fall than for many years, resulting in our securing more eggs for replenishing our waters than ever before. Notwithstanding the largely increased number of anglers from abroad, as well as those we have at home, there seems to be a plenty, if not an increase, left to keep our fishing good for years to come. This result seems to us to be owing in a great measure, if not entirely, to artificial propagation and protection.

We have visited the spawning grounds of these fish in many localities, grounds that we have been familiar with for many years, and, from what we saw at Rangeley and other places, can see no diminution in numbers on their breeding grounds.

The landlocked salmon have thrived and multiplied wonderfully in many new lakes and ponds where they have been introduced within the last ten years—in some of these so much so that we have been able to procure a goodly number of eggs from these fish. They grow very fast, and in good waters, with plenty of feed, very large—in some cases attaining a growth of 12lbs. in six years. We believe they are to be the coming and favorite inland fish in Maine. They are now caught more or less, and increasing year by year, in nearly all our large lakes and ponds. There are hundreds of ponds in Maine adapted to these fish which we are stocking as fast as our limited means will allow. They will live in warmer water than the trout and thrive with the pickerel, but the lakes to be successful should contain deep, pure water.

We have no doubt that in many of our lakes there is a lack of suitable food, more especially for the young fry, also affecting their growth as they advance in life. We believe many of the newly hatched fish starve for lack of suitable food. Those that do survive are apt to be stunted and do not grow to be handsome fish. The smelt hatches at about the time the young salmon begin to feed, and is so small they readily swallow him. They are as eager after them as a cat after a mouse. We have dipped them in a pail of water, turned them in our hatching troughs with young salmon. They would hunt them till they caught the last one.

It is a well-known fact that the amount of fish you can raise in a pond depends on the food supply. The same rule applies to fish as to the number of cattle you can raise in your pastures, depending entirely on the crop of grass you make grow. This is of vital importance, and can in a great measure be improved by the introduction of the fresh-water smelt.

Every lake and pond should be stocked. We shall do it so far as we are able, but it is too large a job for us without help. It can be done very easily by collecting the eggs in the brooks when they run up in the spring to spawn. They adhere to the grass, moss, sticks and stones by thousands. They can be packed in damp moss or sphagnum and carried to the waters needed, and placed in the running waters of some tributary near the pond or lake. They will hatch in a few days and the job is done. We would suggest that any person interested in the fishing in any pond or lake see that it is stocked with smelts the coming spring. They spawn in the spring about the time the ice goes out. We shall do this so far as we are able, but without help it would take us several years, as there are only a few days in spring this can be done.

The run of salmon at Sebago this fall was the largest we have ever known, not only in numbers, but in size of the fish.

Black Game and Capercailzie.

The above-named birds, known to the Swedish language as "orre" and "tjader," are said to be very fine game birds—very fine for table use, and particularly adapted to the climate of the State.

After consulting with our Swedish friends, and also with Hon. W. W. Thomas, Jr., whose long residence in Sweden had given him opportunity to study the habits of these birds, we decided to import a few of each variety and liberate them in the forests. Accordingly, in the fall of 1895 three males and four females of each kind were ordered. They were shipped early in February of this year, but three of the larger kind—the capercailzie—failed to arrive.

Whether they died on the passage and were thrown overboard, or were lost in some other way, we have never been able to learn. We simply know that we received but two pairs of that variety. The others came as ordered, and the eleven birds, all apparently strong and healthy, were liberated on the last day of February in the forest in the northern part of New Sweden.

That a part of the black game has survived is certain, for they have been seen or heard repeatedly—once very recently. One young bird of this season's hatching has also been seen, showing that they have bred, which leads us to believe that the introduction of these birds can be made a success.

Of the capercailzie we can say but little, as their habits of going into the deep forest has doubtless been the reason for their never having been seen, excepting in one instance, about two weeks after they were liberated. The people of the Swedish colony were very much interested in the success of the experiment, and voluntarily organized a system of police surveillance to protect them. They also carried grain for food into the woods and distributed it near the place where the birds were freed. The birds evidently appreciated the kindness, for tracks in the snow showed that they came back for it.

It was intended to repeat the experiment of importing and liberating a few of these birds again this fall or winter, but welearn through correspondence thatsome of our sister States are anxious to try the same experiment, and have been enough more active than we to be able to "corner the market," and none can be bought. Perhaps it is just as well; however; another season will demonstrate more conclusively whether or not our climate is suitable for them.

DAYS AFIELD.—II.

A FRIEND rang me up on the telephone this morning and said: "Why didn't you tell the truth about those dogs?"

"I did."

"You failed to describe a good thing they did and polished up the bad."

"Did I? How will this do? The next afternoon we took Rab out with a good dog and found seven coveys: I one; Rab four, which he pointed; the good dog two, which he flushed. The Professor shot thirteen birds, and I—"

"What rot!"

Central here informed me that 880 Franklin had rung off.

It was the last afternoon of our hunt, and we wanted some birds. Ben, Sr., and Donald have been saved for it. Let me say here, parenthetically, men but seldom shoot over a better pair. No puppies these; one full-aged and wise, the other just coming into his prime—fresh, eager, fast, and yet steady—evenly matched, independent, good noses. We shall see some birds this afternoon, Professor, if there are any.

Ben takes up over the hill; Donald goes around, and both are skirting the woods. That stop must have strained your back, Ben, as you were going as fast as a dog could go, side to us. Now you are rigid, with head toward the woods and tail toward me. I saw it; there was but one motion to stop, and yet your momentum has turned you around. Donald comes on, and at 50yds. sees that he is beaten and stops with a look of resignation. I almost fancy he says to himself, "You have me this time, old man, but look out."

No flushing, and away go the birds as we walk in; most of them cross the ravine and settle in the woods on the opposite hillside.

After reloading our guns we go toward the corner of the fence, when Ben shows signs of game. "Look out, Ben." Donald comes with a rush which almost upsets the older dog, cuts a circle, leaps the fence and comes to a snappy point in the sedge. This covey makes for the same place to which the other has gone, and we are anticipating something to do when we get over there.

It is a pretty piece of woodland in which to shoot—tall oaks, a few pines and cedars and but little underbrush.

Donald goes as though he intended to drive every bird out of the woods in two minutes (one if possible), but he has no such intention. He loves to hunt in curves and circles and to come to his point from a full gallop. Sober Ben knows what is in the air, or rather among the leaves, and goes at it a little more cautiously.

"Point, George."

Sure enough, Ben has one just in the edge of the laurels. "Go ahead, I have a bird of my own over here." Donald has stopped. Further up the hill, and the ball is open.

"Get behind a tree, Squire Green; shot will fly around here rather promiscuously, and I dislike to look out for more than one man."

It's "Whoa," "Bang," "Missed" or "Fetch" until the guns are hot.

It's a question whether Ben, Sr., with that quick-stealing, snake-like movement of his, will find more than Donald, with his rapid gallop, quick turns and sudden stops. No mistakes (by the dogs) now; birds are everywhere. That is a pretty piece, as the Professor, stopping for breath, orders Ben to fetch, and he comes to a full point within a yard of the dead bird,

"Professor, there is a live one there."

Sure enough, and Ben has two to retrieve.

"Donald, what have you?"

A pair, and to me a lucky accident, to the birds a calamity. He brings the first, has secured the second and is coming toward me, stops and points with the dead bird in his mouth.

"Good fellow."

He knows how badly I shoot and seems more than anxious to do his part to help out the bag.

It is just as easy to tell which dog found the next covey as it is to tell who shot the single bird that fell, as five or six quail go whirring over the pine tops. Certain it is that Ben was perhaps two feet nearer the birds. It is equally certain that both dogs saw the fall, as the poor little thing came tumbling out of the bunch of feathers that were left floating in the air, and apparently each dog thought it was his bird—and Ben, Sr., gets it.

We feel too much elated to correct this little break very seriously; secretly, I am afraid that Donald is vowing "that next time if that old chap gets in ahead of me he will be smart."

This bunch is too small to follow. Down a ravine, up over a hill, across an old field, and the broad valley of the river—creek rather—or, as the natives of New Jersey would pronounce it, "crick."

In the sedge and pine we find birds again, and one of them seems to have met with an *accident*, as he cannot keep up with the others, and Donald sees it. "Never mind the dead ones, you can pick them up; I will get that fellow." I half believe he will. The bird is 10ft. in the air, and the dog, with leaps and rushes, almost reaches him. I whistle and call. No attention to me; he must have that bird. I blow and yell; finally lay down my gun, climb the fence and hill and, after a chase that exhausts my breath, catch that dog and lead him in no gentle manner to the place where he should have dropped.

When I get through, the Professor, who generally has a camera along, regrets he left it behind this time. He would "just like to show that picture to my wife. I would have to buy a new dog, as Donald would never be permitted to accompany me afield again if she could see that." Dear old Professor, as though no one had ever seen you tan a dog.

A brief stop at a spring and we go after the scattered birds, and find them. What an afternoon, and what a splendid ending to the old year and to our vacation.

Before climbing into our upper berths of the sleeper on our way home that night, we congratulate ourselves that while we have birds to give away, we have no dogs for sale.

G. B.

THE SQUIRRELS, THE RIFLE AND NIGHT.

TUPELO, Miss.—*Editor Forest and Stream:* While in this place I met Dr. M. F. Rogers, of New Albany, Miss., whose broad fame as a sportsman is so well known that to enlarge on it now would be to tell a twice-told tale. While we were talking over old times and new, and times which were of neither, he, in his engaging manner, said to me: "By the way, did you ever hear of Br'er Hough's schooling in Mississippi as to the best manner of squirrel hunting in the night time? No. Well, it was a real good thing, but somehow Mr. Hough forgot to incorporate it in his charming sketches of the "Sunny South." However, it was not treating the public right to leave out such an important incident, inasmuch as while using the pen of the historian he should tell the whole history; but no doubt Mr. Hough's modesty restrained him from dealing with such incidents as would bring him too conspicuously and too perpetually in the center of the stage. I would have written this true tale myself to FOREST AND STREAM save for the fact that I write but little now for publication, yet I tell it you not in confidence.

"The scene is laid in Bobo's camp, in the middle of his bear garden in Mississippi. Among the stars present were Bobo, Mr. E. Hough and Mr. Lamar Fontaine. These three are the heroes of the story, and it is not essential that the names of the others be mentioned, as if they were it might seem that they were stealthily introduced as witnesses.

"Mr. Fontaine is famous throughout the South as soldier, jurist, sportsman and poet. He is ingenuously versatile in any calling, but in poetry he achieved fame at one effort, for after unremittingly fighting the enemy three days and nights in the late debate at arms between sections which are now good friends, he sat him down on a log, laid gently the finger tips of his right hand on his brow, and thought deep and long, then returned calmly to camp, and by the flicker of the camp-fire, and to the music of cannon, he wrote that immortal masterpiece 'Beautiful Snow.' Some of these accomplishments may have been his brother's, but it is to be assumed that he could have had them had he cared for them. As a practical joker he has no superior in the world. His fertility in inventing cunning devices to inveigle his victims into his dead-fall jokes is surpassed only by his skill in executing what he has planned. With the rifle he is a master, in practical shooting or the wonders of fancy, spectacular performance.

"Well, at the end of a hard day's hunting for bear, which was all the harder from the timorous, inoffensive little creatures doing their utmost to avoid being blown to pieces by so many big guns, the whole party sat in contemplative and reminiscent mood about the camp-fire with the single exception of the mighty Bobo, who in negligee recline was engaged apparently in slumbering.

"A moment of silence came wherein Mr. Fontaine arose from his seat, donned his hat, and then with the most nonchalant air picked up a .22cal. rifle, tested its action, was satisfied, and started for the door.

"Mr. Hough had been furtively eyeing the strange actions which no one seemed to notice other than himself. His curiosity impelled him to ask Mr. Fontaine whither he was going. 'Going squirrel hunting,' was the sententious reply.

"'Squirrel hunting! What, this dark night?' said Mr. Hough in astonishment.

"'Of course,' replied Mr. Fontaine in a tone of indulgent tolerance and an air as became one gentleman informing another of facts the latter should know, but didn't, 'our very best squirrel hunting is in the darkness of the nighttime at this season of the year, and the best weapon, in fact the only successful one for night hunting, is the rifle. Don't you really know anything of this lovely sport?'

"'But how do you see to shoot?'

"'Oh, it has to be learned by experience,' was the laconic answer.

"Mr. Fontaine then strode into the thick of the black night. The members of the party resumed their gaze into the camp-fire. Conversation flagged. A calm contentment pervaded the company save for one who seemed restless and alert. A rifle cracked in the woods. 'That's a dead squirrel,' said one. 'Fontaine never misses,' remarked another. Some minutes passed, when in another direction the rifle was heard, *crack—crack—crack.* 'That fellow was running,' said one of the company. 'It's dead now, anyway,' said another. 'Wonderful gift for a man to have,' said a third, 'and it is no wonder he was so famous for night work in the army.'

"And so it continued for a half hour, when footsteps were heard approaching, and Mr. Fontaine, bunch of squirrels in hand, walked in with the matter-of-fact bearing of the man who has done the deed so many times that he has ceased to think of it with any warmth. The party showed no surprise and but little interest, save Mr. Hough. He entered into the matter with much spirit. His admiration for so mighty a hunter could not be contained. He eulogized him, praised his skill and commended his success. The company did not show the responsiveness befitting the occasion, so he shook the mighty Bobo, saying, 'Awake, awake, and view the marvels of the night and the wonders our good friend hath wrought with his trusty rifle in the darkness. Behold this bunch of squirrels which fell to his nocturnal eye!'

"Bobo awoke suspiciously easy, and said, 'Sonny, you have told us that you killed grizzly bears in the Rocky Mountains, killed ducks and geese in Texas, deer in New Mexico, shot all over Louisiana, killed buffalo and fished all over the world, and yet you break in on my slumbers to have me admire a bunch of squirrels which are cold and stiff and perhaps fly-blown, for they were killed three days ago with a shotgun.'

"A singular merriment thereupon pervaded the party.

"'That is a very good story,' I ventured.

"'That is not a *story*,' said the doctor in a tone of mild rebuke. 'That is a fact, for Bobo told me himself. Ask Mr. Hough about killing squirrels at night.'"

THE CHIEF.

CHICAGO AND THE WEST.

Fatal Affray on the Tolleston Club Grounds.

JAN. 22.—On the morning of Jan. 20 the daily papers of Chicago flamed with deep headlines descriptive of a sudden fatal affray that had occurred the day previous upon the preserves of the Tolleston Club, of Chicago, near Tolleston, Ind., where this well-known and wealthy club has large holdings of marsh lands, used for the purposes of a duck-shooting preserve.

At different times these columns have held descriptions of the determined efforts of the neighboring small landowners, and other less worthy persons, to treat this private property as their own—efforts which the club has always successfully combated within its legal rights. In these troubles of the past two or three determined trespassers have been roughly handled after refusing to leave the grounds. One or two suits for personal damages have been brought against the club, usually only to be dropped later. Suits have been brought to prove that the club marsh was open land belonging to the State of Indiana, and all sorts of trials have been heaped upon the silent and plucky clubmen who have tried to hold a little wild nature intact thus near to the city and to the hordes of unthinking and desperate men who wish to use as their own that which belongs to others. At one time two men who had formerly been in the employ of the club as watchmen pursued a quarrel outside of the club grounds and away from the club jurisdiction, and were both shot and killed by a man who was attacked by them, and who made a good case of self-defense, in which he was upheld by the club. Again, a year ago last October, two of the club watchmen who were crossing the marsh after dusk were waylaid and shot from ambush by unknown parties, whose identity the best detective energy has since been unable to discover. One of these men was Frank Whitlock, head warden, who was concerned in the affray of this week, and who was shot in the breast and seriously wounded at that time, his watchman's star being dented and bent by the load of shot which struck him in the breast and knocked him down. The other man was named Treagar, and he also was badly hurt, though both recovered in time. This latter was the last of the serious troubles upon this marsh, and it was enough to put the watchmen upon their guard, and to teach them how serious might be an encounter with the class of men who make the common and most dangerous poachers upon that property.

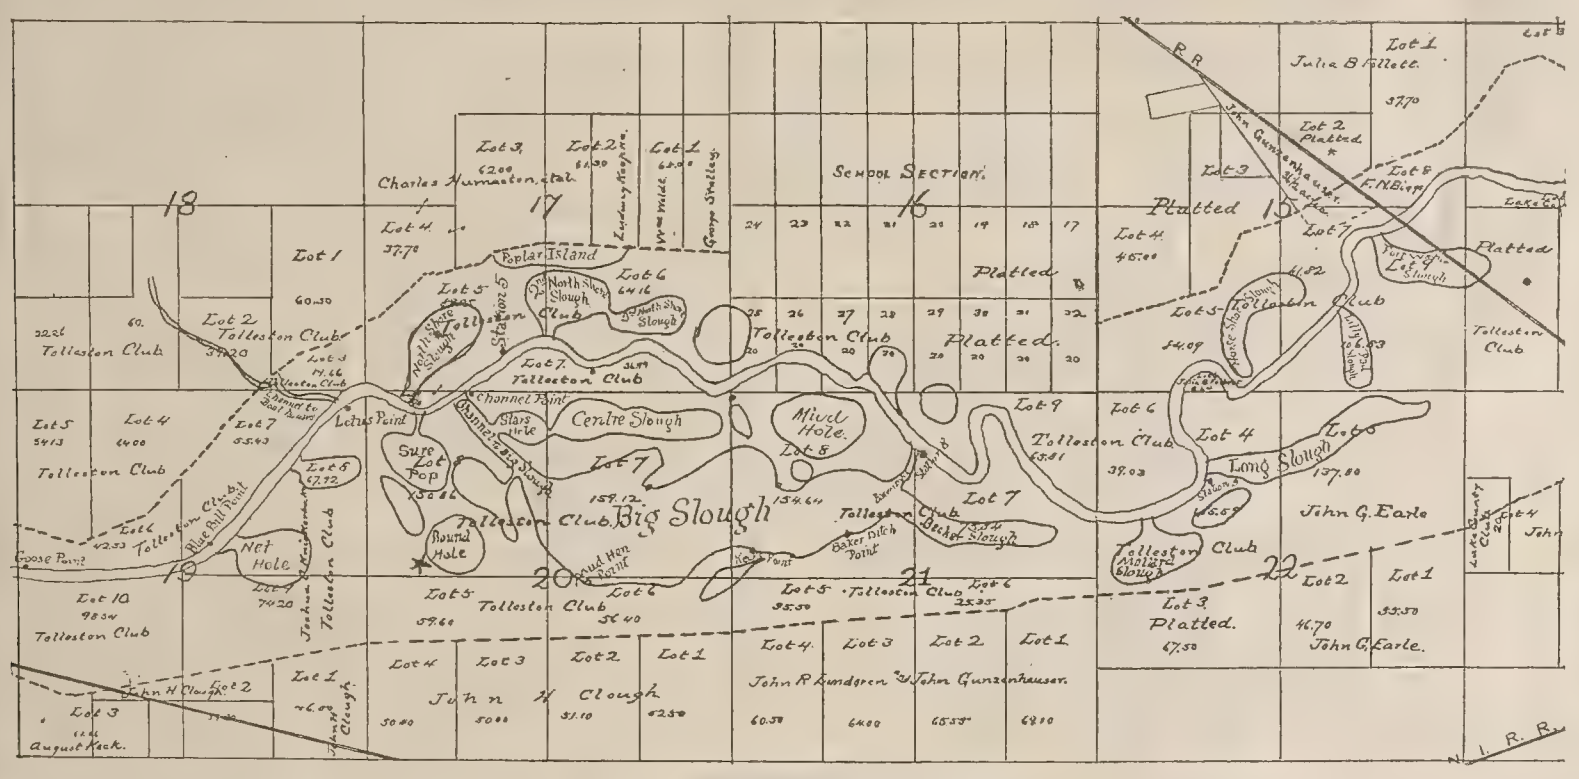
Serious as had been these earlier troubles on the club grounds—troubles which the club has always deplored, but could never avoid—the affair of this week was at once seen to be the most important one that has ever occurred there. Four men were reported to have been shot, two with probably fatal results and the others seriously. Three of the men acting as wardens were arrested, or rather gave themselves up at once; the fourth, Frank Whitlock, being then and now still at large. The prisoners were taken to the jail at Crown Point. It was at first reported, and indeed is asserted now, three days after the affray, that a mob was forming in the neighborhood determined to lynch the watchmen and then to march upon the Tolleston Club buildings to destroy them with dynamite and fire. This latter is a sample of the lawless and incendiary talk common in that neighborhood, where hostility to the "city sportsmen" is a part of the creed of life. Of course nothing will come of that. Meantime the Tolleston Club has engaged the services of W. A. Foster (the attorney who defended the Anarchists here), and has taken prompt steps to see the thing to a speedy legal end. Numbers of arrests are now being made among the poachers who were engaged in the fight, and the result will probably be that all the parties engaged in the affair on either side will be apprehended and held in custody until the matter can receive attention in the courts. The cases will probably be removed from the seat of local prejudice and tried in the courts of La Porte, in the same county.

The facts of the case as developed by careful investigation seem to be as follows: A party of men living near the club grounds—numbering in all fourteen or fifteen men—banded together and went upon the club grounds for the ostensible purpose of spearing muskrats. Just why so large a body of men should go together for the hunting of muskrats they can themselves perhaps better tell. It looks rather as though they were expecting or looking for trouble. At any rate, they were seen by the club watchmen, ordered off and refused to go. In the subsequent fight, in which the four watchmen were engaged with three times their number of trespassers, firearms were used, it is alleged, freely on both sides, with the result that one of the watchmen's party, John Blackburn, was slightly wounded in the head, while three of the trespassers—Frank Koster or Costick, Theodore Pratt and Alvin Bothwell—were shot. Koster was shot with a rifle in the hands, it is alleged, of Frank Whitlock, head warden. Pratt was shot seriously in the legs with a shotgun in the hands, it is said, of Barnum Whitlock, son of Frank Whitlock, who also shot Bothwell with the second barrel of the same gun, injuring him about the legs, though less seriously. The poachers assert that the men were all running away when they were fired upon by the wardens, but the latter testify very differently from that. At latest reports it is stated that Koster will die, and that Pratt's life is also despaired of; but all these reports lack confirmation, for there is obvious effort to work up local feeling and to array the resident population against the club men. It is likely that not more than one fatality will result. This, if the result should be so unfortunate, will be admittedly at the hands of Frank Whitlock, who was himself shot and nearly killed by men of this same stripe about a year ago, as above mentioned. (The poachers say it was Blackburn, and not Whitlock, who shot Koster.) Whitlock certainly had license to feel a bit timid and a bit vindictive toward the trespassers who have so long harassed the wardens and members of this club. It has been no unusual experience for wardens and members to hear rifle bullets singing near them when they have been out upon the marsh. It is commonly known that it is dangerous for a warden to go out upon the marsh alone or unarmed. Threats against the lives and the property of the club men have become too common to be noticed. It may be said, therefore, that when Whitlock saw this large body of men who had evidently come for trouble, he had every season in the world to go armed suitably for such trouble as his duty seemed sure to bring upon him. The facts as recounted by the club superintendent do not indicate that the watchmen acted hastily or in hot temper, or that they were too early with their fire. While the poaching element say that they had no weapons but their rat spears, and inflicted no wounds except with those weapons, the testimony of the wardens is directly contrary to this, they claiming that the men who came on the marsh all, or many of them, had revolvers in their pockets, and that they used them. The circumstances of the shooting are given as follows by the club superintendent, Wm. C. Kunert, in his report to the club officers, written immediately after the affair:

"TOLLESTON, Ind., Jan. 19.—To E. F. Daniels, President, and officers and members of the Tolleston Club, of Chicago: Dear Sirs—This 19th day of January, 1897, the attention of Frank M. Whitlock and Barnum Whitlock was called by me (Wm. C. Kunert) to a large crowd of poachers in the center sloughs, so Mr. F. M. Whitlock did not think thas it was safe to go up to a big crowd of poachers and attempt to order them off. So they asked John Blackburn, Charles Blackburn and Albert Taylor to go along also. George Hacker and I were spearing in the center sloughs; the rest of the boys were on the north shore slough. I assisted the boys over the river in my boat, and they went toward the place where the poachers were. There were but very few words passed between the poachers and the boys when the poachers attacked the boys with their spears, and a few seconds later one of the poachers drew a revolver of .38cal. out of his overall pocket and shot John Blackburn in the head, making a scalp wound about 3in. long. Barnum, having a 10-gauge shotgun, shot this man who shot Blackburn. Then another poacher had a .32 Winchester pointed at Charles Blackburn's breast when 12ft. away from Blackburn. F. M. Whitlock, seeing this man pointing the Winchester at Blackburn, threw a shell in his Marlin Rifle and shot the poacher in the hip. Then the poachers agreed to get off and take their wounded companions along. I was about fifteen rods from where this took place, and to the best of my knowledge, and seeing how it was done, the boys were justified in doing what they did or they would all have been killed, for those poachers have made their threats right along.

"On Jan. 12, 1897, Charles and John Blackburn were spearing in the center sloughs and came across six poachers. They bid the poachers the time of day and asked them if they did not know that they were trespassing on the Tolleston Club's property, and then the poachers threw off their belts and wanted to fight. Furthermore, they always have some boys along to carry a shotgun or a rifle for them, and as the two Blackburns were insulted by the poachers, without a word to the boy, he had his shotgun in readiness to shoot. And the same six that insulted the two Blackburns were in this large crowd to-day. Also was Wm. Lohman. Lohman came across to where Geo. Hacker was spearing, and Geo. Hacker told or asked him (Lohman) what he was doing on the marsh, and Lohman told him (Hacker) that he was going to have everybody arrested who walks on the marsh in Sections 19 and 20.

"It is quite a sad affair. The boys thought life was worth fighting for, and they were right; for I was close enough to see the fight from beginning to end."



Kunert says the man Koster was shot in the hip. Really he was shot through the shoulder or upper part of the chest, and when the ball struck him his hand fell down and struck upon his hip, so that Kunert thought he placed his hand upon the wound. The report as given above does not show that Koster was shot while endeavoring to get away. Young Whitlock seems to have been careful to fire at the legs and not at the bodies of the men engaged in the affair, and this he says he did not do until he thought it was to save the life of the others, among whom was his father. Out of all these conflicting stories the slow process of the law will later sift the approximate truth. In any phase the matter is deplorable enough, to none more so than to the club members who have so long stood silently the opprobrium of an unpopular enterprise, and who have sought to hold their rights only by due and careful process of the law.

History of the Tolleston Club.

Probably no sportsmen's club in the United States has been called upon to make a hotter fight to uphold the trespass law than the Tolleston Club, of Chicago. Its membership is made up among some of the wealthiest men of Chicago, mostly middle-aged or old business men fond of an occasional day afield. The club property is fairly at the door of the city of Chicago, and is surrounded by a loose population not always of a worthy description. The conservative and intelligent methods of the club have always kept these marshes well stocked with game. The methods of the general public have long ago entirely depopulated the marshes outside the Tolleston marsh, and the shooters who believe in the right of all men to the wild game have for years been endeavoring to kill off the game of the Tolleston marsh also. It is impossible to tell how much trouble this has cost the club, or how much money it has expended in the continuous fight against this lawless element. The members of the club are very proud and quiet, and little gets into the public ear about the club's doings unless some case of especial prominence comes up. Really there ha been enacted here for some time the beginning of tha great fight which will eventually have to be settled

America, the war between open shooting and the idea of the game preserve. The lesson of this war may be clearly read in the situation on this once famous marsh of the Little Calumet. Outside the Tolleston Club grounds there is no shooting. Inside there is shooting of very good sort.

For the benefit of those asking a clear view of the affair at the Tolleston Club a map of the grounds is appended, made for FOREST AND STREAM this week from copy furnished by the secretary of the club, Mr. Geo. Manierre. On this map may be seen a heavy dotted line surrounding the portions marked as marsh and water. This dotted line indicates the original U. S. Government Survey, made in 1834, when all this land was part of the public domain. The part of the old Calumet Marsh within these dotted lines was marked as "impassable morass," and it remained as part of the public domain. Under the Swamp Lands acts of 1850 this land was resurveyed in 1870, and was then meandered and so thrown open for entry under the United States land laws pertaining to such lands. The State of Indiana, within whose borders this land lies, never attained title to these lands at all. They were taken direct by patent of the United States. The Tolleston Club obtained its lands, 2,300 acres in all, in 1873, taking title direct from the United States, or in case of some lots by mesne conveyance from the United States. To-day you may see a stack of these old land patents in the archives of the club, bearing the signature of "U. S. Grant, President of the United Stases," these

MAP OF TOLLESTON PRESERVE.

patents running in some cases to a man who at once conveyed them to the Tolleston Club.

Meantime other parties had also taken land near by, and after a time the State of Indiana cast eyes upon this land. Certain parties, among these John H. Clough, whose land may be seen adjoining the club grounds upon the south, brought suit against the club, claiming that as riparian owners they owned all the land, not only up to the old survey line of 1834, but clear up to the middle of the stream of water made by the Little Calumet River. This claim, if allowed, would deprive the club of much of the property it has held so long; but as a matter of fact the Supreme Court of Indiana did approve this riparian ownership position, its decree giving Clough ownership clear up to the middle of the stream. In this, however, the Supreme Court of Indiana ran against the Supreme Court of the United States, to which the case was at once taken by the hard-fighting Tolleston Club. The latter expects that the United States will back the patents as originally issued, and hence believes that it will win the suit. As it stands, of course, Clough does not own the land beyond the line of the 1834 survey, and he cannot own it, no matter what the decision of the Indiana courts, until the Supreme Court has decided that he does so own it. This it may or may not do.

These facts all bear upon the case in hand, in which trespassers were ejected from this debated ground. Reference to the map will show a star (*) marked upon it close to the pond hole called the "Round Hole." This is where the shooting took place. (It was within a short distance from this point that Whitlock and Treager were shot a year ago.) Then fourteen men who made up the invading party came across the marsh from the east on a line from the "Mallard Slough" and across the "Big Slough," all the country being covered with ice outside the running current of water. The men were seen by the watchmen, as described, from a point near the club house beyond the "North Shore Slough," and on the opposite side of the river, which latter they crossed as stated in a boat. The encounter, it may thus be seen, took place at a point which is upon the disputed Clough land. The poachers claim they were on their neighbor Clough's land. The club claims that this land does not belong to Clough at all, and cannot except as the title pends in the Supreme Court. It may be supposed that a very pretty legal situation all around is involved, and it is not likely that we shall for some time hear the end of this complication.

All the officers and members of the Tolleston Club are grave and troubled over this affair, and over the misrepresentations to which they have been subjected by one-sided press reports from the scene of the trouble. They have been asked, "How many men have been killed by the club watchmen?" and all that sort of thing. As a matter of fact, the club has never sought any trouble with the poaching element at any time. It has killed no man. It has lost two watchmen killed and had two others shot nearly to death, to say nothing of the attempt made this week to shoot others of the men engaged in protecting the club property, which has been owned for nearly twenty-four years. The Tolleston Club has not been aggressor in any case, but has refused to allow lawless persons to run over it and its privileges. That the club is intensely unpopular on this account is not to be denied, but this unpopularity is something to which any sportsmen's club must submit.

President E. F. Daniels when seen expressed his deep sorrow over this unfortunate affair, and gladly gave the FOREST AND STREAM representative every aid to a full understanding of the facts. Mr. F. A. Howe, ex-president of the club, a man very much beloved and for many years continued in the office of president by the club, also spoke in terms of regret of the matter. Mr. Howe gave details as to earlier troubles upon the marsh, and set forth clearly facts which have never been made public. Mr. Geo. Manierre, secretary of the club, shared the same feeling, and also aided cheerfully in getting at all the information. Mr. C. D. Peacock, the club treasurer, in response to inquiry writes very kindly that he is not in possession of any facts except those embodied in the superintendent's report. The tone of these men and of other Tolleston members interviewed upon this sad occurrence is that while they deplore the affair, they do not in any sense feel responsible or at fault in it. It goes without saying that their watchmen will have the best of legal defense, and that no pains nor money will be spared in carrying this matter to a finish.

At this writing Frank Whitlock is still unfound. He is thought to be in Chicago. Koster, the man most seriously shot, is at this time still living, and it is hoped by all that his injuries may not be fatal. The ball passed through his body. Koster, or Costick, is a young Pole, a farm hand in the employ of Wm. Lohman, leader of the party of alleged poachers. Henry Nimitz, a farmer and one of the party, says that the following were also of the party: William Lohman, Lawrence Koudyker, John Bothwell, Alvin Bothwell, Rand Bothwell, Floyd Bothwell, William Johnson, John Johnson, Frank Costick, Charles Prott, Theodore Prott, Herman Guntzell, Alvin Nicholson.

It is charged by the club men that this raid was deliberately planned and carried out, and that the intention was to precipitate a fight. It is claimed that the animus of this and the names of the real leaders of the movement will come out at the trial. Feeling at this date of writing continues very intense.

Some Experiences with the Stump Bear.

OKANOGAN COUNTY, Wash., Jan. 7.—A short time ago I returned to the Okanogan from my annual vacation, and I found that I had got a long way behind in my newspaper reading, and nothing pleased me any more than your editorial on the "Stump Bear."

Now that the stump bear has been given a place in the bear catalogue, I presume that it will be in order to give the FOREST AND STREAM family some of the hairbreadth escapes we have had, the number we have seen and been chased by, and all the particulars pertaining thereto.

In 1860, when father and I went to Georgia Gulch, in Colorado, while father was prospecting I put in my time hunting. We had taken our wagon apart and made a cart; as there was quite a lot of open country around there, I found it very convenient and could bring my game home and readily sell any surplus. On one of my trips I was accompanied by Mr. J. and Mr. W., who claimed to be good hunters and had killed a great many deer, yet seemed to be very much afraid of bears. The first day out the boys each got a deer and they were highly elated. The next day they got another deer apiece and I got a very big buck and one small sheep. We reached camp in time to go down on to a stream we called Eagle River. Here we camped under a big spruce tree and picketed the oxen in a meadow near by.

As we had been very successful thus far we were feeling fine, and many were the stories told around the camp-fire that night. After forming plans for the morrow I took my blankets and went and laid down by one of the oxen, a habit I had been following ever since we had left the Missouri River. I was soon sleeping soundly, and do not know how long I had been asleep when I was awakened by the dog barking, and soon I heard two shots fired in quick succession. Then in a few minutes I heard six more. I got up and dressed myself and grabbed my rifle and revolver, and waited for further developments, which soon came by the boys hollering to me to come there, that a bear had taken possession of camp and had them up the tree, and they did not have their shot pouches. The poor dog had stampeded. I went up toward camp very cautiously. The boys kept telling me that they could see the bear, and that it was just above camp. I was soon able to get the object that I could see up between me and the horizon, and then I could see that it was nothing but a very large stump bear. I could not help laughing at the boys for their mistake. I built up the fire, then they come down, but it was quite a while before the dog came back to the fire. He showed by his actions that he was thoroughly frightened, for every few minutes he would look toward the stump and growl. I went back to my bed and slept until day began to break, then I got up and went to camp and started the fire. Soon the boys were up, and although they tried to make me believe that they had put up a job on me, I told them that it was too transparent. One of them had a very nice knife and said that it cost $5 in the States, and that he would make me a present of the knife if I would not say anything about the stump bear. I told him all right. We examined the bear very closely that morning, but could not find a wound on it.

Not many years ago, while up in the Clear Water country, Mr. Odle and I went one Sunday to see if we could locate a raspberry patch I had visited a few years before. When we had got near the place we picketed our horses and started up the ridge, and had gone but a short distance when I called his attention to what at first I thought was a stump, yet it looked very much like a bear. While we were looking it got down from a sitting posture to its natural way of locomotion. I jerked out my revolver, but Mr. O. begged me not to shoot. The bear ran around the hill and I after it. Mr. O. ran toward the horses. I soon come in sight of the bear, which had stopped at about 75yds. I took a shot at it and crippled it very badly. I ran up near to it and shot it in the head, then I went back and hollered for Mr. O. He could hardly believe that I had killed the bear, and was very nervous about going up to it. It was about two years old. And thus ends the first chapter on the stump bear. Next!

LEW WILMOT.

Ontario Water-Killing Deer Law.

BELLEVILLE, Ont., Jan. 19.—A great deal of dissatisfaction having resulted from last year's amendment to the game law, whereby the killing of deer in the water was prohibited, the Forest and Stream Club, of this city, called a meeting some weeks ago, to which all interested in the premises were invited, irrespective of their membership in the club. Mr. W. H. Biggar, president of the club and member in the Ontario Legislature (in whose Province the subject lies) for this constituency, presided, and there was a thoroughly representative gathering. The subject was thoroughly discussed in all its bearings, and it was shown conclusively by reports from various parties of hunters that the prevention of water-killing had had the effect of causing much greater destruction than formerly among the deer herd, owing to the wounding of hundreds of the animals which escaped to die a lingering death. The following resolution, in which will be found embodied the objections which had been found as the result of experience against last year's change in the law, and suggestions for its further amendment at the session of the Legislature, which will open on the 10th of February, proximo, was submitted to the meeting:

Whereas, The effect of the law preventing the water-killing of deer has been shown by the experience of this season to be dangerous to human life by reason of large numbers of inexperienced persons who would otherwise have a clear view of their surroundings being inclined to shoot at moving objects in the woods, supposing them to be deer, with ofttimes fatal results; and

Whereas, to prevent the killing of deer in the water or to prohibit hounding would virtually confine the hunting of deer to professional hunters and settlers, and shut out from such enjoyment the great majority of the people who might so desire; and

Whereas, The result of the present law has been to cause the wounding of many deer which could not be secured, and which no doubt died a lingering and painful death or became prey to wolves;

Therefore, It is resolved that this club respectfully requests that the law may be so altered as to permit the killing of deer in the water as formerly; to limit the number of deer which each hunter may kill to one in each season, and to provide that venison shall not hereafter be sold, under a heavy penalty.

This resolution was referred to an able committee, who after some weeks' consideration adopted it with virtual unanimity, and decided to present them to the Game Commissioners. President Biggar stated that should the Commissioners refuse to recommend the resolution to the Legislature, he will embody it in a bill which he will introduce. When it is considered that our deer country is heavily wooded, rocky and rough in the extreme, and abounding in lakes, it will be seen that it is a fair compromise, and will be highly effective in preserving the deer. The slaughter caused by unskillful marksmanship in the woods; the limiting of the hunter to one deer; but above all, the stopping of the sale of venison, could not have other than a most salutary effect in the way of protection. At present there are men in this region who boast of killing and selling as many as sixty deer in a season. By stopping the sale, as suggested, the occupation of those butchers would be gone.

So great is the extent of the territory to be covered, so difficult is it to secure information from the people in the deer range as to infractions of the law, that our game wardens' duty is no sinecure, but they have done as well as could be expected so far, and will no doubt do better in future, as the people become educated to their interest in the matter. The following paragraph from this day's issue of the Toronto *Globe* will be found of interest in this connection: "The chief game warden for the northern district made an important seizure of moose skins at Orillia last week, and has notified the department to this effect. No names are given, but instructions have been given to prosecute the parties who had them in their possession."

R. S. BELL.

Maine Guide License Scheme.

BOSTON, Jan. 23.—Late reports say that the Maine guides are decidedly down on Commissioner Carlton's bill that they must be licensed. The Rangeley Guides' Association is reported to be against the measure to a man, and so decidedly against it as to have decided to send a protest to Augusta. Several members of that Association have written the newspapers protesting against such a measure, and asking why guides should be required to take out licenses, at cost to themselves, any more than men who work at lumbering, farming or any other employment. Besides they declare that the law does not propose to grant them anything in return. It does not increase their powers for fish and game protection. It simply requires them to look out for fires and make themselves obnoxious to the people whom they guide by being obliged to make returns to the State concerning names, fish and game taken, and grounds hunted and fished over.

The Rangeley Lakes newspaper, published at Rangeley,

and an organ of the interests of that region, ridicules the whole scheme and winds up its criticism with: "Bah! we want none of it!" The Bangor papers have, some of them, scathed the measure unmercifully. Boston sportsmen whom I have met are decidedly against the bill. I met a gentleman to-day who annually spends his vacations in Maine, going twice a year, when possible. Formerly a citizen of that State, he goes to his native town. An old friend accompanies him on his fishing and shooting trips. He does not pretend to be a guide, going with his "friend from Boston" mainly for love of the sport. His Boston friend pays him something for his time, because he cannot afford to leave his farm for nothing; has to hire a man in his place. Who shall decide in such a case as to whether the country friend is a guide? Must he take out a license or be subject to a fine, under Commissioner Carlton's bill? There are many just such cases. Indeed, the guides who make a business of guiding are not many. They work a little while in the spring and fall, accompanying one or two parties for a couple of weeks or more. Must they take out licenses? "Make the best of the guides wardens," the sportsmen say, "and nobody will object. But a sweeping law that every man working for hunters and fishermen must be licensed will not go down."

The very latest reports from Augusta say that the friends of fish and game protection are getting so many remonstrances against the guide license measure, already introduced into the House, that they are seeing that it will be of little use to pass such a bill. They are reported to be ready to consider a compromise measure, and for that reason will propose a hearing where the interests of the guides may be represented. They know that a measure to which the guides and everybody working for sportsmen are hostile can be of very little use. They begin to see the folly of attempting to tax the guides without any returns. SPECIAL.

Rhode Island Game.

PROVIDENCE, R. I., Jan. 25.—*Editor Forest and Stream:* Sportsmen report a scarcity of water fowl in Narragansett Bay and its tributaries this winter, and the cause of the non-appearance of the bird is attributed to the fact that the weather has not been cold enough so far this winter to drive the wildfowl from their Northern haunts to lower latitudes. Nearly every winter from Dec. 1 until early in the spring Narragansett and Mount Hope bays are fairly alive with black ducks, bluebills, coots and whistlers, and sometimes these water fowl are seen in large flocks, often covering several acres of water surface about the bays and harbors. The birds find good feeding places in Narragansett Bay, and they would undoubtedly have made their appearance here in as large numbers as they have in recent years but for the fact that the winter has not been severe enough in higher latitudes to prevent them from obtaining food necessary to exist. So few wild ducks have been seen here so far this season that sportsmen feel that it is a sure sign of a mild winter.

A local sportsman of nearly a quarter of a century's experience, and well informed on the subject, reports that with the close of the shooting season rabbits and quail are more plentiful than for several previous years. Quail, he says, were especially plentiful, and with an open winter next season's shooting in Bristol county and contiguous sections of Rhode Island and Massachusetts should be good. Partridges are scarce, and there is but little prospect of much of this game next year.

The trout hatchery at Carolina recently supplied the Pennsylvania Forest Brook Trout Association with 100,000 trout fry.

While walking along a suburban road on Jan. 5 I thought I heard the note of a bluebird, and was soon gratified by seeing the welcome visitor flitting about among some scrub cedars. Bluebirds and robins were reported from Pawtuxet Valley on the 8th. The weather was unusually warm for several days. On the 15th I noted several small flocks of fox sparrows. Others were seen on the 16th, as well as snowbuntings. W. H. M.

The Cheat Mountain Club.

THE annual meeting of the Sportsmen's Association of Cheat Mountain for the election of officers was held at Hotel Duquesne at 8 o'clock Monday evening, Jan. 18. The election resulted as follows: President, W. M. Kennedy; Vice-Presidents, U. Baird, Nathaniel Ewing, W. S. Edwards, W. G. Brown, S. B Elkins; Secretary, Dr. W. F. Robeson; Treasurer, Theodore Sproull; Naturalist and Surgeon, Dr. W. J. Riggs; Board of Directors, C C. Scaife, George Shiras, 111; H. P. Pears, James H. Stewart, A. P. Tallman, J. M. Bell, M. C. Miller.

The report of the treasurer showed the corporation to be in an excellent financial condition, with a larger surplus than at any previous time. It was decided to purchase several hundred acres of land contiguous to the club house at Cheat Bridge, West Virginia. A survey will also be made with a view to converting certain swamp lands into a lake. The Association voted to indorse the efforts of the Pennsylvania State Sportsmen's Association to have a State game commission created on the lines of the State Fish Commission for the better protection of game in this State. Chinese pheasants introduced upon the preserve have thrived and multiplied. The club will place 3,000,000 trout fry in the waters of Cheat River during the coming season.

The Association intends to fix a date for some time next summer when a reception at the club's preserve will be tendered to the brethren of the fraternity not members, and the sportsmen's press, of which occasion FOREST AND STREAM will receive due notice and its representative a cordial invitation. DEACON.

PITTSBURG, Pa., Jan. 20.

Deer, Pheasants and Hares in Connecticut.

EAST HADDAM, Conn., Jan. 20.—It is $100 fine to shoot deer in Connecticut. A says that if a deer gets into a field of young corn and destroys it, or any crop, you cannot shoot him or collect damage, but must let him keep right on and suffer the damage. B holds that you can either shoot the deer to save the crop or collect damage from the State, as no law is constitutional that obliges a citizen to suffer damage with no means of recovery in such a case.

If you will kindly put us right on this subject we shall be very thankful.

Pheasants are becoming quite numerous in this locality; also Canada hares, which have strayed from the preserves of F. C. Fowler, of Moodus. In Westchester, just north of Moodus, pheasants were so numerous the past season that they did serious damage to the crops, and the farmers were obliged to shoot many of them. F. A. C.

[There is nothing in the Connecticut deer law which provides, as some other game laws do, that game may be killed if it destroys crops. You might save your corn from the deer by building a fence around it, or by exploding giant firecrackers and waving a red flag to frighten the deer away, or by erecting as a scaredeer a sportsman's effigy with a gun, or by a dozen other devices and expedients not necessarily fatal to the deer.]

Pheasants in Vermont.

NORTH FERRISBURG, Vt.—*Editor Forest and Stream:* The pheasants of which I spoke in my note in your issue of Jan. 23 are called golden pheasants here, and were imported by W. S. Webb, of your city, from England, for stocking his Shelburne farms, situated about eight miles from here on the shore of Lake Champlain.

He has also imported (from Michigan, I think) several hundred quail, which are doing well and are already scattered over this part of the State.

I saw by a State paper a short time since that he had delivered to the gamekeeper here three different kinds of game birds, the largest of which when mature weighs 14lbs. and is much the same as a wild turkey.

He has furnished a large number of pheasant eggs to parties, that these birds might be started in different localities. Too much cannot be said in Mr. Webb's praise for his untiring efforts in trying to build up the game supply of the State.

I am very glad to see that our paper is doing all it can to stop the sale of game, and surely I think that could every man who uses a gun read the FOREST AND STREAM for a year we would have many less poachers and pothunters than now. FERRIS.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

A MEMORABLE TROUT SUPPER.

CHARLESTOWN, N. H.—*Editor Forest and Stream:* I have followed up Fred Mather's reminiscences with great pleasure, and particularly enjoyed his graphic sketch of our old friend Chas Hallock, whose photograph will make an admirable frontispiece for the gallery of "Old Forest and Streamers" which you propose to give us in a "New Year's number *some day*"

I have been still more delighted with Mr. Hammond's description of old days in Holland, for it has recalled to my mind old scenes and old friends, long passed to "the happy hunting grounds," or in other ways lost sight of. Geo. Ashmun, Frank Bowles, D. B Wason and "Uncle" Aaron Howe I can see again now, and of George Ashmun I have particular memories. I never shot with him, though he once gave me a handsome black setter, which unfortunately would not stay given and insisted on returning to his old master; but he was one of "the men I have fished with," and I well remember his splicing the tip of a rod for me up at Greensboro, Vt., said tip having been broken by a fall in climbing down from the top of an old-fashioned stage coach to the slippery steps of the country tavern.

Another of my recollections is the eating of some superb trout, of his catching, in the taking of which I did not share, as follows:

In the spring of 1854 Col. Hazard, the proprietor of the celebrated powder mills at Enfield, Conn., discovered some large trout feeding in the pond which supplied his mills, and invited Mr. Ashmun and Chester Harding, the artist, who was also an expert angler, to come down and catch them, and also asked several other Springfield gentlemen to come down at 6 P. M. and eat them, feeling justly sure of the success of the fishermen. Both feats were duly performed, and I remember those trout yet.

It is so long since that I cannot recall all the guests, but I think that the coach in which I went down contained also Hon. David A. Wells, the well-known writer of political economics, now of Norwich, Conn.; Samuel Bowles, the founder of the Springfield *Republican;* and Mr. John L. King, a son-in-law of Mr. Harding. It was a dark and rainy night, and we went down in a covered coach, but the cheerful house, the warm welcome and the delicious dinner are things never to be forgotten. I believe Mr. Wells and myself are the only survivors of the party.

I was very busy in those days building and operating a large cotton mill at Indian Orchard, one of the suburbs of Springfield, and did not get much time for either shooting or fishing, though I managed to slip off for a few hours once in a while with my rod to the North or South Branch of Mill River, which supplied the water shops of the Springfield Armory, and in which there were a few good trout left, though it was severely fished.

Then the little Bircham Brook, which was entirely in Springfield and fell into the Chicopee River, between Indian Orchard and Chicopee Falls, usually gave me a few good breakfasts, and some sport for an hour or two in the afternoon every spring; and there was another little brook on the north side of the Chicopee River, in the town of the same name, and one in Ludlow, which yielded fair toll on an annual visit. There is a great stretch of level "plain land" on the north side of the river, stretching over Willimansett and South Hadley, which was a favorite resort for upland plover in August, and I occasionally got one or two of them, and have shot them so fat on grasshoppers as to burst open when they struck the ground in their fall if I had dropped them from a high sweep overhead, as they circled round. They are a hard bird to approach, though, and hardly pay for the trouble of looking up.

So much for recalled reminiscences. VON W.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

MEN I HAVE FISHED WITH.

XXX.—Francis Endicott.

TEN years ago there was no sportsman more widely known in New York city and vicinity than the genial gentleman whose name heads this article. He was then in his fifty-fourth year and was a strongly built man of medium height, with a stamp of sorrow on his face from a domestic affliction the year before, from which he never recovered. He had fished with all the clubs that have their great houses on the islands in Martha's Vineyard, shot bay birds at every beach about Long Island and was one of the most frequent guests at Bill Chadwick's famous resort on Squan Beach, N. J., since 1850, when Tom's River was the most famous place for fish and game within 100 miles of New York

Having said this, I hardly know how to say more, for he was the most intimate companion I ever had, and my love for him was greater than that of a brother. To strangers he was rather cold and dignified, always wearing a "Prince Albert" coat and a high hat, but rare old Jack Falstaff said: "Thine, * * * Jack, with my familiars; John with my brothers and sisters; and Sir John with all Europe;" and it was my privilege to be a familiar and call him "Frank."

With Rosaline I could say:

"A merrier man,
Within the limit of becoming mirth,
I never spent an hour's talk withal."

In the sketch of ex-President Arthur it was told how I fished with him and Mr. Endicott in 1862, but the exciting events that followed, when we were making volumes of history every day, obliterated, or at least dimmed, their names on memory's tablet; but chance threw us together nearly twenty years later, and it seems strange how it came about. His father died in 1848, and before he was twenty he became head of the firm of Endicott & Co., lithographers, which did that fine work for the twenty volumes of "The Natural History of New York," in 1842, of which De Kay's volumes of Birds, Fishes, Reptiles, etc., are well known.

There had been annual contests at fly-casting at the New York State Sportsmen's conventions since 1866, but they were small beginnings with only two entries in each until 1871, when there were five contestants. Two years later I attended the meeting at Batavia to see what such a contest might look like. Four men entered, and the judges had no way of measuring the casts, but awarded the prizes as they thought best. The next year, 1874, at Oswego, they measured the lines after the casts, and on this false basis made the first report of distance cast. I attended many contests and made notes, which are now before me. In 1881 the State tournament was to be held at Coney Island, and the president, Mr. Abel Crook, asked me to superintend the fly-casting. I would, if permitted to carry out my ideas of reform and make the affair a perfectly square contest, which I plainly said had never been held in the State. Permission was given and we went ahead, to the utter dismay of some casters of great reputation. It was the first great contest where there were six classes and twenty-eight entries. In the bass casting, "Cuttyhunk style," appeared the name "Frank Endicott, Richmond County Protective Association," and the record in FOREST AND STREAM of June 30, 1881, says: "Mr. Endicott was awarded the fourth prize for the accuracy with which he cast, in addition to the third given him for distance."

After the labor of the day was completed I said to Mr. Endicott: "This is the first time I have ever seen a weight or bait cast from the reel, and it was very interesting."

"You've never fished for striped bass then?"

"O, yes, at Albany, with sturgeon spawn bait for small bass, and at the Great Falls of the Potomac with fly and bait for larger fish, and fine, gamy fish they are."

"Yes," said he, "but for grand surf fishing, for bass weighing from 10 to 40lbs., you should go to the islands in Martha's Vineyard, or down to Montauk Point."

And I met him frequently for a year afterward, and the pleasure of his company grew on me, and somehow we managed to meet frequently, by accident. One day in a rambling talk of fishing he mentioned losing his rod and rations at the Great Falls of the Potomac, and how a soldier from a neighboring garrison had saved his life with hardtack and salt horse.

I looked him over. There was the man who had slipped on the rocks twenty years ago, of whom I told of in the last sketch; the same sad eye, erect figure, silky hair and the long "dildalls," as we called long side whiskers in those days, to distinguish them from the short "Burnsides." I asked: "When did this happen?"

"In the fall of 1862. Why?"

"Nothing, only I heard a story like that from a man who served in a regiment there; he was a sergeant at that time. Would you know his name if you heard it?"

"No, I don't think I would, although I met him later and he dined with my friend and me in Washington. Those old times are so long ago and events came so fast that one can't remember every chance acquaintance."

"The sergeant's name was the same as mine, and I went down from the falls in the hack with you to Fort Alexander, and afterward met you and your friend at the regimental su ler's, when swords were substituted for corkscrews."

"No!"

"Yes!"

"Shake!"

And there began a friendship with one of the most lovable men that I ever knew, a man of whom the late Martin B. Brown, printer of the N. Y. *City Record*, and a member of the Cuttyhunk Club, once said: "A man who could not love Frank Endicott couldn't love anybody." And I most heartily agree with him. He became my *alter ego.*

As an all-round genial sportsman he knew more anglers and shooters in New York city than any man in it. A walk with him on any street was a continued interruption of salutations and chats on fishing or shooting. Under the *nom de plume* of Ted Grayson he contributed charming sketches to *Porter's Spirit of the Times*, then the only journal in America which touched field sports. In the early day when Old Bill Chadwick was younger than he is now his hostelry on Tom's River, N. J., was the most famous of all nearby resorts for sportsmen from the great city, and around its fireplace the events of the day were discussed. There was grand fishing in Barnegat Bay, ducking and bay bird shooting along the sandy beaches, and brant were plenty in season. In the later days when I accompanied him to Chadwick's there was still good sport there, but over it hung the pall of tradition. "You should have been here thirty years ago, when George Gelson killed thirteen brant with one barrel," etc. I knew Gelson slightly, a man then of eighty years, who still shot an 8 bore and was known in New York city as "the bald eagle of Currituck."

After the tournament at Coney Island Endicott and I organized the FOREST AND STREAM anglers' tournament, which held its only contest on Harlem Mere, Central Park, in 1882, and then became the National Rod and Reel Association, and held tournaments until 1889.

He kept the lithographing firm running for many years after the death of his father, but soon after losing his wife his children left the Staten Island home and moved into the city, but he took a room in a very unpretentious hotel and remained on the island, where he could fish when inclination agreed with the tide. His room was a museum of arms and fishing tackle, as well as the library of a scholarly man, and after a day's fishing we often sat looking out on the bay, where we could see the ocean steamers from the Narrows until they were lost in the direction of the great city and exchange stories of fishing and shooting, or smoke in reverie. He seldom fished in the Bay above the Narrows; his favorite grounds were in the Lower Bay and the Great Kills, taking boat at Gifford's and going out far or fishing near, as he thought best. Our fishing there was mainly for weakfish and kingfish, but sometimes we tried for bluefish in Raritan Bay. He knew the grounds for miles around, and his knowledge of where to find the weakfish, whether the smaller school fish or the big yellow-finned tide runners, in all kinds of weather and stages of tide was remarkable.

Mr. Endicott, like his friend Gen. Arthur, was an epicure; perhaps not "of the first water," let us say of a prime vintage, for they were *connoisseurs* in wines as well as in all other things which are esteemed by the *bon vivant*, and in the two last months of each year, while he lived, we met at a little French restaurant and ordered a roast grouse, chicory salad and Burgundy; the grouse to be in the oven only twelve minutes, and the *chapon* in the salad to have an extra rub of garlic. This chicory was not the kind which grows like a carrot, but the French sort, sometimes called endive; and while we are talking of this salad I will tell you what I learned from Endicott about it. The *chapon* is a bit of dry bread 2in. square that has been rubbed with a clove of garlic, and then the latter is thrown away and the *chapon* is tossed among the leaves, which have been treated to salt and oil only. Most persons get enough garlic from this slight contact with the bread, but we saved the *chapon* for a *bon bouche* and divided it fairly. Whenever I wander up Fulton street, especially in the grouse season, it seems as if Frank Endicott must be coming to meet me at the little café, which is now no more.

From him I not only learned much about salt-water fishing, but also how game should not be cooked. At our first grouse dinner he noticed that I was a little shy of the very rare interior, and he overcame my crude ideas and taught me that the bird was cooked to perfection, and then I came to know how not to cook some birds. This is a thing which requires education, and I was a long time in getting mine, and have been longer in trying to educate a few household cooks who may appreciate rare beef, but draw the line on rare birds; but let me tell it as my mentor told me, as near as his words can be remembered:

"In the cooking of game birds," said he, "it is necessary that all the white-meated ones, like our Northern partridge and quail, should be well done, so as to show no bit of rare meat, just as a turkey or chicken should be cooked. But, my boy, with the dark-meated birds such cooking is ruin, the distinctive flavor of the meat is lost You know, of course, that the ruffed grouse is called a 'partridge' in New York markets, while the prairie chicken of the West is the only 'grouse' that the market and the café knows. Well, the first of these birds needs to be cooked to the bone, and the latter only well browned on the outside, just as fish should be thoroughly cooked and beef lightly. Ordinarily a French *chef* has little knowledge of cooking game birds; he may cook venison well, because it requires the same treatment as mutton; but his idea is to devise some sauce with a flavor that will destroy the individuality of a game bird. Don't trust him to cook one without special instructions unless you know he understands this."

I was getting some new ideas about good cooking of game, and somehow they seemed to accord with the plain cooking of my hunting and trapping life, when it often seemed that there was a lack of "dressing" and sauces.

He continued: "Take a canvasback duck, for instance. If it has fed upon wild celery it is the finest aquatic fowl in the world, unless we include the redhead, which robs it of its dainty after its long dive for it; but let some cook roast it for half an hour and it might as well be a barnyard fowl, especially if it is stuffed and 'seasoned' so as to destroy the delicate natural flavor. If a canvasback is to be cooked at home, let them roast it in a hot oven full fifteen minutes if women are your guests; but only twelve if they are sportsmen epicures; but in both cases it must be served hot The oven must be hot and the bird heated through and served on hot plates, or it is wasted."

Another thing which this epicure taught me was to relish the bitter flavor in the backbone of a grouse after there was little else left. This can only be had by sucking on the dorsal vertebra, and it is said that in England some men carry this bone in a vest pocket for weeks and refresh their memories with a pull at it; but it is true that there is an agreeable bitter in the backbone of a grouse when you can't get another bit of satisfaction out of the bird. Yet this man whom I have extolled as an epicure was, or pretended to be, fond of roast possum, that omnivorous, fat-laden critter which feeds on what comes handy, just like the hog, the coon, the bear and man, whether it be fish, flesh, fowl or blackberries.

In my Long Island home there were two permanent boarders who never missed a meal nor paid me a cent. Their names were Keno and Trouble, and their idea of enjoying life was to make it miserable for rats, cats and possums. Regularly, about midnight, these terriers were let out before going to bed and their voices told me if they had treed a possum or if it was only a cat. In the latter case they came reluctantly at call, but if it was a possum they renewed their yelping after I had pulled on boots and started with a lantern for the game. I had told all this to Mr. Endicott and told him that I gave the long snouts to the darkies. Just how many I sent him or how many possum dinners we had down on Staten Island is not on record, but if not exactly feasts of reason there was always a flow of soul and wit. It may be possible that a dislike for all fat meats led me to revile the succulent possum while eating a small portion of it out of compliment to the host; that's the most likely solution, for I once told Frank, who was extolling the merits of a roast sucking pig, that I'd as soon eat a baby. Now, in justice to the taste of my friend and to the possum, I will say that the portion of the tongue, which he impartially served to each guest, was truly a gastronomic delicacy, little, but oh, my! Frank once delivered this after-dinner rhapsody over the remains of a possum:

"Oh! rare marsupial with the tail prehensile,
Would that I had the fervid pen or pencil
Thy virtues to depict—suffice for me
That thou hast brought such guests to dine on thee.
There are who say—may Satan's pitchfork toss 'em—
That none but Southern darkies eat the possum.
But we will cling with simple faith to thee,
As clings thy tail to the persimmon tree,
Immovable as earth—thou pansy blossom!
Thou flower! Thou miracle of gr(e)ase! Oh!!

"POSSUM."

In the last year of his life he wrote me the following, dated Jan. 28, 1890: "I have been very sick, weak and debilitated from nasal hemorrhages—have had some fainting spells and am somewhat weak on my pins, otherwise I would have inflicted you with my presence for a few days as per your kind invitation. I am the victim of a conspiracy between my children, my brother Munroe and a local physician, and the result is that I am ordered away to the Adirondacks for change of air. But what I wish to say to you, my dear boy, is this: The trouble in my throat is, I think, malignant, and as a consequence fatal. Ever bear me in your kind remembrance; I am not afraid of the grim enemy."

As I had seen him within a month and had eaten a grouse and venison chops with him, and promised him a possum or two before long, the above letter seemed strange. He was not a complaining man, and he appeared to be in robust health. He wrote me jolly letters, and I forgot that his health was bad. My busy season came on, and in May I learned that Dr. Russell had taken him to the Adirondacks, and we exchanged weekly letters. On July 24 he wrote from Benson Mines, near Carthage, N. Y., as follows:

"I have been here two weeks, loafing, vegetating, resting and blue-moulding. Have been too weak to do much fishing until yesterday, when I went somewhat further from the

FRANCIS ENDICOTT.

From a photograph sent to Fred Mather, June, 1888.

house (half mile) and caught twenty four trout, none weighing over ¼lb., most of them being about 7in. long. The trout are small in Little River, as they call this beautiful trout stream, but are very game. However, if you catch nothing, fly-casting is, like virtue, its own exceeding great reward. The stream is delightful for casting, no overhanging bushes nor other obstructions, and is strung with beautiful pools on whose surface you can see an occasional dimple made by the troutlings, or the bolder whirl of the larger trout. * * * Not much sport, you may say, but to me the brook and the trout were like a dream of past days. My chum, Dr. Russell, has just returned from a little stroll to the inlet of Cranberry Lake—eight or ten miles. Wish I could have been with him! He reports the fish much larger, but the accommodations bad. He brought home a trout which weighed 1½lbs. dressed, and we promptly had it boiled for supper, with egg sauce. A large trout is a sublimated salmon! * * * I have gained somewhat in strength, but my throat still continues to be painful, and does not yield to the balsamic odors of the hemlocks, nor the tender ministrations of the black flies, punkies, mosquitoes and deer flies, which are very assiduous in their attentions."

This letter alarmed me. Between the lines I read that my dearest friend was really in danger of passing away in some lingering manner. If he were killed by any accident of flood or field, there would have been a shock devoid of pity. Few men care to be pitied, a brave one never does. As his most intimate friend I had seen many exhibitions of his moral courage, and now came that display of the highest quality of courage, the unflinching facing of the enemy who bears "Victory" on his banner, without the excitement of battle or "the pomp, pride and circumstance of glorious war."

Then I tried to be funny and fired letter after letter at him, filled with such conceits as I could muster, and hope they did him some good. The summer passed and the doctor brought him back to Staten Island. Late in September he dictated a letter saying that his troubles had increased, and wound up by saying: "I did intend to go down with my friend and chum, Dr. Russell, and see you, but cannot. I must have misrepresented you to him in some way, for he seems to want to know you; come down soon." Evidently his sense of humor had not left him, but the fact that the letter was dictated was alarming, and I would go at once On looking at the letter again there was a marginal note from Dr. Russell, saying: "If you want to see your old friend again in life, come at once."

He was very weak, and as I kissed him he asked his son George to raise him up while he told me a funny story of the woods, at which he laughed so heartily that he dropped back in a faint and we feared he had gone. Brave fellow! He never complained, and he retained his pleasant manner during several visits. Early in October he was removed to the Hahnemann Hospital, in New York city, where he died on Nov. 14, 1890.

Francis Endicott was born in Baltimore in 1834, and was a descendant of the Puritan, John Endicott, "who in 1628, with his wife, Anne Gower, and that determined company of a hundred or so, followed the Plymouth pilgrims and founded Salem, in the New World, the famous Massachusetus Bay colony." Hawthorne, in his "Twice Told Tales: Endicott and the Red Cross," vividly pictures the old Puritan Governor slashing the red cross from the flag with his sword and resolutely ordering: "Beat a flourish, drummer, in honor of the ensign of New England. Neither pope nor tyrant hath part in it now." The famous Endicott pear tree, planted in Danvers in 1632, is still standing on the old farm. Gilbert Endicott, grandson of the Puritan, located in Stoughton, now Canton, Mass., and there on the old farm Frank's grandmother lived, and in his young days he frequently went there for trout fishing and shooting.

Spice forbids writing many anecdotes of this genial sportsman, which not only show the turn of his mind but would be interesting to the general reader. Perhaps they may be written next week, but in closing this the sad lines of Eugene Field come up:

"O trees and hills, and brooks and lanes, and meadows, do you know
Where I shall find my little friends of forty years ago?
You see, I'm old and weary, and I've traveled long and far;
I'm looking for my playmates; I wonder where they are!"

FRED MATHER.

ANGLING NOTES.

John Mowat.

MANY readers of FOREST AND STREAM will learn with unfeigned regret that the grand old man, John Mowat, is no more: that, as he would have expressed it himself, he "crossed over the river" on the 14th of this month. On that day I received a telegram from Mr. Archibald Mitchell: "Our friend, Mr. Mowat, died this morning at 8:15. Was conscious to the last."

The last letter Mr. Mowat wrote me was dated in October, and contained some MS. for this journal, which was printed soon after, being his last contribution to FOREST AND STREAM. This column has told of the accident to Mr. Mowat on the Restigouche River last year, and how a log on which he was sitting with Mr. Archibald Mitchell became loosened and rolled over him, injuring him internally. His first conscious words as Mr. Mitchell was conveying him in his own canoe to a nearby farmhouse, where medical aid was obtained—for Mr. Mitchell's canoe had been smashed by the log after it passed over Mr. Mowat's body—were that he was glad that the accident had not happened to his companion, and that expression may be taken as an indication of his character. His last letter to me was so full of hope that I looked forward to seeing him in the spring. He said: "I do wish I could have met you in Montreal, but I was very sick, so much so that I had to be carried to the car. I am a good deal better, and since coming home have found out the cause of the trouble. The log in passing over me bruised the kidney, but the doctor says he will have me all right before spring. This has put new vim into my seventy-five years, and I may kill a salmon yet."

He mentioned the leasing of fishing privileges in New Brunswick, which will take place in March next, and closed his letter in these words: "I fully expect the few spots now available on which a fish can be had" (a "fish" with Mr. Mowat was always a salmon) "will pass out of the hands of the holders this season, but I expect to meet you next spring on the old Restigouche."

But this was not to be. In the death of Mr. Mowat I believe we have lost the man best informed about the Atlantic salmon in Canada. For more than fifty years he has been familiar with the Canadian salmon rivers, most of the time acting in an official capacity under the Fisheries Department, storing up knowledge of the habits of the fish such as it was given to but few men to possess. Of this knowledge he gave freely, and every one of his letters to the writer was like a fresh chapter in a book, ever interesting, ever charming, ever new and instructive, and always of the fish and fishing he loved so well. Once when he sent me for FOREST AND STREAM a paper on the habits of the moose I was rather surprised, but I believe the readers of this journal pronounced it one of the best papers on the animal published, the result of long and close observation.

Four years ago Mr. Mowat wrote me of the circumstances connected with the naming of the Princess Pool on the Restigouche River, the salmon stream which he regarded with more affection than any other in Canada. For a long series of years Mr. Mowat escorted every Governor-General of Canada whenever there was a State visit to the salmon rivers. When Lord Lorne and H.R.H. Princess Louise visited the Restigouche, the stream had been reserved for them by Messrs. Fleming and Brydges, and as usual Mr. Mowat was the escort of the royal party, and I will tell the story in his own words:

"When on the way down the river Her Royal Highness said to me, 'I am not yet tired of fishing, please stop the boat (Great Cæsar's Ghost) where you think we can have some sport.' I did so at the mouth of Chain Rock Brook, half a mile or so below Indian Pool. Lord Lorne, the Duke of Argyle and his daughters left us there, going down in their bark canoes, leaving the Princess, Lady MacNamara, Carpenter (detective), two Indians, myself and the boat's crew.

"The Princess called me and said she would be ready to go when I thought it time. The day was warm, with south wind, and toward afternoon clouds began to rise. About 4 o'clock I called the Indians, and the Princess was ready. I took the stern of the boat, turning out one of the men, rather against her will, as she requested me to sit down. I told her I wanted to manage the canoe myself. We soon got up to the ground, about 250yds. above the fall of the Hero Rapids. After anchoring the Princess handed me her fly book, saying: 'You know best which fly is most likely to kill.' Not finding a fairy, I put on a fly of my own, a middling-sized brown. First fish broke hold before anchor was raised; second fish did the same before it came to gaff, and this seemed to disappoint her very much. I said as the sun lowered the fish would take hold better, and just then we had a slight shower with some wind, and cooler. It was then about 6 o'clock, and the Princess struck a fish which held, and was landed in eleven and a half minutes, and was 24lbs. in weight. Next fish was foul-hooked behind the gill cover, and took twenty-two minutes. While playing her fish, she said to me: 'Don't be afraid to tell me if I do not handle them properly. I should have killed the last one quicker; he was only 22lbs., and I found he would go through the rapids.' I said: 'You hold very hard; your cast could bear no more.' Our next fish was a 26-pounder, and the fourth and last a 27-pounder, which I gaffed out of the

canoe when within 15yds. of the rapids, at 8 o'clock in the evening. We could have killed another, but the midges were plentiful and we concluded to quit. On our way to the barge the Princess said to me: 'If you had been with me all the time we would have made a much larger score (about thirty fish), and if I come again you must promise to go with me.' I then told her that the pool had no name, and asked her permission to name it the Princess Louise Pool, and so it was named. I must say that few anglers could handle a fish with Her Highness. She used a heavy English 18ft. rod, and her strong right arm (after the fish had made his second run) would lift his head clear of the water."

New men may come on the Canadian salmon rivers, but no one will ever entirely fill the place of the genial, kindly, loyal, unselfish, simple Scotchman, John Mowat, a pioneer salmon fisherman, who made friends to retain them always and who now mourn his loss.

Landlocked Salmon of Europe.

In a personal letter from Mr. Siegfried Jaffé, a noted German fish breeder, he tells me something of the European landlocked salmon, a fish that I have heard credited with many good qualities not possessed by our own landlocked salmon, until I once regarded it as something to be desired, like the Philosopher's Stone, and perhaps with as many mythical qualities. Anyway, Mr. Jaffé wishes very much to try the ouananiche in German waters, and describes one of his lakes and says: "The lake seems to be so appropriate for stocking with your landlocked salmon that I will defer stocking it with other *salmonidæ* for another year, hoping in the meantime to obtain some eggs from America. I have tried our own landlocked salmon (*Salmo hucho*) here twice. They are from the Danube and never go to sea, but somehow deep, quiet water does not seem to do for them, though it does well in the long, deep reaches of the Bavarian rivers If at any time you care to try the *Salmo hucho*, and will tell me, I will be glad to send you a consignment. They are not adapted for feeding the fry artificially. The *hucho* salmon is a nearly white meated fish, very good eating, but not a sporting fish."

I had to read that over two or three times, and then put my reading glass on the letter to make sure I read aright. Not a sporting fish! Well, our landlocked salmon is a sporting fish from the day it is born until its death. To continue from the letter: "The reason why I should like to try ouananiche and *purpuratus* [the redthroat trout] over here is that I have been so well pleased with the results the other kinds of American *salmonidæ* have given me, that I think they will do well too. The rainbow and *fontinalis* do very well here, and it may interest you to have the remarks concerning them which I have put on the inclosed sheet.

"The quinnat (Pacific salmon) is still in its first season with me here, but continues to do well. The fish in the yearling breeding ponds are now 6 to 7in. long. I have had reports, inclosed, showing that some I gave away for Bavarian small highland lakes have grown to 8in. fish.

"The prejudice against the quinnat is still great over here, caused no doubt from the results of the first consignment made by your Fish Commission to Europe in the 70s. They turned out unsatisfactorily, that is to say, the fish when they arrived at breeding age were subject to very bad fungus and peeled skin and scales easily, but I have no doubt this was owing to wrong treatment. The quinnat, which with us in the first season took on silvery scales that came off easily, is a very early ripening fish, and we must be prepared to give it large range early in the second year.

"We tried last year some experiments with Swiss char (from lake of Zug). The fish does not exceed 1½lbs. in its native waters. The fry did not do as well as *fontinalis*, but there was a good proportion of yearlings, although they did not feed as greedily as *fontinalis*, and I would consider the fish a doubtful acquisition; ova very small, smaller than from two-year-old *fontinalis*. I have also, after infinite trouble, obtained this year a small consignment of Russian char, a very big lake trout running up to 28lbs. in its native waters. The eggs are taken the end of August and they are fully hatched by now (the letter is dated Jan. 1). The ova is unusually large, larger than salmon ova (*Salar*) and nearly as big as from the quinnats, and the fry are beautifully strong. I will report on this fish, of which I have great hopes, as the season goes on." At another time I will give the notes on our rainbow and brook trout in Germany.

A Cinch.

There are some things done better in New Hampshire than in other States For example, when Fish and Game Commissioner Wentworth was elected to the New Hampshire Senate he was made chairman of the Senate committee on fish and game; and when at the same election Commissioner Hughes, his colleague on the Commission, was elected to the Assembly, he was made chairman of the Assembly committee on fish and game. If they do not have some good fish and game legislation in New Hampshire this winter it will be no fault of the chairmen of the two committees.

Champion Stakes at West Point.

WEST POINT, Miss., Jan. 26.—*Special to Forest and Stream:* Five have qualified to start in the Champion Stakes: Delhi, Marie's Sport, Minnie T., Harold Skimpole and Tony Boy. The weather is extremely cold and stormy. The stake was declared off to-day, the money to be divided pro rata among the starters after deducting the expenses.

B. WATERS.

United States Field Trials.

THE results arrived at in the Pointer Derby, the Setter Derby and the All-Age pointer stakes are given below:

Pointer Derby.

Starters: T. W. O'Byrnes's dog Redskin, C. S. Shoop's bitch Aloysia, H. H. Mayberry's bitch Alabama Girl, Del Monte Kennels' dog Tony Works, George H. Smith's bitch Diana, T. W O'Byrnes's dog Moerlein, J. S. Crane's bitch Firefly, H. S. Smith's bitch Ripple, Bar Harbor Kennels' dog Young Rip Rap, T. T. Ashford's bitch Elgine, Del Monte Kennels' dog Tick's Kid

Winners: First, Young Rip Rap; second, Elgine; third, Ripple.

Setter Derby.

Starters: P. M. Essig's bitch Saragossa Belle, W. R. Holliday's dog Billy T., J. P. Greene's dog Sarsfield, Charlottesville Field Trial Kennels' bitch Pin Money; F. R. Hitchcock's dog Tory Rustic, Fox & Blythe's bitch Caroline, H. Ames's bitch Christina, Theo. Goodman's Dog Dave Earl, Avent & Thayer's dog Peconic, C. P. Jones's dog Hurstbourne Zip.

Winners: First, Pin Money; second, Christina; third, Dave Earl and Tory Rustic (divided).

All-Age Pointer Stakes.

Starters: Ashford & Adams's dog Von Gull, N. T. de Pauw's bitch Sister Sue, H. K. Devereux's bitch Virginia, Del Monte Kennels' dog Tick Boy, Bar Harbor Kennels' dog Young Rip Rap, F. W. Dunham's dog Elgin's Dash, Charlottesville F. T. Kennels' dog Delhi, H. S. Smith's dog Ripsaw, Charlottesville F. T. Kennels' dog Tippoo, J. H. Johnson's dog Crackerjack, Charlottesville F. T. Kennels' dog Nabob.

Winners: First, Tippoo; second, Young Rip Rap; third, Elgin's Dash.

The judges were: Dr. George Ubanks, of Birmingham, Ala., and Mr. J D. King, of Jackson, Tenn. The trials commenced on Jan 18.

Challenge Class Prizes.

NEW YORK, Jan 23.—*Editor Forest and Stream:* A merchant does not expect to increase his business by lessening the inducement to visit his store. This, however, is just what many of the dog shows this year are doing. Owing, I presume, to the slim entries in the challenge classes last year, they have offered only one prize therein for each sex. (I am only alluding to setters, having no interest in any other breeds.)

How many entries would they get if there were one first prize instead of first, second, third and fourth offered for open class dogs? And what do they get in the open classes even with the inducement of four prizes? Certainly not many entries, and those of a quality not comparable to the challenge dogs. For there are very few fine dogs "coming on," sad as it makes me to acknowledge it. The most of them have already won their way into the challenge ranks, which now actually outnumber, in good dogs, the open classes.

Now I take it that the mission and object of dog shows is, or ought to be, to draw out quality as well as numbers. And especially is this true of the large shows, such as New York's, Boston's, etc. They can afford to and should set the pace for the smaller exhibitions. Both numbers and quality are to be found in the challenge setter ranks. Offer four grades of challenge prizes and the good dogs there will come out. Let them adhere to one first prize, and the exhibitions in the challenge classes are likely to be the one dog that is usually the winner—such as champion Kildare in Irish setters. Many an owner of challenge setters, while conceding the superiority of some particularly fine specimen, would exhibit his really fine animals because he expects to beat every other entry except this one. But I don't think you'll find many men pay $5 entry fee, and more for expenses, for the doubtful honor of having their dogs unnoticed. As they can't win the first prize (and don't expect to) and there is *only one prize*, they'll keep their dogs at home. Offer four prizes and give them a chance to win something in a class where it is an honor to win anything, and they will send them. I have a letter before me now, from another State, where an owner of two fine Irish setters in the challenge classes says he did not enter them in Boston and will not in New York because there is only one challenge prize and Kildare and Queen Vic will take it. And he acknowledges their superiority, too. If economy be necessary, drop the puppy classes. No pups not having had distemper ought to be allowed in shows, for they merely spread disease and do no good to the breeds. Economize these, but increase the inducements to draw out the best dogs, which happen to be mostly in the challenge classes, and the quality as well as numbers will be kept up. Reduce challenge prizes to one, and only mediocrity (after the acknowledged champions grow old) will be the result. The practical importance of the matter to all lovers of a good setter makes me earnest.

SETTER.

Mascoutah Club Show.

THE premium list of the Mascoutah Kennel Club show, Chicago, March 10–13, has been issued. The judges will be:

St. Bernards, mastiffs, bloodhounds, Newfoundlands, greyhounds, deerhounds, Russian wolfhounds, poodles, beagles, dachshunde, Dalmatians, whippets, Italian greyhounds and miscellaneous, Mr. H. W. Lacy.

Pointers, English, Irish and Gordon setters, foxhounds and Chesapeake Bay dogs, Major J. M. Taylor.

Collies and Old English sheep dogs, Mr. Henry Jarrett.

Great Danes, Dr. Nicolai.

Fox, Boston, bull, Black and Tan, Irish, Scottish, Skye, Bedlington, Dandie Dinmont, Yorkshire and toy terriers, Mr. T. S. Bellin.

Bull dogs, Mr. E. A Woodward.

Pugs, Mr. A. E. Pitts.

Cocker, Clumber, field, Irish water, Blenheim, King Charles, Prince Charles and Ruby, and Japanese spaniels, Mr. E. M. Oldham.

Entries will close Feb. 20. There are, in addition to the regular premiums of $15, $10 and $5 in the larger classes, $10, $5 and $3 in others, and $5 and $3 in others; there are kennel prizes ranging from $25 to $10, and numerous specials. The list will be sent on request by Secretary J. L. Lincoln, Mascoutah Kennel Club, Chicago.

The Gould Cup.

WEST POINT, Miss., Jan. 24.—The absolute All-Age competition for Gould cup was awarded to Tippoo without competition, Tony Boy being sick.

B. WATERS.

National Beagle Club.

A QUARTERLY meeting of the National Beagle Club of America was held in New York on Jan. 19. Members present were: H. F. Schellhass, J. W. Appleton, G. B. Post, Jr., A. W Post, George Laick, G. Mifflin Wharton and George W. Regan. Voted that minutes be read at the adjourned meeting, subject to call of the chair. The executive committee then went into session with the above members present.

It was voted that the field trial committee should be excused. The secretary was instructed to secure ribbons for the prize winners of 1896 field trials. Voted that a bronze medal be presented at the Mascoutah Kennel Club show for the best beagle in the show. Open to members of the National Beagle Club of America only. It was requested that the judges be selected from the club's official list of judges or from members of the club. Three names were dropped for non-payment of dues. Voted that the Futurity committee send out blanks for the 1898 Futurity.

Pittsburg Show.

PITTSBURG, Jan. 24.—The Duquesne Kennel Club is booming matters for the big Pittsburg Bench Show, which will take place March 24, 25, 26 and 27, in the Marshall building, Penn avenue. At the annual meeting last week the following officers were elected: John M. Chaplin, President; Dr. J. S. Phillips, Vice-President; W. E. Littell, 69 Federal street, Allegheny, Secretary; W. R. Sewell, H. M. Breckenridge, Bernard S. Horne, J O'H. Denny, Frank H. Denny, John M. Chaplin and Dr. J. S. Phillips, Board of Governors. These make up the bench show committee.

E. M. Oldham will superintend. The judges will be Major J. M. Taylor, C. H Mason and James Mortimer. The entry list will close March 13. Secretary Littell will mail the premium list about Feb. 1. It will contain 163 classes against 130 last year. The cash prizes aggregate $500 more than last year. The specialty clubs offer an unusually large number of special prizes. The show building this year will have superior ventilation, heating and lighting. The Pittsburg show follows Louisville and precedes Baltimore.

CROMBIE ALLEN.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

THE BEGINNER AWHEEL.

SCENE—A Ninth avenue express train on the Elevated road, New York. Enter Mr. White, an old-time wheelman (number 'leventy-'leven in the L. A. W.), who takes a seat beside Mr. Brown, just graduated from the cycling academy. Grasps his hand warmly, and received but a feeble response.

"Glad to see you, old man, but what makes you look so badly? You aren't ill?"

"No, it's all due to that confounded bike; I took a ride yesterday."

"So did I. Hope I don't look as if I had lost my best friend in the world."

"You don't; you look as if you took life easily, and enjoyed it. That's where we differ. Life is a burden to me just now, and it's all due to that blamed wheel."

"Got a suit for damages on your hands? Did you kill anybody yesterday?"

"No, confound it. Wish I had I was mad enough to kill some of those blathering scorchers if they had given me the chance."

"Never mind, you'll be scorching some of these days yourself. But tell me about it. It'll relieve your mind."

"Well, you see, yesterday was a nice day, and I thought I'd take a ride out on the Boulevard and around Grant's Tomb. Knew it was Sunday, but never thought there'd be much of a crowd out at this time of year."

"You thought it would be a good chance to get a little whack at the real thing, eh? Unlearn a few of your riding school lessons?"

"Yes, but I was hardly prepared for what happened. Before I'd gone a block I fancied something was wrong with the adjustment—wheel seemed to kind of drag, you know—and when I got off a great big ruffian with a loud, glaring sweater ran square into me from behind."

"Stopped in the middle of the street, did you?"

"Yes, I guess I had as much right to the street as anybody—that tough was from the Bowery. His talk was an inarticulate jumble of slang and chopped-off words. He said, 'What t'ell' and 't'row' for throw, and 'eart'' for earth, and wanted to fight me."

"What did you do?"

"Oh, I tried for a while to argue with him. Told him that he'd been guilty of criminal negligence in scorching with his nose down to his front wheel in a position that rendered it impossible for him to see what was ahead of him. Of course, as I had no eyes in the back of my head I didn't as a matter of fact see what his position was; but then, you know, I argued that he wouldn't have run into me if he had been looking."

"You stopped rather suddenly, didn't you?"

"Yes, but he had the whole width of the street to turn out in; yet the fellow had the impudence to say that I was responsible for his bloody nose, and that I had deliberately thrown myself in his way—just as if I would do such a thing for the sake of being run into, and lamed so that I haven't been able to sit comfortably in my saddle since."

"What was the upshot of the affair?"

"A big crowd collected, and some of the people suggested that we fight it out and indulged in various witticisms at my expense. One man said that I had made a good beginning and had drawn first blood. Another said I should claim a foul, as I had been hit below the belt. Then a policeman came sauntering along, and the beastly ruffian that had made all the trouble got on his wheel and scorched down the Boulevard, and as I'd only been awaiting an opportunity to get rid of his nasty personalities, I left too, going up the Boulevard.

"I'd lost all pleasure in my ride, and would have gone home if it hadn't been that the fellow who ran into me went that way, and I had no desire to encounter him again."

"Hard lines, old man. I hope that was the end of your difficulties."

"Not by any means. What between thinking of crushing things I might have said to that Bowery thug if I'd only thought of them at the time, and wishing I hadn't come out—and I tell you Sunday is no day for a gentleman to ride, there's sure to be a crowd—I didn't watch very well where

I was going, and the first thing I knew I ran into another blooming idiot who showed up directly in front of me so suddenly that I couldn't avoid him."

"Threw himself right in your track, eh?"

"No, he was there all along. He slowed up because he wanted to turn into Eighty-sixth street."

"Didn't he give you any signal?"

"Signal! He had a little tinkling bell that you might have heard with an ear trumpet. I remember thinking at the time that a bell that didn't make any more noise than that was more fit to put around a poodle's neck than as a signal on a bicycle."

"You heard it then?"

"Yes, but before I could get over the first ridiculous impression it produced the bump came, and both of us went sprawling on the cross town car tracks. I tell you I had a narrow escape for my life. The horses of an east-bound street car were almost on top of me, and if the driver hadn't pulled them up mighty quick and put on his brake instanter I guess I wouldn't be here now to tell you the story."

"No doubt your heirs would be suing the horse car company, and preparing to give you a decent funeral."

"Glad I saved them the trouble. I can assure you I thought of them first in the matter."

"So you escaped with your life and went on your way in search of new adventures?"

"Yes, but first I waited a while to see how they would untangle the mass their cars had gotten into. You see a northbound Boulevard car was coming along at a good rate, and when the Eighty-sixth street car stopped to keep from going over me, the other car ran plumb into it and knocked it sideways up against a lamp post. A third car coming west on Eighty-sixth street tried to get by the other two and jammed the Boulevard car, so that not one of the three could be moved. It was the most interesting lock-up you ever saw, and I never would have believed it could have happened if I hadn't been there and seen the whole thing."

"And I suppose you pride yourself on being the cause of this interesting blockade?"

"Me? Why, I wasn't the cause of it. It was the other fellow, as I took particular pains to explain."

"Pardon the error. But how did they separate the cars?"

"I didn't wait to see, the whole thing took too long. Why, man, they had a jam of cars on the Boulevard reaching to 110th street, and—"

"From the mention of 110th street, am I to infer that you continued your disastrous course on up the Boulevard to that point?"

"See here, old man, you may be a hoary chestnut at wheeling, and perhaps you have been riding since the days when you had to carry your road along with you because the League hadn't yet taken up its arduous duty of making them for all mankind; but I want you to understand that I won't take any of your freshness."

"But really, I am curious to know if you got as far as 110th street!"

Before Brown could answer the guard pushed back the door with a bang, and putting his head inside the car unhitched his hoarse voice long enough to say "Warr'n street!"

"My station," said White, and he rushed for the door, calling back as he went, "I suppose, old fellow, that this will be 'continued in our next'?"

"No," replied Brown, speaking to himself, for his friend had disappeared, "not while the editor has a blue pencil back of his ear. To be exact, it will be 'concluded in our next.'"

DAN DALY.

[TO BE CONCLUDED.]

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public.*

A SPECIAL meeting of the New York Y. C. was called for Jan. 26 to hear the report of the special committee appointed to consider the desirability of the club taking action for the formation of a national yachting league. As the committee was made up largely from men who were known to be hostile to the scheme, an adverse report is looked for.

YACHT DESIGNING.—XIII.

BY W. P. STEPHENS.

[*Continued from page 55.*]

THE subject of marine drafting, to say nothing of the broader subject of designing, is one that can be properly taught only by personal instruction, with its accompanying questions, explanations and discussion. In order to remove as far as possible the difficulties incident to such a treatise as ours, the writer and his readers not being in personal communication with each other, we shall welcome suggestions and inquiries that will tend to bring out any points that may be omitted, or to clear up any that are not perfectly clear. There is one important fact that we have in no way overlooked or underestimated. In the case of a teacher and his pupils in a class engaged in the study of drafting, it is almost invariably the case that each pupil has completed a course of preparatory study which has fitted him for the more advanced stages of the course. In the case of the present series of articles, many of our readers approach the subject with no previous knowledge of it, making it essential that we should cover at the same time both the preparatory and the more advanced work. The college student who has fresh in mind his geometry, trigonometry and descriptive geometry will find little difficulty in understanding every detail of a design, such as that in Plate I. There are many among our readers, however, who are thoroughly skilled in boat handling, and perhaps know more or less of building, but have no idea whatever of what such a drawing is intended to convey, or how to interpret it. We have endeavored thus far to take up the different points in a logical sequence which is not quite the order in which they are customarily found; and it may appear that some important points have been omitted when they are merely deferred to a more appropriate place.

Two questions have come to us this past week in relation to Plate I.: why two parallel lines are used in the sheer plan to outline the extreme end of the counter, and why the curved line marked C S, or cross seam, is shown, in all three plans? The outer of the two parallel lines, that to the left, marks the extreme limit of the under side of the sternpiece, the line just inside and above it is the continuation of the buttock line across the face of the sternpiece. The line marked cross seam shows the edge of the after face of the sternpiece, the joining of this face with the main surface of the counter. It sometimes happens, as in Vigilant, Colonia and Navahoe, that the fair surface of the hull is carried out even aft until it intersects the deck, forming what is termed an *elliptical stern*; but the usual custom is to cut off the end of the counter, as in Plate I., by a separate surface, sometimes vertical, but generally on a *rake* or angle. The edge of this surface where it joins the main surface of the hull is called the cross seam.

We spoke in the previous chapter of the various methods of numbering the stations; in the design by Mr. Stearns, published last week, it will be noticed that the numbering begins on the after end of the l.w.l., which is called No. 1 station, and runs forward, the stations in the counter being lettered. This system has the important sanction of very general use among both designers and builders on the Clyde, but apart from this, the reverse system, with the fore end of the l.w.l. marked No. 0, is preferable.

We have seen in the previous chapter how certain lines of a design may be drawn in straight in one or even two of the plans, but are curved in the third. The process of constructing a design begins with the laying off of the various straight lines on the three plans; the second step, in which we begin to outline the actual form of the yacht, being the drawing, according to the judgment of the designer, of the curved lines such as the level lines, deck line and side line in the half-breadth plan, the keel line and sheer line in the sheer plan, and the stations or sections in the body plan.

The third step is called *fairing the design*, and includes the adjustment of each of the three designs until every curve is *fair*, and at the same time every one of the intersections, possibly a couple of hundred or even more, is absolutely correct within the limit of accuracy which the draftsman has determined is suitable for the nature of the work.

The term *fair* is a very common and useful one to the designer and builder, signifying a line or a surface which is of one true and unbroken sweep throughout its whole extent; the degree of curvature may vary from even a straight line to a circle of comparatively small radius, but if the changes of curvature are gradual and continuous the line or surface is considered *fair*. The reverse of *fair* is a line or surface which is broken by angles, short, abrupt curves, or curves which join together, or with straight lines, without being truly *tangential*. It may be as well to explain here that a *tangent* to a circle or other curve is a straight line which just touches it without cutting; similarly, two curves are *tangent* to each other when both have the same straight line as a common *tangent*, thus flowing easily into each other without a break.

A vessel is said to be *fair* when all the curves of her surface are true, one part sweeping into another without break or angle. A drawing is said to be *fair* when not only every curve is true, but when every measurement of one plan can be checked off exactly in its appropriate place on one or both of the other two plans. Before this end is attained the aspiring amateur will probably have reached the conclusion that he has mistaken his vocation, and that he is not destined to be a successful designer.

Strictly speaking, a drawing that would pass as perfect must be *fair* in two ways: In the first place, it must show a solid that is properly proportioned and whose surfaces are easy and flowing from end to end; in the second place, the various curved lines in each of the three plans must be *fair* in themselves, and their measurements must check off correctly in all three plans.

To secure this double end a number of auxiliary lines, mostly *fore and aft* or running with the length of the vessel, are used. From their length and their positions on the surface of the vessel, most of these lines are long and of easy curvature, making them more easily drawn than the level lines, and they also mean more to the draftsman.

The most useful of these lines are the *diagonals*, of which three or four at least may be used to advantage. A *diagonal* is a line cut from the surface of the hull by a fore and aft plane vertical to the end planes of our original box, but inclined to the bottom and back. The *traces* of such a plane are shown in D 1 in each of the halves of the body plan in Plate I. It will be noticed that the *diagonal* follows closely the lines of the plank edges, and crosses each section at as nearly as possible a right angle. In locating the *diagonals*, the body plan is first partly completed, perhaps half of the section being drawn in, and then three or four straight lines are drawn across it on each side of the center line, each being as nearly as possible *normal* to the curve of each section where it cuts it (a *normal* line is one perpendicular to a *tangent*). It will not be possible to draw a straight line which shall be absolutely *normal* to the curve of every section where it cuts the section, but a fair average position is taken. One *diagonal* is usually run across the *topsides*, in the position D 1, serving to fair the upper part of the body; another is run to cross the *turn of the bilge*, to secure perfect fairness in this important place; and a third about the *hollow of the floor*. In different models the positions will be altered, as will appear later.

A look at the lines in Plate I. will show that in the *fore body*, that portion of the vessel forward of the *midship section*, as shown in the right hand half of the body plan, the upper *diagonal*, D 1, is very nearly *normal* to all the sections, though in the *after body* it is by no means *normal* to Stations 13, 14. In the *after body*, D 3, through the hollow of the floor, is also nearly *normal* to every section, while it is but slightly inclined in the *fore body*.

It is easily possible to draw a line or lines that shall be truly *normal* to every section at the point of intersection, and such a line is called a *dividing line*. It is evident that it will not be a straight line in any one of the three plans. The *dividing lines* are true lines for the plank edges. The *diagonals* may be considered as approximate *dividing lines*, much more easily handled and more useful. In Plate I. they are shown only in the body plan; the true curves of the lines, as will appear in the next plate, are drawn on the sheer or half-breadth plans, or more probably between the two, as a matter of convenience.

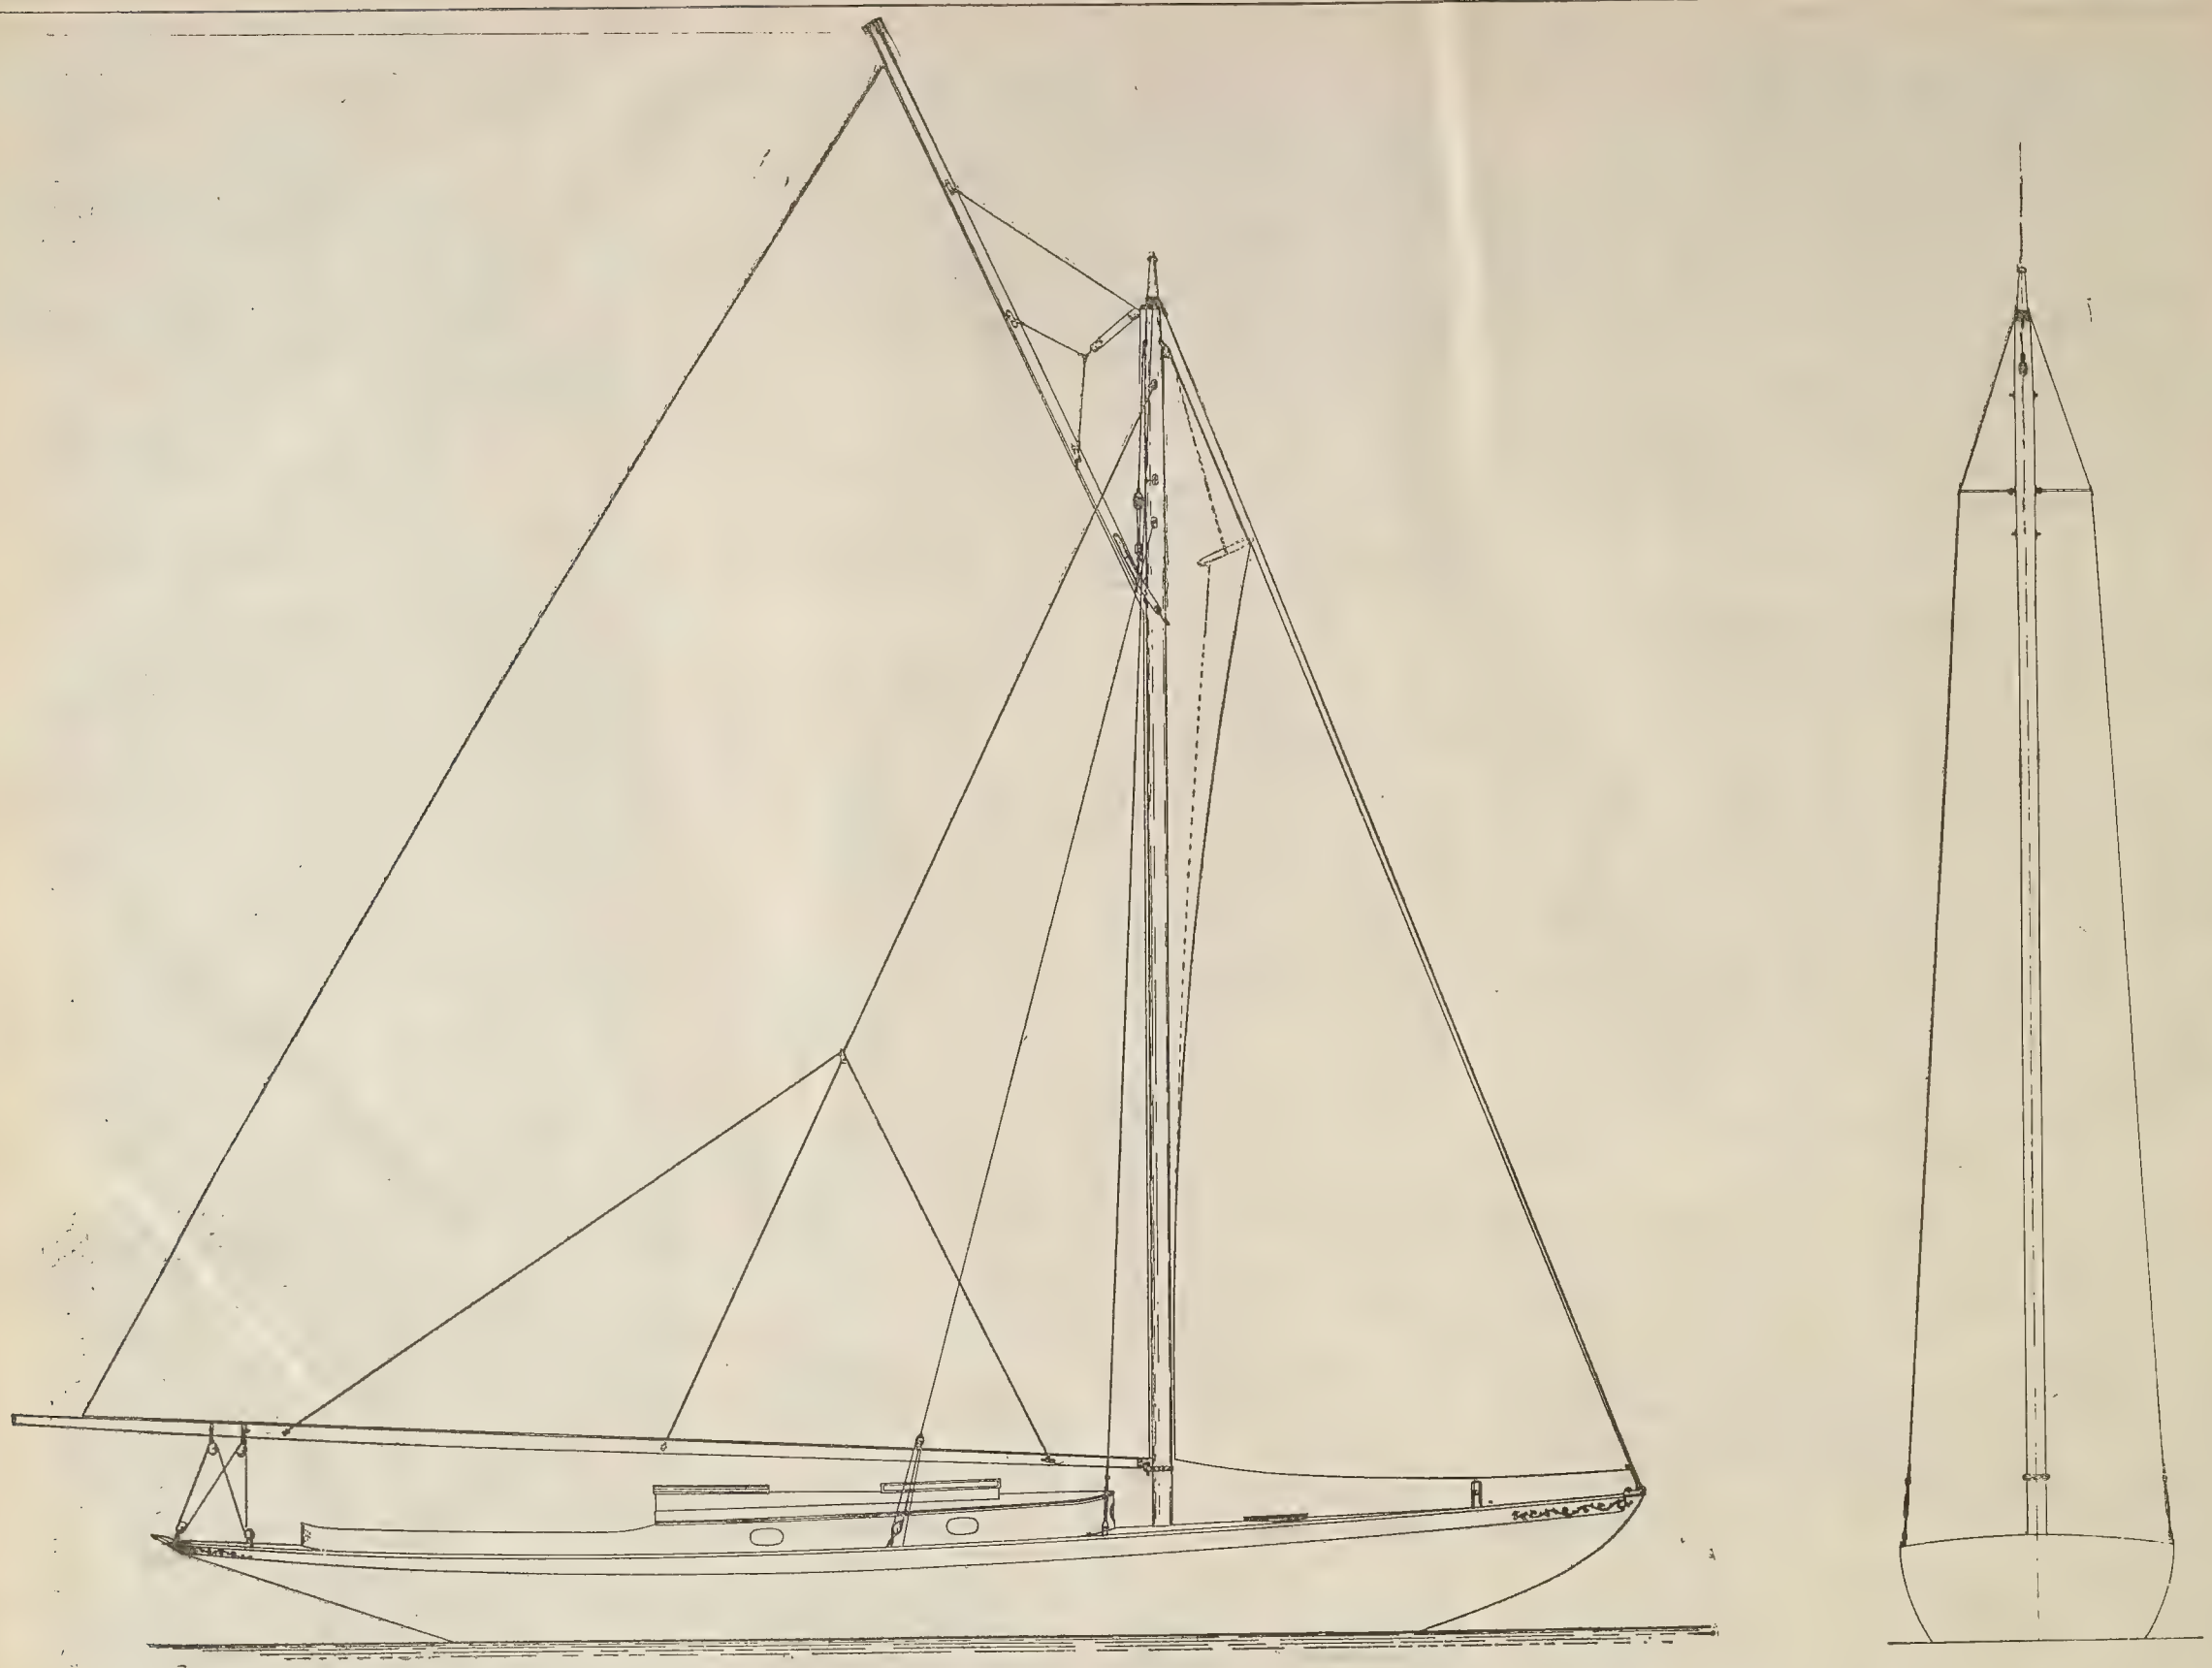
They may be set off in three ways, as follows: First, the *expanded diagonal:* The distance from the middle line of the body plan to each section, measured along the *diagonal*, is set off from some suitable base line on its proper section, giving a number of points through which a curve may be drawn. Second, the *horizontal ribband line:* The distance of each intersection of section and *diagonal* is measured horizontally, and set off from a base line on the proper station; this line is usually drawn in over the level lines in the half-breadth plan. Third, a similar projection is made by measuring the *heights*, instead of the *breadths*, from the body plan, and setting them off on the proper stations in the sheer plan. The *expanded diagonal*, which is the most useful, is sometimes called the *line of heads and heels of timbers;* as, in the old system of framing by sawn timbers made up of short lengths, two sets of such timbers fastened side by side making up each frame, the joints of the heads and the heels of these various timbers were placed on the *diagonal lines*.

One very important use of the diagonals is in connection with the beveling of the timbers or frames of the hull, these lines being so nearly in a normal plane that the bevels taken on them are quite accurate

Another series of lines that, while perhaps not quite as indispensable, is still very useful, is that known by the double term of *bow lines* and *buttock lines*. The traces of the auxiliary planes, by which these lines are cut, are found, of course, in the shape of straight lines in both half-breadth and body plans; in the former parallel to the base line, in the latter parallel to the middle line; the planes themselves thus being vertical and parallel to the sheer plan. The lines themselves are found in the shape of fair curves in the sheer plan, as in Plate I., the curvature being quite abrupt forward and usually very easy aft That portion of such a line in the *fore body* is called a *bow line*, and that portion in the *after body* is called a *buttock line*. So far as strict accuracy of nomenclature is concerned, the proper term for the whole line would seem to be *bow-buttock line*, as we have lettered it in Plate I. Although the "*bow*" end of this line is always run in on the sheer plan, owing to the obliquity of the intersections, this part of the line is of little real value; but the after end, the "*buttock*" line, is very useful indeed, both in the original drafting of the lines and in the subsequent fairing.

The number and spacing of the bow-buttock lines is a mere matter of conventionality; three at least are generally used, spaced at equal distances. We have found by experience that it is very convenient to use three, as shown, and to space them at *equal intervals* of one-eighth of the extreme beam of the vessel. This brings the principal one, the *middle bow-buttock line*, about where it should be; and it has the further advantage of making it easily possible to enlarge the beam of the design. Suppose, for instance, that it was desired to widen the design in Plate I. so as to give a yacht 1ft. more beam, the other dimensions being unchanged. We would first draw a line in the half-breadth plan parallel to the base line and distant from it one-half of the required new beam; similar vertical lines being drawn at the same distance in the body plans. Now we will divide this new half-breadth into four equal parts, and draw new *bow-buttock lines* through the points of division in each plan. This done, the intersection of each *level line* with one of the original *bow-buttock lines* in the half-breadth plan would be squared out to a corresponding point on the new *bow-buttock line;* and in the same way the intersections of the sections in the body plan would be squared out to the new lines in that plan. Through the points thus obtained the new *level lines* in the one plan and section lines in the other could be run in, with the certainty that they would give a fair design of the required enlargement. If more than the three bow-buttock lines are needed, as sometimes happens, extra lines can be run in between the original ones, this being frequently desirable for the full length of the counter between the line B B 1 and the middle line.

The *inclined waterline* is of comparatively little use in fairing, but it is worth plotting, at least for the sake of comparison with the same line in other designs. It is supposed to be cut from the hull by a plane similar to the *diagonal planes*, but passing through the L.W.L. in the sheer plan, and inclined at some special angle to the *normal* or upright L W.L. plane. This angle is usually that at which the plank sheer will be awash at its l owest point; it may vary from 15 degrees in a wide, shoal boat, up to 30 or even more in a narrow boat with high freeboard; in the present case it is 25 degrees.



The normal L.W.L , with the yacht in the upright position, is of course symmetrical in its two halves, and but one side need be drawn, the L.W.L. of Plate I. The inclined L.W.L , however, is by no means symmetrical, and *both* sides must be drawn. Taking first the fore body of the yacht, as on the right hand in Plate I., it will be plain that if the vessel be heeled about the axis of the L.W.L. plane one side will go down while the other rises. Supposing the yacht to be thus inclined, the line marked *Im L.W.L.* will show where the surface of the water cuts the various stations in the topsides; and the line *Em L.W.L.* will show the similar intersections on the other side of the yacht. The former series of intersections, carried through both fore and after body, give us what is called the *immersed L.W.L.* or the *lee list line;* the latter give the *emersed L.W.L* or the *weather list line*. In Plate I. these lines are shown in the sheer plan, projected according to the third method described for the diagonals: by measuring the height of each intersection of the inclined line in the body plan with the different sections, and setting it off above the base line in the sheer plan on the proper station. This method shows one important point that has been much misrepresented of recent years: that in smooth water the mere heeling of the yacht, even to a great angle, does not increase the length of the waterline forward, the lengthening aft being much less than commonly believed.

The usual method of drawing the *inclined waterlines* or *list lines* is the same as the method for the *expanded diagonal*, the breadths from the middle line to the intersection of each station in the body plan are taken along the two lines representing the immersed and emersed sides, and then they are set off from any convenient base line on the proper stations.

The Payne Yacht Bill.

IN the Senate on Jan. 20 the House bill for the protection of shipbuilders of the United States was taken from the calendar, explained by Mr. Frye (Rep , Me.), and passed without amendment.

The bill provides that yachts belonging to a regularly organized yacht club of any foreign nation which shall extend like privileges to the yachts of the United States shall have the privilege of entering or leaving any port of the United States without entering or clearing at the Custom House thereof or paying tonnage tax; provided that the privileges of this section shall not extend to any yacht built outside of the United States, unless such ownership or charter was acquired prior to the passage of this act. And it repeals Section 11 of an act entitled "An act to abolish certain fees for official services to American vessels," approved June 19, 1886, so far as the same exempts any yacht built outside of the United States and owned, chartered or used by a citizen of the United States, from the payment of tonnage taxes.

TWENTY-ONE FOOT CRUISING YACHT DESIGNED BY W. B. STEARNS,—SAIL PLAN.

An Exceptional Case.

IN the interest of fair sport it is gratifying to think that the Choctaw-Penguin dispute, to which we have alluded at times during the past season, is a very exceptional case. It is also gratifying to know that the Atlantic Y. C. has not shirked a most unpleasant duty, but has dealt firmly and boldly with the case.

We hope that this action of the committee will avoid any possible necessity for adding to the *fin de siècle* term, "government by injunction," a similar one, "protest by injunction." The following official statement of the regatta committee recounts all the points of the case, as well as the final decision:

"The committee does not at this time attempt to consider many of the points originally contended for by the owners of Choctaw and Penguin, among which were:

"First—Whether Mr. Brightson's 'protest was sent to the committee before 6 P. M. the day succeeding the race,' as provided in Racing Rule XXVI.

"Second—Whether the races on June 6 and 13, being continuing races of legs of race, a protest under said Rule XXVI. should be construed to mean before 6 P. M. June 6 or 6 P. M. June 13.

"Third—Whether under Rule XXV. 'they should disqualify any yacht, should it come to their knowledge that she has committed a breach of the rules,' even if not protested

"The regatta committee does not consider that under Article XII. of the constitution 'it had the power to decide all questions that may arise in the sailing of races,' * * * and that 'there shall be no appeal from the decision of the committee.'

"The committee considers that the agreement made by the owners of both Choctaw and Penguin with this committee at the hearings of June 17 was a full and complete waiver of all points of contest between them, whether of construction of by-laws or rules, and it was agreed that there was to be a new race under the measurements of Mr. Hyslop in lieu of June 6, and that if Mr. Hyslop's measurement did not show a sufficient difference to change the results of June 13, then that race should stand as a race to the credit of Choctaw.

"The owner of Choctaw failed to do as he agreed and his boat was not measured. The Penguin was measured as agreed.

"Later, for Sept. 5, the club having elected a measurer meanwhile, it was deemed advisable to give Choctaw another opportunity to respond, and so avoid all possible quibbles, and to secure an absolutely fair race it was determined to have both boats measured by Mr. Hill, the measurer of the club, on the morning of Sept. 5, the day designated for the contest, and the race of June 6 to be resailed or sailed off on that day. The race of June 13 should stand to the credit of the Choctaw, if Mr. Hill's measure showed she was entitled to it.

"Thus the committee considered it was giving Mr. Strong, of the Choctaw, an opportunity to redeem his reputation, and in reality a second chance, which perhaps had been already forfeited, but to which Mr. Brightson agreed.

"Mr. Brightson, for Penguin, complied with the committee's instructions, had his boat measured, and presented her for the race. Mr. Strong, for the Choctaw, not only failed to comply, but, through an attorney, served an injunction restraining the committee from sailing the race.

"The regatta commitee decided that by reason of no measurements of Choctaw having been made as first agreed, and later as ordered, and the violations of both agreement and order having been made on the part of Choctaw, and by reason of its failure to present itself for races, as ordered by the regatta committee, the said committee hereby award the races of June 5 and 13 to the sloop Penguin, George E. Brightson, owner, and award the Adams cup as the prize therefor.

"In view of the action of the owner of the yacht Choctaw in securing an injunction where, under the constitution of the club, there was no appeal, the regatta committee thinks that a full and searching inquiry should be made to prevent recurrence of such action, and to determine whether those who, by affidavits, secured the injunction, or the attorney who represented Mr. Strong, or Mr. Strong himself, either or all of them, have 'acted in a manner unbecoming gentlemen, or injurious to the name of the club,' as specified in Chapter XIII., Section 2, of the by-laws, and the regatta committee asks the club to direct the trustees or a special committee to fully investigate and report for the action of the club, as specified in Chapter XIII. of the said by-laws.

"The regatta committe directs that this decision be forthwith sent to the owners of the Choctaw and Penguin, to the chairman of the board of trustees, and presented to the club at it its next meeting for action on the last clause."

G. W. MCNULTY.

The German Emperor's Cup for the Queen's Diamond Jubilee.

A MEETING of the committee appointed by the German Emperor to arrange the conditions for the match for the silver cup which he has designed as a yacht racing prize to form part of the celebrations this year in honor of Queen Victoria's sixtieth year of reign met on Jan. 8 at Grosvenor House, Grosvenor street, to settle the conditions. There were present the Marquis of Ormonde, Vice Com. of the Royal Yacht Squadron, in the chair; Sir Edward Birkbeck, Sir Edward Sullivan, Baron von Senden (Berlin), Admiral von Eisendecher, Geheimrath Prof. Busley, Mr. Richard Grant (Cowes), Mr. R. G. Allan (Glasgow,) and Mr. Dixon Kemp.

The chairman proposed that Mr. Richard Grant should be honorary secretary of the committee. This was unanimously agreed to.

Mr. Dixon Kemp proposed, and Admiral von Eisendecher seconded, that the match for the cup, as far as racing yachts are concerned, be sailed under Yacht Racing Association rules and time allowances, and that cruising yachts shall be specially handicapped on the scheme adopted for the Queen's Cup by the Royal Yacht Squadron at Cowes, the handicap to be determined by a sub-committee, from which there can be no appeal. This was unanimously agreed to.

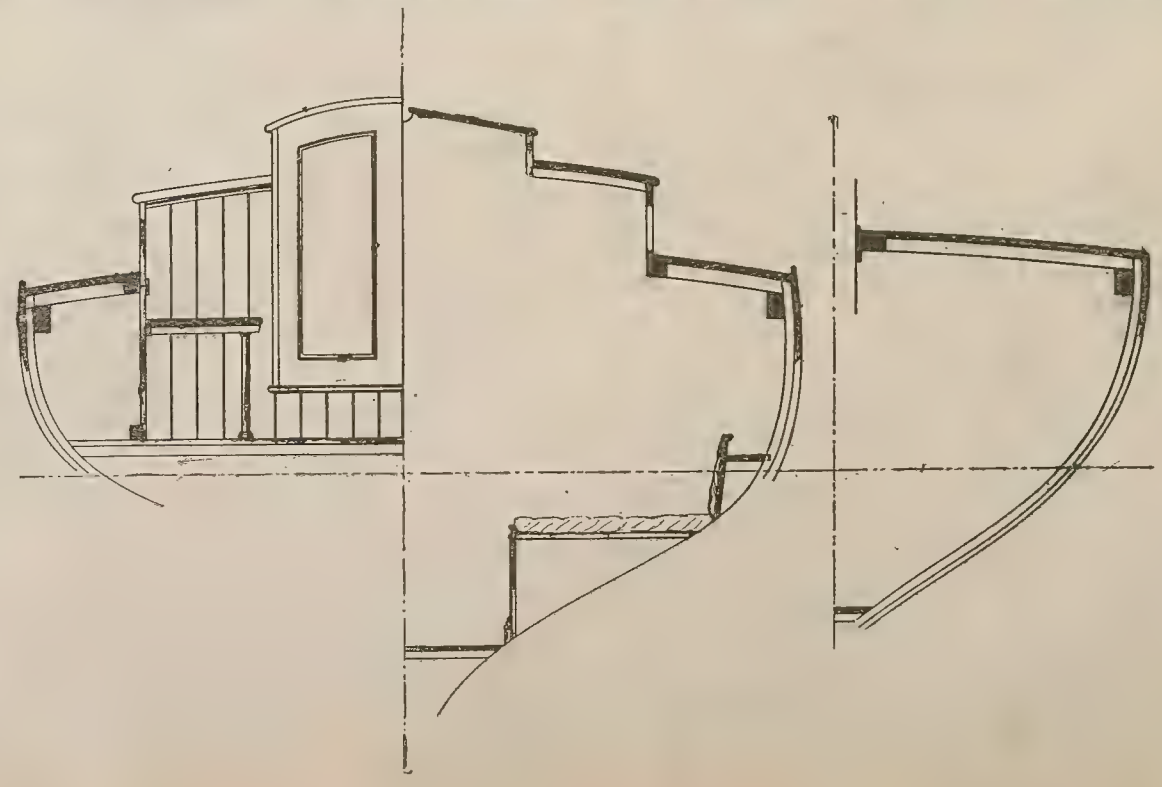
It was further agreed that three yachts should start, or no race: that the entries should close with Mr. Richard Grant, at Cowes, at noon on June 1, and that the match be started from Dover on June 23, at noon.

The following were appointed the sub-committee to carry out all the arrangements: Admiral von Eisendecher, Marquis of Ormonde, Mr. R. G. Allan, Prof. von Busley, Mr. Dixon Kemp and Mr. Richard Grant.

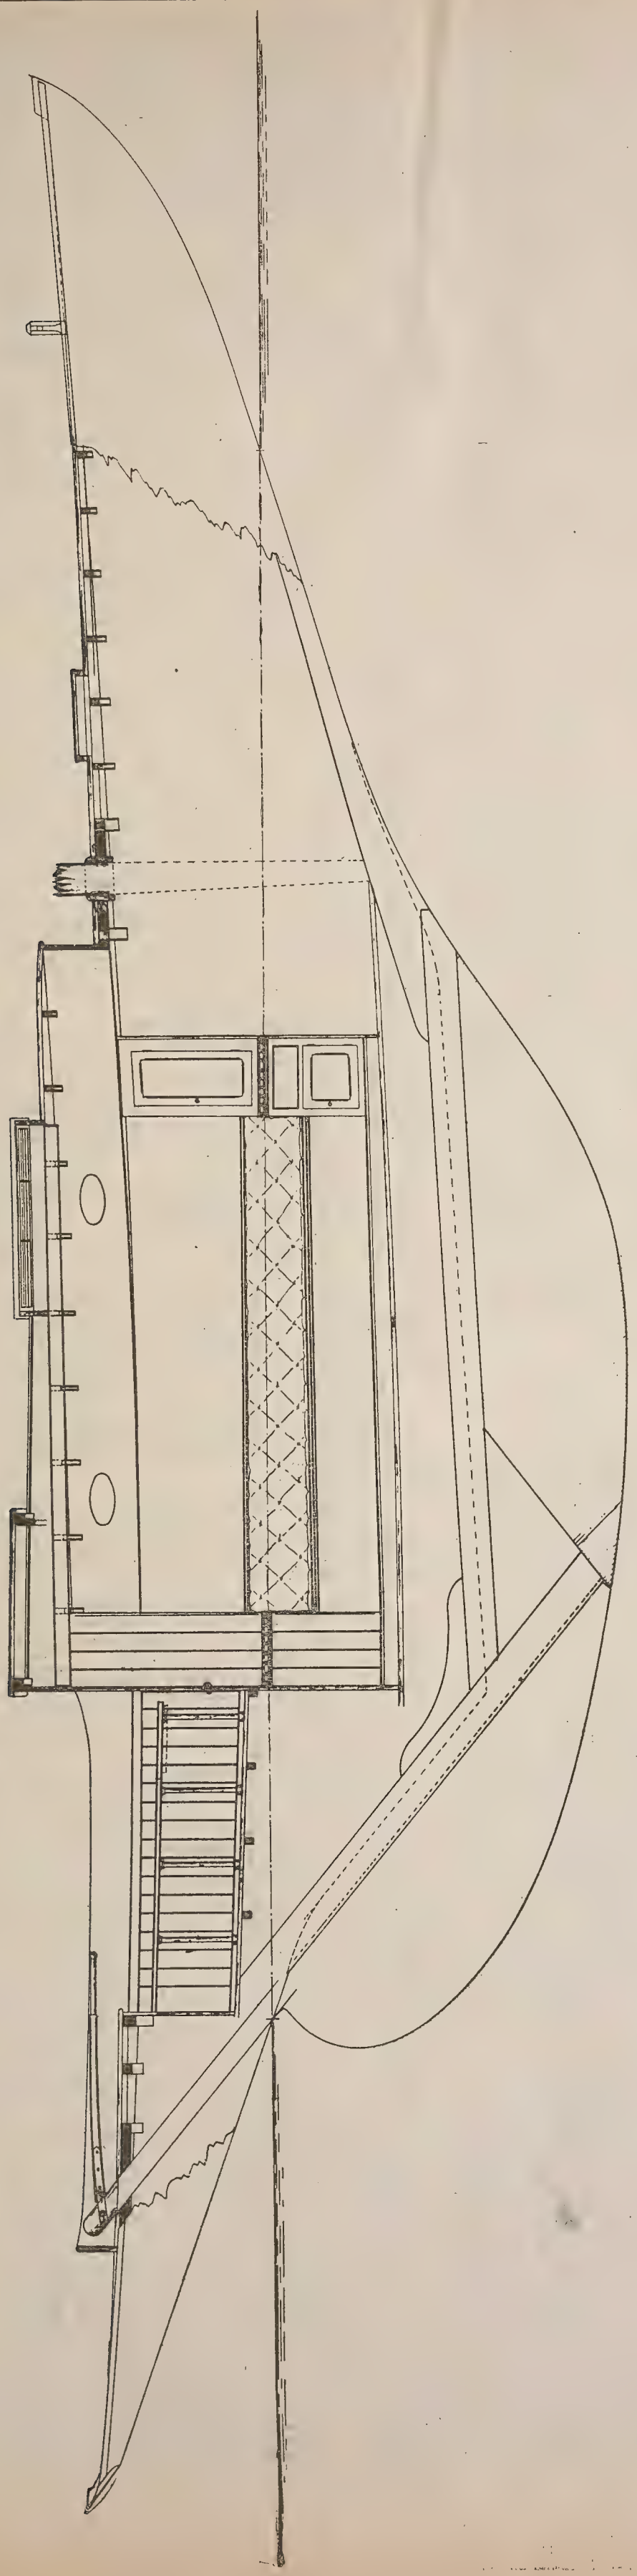
It was further agreed that Mr. Grant should convene the meeting of the sub-committee for the day he considered most convenient.

The Marquis of Ormonde proposed that the following resolution should be adopted and sent by telegram to the German Emperor:

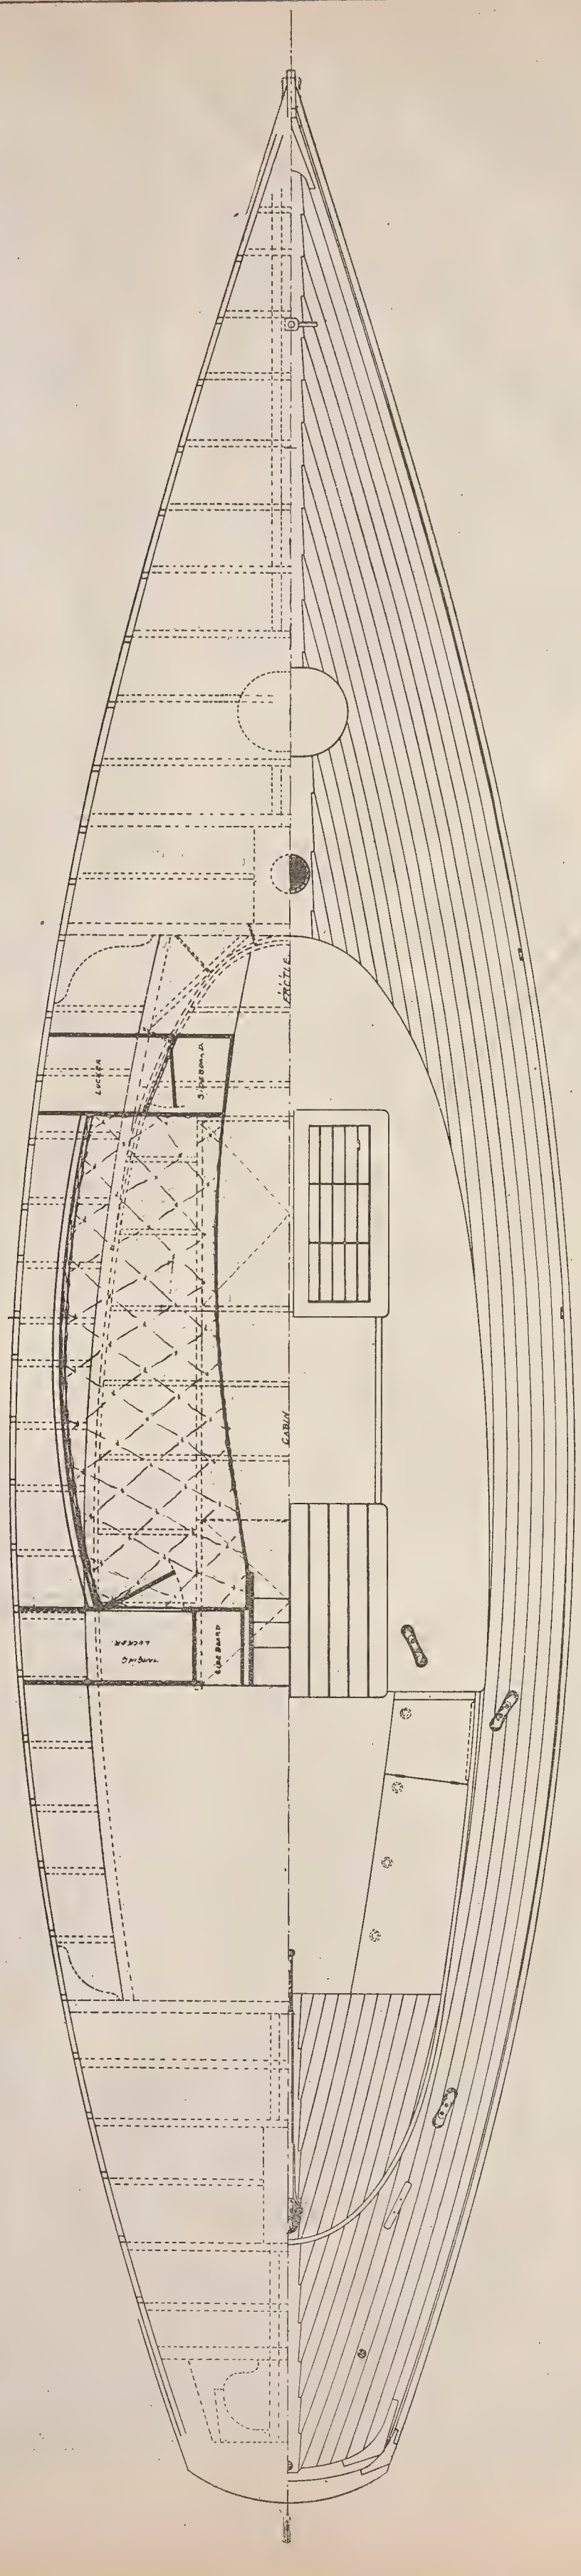
"That the best thanks of the Jubilee cup committee be conveyed to His Majesty the German Emperor for his generous gift of the Diamond Jubilee cup and for his continued support of yacht racing."



The resolution was seconded by Sir Edward Birkbeck, and carried by acclamation.—*The Field.*



Another "One-Design" Class.



THE Bray Sailing Club will be strengthened this year with a new class of sailing boats entitled droleens. The boats will be miniature copies of the American catboat, their dimensions being: Length 12ft., beam 6ft., and transom 4ft. 7in. They will be rigged with a standing lugsail of 100sq. ft., and in addition will have a spinaker of 60sq. ft. The boats will be all from one design, and will be cheaply put together, the hull and spars costing the modest sum of £9. The planking will be of $\frac{5}{16}$in. spruce, timbers of steamed American elm, ¾in. by 1½in., spaced 5in. center to center, with a round fastening between each timber. The hull will be strengthened throughout in every likely spot for straining with grown knees. The centerplate is of galvanized iron, its area being 3.6ft., and it is pivoted in a slot 2ft. 3in. long. The keel is at right angles to the stem, but 8ft. 6in. aft it rockers 6in. to the under side of the transom. The hulls are being put together by Foley, of Ringsend, and the sails are being made by Madder, of Wyvenhoe, their cost being £1. 8s. The club thinks that these boats are most suited to resist the strain of a mast in the bow and live ballast on the weather gunwale, while at the same time giving more room, and being much drier than a narrower boat. Whether its aspirations will prove true is a question which time alone can safely tell.—*The Field.*

A Modern Cruiser.

THE accompanying illustrations show the accommodation and sail plans of the little yacht described last week.

TWENTY-ONE FOOT CRUISING YACHT DESIGNED BY W. B. STEARNS, 1897.

The Massachusetts Y. R. A.

THE *Boston Globe* comments as follows on the action of the Mass. Y. R. A. in regard to its 17ft. l.w.l. class: At a meeting of the executive committee of the Yacht Racing Association of Massachusetts, held recently, it was declared that the vote of the Association at its meeting Dec. 21, extending the limit of the fourth class to 18ft., was illegal. The secretary was instructed to notify all the delegates of this action, and also that the motion for a change in the limit had been withdrawn. This disposes of the matter permanently, and the limit of the class remains at 17ft., as established in October.

This action of the executive will be good news to yachtsmen who have already built, or are intending to build, in the fourth class. The motion was originally made on the supposition that several Seawanhaka 20-footers and comparatively few Y. R. A. 17-footers would be built, but since it has been shown that the reverse is the case, and that no 20-footers are in sight, while nearly a dozen of the others can be counted, the maker of the motion cheerfully withdraws it, and hopes to see the 18ft. class fulfill all the promises of sport it now gives. So the 17-footers are all right for at least another season.

And the class is indeed a promising one. Lynn alone will contribute at least five new boats to the class, while last year's champion, Alpine, is being remodeled and improved in the effort to retain her championship honors. Rumors of a couple of new boats come from further down the North shore, while Boston will contribute quite a fleet, prominent in which will be C. B. Pear's Ripple and H. H. Linnell's new one of his own design. Harold Faxon's Gnome may also be fairly ranked as a new boat in the class, since she has been given a new and larger sail plan, and will be sailed with three men instead of the two for which she was originally designed when intended for the Seawanhaka 15ft. class. She was tried under her new rig last fall, and was shown to be much faster under a gaff mainsail than under her original leg of mutton.

[Gnome has never carried a leg o' mutton rig.—Ed. F. & S.]

The latest announcement of a new boat in the class is one for C. D. Mower, of Lynn, head draftsman for designer Arthur Binney in this city. The boat was built last fall by Mr. Mower from his own designs, and was launched prior to Dec. 31, 1896, so as secure whatever time allowance may come her way. She proved well able to carry her sail, and he hopes for a good record the coming season. The boat is 25ft. over all, 15ft. waterline without her crew, 7ft. 5in. beam, and 7in. draft. She is lightly built, and has only ⅛in. planking. She carries about 550ft. of sail in a jib and mainsail rig. Her board is a wooden one, with about 100lbs. of lead on the bottom. She is a well-turned model, with a bilge inclining toward hardness, and but little flare to the topsides. Her fore and aft lines are very easy.

The Sound Y. R. U.

THE following notice has been sent out by the Long Island Sound Y. R. U.:

OFFICE OF SECRETARY OF COUNCIL, Y. R. U., }
38 Park Row, New York, Jan. 18, 1897. }

NOTICE TO REPRESENTATIVES.

Dear Sir—A copy of the FOREST AND STREAM of the issue of Dec. 26, 1896, containing a report of the general meeting of the Yacht Racing Union of Long Island Sound, held Dec. 19, 1896, is mailed you under separate cover. This report should be placed in the hands of the chairman of the regatta committee of your club.

Action should also be taken by the club as soon as practicable on the amendments to the rules adopted by the Union at that meeting. Copies of the amendments for club distribution can be obtained from Messrs. Thompson & Co., printers, No. 55 Dey street, at $2 per hundred.

The Council recommends the following changes in the amendments to the rules adopted at the last general meeting:

Alter addition to Rule II., Section 2, by striking out the words "All yachts in the 30ft. and lower classes," and substitute "yachts in classes 25ft. and under of sloops and all classes of catboats."

Strike out Section 3 of Rule III., reading "Yachts launched prior to Nov. 1, 1896, not exceeding the limit of the 30ft. or lower classes by more than .5 of a foot, and that have not been increased in sail area measurement since that date, shall sail in such class."

Alter Section 3 of Rule XII. by striking out the words "in classes 30ft. and under" and substitute "in classes 25ft. and under of sloops and in all classes of catboats."

The Council finds that it will be expedient to place yachts in the 30ft. class of sloops, cutters and yawls under the same regulations that govern classes above 30ft. This will make it practical and desirable to eliminate the provision allowing 5ft. excess in this and lower classes. To dispense with the necessity of calling a special meeting of the Union to act upon these changes, the Council asks for a mail vote of the representatives. You are therefore requested to notify the undersigned on or before Monday, Jan. 25, whether you are in favor of their adoption or not.

The Council reports that the Corinthian definition has been amended to read as follows: "Corinthianism in yachting is that attribute which represents participation for sport as distinct from gain, and which also involves the acquirement of nautical experience through the love of sport rather than through necessity or the hope of gain. In this respect the following general definition is given: No person who follows the sea as a means of livelihood or who has accepted remuneration for his services rendered in handling or serving on a yacht shall be considered a Corinthian yachtsman."

Applications for dates for special races for the season of 1897 should be submitted to the Council before April 1.

The Council should also be furnished before that time with a list of the sailing yachts in your club that will require racing numbers for the coming season. It is intended to issue a list before the commencement of the racing season of all yachts to whom racing numbers have been allotted. On account of changes in the lettering of the classes new numbers will have to be allotted for this season. The list of yachts should comprise the following information: name, owner, address, rig, 1896 racing length, cabin or open.

FRANK BOWNE JONES, Sec'y of Council.

The Lake Associations.

UP to the time of going to press last week we were unaware of the sequel to the long fight on Lake Ontario from the time of the Rochester meeting up to the close of the special meeting, which only adjourned after dark on Saturday. As stated last week, this meeting was followed later in the night by a second session of the Council of the new Yacht Racing Union of the Great Lakes, which was unable to complete the work begun at the morning session until it was known what action would be taken by the L. Y. R. A. in the matter of the limitation of midship section and also that of measuring the l.w.l. and that of Corinthian crews. As told last week, the L. Y. R. A. meeting resulted in the adoption of a minimum section of 33⅓ per cent. for the 32ft. and larger classes, 20 per cent. for the 27ft. class and 12 per cent. for the 22ft.; in the rejection of the proposal to measure with crew on board, and of the admission of professionals, both as helmsmen and crews, except in the former capacity, and in the 32ft., 27ft. and 22ft. classes. These amendments were no more acceptable to the Lake Erie representatives than to the Ontario men outside of the Hamilton Oswego combination, and when they came up at the night meeting of the Y. R. U. Council they were all rejected, the Council retaining the original rules concerning the disputed points, with one or two additions, the result being:

First, that the area of midship section in all classes recognized by the Y. R. U. shall not be less than 35 per cent. of the parallelogram—the 22ft. class is not recognized, but the 27ft. class is. Second, that the Council shall have power to impose an extra allowance on existing yachts which fall under the limit. Third, that all yachts shall be measured with crew on board, existing yachts which do not exceed the limit by over 5ft. being retained in their old classes, but giving time for the excess of measurement. Fourth, that all yachts in the 42ft. and smaller classes shall be steered by Corinthians, and that not more than two professionals may be carried in any crew.

The Council then named the following yachts as subject to special allowance: Vencedor, Canada, Vivia, Eva, Hiawatha and Myrna. All of these are of reduced section, Canada being 28 per cent., Hiawatha 19, Eva 32, and Vencedor probably about 22 per cent. The latter was included in the list only because she has within the past two weeks been enrolled in the fleet of the Victoria Y. C., of Hamilton.

The final action before adjournment was the presentation by Mr. Jarvis, on behalf of the owners of Canada, of the silver cup won by her last summer, to be held by the Y. R. U. as a perpetual challenge trophy under the following conditions:

To all to whom these presents shall come, greeting:

Whereas, we, the undersigned, are owners of the yacht Canada and of the cup hereinafter mentioned, and members of the Royal Canadian Y. C., Toronto; and

Whereas, our said yacht Canada did on the 26th and 27th days of August, 1896, off Toledo, O., in an international sailing match with the yacht Vencedor, of the Lincoln Park Y. C., of Chicago, Ill., win the silver cup hereinafter mentioned; and

Whereas, we are desirous that said cup shall be preserved as a perpetual international challenge cup for friendly competition between representatives of yacht clubs of the two nations bordering on the Great Lakes, and to encourage the building of larger fleets by fostering class racing, and that the same shall be known as the "Canada's Cup."

Now know ye, and these presents witnesseth, that we do hereby give, grant, bargain, sell, assign, transfer and set over unto the Royal Canadian Y. C., of Toronto, to their successors and assigns as trustees, the said silver cup, in trust, to preserve said cup as a perpetual international challenge cup for friendly competition between sailing yachts, representatives of yacht clubs of the two nations bordering on the Great Lakes, and subject to the following rules and conditions:

(1) That said cup shall be known as the Canada's Cup.

(2) That any yacht belonging to any of the yacht racing associations on the Great Lakes affiliated with the Yacht Racing Union of the Great Lakes shall be entitled to challenge for the cup, provided that such challenge shall be made and match sailed in accordance with the terms and provisions of this instrument.

(3) The cup shall be held by the club to which the winning yacht belongs, and such club shall be responsible for its safekeeping.

(4) Should the club holding the cup at any time go out of existence or should the association to which such club belongs withdraw from the Yacht Racing Union of the Great Lakes, it shall hand over said cup to such club eligible to hold the same as above as it may elect, upon the written demand of the Royal Canadian Y. C., of Toronto, their successors and assigns.

(5) Matches for the cup shall be limited to yachts belonging to the so called 42, 37 and 32ft. class of the Yacht Racing Union of the Great Lakes as such classes exist at the time of this instrument. But should in the future the method of classification in the Yacht Racing Union of the Great Lakes be altered, or should the said union go out of existence, the classes in which matches for the cup may be sailed shall only include yachts of substantially the same size as represented by the above mentioned classes—*i. e.*, yachts having a load-waterline length between 25 and 40ft., the same being fixed from time to time by the Yacht Racing Union of the Great Lakes, and should said union go out of existence, by the Lake Yacht Racing Association of Lake Ontario, and in the event of said association going out of existence, by the Royal Canadian Y. C., of Toronto

(6) All matches shall be sailed under the sailing regulations of the Yacht Racing Union of the Great Lakes, and in the event of the said union going out of existence, under the sailing regulations of the Lake Yacht Racing Association of Lake Ontario, and in the event of said association going out of existence, under the sailing regulations of the challenged club, but subject to the provisions of this instrument.

(7) All matches shall be sailed between a single yacht on behalf of the challenging club and a single yacht on behalf of the challenged club.

(8) The challenging club shall give ten months' notice in writing, naming the dates for the proposed races, and no races shall be sailed between the 15th day of September and the 15th day of June. At the time of the giving of the challenge it must be stated the class in which the match is to take place, subject to the rights given in Clause 11.

(9) The challenging and the challenged club shall each name its representative yacht by written notice to the other at least one week prior to the races.

(10) The match shall be decided by the winning of not less than two out of three or three out of five races, as may be agreed on between the clubs interested.

(11) The club holding the cup shall have the right to name the class in which the race is to take place for a period extending over three matches only.

(12) The challenged club must accept a challenge duly made under the terms and provisions of this instrument within sixty days of its receipt or surrender the cup to the challenging club.

(13) The course shall be an open lake course, having at least 15ft. of water over its entire length, and shall be leeward or windward and return, and triangular.

(14) All races shall take place under the management and auspices of the club holding the cup.

(15) The club challenging for the cup and the club holding the same may, by mutual consent, make any arrangement satisfactory to both as to dates, course, number of trials, management of races and other conditions that do not alter the sense or spirit of this instrument, and may also waive the ten months' notice mentioned in paragraph 8.

(16) For the first race the Royal Canadian Y. C. shall be deemed the holders of this cup, and, in the event of the Royal Canadian Y. C. selecting the yacht Canada to defend the cup in the first race, the representative of the challenging club shall not be required to fulfill Rule No. 4, restriction on area of midship section, page 16, rules of Yacht Racing Union of the Great Lakes, and, in this event, in place of 35 per cent. 28 per cent. may be substituted, being the percentage of the area of the yacht Canada's immersed midship section of her beam at load waterline multiplied by her extreme draft.

And we, the undersigned, the Royal Canadian Y. C., of Toronto, do hereby accept the above trust.

In witness whereof, we have hereunto set our hands and seals, and the Royal Canadian Y. C. has hereunto set its corporate seal and the hand of its commodore and secretary, this 16th day of January, A.D. 1897.

Fifteen-Footers on Lake Ontario.

THAT Hamilton will lead the rest of the Dominion in the matter of half-raters next season seems now almost assured. F. E. Walker, vice-com. of the Victoria Y. C., started the interest in this type of boat when he acquired by purchase the possession of the slippery Sothis, believed by many to be the fastest boat in her class afloat, not even excepting the international champion, Glencairn. Other yachtsmen, however, did not propose that Mr. Walker should have a walkover in half-rater competitions, and a number of them early in the fall began preparations to build in this class, with the result that already three or four boats, whose owners have championship aspirations, are completed, while others are well under way.

Of those finished the most likely appearing is one now lying in the Bay street shop of L. H. Bastien. She is a creation of G. H. Duggan, designer of Glencairn and Sothis, and was built by Mr. Bastien for T. J. Carroll, of the Hamilton Brass Mfg. Co. She has been christened Ethel, and will fly the burgee of both the local yacht clubs.

Ethel is a typical half-rater, as may be seen by reference to the following dimensions and particulars of construction: Length over all, 23ft.; l.w.l., 12ft. 6in.; beam, 6ft. 3in.; draft, 6in.; draft with centerboard, 5ft. 6in.; mast, 20ft.; sail area, 300sq. ft.

The sail plan calls for a greater mainsail, jib and a spinaker, all of the best India silk. The boat is finished in natural wood, ship-lapped and smooth, the hull being white enameled. The weight, exclusive of spars and rigging, is exactly 350lbs. The spars, which are hollow, weigh 40lbs., and the running and standing rigging, all of the lightest possible material, when in position will add but 25lbs. to the weight of the boat.

The construction is as follows: Frames of oak, ⅝in.×⅜in.; planking of cedar, ⅜in. in thickness; deck of cedar, ship-lapped and finished naturally, $\frac{5}{16}$in. in thickness.

The centerboard and rudder, which are now being cast expressly for Mr. Carroll, are to be of bronze, light and durable.

As has been previously stated, there are to be a number of races arranged for boats of the Ethel type next season. The R. H. Y. C. and V. Y. C. will probably each schedule three events in this class, and arrangements are well under way to bring off five special events of $50 each exclusively for half-raters.—*Hamilton Herald.*

Lake Minnetonka.

THE Chamber of Commerce syndicate, headed by Hal P. Watson, skipper of the white-hulled sloop Marie, has ordered from Arthur Dyer, of Deephaven, a first-class sloop to be ready for launching as soon as the ice is out. The new craft is to be practically the same over-all length as Marie, but what her beam will be or whatever peculiarities are to enter into her construction will not become apparent if Dyer can help it until the boat is put afloat. A well known yachtsman, who may be expected to know as much of the plans as any one except the owners, asserts that Dyer is intending to introduce an even more startling innovation in yacht construction than the divided stern in Peet & Dunwoodie's phenomenal Tartar. The sensational career of the latter craft last season was a surprise to nearly everybody, including her owners. She did not surprise Peterson apparently, for very early in the season, before the trial races with Kite had been sailed, the Excelsior man said he had something that would make the critics open their eyes. Tartar did everything her builder claimed she would do, and nine out of ten yachtsmen believe that nothing will be put up this season, either at Deephaven or Excelsior, that can show the black-hulled craft a lead. At all events, Messrs. Dunwoodie and Peet are quite satisfied to nail their colors to Tartar's masts for this year at least.

The Chamber of Commerce syndicate intended building a new racing boat last year, but it was put off until it was too late, and Marie did duty instead. In the new boat just ordered the purpose is, of course, to get something that will beat Tartar, and certainly Dyer will put forth every effort to produce the fastest boat ever turned out of the Deephaven yard. None of the details of this contract, closed yesterday, can be learned. Hal Watson, when asked about the matter this morning, said that he didn't know what material was to be used in constructing the new boat, as the whole thing has been left to Dyer. The syndicate is offering a bonus for a boat able to perform certain necessary feats during the season of 1897, and if Dyer succeeds he will get a fancy price for his work.

There is a healthy rumor that Peterson has been commissioned by a Minneapolis yachtsman to construct a boat able to beat Tartar, and that the Excelsior man has accepted the commission. When asked about the matter, Peterson simply says that he has several orders in, but that he is not at liberty to talk about any of them. He seems to believe, though, that Tartar can be beaten out of the same yard, and very likely Capt. Peet will not have such an easy time in the coming season as many of his friends anticipate for him. So far there are only three first-class sloops under order for next summer, but six or seven of the one-rater class will be ready for launching in April.—*Minneapolis Journal.*

YACHTING NEWS NOTES.

On Jan. 19 the members of the Seawanhaka C. Y. C. listened to a very interesting lecture, the first of a series of three, by Commander Casper F. Goodrich, U. S. N., the subject being "The Sailor in the Revolution." The other two will deal with the sailor in the war of 1812 and the sailor in the rebellion.

The American Y. C., of Newburyport, Mass., has elected the following officers: Com., Charles H. Shackford; Vice-Com., William Balch; Rear-Com., G. W. Rodigrass; Sec'y, E. N. Follansbee; Treas., H. W. Bayley; Meas., E. P. Durland; Delegate to Massachusetts Y. R. A., H. W. Little; Executive Committee, C. H. Shackford, William Balch, E. N. Follansbee, H. W. Bayley, E. G. Wordwell, H. W. Little and L. P. Balch; Regatta Committee, H. W. Little, D. P. Page, A. T. Gould, L. W. Rodigrass, James F. Chase.

The American Y. C., of New York, held its annual meeting at Delmonico's on Jan. 19, the following officers being elected: Com., Charles A. Gould, steam yacht Neaira; Vice Com., William A. Hearst, steam yacht Buccaneer; Rear-Com., William H. Butler, steam yacht Forget-Me-Not; Sec'y, Thomas L. Scovill; Treas., William Porter Allen; Fleet Surgeon, Charles I. Pardee, M. D.; Meas., Charles H. Haswell; Consulting Engineer, George W. Magee, U. S. N.; Trustees (to serve three years), F. R. Lawrence, Wiliam H. Parsons and William Porter Allen; to serve one year, J. Howard Wainright and Charles I. Pardee, M.D.

At the annual meeting of the Dorchester Y. C., on Jan. 13, the following officers were elected: Com., Franklin L. Codman; Vice-Com., Arthur Merritt; Sec'y, Frank A. Dewick; Treas., George H. Collyer; Meas., Clifton W. A. Bartlett; Directors—Hartford Davenport, Wm. H. Swift, C. H. Nute, Franklin L. Codman, Arthur Merritt, Frank A. Dewick, George H. Collyer; House Committee—Hjalmar Lundberg, W. F. Abbott, Henry D. Wing; Membership Committee—James F. Moody, Charles F. Hosmer, Fred P. Hayward, G. A. Critcherson, Frank A. Dewick; Regatta Committee—John F. Small, C. B. Pear, Arthur P. Nute, Theodore Hallett, Oliver F. Davenport.

At the annual meeting of the Corinthian Y. C., of Philadelphia, on Jan. 13, the following officers were elected: Com., Clement A. Griscom, schr. Alert; Vice-Com., Joseph de F. Junkin, schr. Columbia; Rear-Com., Dr. Hobart A. Hare, schr. Elfin; Sec'y, Addison F. Bancroft; Meas., George Herbert Millett; Race Committee: Addison F. Bancroft, Isaac W. Jeanes, Henry S. Jeanes; Committee on Admissions: Charles H. Brock, Alexander Van Rensselaer, G. Herbert Millett, Brereton Pratt, Frank H. Rosengarten; Trustees (to serve for three years): Joseph de F. Junkin, Brereton Pratt, George H. Kirkpatrick, Alfred C. Harrison. These with the following constitute the full board: Clement A. Griscom, Edgar T. Scott, John W. Brock, Russell E. Tucker, Addison F. Bancroft, Robert K. Neff, Wm. L. Elkins, Jr., Richard P. White.

Murray & Tregurtha, South Boston, Mass., report business fairly good, considering the present general depression. They have recently shipped a 5 H. P. gasoline motor to North Carolina, and a 41in. Tregurtha boiler to Buenos Ayres, South America. Among contracts at present in hand are a 33ft. cabin yacht, schooner-rigged, equipped with a 10 H. P. gasoline motor, for Mr. George Skene, to be used at Chatham, Mass.; a set of machinery consisting of 12 H. P. compound engine and Tregurtha boiler, for a high speed launch for Mr. Ernest H. Rogers, of Brookline; a 41in. Tregurtha boiler for Mr. G. C. Stickney, of Beverly, and a 10 H. P. gasoline engine for Mr. W. H. McLeod, of Boston.

Adrienne, schr., designed by Stewart & Binney for members of the Southern Y. C., and successfully used for several years about the Gulf of Mexico, has been sold to Chas. E. Graham and J. A. Kelsey, New Haven Y. C. On the voyage from New Orleans to New Haven she was overhauled by a revenue cutter under suspicion of being engaged in filibustering, and later she put into Miami, Fla., where she will remain until April.

The annual meeting of the Chicago Y. C. was held on Jan. 16 at the club house of the Chicago Athletic Association; the following officers were elected: Com., Fred W. Morgan; Vice-Com., Frank K. Bull; Sec'y and Treas., Charles H. Thorne. Executive Committee: Com. Morgan, W. Vernon Booth, Charles E. Kremer, Elliott Durand and James H. Channon. The offices of fleet captain and fleet surgeon will be filled hereafter by the executive committee.

Under the laws of the Chicago Y. C. all of its members must be members of the Chicago Athletic Association. The dues are merely nominal, $1 a year, and no initiation fee is charged. This is amply sufficient, as the club's expenses are also nominal only. The membership now numbers 90, but a large increase is anticipated during the coming season.

On Dec 21 the Peoria Y. C., of Peoria, Ill., was organized with the following officers: Com., Lee Harrison; Vice-Com., W. A. Jones; Sec'y, C. A. Weiberg; Treas., E. J. Cressy; Board of Directors—Lee Harrison, chairman; W. A. Jones, secretary; F. C. Howe, H. S. Miller, E. N. Armstrong, W. A. Sheehan, Joseph A. Weil. The club has ten sailing yachts and eight launches, and will add several 15 footers to its fleet.

The Winthrop Y. C. has elected the following officers: Com., Geo. E. Leighton, slp Hyperion; Vice Com., Arthur W. Chesterton, cat Myrtle; Sec'y, Charles G. Bird; Treas., Luther T. Harrington; Meas., Harry Hutchinson; Directors—Clarence H. Billings, Edgar A. Cook, Lyman S. Meston, Chas. A. Heney; Regatta Committee—Jas. R. Hodder, John MacConnell, Jr., Wm. I. Kelley, Lyman J. Gillies, Samuel J. Wilde; Membership Committee—Harry W. Hall, Harry O. Riggs, Wm. W. Fordham, Frank H. Richardson, Wm. H. Mirick, Minot H. Beacham, John G. Cuthbertson, Albert S. Richards, Joseph L. Rankin. The club has a membership of 225. It has adopted the Massachusetts Y. R. A. rules.

Lawley has five orders on which he has not yet started: one 14ft. centerboard knockabout, two 14ft. cruisers, one 21ft. knockabout, and the Crane Seawanhaka 20 footer. The wooden keel and stem and sternpost for the composite steamer have been got out, and the steel keel and floor plates are being got out in the mill. The Peabody 21ft. knockabout is nearly in frame, and shows a sharp-floored boat with some "tumble home" to the topsides. The lead keel is very much bulbed. The Burgess 24-footer is planked and smoothed and the cabin house is partly on. The deck will be covered with canvas. A 23ft. mahogany launch for A. E. Lockhart's steam yacht Starling is planked in the boat shop. The 25ft. mahogany launch built for the Hermione is completed, and is a beauty in design, workmanship and finish. Her 5 H. P. alco-vapor engine is in a small cockpit by itself aft, leaving a clear forward cockpit nearly 12ft. long.

Fenton & White, of Manchester, who are building the racing 24-footer for A. H. Higginson, have received an order for a 24ft. cruising knockabout from a Boston yachtsman. The boat is from the designs of E. U. Jewell, a well-known Corinthian skipper, and is his first venture into the field of design in a large boat. She will be 42ft. over all, 8ft. 6in. beam and 6ft. 2in. draft, with a sail plan of about 1,000sq. ft. In the matter of long ends, as well as in some other ways, she will differ from present knockabout models, and hence should make an interesting boat. She will have a good cabin, with 6ft. of head room under the cabin house, and will be used in Boston and Marblehead waters. The Higginson boat is in frame, and is a very promising looking article.—*Boston Globe.*

Sovereign, steam yacht, Mr. C. D. Borden, is wintering at her builder's yard, Erie Basin, where her Babcock & Wilcox boilers are being replaced by others of the Sarrow type.

Clermont, steam yacht, A. Van Santvoord, is being lengthened 15ft. forward.

In March next, an exhibition of yachting and shipping will be opened at the St. Petersburg Aquarium, under the auspices of the Neva Y. C., of which the Grand Duchess Xenie Alexandrovna is patroness. The exhibition is being supported actively by the ministers of marine, finance, imperial domains and railways, and will be very extensive in character and scope. There will be fourteen sections, comprising twenty-eight classes of exhibits, including historical exhibits, ships, motors and machinery, rig and equipment, life-saving apparatus, yacht racing, navigation and such like items. An important feature of the exhibition will be the assembling of the first Russian congress of yachtsmen, which will, in all probability, awaken much enthusiasm in the breasts of the yachting fraternity, and may lead to further developments in the sport in Russian waters. The entire business of the exhibition is in the personal control of the Grand Duke Alexander Michaelovitch, who is honorary commodore of the Neva Y. C.—*The Field.*

On Jan. 14 the Savin Hill Y. C. elected the following officers: Com., A. W. B. Foster; Vice-Com., W. F. Bache; Rear-Com., W. F. Scott; Sec'y, A. A. Swallow; Treas., C. A. J. Smith; Meas., J. E. Robinson; Directors—W. H. Besarick, Homer Methot; Membership Committee—E. L. Bragg, C. H. Conant, G. L. Fitz, L. E. Noble, G. E. Stone, Loring Sears, A. A. Swallow.

The annual meeting of the Corinthian Y. C., of Marblehead, was held on Jan. 13; the following officers being elected: Com., Nathaniel C. Nash; Vice-Com., Herbert H. White; Rear-Com, Winthrop A. Harvey; Sec'y, Everett Paine; Treas., J. B. Rhodes; Meas., John W. Dunlop; Executive Committee Francis A. Seamans, John F. Cole; Regatta Committee—David C. Percival, Jr, Herman Parker, C. Edgar Finney, Wm. B. Stearns, George W. Mansfield; Membership Committee—Herman Parker, Arthur K. Simpson, Daniel W. Lane, Joseph W. Hodgkins; House Committee (three years), Joseph W. Hodgkins; Board of Judges—Wm. W. Keith, W. I. Palmer, Arthur K. Simpson, Wm. B. Stearns, Albert E. Smith.

The Commonwealth Y. C., of Boston, has elected the following officers: Com., Edward Marley; Vice-Com., C. L. Ellis; Rear-Com., L. D. Lyons; Sec'y, John Nolan; Treas., C. H. Wilson; Meas., J. F. McKee.

We learn from the *Field* that among Mr. Watson's latest orders is one for a 1,200-ton steam yacht for an American owner.

The new steam yacht designed by G. L. Watson for Robert Goelet, of 1,750 tons, will be named Saldanha.

Empress, steam yacht, has been sold to A. Schwartzmann.

Rifle Range and Gallery.

Police Revolver Scores.

ON Jan. 20 the first and second teams from the two platoons of the New York Police Department met for practice at the revolver school in the 8th Regiment Armory. For some unknown reason Warner and Adams on the second team of the second platoon went to pieces in their shooting.

The conditions call for three strings of 5 shots each on the Creedmoor target (4in. bull) at 10yds. Scores follow:

FIRST TEAM FIRST PLATOON.

	Precinct.				Total.
Ebermann	11	71	70	70	211
Leddy	34	69	68	67	204
Schryver	4	66	66	63	195
Ward	29	66	62	62	194
Stenner	12	71	69	65	205

SECOND TEAM—FIRST PLATOON.

Illich	38	67	65	65	197
Dowling	38	66	63	62	191
Mason	20	69	64	61	194
McCarrick	18	72	70	69	211
Kolle	24	Absent.			

FIRST TEAM—SECOND PLATOON.

Rifle Contests at the Sportsmen's Exposition.

THE Sportsmen's Association has decided to promote a series of contests for .22cal. rifles during the week of the Sportsmen's Exposition, the contests to take place in Madison Square Garden.

The committee in charge of the tournament is composed as follows: H. D. Muller, chairman; Gus Zimmerman, C. G. Zettler, B. Walthers and Edward Banks, the latter being secretary of the committee. At its first meeting, held on Friday, Jan. 22, the committee decided to visit the Garden on Tuesday afternoon, Jan. 26, for the purpose of choosing a location for the ranges on which the contests will be carried out. It also decided to issue a personal invitation to the captains of all rifle clubs in the vicinity of this city to attend the next meeting of the committee for the purpose of arranging a programme that would be satisfactory to the majority. This meeting will be held at 3 P. M., Tuesday, Feb. 2, in the rooms of the Sportsmen's Association, Room 1,009, 377 Broadway.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in these columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 29.—YONKERS, N. Y.—Tournament of the Harriott Gun Club. Live birds and targets.

Feb. 8-20.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live-bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Feb. 10.—HACKENSACK, N. J.—Second contest for the *Recreation* cup, under the auspices of the Bergen County Gun Club. C. O. Gardner, Sec'y.

Feb. 12.—HACKENSACK, N. J.—100-target handicap event, unknown angles, $2 entrance, targets extra at 1 cent each. Shoot commences at 10 A. M. C. O. Gardner, Sec'y.

Feb. 12.—NEWARK, N. J.—All-day shoot of the Forester Gun Club. Targets. H. E. Winans, Sec'y.

Feb. 22.—NEW HAVEN, Conn.—All-day shoot of the New Haven Gun Club. Targets. Wm. H Hazel, Sec'y.

Feb. 22. WISSINOMING STATION, P. R. R., Pa.—All-day shoot of the Florists Gun Club, of Philadelphia. Targets.

Feb. 22.—PARKERSBURG, W. Va.—All-day shoot of the Mountain State Gun Club. Targets. Leo Epstein, Sec'y.

Feb. 22.—NEWARK, N. J.—All-day shoot of the Forester Gun Club. Targets. H. E. Winans, Sec'y.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK.—Interstate Association's fifth annual Grand American Handicap (live birds), at Elkwood Park. $1,000 guaranteed in the main event, all surplus added. Entries close March 20

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 14-16.—BALTIMORE, Md.—Tournament of the Interstate Association, under the auspices of the Baltimore Shooting Association.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

B. F. Smith, late of Buffalo, N. Y., has taken root at Leroy, Pa. The first thing naturally that Smith turned his hand to after locating in Leroy was the organizing of a gun club. He has succeeded admirably in his efforts, and is now busily engaged weaning the affection of his pupils from black powder to nitros. In order to show the boys what he can do with the latter, he has recently shot a couple of races at 50 targets each, and has broken 45 each time. In a race for a silver trophy on Jan. 19 he won with 24 out of 25. Smith is still shooting his old Baker gun, and is pushing King's Smokeless and Peters's shells on behalf of the companies manufacturing the same.

A glance at our Fixtures column will show that the Interstate Association has made arrangements for tournaments as follows: Baltimore, Md., April 14-16; Monroe, La., June 9-10; New Haven, Conn., July 14-15; Lewiston, Me., Aug. 4-5; Montpelier, Vt., Aug. 25-26. It was a wise move of the Association to open its target season at Baltimore, Md., as that tournament will, without question, prove one of the drawing cards on the Interstate's circuit for 1897. Dates have not yet been claimed for Richmond, Va.; Nashville, Tenn.; nor Portsmouth, N. H.; but these three cities will probably round out the circuit of eight tournaments decided upon by the Association.

The name Bradley that appears in the scores made at Elkwood Park on the opening day will hardly be familiar to many of our readers. Mr. Bradley has not done much live-bird shooting outside of his own club's grounds; but his name will be a little more familiar to readers of FOREST AND STREAM when we mention that he is the hero of the Edgar Murphy-Bradley match shot a year ago at Carteret, when Murphy conceded his opponent 10yds. and was defeated easily, although he shot a good race. The conditions were: Murphy 30yds., Bradley 20yds. and 10 dead birds. Score: Murphy 83 out of 93, Bradley 93 out of a 100, including the first 10 dead.

Mr. Hyatt L. Frost, of Indianapolis, Ind., in sending us an account of the sparrow tournament in that city, makes the following note: "J. A. R. Elliott, O. R. Dickey, S Glover. E. D. Fulford and B. A. Bartlett, the Eastern contingent; R O. Heikes, Ralph Trimble and J. H. Mackie, of Ohio; and George C. Beck, J. W. Cooper, J. H. Trippe and Royal Robinson, of Indianapolis, left for the San Antonio shoot at 7:05, Wednesday evening, in a special sleeper via St. Louis. At that point they will be joined by Harvey McMurchy, T H. Keller, J. L. Winston, Jack Parker, C. E. Willard, and probably several others."

We recognized the "Ready," "Pull," of R. A. Welch at the Elkwood traps on Thursday last much more quickly than we did his features. It is two years since we saw Mr. Welch shoot a live bird, and indeed during the past two years he has been almost an absentee from any shooting grounds. His ability for knocking down fast birds does not seem to have deteriorated in the least. He is shooting as well as ever, and that's saying a good deal, because on his day he is a dangerous man for anybody to go up against. Thursday, Jan. 21, was one of his days.

The second contest for the New Jersey amateur championship cup will be held on the Bergen County Gun Club's grounds, Hackensack, N. J., on Wednesday, Feb. 10. The club will also hold a 100 target handicap race on Feb. 12, Lincoln's Birthday, the conditions being unknown angles, $2 entrance, targets extra, at 1 cent apiece. A good lunch will be ready for the club's guests, and the boys may be trusted to look after everybody's comfort in their usual hospitable manner. Shooting commences each day at 10 A. M., the main events being commenced at noon promptly.

The Florists Gun Club, of Philadelphia, Pa., one of the most energetic and thriving gun clubs in the State, has arranged to hold an all-day shoot at targets on Washington's Birthday at its grounds, Wissinoming Station, P. R. R. The programme will be one of "popular prices," and Will K. Park informs us that some specially interesting features will be introduced.

Arthur Bunn, of Singac, N. J., will have a live-bird shoot at his grounds Jan. 30, Saturday of this week. The chief event is a 25-bird handicap, $10 entrance, birds extra at 25 cents each, Rose system; if 12 entries or more, 4 moneys. The handicap will commence at noon sharp, but entries will be received up to the end of the fifth round. Bunn's birds are always good, so that a man who can shoot will stand some show to pay his car fare.

The Arkansaw Traveler's first annual live-bird tournament, advertised to take place at Hot Springs, Ark., Feb. 8-20, is in good shape. The programme states that $700 cash will be added to the purses, and that "no trophies, no plunder, nothing but cash," is on the list. The programme is a decidedly interesting one and a pleasing souvenir of a famous watering place.

The Knoxville, Tenn., Gun Club and other shooting organizations in Tennessee are doing their best to put a stop to the practice of exporting live quail out of the State. This pernicious practice has grown to such a magnitude that quail are now quite scarce where a few years ago they were numerous enough to suit a game hog. And this scarcity is not the result of "freeze-outs," but of netting.

"George McAlpin is shooting a great gait just now." That is a sentence we have heard so often of late that it comes to mind whenever we stop a moment to think out some driver or twister. Could we drop our Drivers and Twisters with the ease and regularity that marks McAlpin's efforts in that line, we'd be the king pin of them all.

Fred Quimby is making an extended tour through the Western cities and will hardly be back in New York much before the first day of March. It is quite a comfort to be able to go into Fred's store now without first being forced to remove one's spare cigars from their accustomed resting place in the right hand upper vest pocket.

The Elkwood Park grounds were given a thorough trial on Thursday last, the rain of the previous night having been almost heavy enough to merit the title of deluge. Although every inch of the new grounds is "made ground," shooting went on just the same as if the soundest turf surrounded the club house.

During the second day of the Erie (Pa.) Gun Club's tournament, Jan. 14, Harry Kirkover, of the Audubon Gun Club, of Buffalo, N. Y., was slightly wounded in the right eye by a stray shot from a pothunter's gun. Owing to the accident Mr. Kirkover was unable to take part in his club's tournament the following week.

In a copy of the Harrisburg (Pa.) *Call* of Jan. 15 we notice an account of a small live-bird shoot that took place at Ephrata, Pa., on the previous day. The most interesting part of the report (to us at least) was the fact that Billy Fieles's name appeared in every event. That fact is interesting, because it shows that Billy is still on deck with the boys when business permits.

Bad weather marred the opening day of the Buffalo tournament, Jan. 18. The attendance was quite small, only 11 shooters taking part in the 13 events shot during the day. L. V. Beyer won the honors of the day with great ease, no one else being able to get near him. The strong wind was fatal to high scores.

T. W. Morfey's open letter to Winston, accompanied by the solid backing of a $50 forfeit, should recommend itself to Winston. An agreement was made between the two on Jan. 16 to shoot on some date between March 1 and 10, but no forfeit was put up. As Winston has expressed some doubts as to Morfey's tackling him, the latter has thought it better to post a forfeit and thus make the matter binding on both parties.

Roll Organ and W. P. Mussey have been in New York city on business. While here they found time to run out to Larchmont on Friday, Jan. 22, and see the Duryea-McAlpin match. It was a cause for regret on our part that business engagements on both sides prevented our meeting either of the above able representatives of Western trap shooters. The fates are unpropitious sometimes.

Noel Money is getting back into form again, judging from the way he smashed targets at Hackensack, N. J., on Saturday, Jan. 23. It was hard shooting too, as the wind blew a gale from the northwest. In the E. C. cup shoot he was the winner with 48 out of 52 shot at. T. W. Morfey was right after him with 45 out of 51.

Regardless of the letter from the attorneys of Elliott Bros., Kansas City, Mo., warning Phil Daly, Jr., not to use the traps now in position, as it is claimed they are similar to some in use at Kansas City for which a patent has been applied for, shooting will take place every Saturday, as announced, and from the traps now in position.

A 100 bird race was shot at the Larchmont Y. C.'s grounds on Jan. 20 between J. P. Knapp and H. Sanford, both standing at the 30yds. mark. The match resulted in a tie, each scoring 87 out of 100. The New York *Herald*, commenting on the shoot, says: "The weather was not favorable, and most of the birds were drivers." Favorable for what?

T. W. Morfey is no longer in the hotel business, having sold out his interest in the Eagle Hotel, Paterson, N. J., recently. It is more than likely that Morfey will be on the list at some of the large tournaments this season.

The scores made at the Indianapolis (Limited Gun Club's) tournament show that sparrows do not stand much chance with the crackerjacks unless there is a gale blowing and no snow on the ground.

In writing to us on another matter, Wallace Miller, of Austin, Tex., pays a high tribute to Jim Elliott's prowess as a shooter of live birds, and asks: "Where are all the gang that were looking for his scalp at Chicago last summer?"

The Forester Gun Club, of Newark, N. J., will hold all-day shoots at targets on its grounds, Newark, N. J., on Feb. 12, Lincoln's Birthday, and Feb 22, Washington's Birthday. On Feb. 12 Jesse James and Melrose Hayes will shoot a race at 50 targets, expert rules, for a side issue. This race will commence at 10 A. M.

J. J. Hallowell, of Tucson, Arizona, president of the Arizona Sportsmen's Association, was in great form at the recent State shoot held in Prescott. The boys of the circuit of 1896 will remember Tucson well, and will be glad to hear that his right hand and his right eye have not forgotten their cunning.

The Mountain State Gun Club of Parkersburg, W. Va., has elected the following officers for 1897: President, John Hogan; Secretary-Treasurer, Leo Epstein; Captain, Bob Clark. The club will have an all day shoot on Washington's Birthday.

The New Haven, Conn., Gun Club will hold an all-day shoot on Washington's Birthday. Particulars can be obtained from W. H. Hazel, secretary.

This week may be said to inaugurate the preliminary skirmishes prior to the breaking out in the target tournament line that will not come to pass until the month of April is fairly upon us. The boys will be cracking the blue rocks this week at San Antonio, Texas, under the supervision of the Big Three.

The Boston, Mass., Gun Club has arranged a series of prize handicap events to commence Jan. 27 and end on May 5. Each event is at 21 targets, viz.: 10 known, 5 unknown and 3 pairs. Shoots take place every week and the best six scores out of the fifteen shoots to count.

The Jeannette Gun Club, a New York organization that holds its live-bird shoots at Guttenburg race track, Hoboken, N. J., has elected the following officers for 1897: Pres., C. F. Offerman; Vice-Pres., C. Vagts; Sec'y, Wm. P. Rottmann; Treas., C. N. Brunnie.

Gus Nowak, one of the most popular men in the ranks of the Emerald and Hell Gate gun clubs, of New York city, has become the proprietor of the Boulevard Hotel, Westchester, N. Y.

The third annual amateur championship of the Larchmont Y. C. will take place on the club's grounds, Jan. 29-30, on the arrival of the 9 A. M. train from New York. The contest is at 100 live birds per man, $100 entrance.

The Bergen County Gun Club will send a team to the Endeavor Gun Club's grounds, Marion, N. J., on Saturday next, Jan 30, to compete with a team from the home club. The team race will be commenced at 1 P. M.

The programme for the Grand American Handicap is well under way, and will be ready for distribution by Feb. 10.

The Poughkeepsie, N. Y., Gun Club intends to have some live-bird shooting on its grounds on Washington's Birthday.

Capt. A. W. Money is not expected home until the middle of February.

JAN. 26. EDWARD BANKS.

Morfey to Winston.

PATERSON, N. J., Jan. 23.—*Editor Forest and Stream:* One week ago to-day I was present at the Winston Mosher match for the Du Pont trophy at Yardville, N. J. On that day Mr. John L Winston told me that he would shoot me a match at 100 live birds for $100 a side on his return from the South, the match to take place between March 1 and March 10. Notwithstanding the fact that I said that I would shoot him such a race on either of the grounds he named—Zwirlein's or Daly's—he made a bet with me of a $5 hat that I would not shoot him. I understand also that he openly expressed his opinion during the evening of the same day that I would not shoot him the above match.

To show Mr. Winston, therefore, and anybody else interested, that I mean what I say, I hand you herewith $50 forfeit to bind the match on the above terms, viz: 100 live birds per man, $100 a side, 30yds. rise, whatever boundary he wishes according to the grounds he names (Zwirlein's or Daly's), the match to be shot between March 1 and March 10.

The above is really an acceptance of Mr. Winston's own proposition, but as he always prefers to be challenged to challenging, I am willing to accommodate him to that extent. Let him now put up or do the other thing. T. W. MORFEY.

[Fifty dollars forfeit received.]

The Hot Springs Tournament.

THE souvenir programme of *Arkansaw Traveler's* first annual live-bird tournament, to be held at Hot Springs, Ark., Feb. 8-20, is a good and sufficient excuse for the long silence of John J Sumpter, Jr., promoter of this shoot. It is a dandy, and contains much food for thought on the part of those who contemplate attending the same. It is hard to see wherein Mr. Sumpter could have made any change for the better. The list of events is small, it is true; but what does that amount to? Miss and-outs, whether $5 or $2 entrance, are always acceptable and easily gotten up to suit shooters. So don't let the small number of events worry you. There'll be plenty of shooting and plenty of birds for all.

The first point we always make for in a programme is the page containing such matter as may be covered generally under the head of "General Information." This time that page is headed "Notes of Interest," but it means just the same. Extracting briefly, as space and time are limited, we would say: Black powder and 10-gauge guns are barred; A. S. A. rules will govern, and the referee's decision is to be *final under all circumstances;* handicaps range from 25 to 33yds; King's automatic traps used and birds trapped at 25 cents each; guns and shells to be shipped in care of Thompson & Kelly; shooting commences at 9 A. M.; post entries ($5 extra) taken up to the end of the fifth round, etc. We would specially make a note of the fact that entries for the big event, the *Arkansaw Traveler's* handicap, must be made by Feb. 15, each entry being accompanied by a forfeit of $5; balance of entry money, together with the price of the birds, to be paid before going to the score. The following is a list of the scheduled events:

Preparation Day, Feb. 8.—No. 1, 10 birds, $5. three moneys, no handicap, birds included; No. 2, miss-and-out, $2.

Feb. 9.—Arlington Hotel handicap, 25 birds, $10, birds extra, $100 added, five moneys.

Feb. 11.—Fifteen birds, $10, five high guns.

Feb. 12.—Eastman Hotel handicap, 25 birds, $15, birds extra, $100 added, five moneys.

Feb. 15.—No. 1, 7 birds, $5, four high guns; No. 2, 10 birds, $10, four moneys, class shooting.

Feb. 16.—*Arkansaw Traveler's* handicap, 25 birds, $25, birds extra, $500 added. (The programme omits all mention as to how the purse is divided.)

If we know anything, and grave doubts have arisen on that point, it seems to us that Mr. Sumpter has done well in arranging a programme that is likely to catch everybody; and which, while giving them lots to talk about and plenty of shooting, will not take up a great deal of the two weeks of the tournament, but will allow ample time for any bluffs that may be called being settled then and there. The *Arkansaw Traveler's* head has proved itself to be perfectly level.

Trap Notes from Hartford.

HARTFORD, Conn., Jan. 25.—The Colt Gun Club held its annual meeting to-day and elected the following officers: President, J. A. Pitkin; Vice-President, Fred Bishop; Sec'y-Treas., M. F. Cook; Instructor, F. Risley. The Executive Committee are the above, with L. C. Grover added. The club has moved to new grounds and has built a new club house and inclosed the trapping pit. New traps with electric pulls have been put in. Being in the city limits, and only one and a quarter miles from the City Hall, the center, makes it the handiest grounds possible. The club has a membership of 150, with a good balance in the treasury.

The club holds bi-monthly shoots for a gold medal. The following scores were made at the last shoot at 25 targets:

Bishop 23, Cook 20, Risley 22, Sexton 20, "McGinly" 21, Alger 19, Pitkin 21, Putnam 19, Burbidge 17, Goodwin 16, Colt 15, Green 14, Storrs 12, Carter 14, Keho 5, Nichols 12. M. F. COOK, Sec'y.

The Midwinter at San Antonio.

SAN ANTONIO, Tex., Jan. 25.—*Special to Forest and Stream:* All day long there has been a fierce norther raging, and at the request of all the visiting shooters the tournament was postponed until to-morrow. This is the coldest weather experienced here in years. The ground is covered with ice and sleet and the wind is blowing a gale, while the thermometer is down to 19. All the hotels are crowded with shooters and the entries will exceed those of last year. Eleven full squads have entered for to-morrow, and if the weather moderates the entries will reach ninety. PAUL R. LITZKE.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Arizona State Sportsmen's Association.

TUCSON, Ariz., Jan. 12.—The morning of Jan. 9 dawned bright and clear at Prescott, and gave promise of a perfect day; but ere the hosts of Arizona were drawn up in battle array before the traps, dark, lowering clouds hung all around, and gusts of wind swept over the grounds, while rain, snow, and occasional hail appeared at intervals. However, the Prescott boys had made arrangements for the bodily comfort of visiting sportsmen by the erection of a large tent, in which there was ample room for all guns, ammunition and shooters. The grounds are well located, and although the old-style rope pull was used it certainly gave the best of satisfaction.

The visitors were: J. H. Holmes, F. N. Scofield, M. E. Morin, M. B. Chubb and J. H. Aitken, Phœnix; K. L. Hart, C. Weber, F. Wilding, O. E. Connor, C. P. Hart and J. J. Hallowell, of Tucson. The occasion of the visit of this aggregation of talent and gall to Prescott was the annual battle between the gun cranks of Arizona for the possession of three very handsome medals, representing the four-men team championship, the individual blue rock championship, and the live-bird championship. As the shooters were being driven to the grounds in the morning there were more blue-rocks smashed than Paul North could turn out at Cleveland in seven years, and more straights made than Rolla Heikes ever dreamed of; but as the day waxed old the target factory was not enlarged, and the slumber of the man from Dayton had not been broken.

The boys from Tucson started in at a swinging clip, and thanks to the fact that Capt. Hallowell personally tucked each one of his team into his respective downy couch the night before, they kept it up all day and landed the blue rock medals. The individual badge was won only after a hotly contested race and a shoot-off between Holmes and Hallowell, but the team badge was won by the handsome margin of 20 birds, with the total score of 163 out of 200, each man shooting at 30 singles and 10 pairs.

The morning of the second day was devoted to target shooting, and the weather was fairly good, but threatening clouds spoke badly for the live-bird contest to come off during the afternoon. The supply of live birds was very limited, and one event had to be cut out of the programme entirely. The other one was shot in an almost continuous drizzle of rain, making the birds heavy and slow. Very little interest was manifested during the shoot, as hard drivers were few and far between, none of the stops were phenomenal, and not more than a half dozen birds were above the ordinary run. The shoot was finished in semi-darkness, and the two tied for the medal with 15 straight decided to shoot it off at some future time. Not so, however, the three tied on 14; they, trusting to luck and awkwardness, decided to shoot in the dark, and had the pigeons been blue a clean score (of misses) would undoubtedly have been made. Hallowell finally succeeded in killing 4 out of 5 and landed a fine gun case. Jackson, of Prescott, killed 3 and got 200 loaded shells; while Hart, of Tucson, killed 2 for a Thurman blouse. Thus ended the fourth annual tournament of the Arizona Sportsmen's Association. Who shall say it was not the best, for we all had a splendid time, were treated royally, and had the best and squarest referee on earth.

The Prescott Gun Club tendered to visiting sportsmen one of the best and most elaborate banquets which it has been my fortune to attend. This, combined with the thorough hospitality of everyone we met in Prescott, from the solitary pioneer who met us at the train at 2 A. M. to the last parting handshake in the rain when we left, made it an occasion long to be remembered.

The toasts which were responded to were as follows: Arizona Sportsmen's Ass'n, J. J. Hallowell; Arizona Quail, F. N. Scofield; Sonora Pigeon, M. B. Chubb; Live Bird Badge, J. H. Holmes; Team Badge, C. Weber; Cactus Buck, M. E. Morin.

After the banquet a meeting of the Arizona Sportsmen's Association was held, and the following officers were elected for the ensuing year: Pres., J. J. Hallowell, Tucson; Vice-Pres., C. Weber, Tucson; M. E. Morin, Prescott; Corresponding and Recording Sec'y, K. L. Hart, Tucson; Treas., J. H. Holmes, Phœnix.

The next annual tournament was slated for Tucson, at such time as the club located there should set.

TARGET SCORES.

Scores in the target events shot on both days were as below:

	First Day.					Second Day.				
Events:	1	2	3	4	5	1	2	3		
Targets:	15	20	25	50	20	15	20	25	Shot at.	Broke	Per cent
Hallowell	13	17	23	44	18	13	18	23	150	171	80
Weber	12	17	20	45	17	13	18	19	190	161	84.7
Holmes	12	16	23	37	16	13	17	22	190	156	82 1
Ferguson	14	17	20	38	18	13	14	21	190	155	81.6

Sparrow Tournament at Indianapolis.

INDIANAPOLIS, Ind., Jan. 20.—The Limited Gun Club opened its sparrow shoot under very unfavorable auspices as far as weather conditions were concerned. The first gun ushered in a fine snow, which a half hour later developed into a very heavy snowfall; this continued to 12 o'clock, when it again changed to a penetrating drizzle, and this at 2:30 o'clock had again changed to a heavy snowfall. The walks were kept well cleared, but still all was bad under foot—nothing but slush all the time. The snowfall amounted to nearly 6in., and thus the sparrows so trying to the eyesight where the ordinary dark background exists were made comparatively easy so far as seeing was concerned. And as is usually the case with pigeons, the sparrows did not fly so well as when ground is not covered with snow. The slight wind was favorable to incomers, of which there were a large number, the greater number, however, being crossing shots.

The six programme events were run off by 2:30 o'clock. In these the money was divided 50, 30 and 20 per cent. Two extra 15-bird sweeps were shot, with a division of the purse into four moneys; 1,405 birds were trapped in all; 15 traps were used and squads of five men shot rapid fire. Each shooter faced one of three unknown traps. The surroundings were conducive to rather high scores, but this should not materially detract from the shooting, which was excellent. In the 25-bird event the first squad averaged 96 per cent., and the entire score averaged 93.5 per cent.; in the 20-bird event the total score averaged still better—95 per cent.

The following table shows the first day's scores, and also gives the averages of the shooters:

First Day's Scores.

Events:	1	2	3	4	5	6	7	8			
Entrance:	$4	$6	$8	$4	$10	$8	$4	$4			
Birds:	10	15	20	10	25	20	15	15	Shot at.	Scored.	Av.

J H Mackie	..	..	..	..	..	..	..	9	15	9	60

Second Day.

The weather conditions to-day were decidedly improved. No rain or snow fell, and it was colder, while a wind from the southwest reduced the number of incomers The shooting was difficult, but yet not what the usual breeze from the above quarter gives us The scores below show that the pace set by the crackerjacks was a hot one:

Events:	1	2	3	4	5	6			
Entrance:	$4	$4	$10	$6	$8	$8			
Birds:	10	10	25	15	20	20	Shot at.	Scored.	
Heikes	10	7	23	14	19	20	100	93	
Elliott	10	7	22	15	18	18	100	90	
Dickey	7	9	25	15	17	17	100	90	
Fulford	9	8	24	13	14	15	100	83	
Bartlett	8	6	23	14	15	18	100	84	
McVey	9	5	23	14	13	17	100	81	

No. 2 was at 5 pairs; No. 5 at 10 singles and 5 pairs.

NOTES.

Although E. D. Fulford killed one more bird in all the events than was scored to Ed Voris, they tied in the programme events and divided first and second average money, $15 each; J. A. R. Elliott took third average money, $7.50, although Heikes beat him out for average in all events.

Ed Voris really failed to kill only two of his birds, three of his lost birds falling dead out of bounds. He carried off quite a bit more of the money than any other shooter, and this fact made him feel pretty well, and he talked enough to disclose the fact that he had never challenged anybody in his life and yet had shot 46 individual matches, and lost but 3 of the 46. One of the lost matches was when he shot one barrel against the other man's two barrels, and yet he was beaten only 2 birds in a 100-bird match. Mr. Voris came very near to giving O. H. Hampton a chance for revenge for a previous defeat at sparrows; matters came so nearly to a climax that $40 was put up by Mr. Hampton, but was withdrawn shortly afterwards; it all seems to depend on Mr. Hampton.

When I expressed the hope to J. A. R. Elliott that he and J. L. Brewer would yet lock horns, Mr. Elliott indicated that "Barkis is willing" if the race be shot on a neutral ground.

The absence of A. W. du Bray was remarked early in the day by many of the shooters. His absence from a tournament of the Limited Gun Club would cause almost as much comment as the absence of its efficient secretary, Royal Robinson. It was therefore with much pleasure that the appearance of Du Bray about 2 P. M. was noted. He did not do any shooting, as he was attending strictly to business in order to be able to leave for San Antonio, Texas, with the rest of the boys.

It is more than three years since Jim Elliott has been in Indianapolis. His presence on this occasion caused quite a lot of talk in regard to the result of his recent match with J. D. Gay, of Pine Grove, Ky. Mr. Du Bray undoubtedly voiced the sentiment of all Kentucky shooters when he said that, though Old Kentucky had been defeated, such a defeat with such a score was no disgrace. For his last 400 live birds shot at Gay has averaged better than 95 per cent.

Rolla Heikes had a slice of his usual well-deserved luck, carrying off the biggest pot of the day on 15 straight alone in the first 15-bird event; the purse was about $30.

HYATT L. Frost.

Altoona Gun Club.

ALTOONA, Pa., Jan. 21.—The annual handicap shoot of the Altoona Rod and Gun Club took place on New Year's Day at the club's new grounds near Lake Mont. This handicap is an annual feature among the members of the club and is usually well attended. This year, however, the attendance was light, but the enthusiasm was as great as ever and a good day's sport was had. The weather was fine with the exception of a high wind that blew across the traps from west to east, helping some of the right-quarterers to a gait that the boys could not gauge. The birds were a good lot, there not being more than half a dozen out of the 240 shot that refused to fly or leave the trap immediately after being released.

After the handicap was over a miss-and-out and two 5-bird events were decided. In these Sands shot in great form, killing all his birds in grand style. Booky carried off the honors in the handicap, killing 14, the lost bird falling dead out of bounds. Following are the scores:

Sweeps were shot as follows:

No. 2, 5 birds, $2. two moneys: Kotty, Roher, Bastian and Sands, 5; Christy and Bell, 4; Booky 3, Barley 2.

No. 3, same: Bell, Sands and Roher, 5; Booky and Bastian, 4; Kotty and Christy, 3; Fay 2.

No. 4, miss-and-out: Sands and Bell, 8; Bastian 7, Kotty 2; Christy, Booky and Roher, 1.

W. S. B.

The FOREST AND STREAM *is put to press each week on Tuesday correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Erie's Midwinter Tournament.

ERIE, Pa., Jan. 20.—The Clover and Pope midwinter tournament was held at Massassauga Point, Erie, Pa., Jan. 12, 13 and 14, and aside from disappointment in the matter of attendance was a very successful and enjoyable affair. The weather was clear and cold enough to keep the shooters hustling when at the score, and made the shooting both at live birds and targets all that could be desired. The birds were first class, being a selected lot, and the targets were thrown as difficult as possible and tested the skill of all shooters present. While this is the first effort made in Erie for years to hold a tournament of this kind, it will not be the last. The ball is started, and there is no place in the country with better facilities for holding a first-class tournament than we have here, and I think those in attendance at this tournament will bear us out in that. It is our intention to give another tournament in the spring that will give all trap-shooters in this part of the country a first-class time. The many shooters wending their way to Indianapolis, San Antonio and Hot Springs, the present centers of attraction to the trap-shooters all over the country, caused many of our friends to deprive themselves of the pleasure of attending our tournament who would otherwise have been with us on this occasion.

Among the visiting sportsmen present were: Sim Glover and Wride, Rochester, N. Y.; Ed Fulford, Utica, N. Y.; D. A. Upson, Cleveland, O.; B. A. Bartlett, Harry Kirkover and Norris, Buffalo, N. Y.; E. D. Kelsey, East Aurora, N. Y.; Robert W. Ewalt, Warron, O.; A. Smedley and Mr. Lay, Oil City, Pa.; I Ware, Dunkirk, N. Y.; Thos. Poy and Keck, Kane, Pa.; Fred Shelley, Sheridan, N. Y.; Whitner and J. M. Reed, Greenville, Pa.; Bixby and Jones, Beaver, Pa.; O. J. Marsh, Westfield, N. Y; Wood and Smith, Cincinnati, O.

Sim Glover shot in excellent form and held himself at the top all through the tournament. Sim is shooting a Parker gun and Schultze powder loaded in U. M. C shells, and is doing great credit to himself as well as doing the boys, as he earnestly and busily walks down the line knocking out clean scores one after another, and then walks up to the cashier's office and invariably gets first money alone. He then in a very complimentary way says to the cashier, "You are the quickest figurer and the best man in the cashier's office I ever saw at a tournament," closing by saying, "and that's no kid, either." E D Fulford, representing Francotte guns, was feeling good, looking fine and shooting to perfection; but was so busy selling guns that he hardly kept up to his usual form. Ed sold four guns in Erie, and has other sales under contemplation, and says that Erie is all right. There is probably no man in the world who understands loading shells better for all purposes and conditions than E D. Fulford to get any desired pattern or penetration. He was loading his shells here for the sparrow shoot at Indianapolis. His first barrel will be loaded with 4drs. of Schultze, with a complicated arrangement of wadding, and 1½oz. of aqua ammonia instead of shot. He will shoot this in a cylinder-bore gun, which will fill the air through the whole boundary with a suffocating mist. Should this load possibly fail, he will then steadily use his left, which I think is loaded with hemp or canary seed; at least the whole combination is sure death to the sparrow. Capt Bartlett was shooting in fine form and attracting the attention of all by his rapid work with the Winchester gun, which company he represents.

During supper time on the third day there was some very exciting live-bird match shooting going on over the sumptuously loaded board served by our host, Mr. John F. Parke. Propositions, with conditions such as would draw the last cent from any shooter's pocket with a strong string tied to it, were offered, accepted and rejected. The table was covered with money, the floor with feathers, and the room filled with referees and stakeholders. After quietness was restored, and after it was found that the management had still on hand 700 choice live birds immediately at their disposal, it was agreed to declare all matches postponed.

Scores in the target events were as below: Nos. 1-6 were shot on the first day, Nos. 8-13 on the second day, and Nos. 15 and 16 on the third day. Nos. 7, 14 and 17 were live-bird events, the results of which are given below the target scores. No. 16 was a two-men team race, 20 targets per man, $4 per team. The scores were: Buffalo, F. D. Kelsey 18, B. A. Bartlett 17—35; Greenville, Smith 17, Clover 17—34; Rochester No. 1, Glover 18, Pope 15—33; Rochester No. 2, Fulford 18, Wride 15—33; Dunkirk, Shelley 17, Jones 12—29; Greenville No. 2, Keck 15, Carn 10—25. Other target scores were:

A. P. P.

Bronx River Gun Club.

NEW YORK, Jan. 21.—Two members of the Bronx River Gun Club met on Saturday last at the club's grounds (Miller & Zorn's), Baychester, N. Y., to decide the ownership of class A medal. This medal becomes the property of the member winning it the greatest number of times during the year. On summing up at the end of the year (1896) it was found that F. Pringle had won the medal four times, C. H. Zorn had also won it four times and tied M. Herrington for it once; the latter had previously won the medal three times. It was therefore only necessary for Zorn to defeat Herrington to become the owner of the prize, and his failure to defeat Herrington would make all three, viz.: Pringle, Zorn and Herrington, a tie with four wins each to their credit. It being too dark to shoot at the conclusion of the regular event, it was decided to postpone the shooting off of ties until Jan. 16, 1897, on which date Zorn and Herrington met and shot off their tie. The conditions were 25 targets each, unknown angles. The scores:

M Herrington	1111111111011111111111101—23
C H Zorn	1101011111000111110111111—19

Mr. Pringle not putting in an appearance, Zorn and Herrington shot two sweeps of 5 pairs each, which resulted as follows:

	No. 1.	No. 2.
Herrington	10 11 11 11 11—9	11 11 10 10 11—8
Zorn	00 11 10 w	01 11 10 01 00—5

The ties between Pringle, Zorn and Herrington will be shot off at the next regular club shoot, which will take place on the last Saturday in this month (Jan. 30).

B. CRUGER, Sec'y.

IN NEW JERSEY.

OPENING DAY AT ELKWOOD PARK.

Jan. 21.—The inaugural shoot at the Elkwood Park new grounds took place to-day in bright, blustery weather. It was just the weather to make the shooting hard, the northwest wind driving the birds away from the traps whether they wanted to go or not. Late yesterday afternoon it commenced to snow, but during the night the snow turned to rain, a perfect deluge of water falling in the early hours of the morning. The effects of the heavy rain were no cause of worry to the management at Elkwood Park, except in the matter of transportation from the Branchport crossing to the grounds; and yet that was both easy and cheap—stages at 10 cents a head being provided in numbers ample enough to meet all demands.

Once at the grounds, it was as pleasant inside the big club house as one could possibly wish. The building was warmed both naturally and artificially, the sun's rays and the heat from the stoves being almost more than enough to make it comfortable. Upstairs was the café and restaurant, all four sides of it glass. Seated at the tables on the southern side of café, it was possible to eat one's dinner and also watch the shooting at the No. 2 set of traps. Downstairs only the left wing was used as a depository for shooters' coats, guns, satchels, etc., the belongings of the eighteen or twenty shooters present scarcely making a show owing to the ample accommodation provided.

Only two sets of traps were used, the number of those who wanted to shoot being insufficient to warrant the use of more. Different events were shot off at the same time on Nos. 1 and 2 set of traps, and in some instances the shooters entered in both events; yet so near together are the scores of the two sets of traps, owing to the "clover-leaf" formation of the three sets, that little or no delay was caused by permitting entrance in both events. There was no delay in trapping birds, the underground system in use at Elkwood Park being more than equal to the occasion. This feature of these grounds is worth more than passing mention on this occasion, and it is an absolute fact that no shooting at all could have taken place on the Elkwood Park grounds to-day had the old conditions of trapping been in use; being all "made ground" of a light, sandy-loam nature, and saturated by the downpour of the previous twelve hours, it was considerably more than "hock-deep" when one got off the boardwalks.

THE ATTENDANCE A DISAPPOINTMENT.

The attendance was a disappointment to us. We had looked for a far more representative gathering than we found at Elkwood Park on our arrival. Philadelphia and the Riverton Gun Club easily carried off the honors, both in point of numbers and in shooting. Among those from Philadelphia were: R. A. Welch (winner of the first Grand American Handicap), T. S. Stokes, Junius H. Davis, C. H. Edwards, Leonard Finletter and Count Gustav Langen. New York was represented by Noel E. Money, of the American E. C. Powder Co.; Justus von Lengerke, of the firm of Von Lengerke & Detmold (U. S. agents for Schultze); G. S. McAlpin, of Carteret; D. Bradley, of the Larchmont Y. C. and New York Athletic Club. Other shooters were: T. W. Morfey, of Paterson, N. J.; W. R. Patten and Woolley, of Pleasure Bay, N. J.; A. L. Ivins, of Seabright, N. J.; Dr. J. G. Knowlton, of New York city, etc. Among the spectators were: Marshall Herrington, of the Laflin & Rand (W-A) Powder Co.; Aaron Woodruff, Hank White, "Uncle Billy" Hughes, etc. Fully a couple of hundred spectators, including several ladies, were present during the day.

The birds were a good lot, leaving the traps very quickly and being aided very much by the strong wind that blew over the grounds. Coming out of the northwest, it made a nearly straightaway wind on the No. 1 set of traps, the set facing toward the Inn. On the traps that faced south, the No. 2 set of traps, it was a strong left quartering wind that swept the birds off to leeward at a rate of speed that baffled nearly all calculations. Many a bird that struggled up wind escaped through errors made in calculating the "drift" of the shot in such a strong breeze. The difference between the two sets of traps was remarkable. On the No. 1 set birds went down wind very fast, but did not twist to any great extent. Many birds also quartered and fought up against the wind toward the club house, affording the easiest of marks. Occasionally a screamer would leave the traps, and then there was generally trouble. On No. 2 set it was different; birds jumped into the air, twisted and turned down wind in a style that baffled all of the shooters; it was just about as hard shooting as any we have ever seen.

THE PATTEN CUP.

The principal event on the programme was the competition for the Patten cup, a valuable trophy presented by Mr. W. R. Patten, of Pleasure Bay. This contest was at 25 birds, $25 entrance, handicap, birds extra, and was open only to members of the Hollywood, Philadelphia, Riverton and Carteret gun clubs; and to members of Tuxedo, Westchester Country Club, Westminster Kennel Club and Larchmont Yacht Club. Only eight entries were obtained for the event, and six of these hailed from Philadelphia, New York's only representatives being D. Bradley and G. S. McAlpin. Harold B. Wallack acted as referee.

McAlpin lost a good bird in the first round, the pigeon going down wind and getting over the boundary before coming to the ground. Bradley and Finletter both lost birds in the next round, Finletter's being as hard a bird as left the traps during the day; it was a dark blue that sneaked out of No. 5 trap before it was half open and then streaked away for the boundary, never leaving the ground more than a foot. In the third round Count Langen, of the Riverton Gun Club, scored a lost bird, Mr. Edwards of the same club losing a very hard bird in the fourth round. Mr. Davis drew a good one in the fifth that beat him out, although he scored many a harder bird afterward. Thus at the end of the fifth round only two men, Stokes and Welch, were straight. Stokes lost a fair bird in the next round, McAlpin and Bradley both drawing very hot ones and scoring ciphers. This left Welch in first place, a position he never relinquished, running out with 25 straight, a score that, although not unmarked by luck in the draw of the birds, was one that any one could feel proud of, as the list of 25 kills included some excellent pieces of work with the gun on very fast birds. Mr. Welch was placed 1yd. in by the handicappers, receiving a yard the best of it from Stokes, McAlpin, Davis and Finletter. We suppose his handicap was figured on the basis of the shooting he has been doing of late, viz., practically nothing at all, as he has not been doing much shooting for a couple of years. On that basis we think the handicappers were by no means at fault, notwithstanding his record of to-day. Welch on his day is a remarkably dangerous man for anybody to meet, and to-day was his day. He was favored in the draw of the birds perhaps, but he used his first barrel with the precision and quickness that marked his efforts in past years; many a screamer was cut down before it had more than gotten under way, and again many a bird that had jumped into the air and twisted off to the east (down wind) was centered with the first barrel with wonderful quickness. His "ready" and "pull" were given with his old-time vigor.

To return to the Patten cup contest: Edwards retired in the 15th round with 10 kills to his name; McAlpin followed suit in the 18th with 13 kills, Davis also dropping by the wayside with 15 out of 20. Stokes withdrew in the 24th round with 19 kills, leaving Welch with a straight score, and Finletter with no misses, and Bradley and Count with 4 misses each. This quartette scored their 25 birds and ended with 25, 23, 21 and 21 respectively. The conditions of the cup were: 50 per cent. to first and cup; 30 per cent. to second and 20 per cent. to third high guns. Welch and Finletter took their respective portions, Bradley and Count dividing third money.

Before leaving the record of the Patten cup, mention must be made of Bradley's 22d bird; it was a good hot one that was knocked to the ground and was apparently a certain dead bird for him; when the dog got to it it rose and flew back over the boundary, falling dead just outside. Welch's 24th bird nearly spoiled his straight score, as it went off to the boundary and fell just against the low wire fence that marks the 50yds. boundary.

The scores in this event are given below:

OTHER EVENTS.

Several miss and-outs, $5 entrance, and three other sweepstakes were shot, the latter being: 10 birds, $10; 5 birds, $5; and 15 birds, $15, all at 30yds.

The last-named event was shot on No. 2 set of traps, the representative of FOREST AND STREAM acting as referee on this set. This event was almost the last for the day, and was finished with the sun about three-quarters of an hour high. The birds were a really excellent lot of flyers, and were directly responsible for the comparatively low scores made.

THE 15-BIRD RACE.

Morfey went to the score first and drew a hot one that fairly beat him out; Count lost one in the first round also. Count, Davis and Woolley also lost their birds in the second round, Woolley's being a piece of extremely hard luck, the wind fairly carrying his dead bird just over the boundary fence into the cornfield. Edwards lost his 3d bird dead out of bounds, Woolley, Stokes and Morfey all drawing very fast birds in this round. Welch, Stokes and Finletter broke their straight scores in the 4th round, Finletter having a good hard bird to kill. Welch's loss was the result of a piece of carelessness on the part of the shooter; he simply paralyzed a swift white bird from No. 5 trap that went down wind to the left, knocking it all in a heap just to the left of No. 2 trap, where it lay on its back, its head doubled up under it. Welch thought that one barrel was enough, although the bird was trying to turn over, so opened his gun and left the score. When the retriever got to the bird, the pigeon managed to get into the air and flew over the boundary before dropping to the ground, where it was gathered; the judicious placing of a second barrel on this bird might have landed Welch closer to first place. Count and Stokes lost birds in the 5th round, Patten being the only man left with a straight score at this point of the game.

Patten spoiled his score in the next round (6th) by having a fast left-quarterer drop dead out of bounds. Woolley scored a miss in this round on an easy bird, shooting behind it with both barrels. In the 7th round Count lost another bird and retired; Stokes drew a good one and made a great stop on it. In the next round Davis and Morfey lost birds, Morfey's miss being one of those unaccountable pieces of shooting one often sees—but not when Morfey is at the bat. The bird was a left-quartering incomer and fairly sat in the air while Morfey plunked both loads at it; as soon as the second shell had been discharged the bird concluded it had had enough and turned off down wind without a feather injured. It was one of the luckiest pigeons we have been made acquainted with.

The 9th round was an interesting one, five out of the eight men still in the race losing their birds. To make up for this piece of work, the next 11 birds were scored dead, and then Stokes lost his 11th, a fast one that was too good for the shooter. Davis lost his 11th bird and Edwards scored a miss on a fast circling incomer to the right in the 12th round. In the 13th round Welch and Woolley each lost a bird dead out of bounds, Welch's being an extremely hard bird to kill, as it fled for the boundary. Davis and Finletter scored losses in the 14th round, Finletter's bird falling dead out of bounds. In the last round Welch lost a driver that put him in second place; Edwards also lost a driver, thus shooting himself into the 11 hole and out of the money; Davis also drew another screamer and made his second consecutive cipher.

The conditions were: Three high guns, 50, 30 and 20 per cent. Thus Morfey and Patten divided first and second moneys with 13 each, while third money was divided between Welch, Stokes and Finletter. The scores in this event were:

Sweepstakes, 15 birds, $15, three high guns:

SUBURBAN GUN CLUB, OF ELIZABETH.

Jan. 16.—The Suburban Gun Club, of Elizabeth, held a little live-bird shoot to-day. In addition to three sweeps, a 50-bird match was shot between W. E. Ross and H. K. Tooler, both of this city. Ross won by 41 to 35. W. Parker acted as official scorer, and also looked after Ross's interests, Aaron Woodruff handling Tooler. Nate Astfalk was referee. The scores in the sweeps were as below:

	No. 1.	No. 2.	No. 3.
Dr Eaton	12200—3	00010—1	..
Chas Ross	10000—1	.....	..

E. C. CUP AT HACKENSACK.

Jan. 23.—The cup presented to the Bergen County Gun Club by the American E. C. Powder Co. was contested for to-day for the third time on the grounds of the club, near the depot of the New York, Susquehanna & Western R. R. The day was unfavorable for target shooting, as a gale from the northwest swept across the Hackensack meadows and played all sorts of tricks with the targets. In the cup race Noel Money shot like his old self, and carried off the cup with the good score of 48 out of 52. Morfey also made a rattling good score under the conditions, running 24 out of his first 25 and 20 out of the second string. Money, Morfey and Brocket, the latter a beginner of promise, were the only ones to shoot out their handicap allowances, as no one else had any show against Money's total. The totals made in this race give some idea of the conditions under which the event was shot. Edwards, the scratch man, made a poor showing in this event, scoring 34 out of 50. The Bergen County boys made things very comfortable for their members and guests, and "set up" the lunches in a very pleasant manner. If everybody did not get enough shooting it was his own fault, as the traps were kept busy all the time from 11 until dark. The club will hold a handicap target race, 100 targets, unknown angles, on Feb. 12. Scores in the cup race were:

EAST SIDE GUN CLUB, OF NEWARK.

Jan. 20.—The following scores were made to-day by members of the East Side Gun Club, of Newark. Event No. 1 was at 8 live birds, $2.50 entrance; Nos. 2 and 3 at 15 targets per man, known traps and angles. Scores in the live-bird event were:

Perment	11111111—8	Erhardt	10101110—5
Thomas	11111111—8	Laufenberg	11000111—5
Koegel	10111111—7	Bitz	10100111—5
Leuthauser	10111111—7	Reiboldt	10101100—4
Hilfers	01011111—6	Neigart	01110001—4

Two 15-target events were shot after the live birds had been disposed of. Scores were as below:

	No. 1.	No. 2.
Leuthauser	111111100111110—12	110010010111111—10

THEO. LEUTHAUSER, Sec'y.

A Saturday at Larchmont.

NEW YORK, Jan. 16.—A long list of events was decided to-day on the grounds of the Larchmont Y. C., 15 events being shot and 427 pigeons trapped. Of this number 253, or about 82 per cent., were scored, the number of dead out of bounds, owing to the 21yds. boundary, being extremely large and fatal to the chances of many a shooter. The scores in the 5 bird events, two high guns, and in the miss-and-outs were as below, a glance at the scoores tellIng what was what:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	No. 6.

Trap at Leroy, Pa.

LEROY, Pa., Jan. 19.—The newly organized gun club of this city held a shoot to-day for a silver trophy donated to the club by its secretary, Mr. S. D. Loyd. The contest was a handicap affair, the number of targets shot at by each individual ranging from 25 to 50. The handicaps were arranged by B. F. Smith, S. D. Loyd and R. Holcomb. B. F. Smith won the trophy by breaking 24 out of his 25, but was closely pursued by Messrs. R and C. Holcomb, each of whom broke 23 out of 37. There would have been seven or eight more entries had the weather been more favorable; as it was, the air was bitterly cold and penetrating. Scores were:

B F Smith (0).....1111111111111111111110111 —24

R Holcomb (12)....1010111010101011011011101010100110 1 —23

C Holcomb (12)....1110101011011100110111011000111001110 —23

T Morse (19).....1100010001110101100011011000110000010110111 —22

C Dodge (20).....1000011011001101101011100101000100000101001 01 —20

H. L. WORTHINGTON, Sec'y.

ON LONG ISLAND.

EMERALD GUN CLUB.

Jan. 19—The Emerald Gun Club's monthly shoot was well attended, as usual, twenty-eight members taking part in the club shoot, three guests making the number that faced the traps at Dexter Park this afternoon total thirty-one in all. There was just enough wind to make the birds a fairly strong lot of fivers, and in consequence only two of the thirty-one, E. J. Clark and Gus Nowak, were able to make straight scores. Among the twenty-eight members of the club were two new ones, J. S. S. Remsen and H. F. Burns Remsen was shooting a new gun, and found that it suited him very well, as he scored in practice and in the main event just 31 out of 35.

The monthly gatherings of the Emerald Gun Club are always most enjoyable, while the friendly rivalry among the members makes each shot of interest. Although our score does not show the number of birds that fell dead out of bounds, it should be noticed that Charlie Dudley's straight was spoiled in the 8th round by a bird that barely got across the boundary. Tom Lewis (an assumed name, by the way) shot about five different guns, and his score by no means represents his real capabilities.

The full score in the club shoot is given below, the manner of handicapping the members by both distance and by points being shown. (N. B.—Each shooter must score more birds than shown by his handicap points before adding anything to his record for the yearly prizes):

EDWARD BANKS.

NEW YORK GERMAN GUN CLUB.

Jan. 20.—The first shoot of the year of the New York German Gun Club was held to-day at Dexter Park. There were thirteen shooters on hand to take part in the club shoot at 10 live birds. Three of the thirteen tied on 9 each, and on the shoot off miss-and-out Koenig won on the first round, both Dr. Hudson and J. Schlicht losing their birds dead out of bounds. Scores made in the club shoot and in a 3 bird sweep shot after the main event were as follows:

	Tie.	Sweep.
B Koenig	2	211—3
Dr Hudson	•	111—3
J Schlicht	•	
F Sauter	.	101 2
H Thamforde	.	
E Doeinck	.	102—2
J P Dannefelser	.	100—1
H Leopold	.	...
J Oehl	.	...
M Banden	.	...
J Wellbrock	.	200—1
A Radle	.	...
P Kronsberg	.	252—2
H Meyer	.	...

The following list gives the records for 1896, and shows the number of points handicap, and also the total number of points scored by each contestant in the nine club shoots held during the year. The first ten on the list received prizes at the annual meeting held Jan. 15:

	Handicap.	Points.		Handicap.	Points.
J Wellbrock	5½	15	M Banden	4½	4
H Thamforde	5	8	S J Held	6	4
Dr Hudson	6½	7	H Nobel	5	3
J Schlicht	5½	6½	J Oehl	4	3
F Sauter	5	6	A Schmitt	5½	3
J Smith	5	6	E Doeinck	5½	2
H Leopold	5	6	A Lucas	3	2
E Radle	4½	5½	A Leutheusser	3	2
J P Dannefelser	5	5	A Busch	5½	½
P Garms, Jr.	5½	4½	B Koenig	5	1

The annual election of officers also took place on Jan. 15, the following list of offieers being elected for 1897: President, August Schmitt; Vice-President, J. Wellbrock; Secretary, A. Leutheusser; Treasurer, J. P. Dannefelser; Captain, F. Sauter

A. LEUTHEUSSER, Sec'y.

FOUNTAIN GUN CLUB.

Jan. 21.—Five members of the Fountain Gun Club, of Brooklyn, put in an appearance this afternoon at Dexter Park, to take part in the first regular monthly shoot of the club for 1897. J E Lake scored 8 out of 10 from the 28yds. mark and took first place. W H. Dean, a guest of the club, ran his 10 birds straight. Scores were:

J E Lake (28)	0301211121— 8	J Grace (28)	••10210000— 3
Dr Eddy (28)	1•120•1110— 7	*W H Dean (20)	2112221121—10
Wm Allen (29)	22112•100— 7	*J Williams (25)	0001110112— 5
Wm Selover (30)	12•220120— 7		

*Guest.

FALCON GUN CLUB.

Jan. 22.—The Falcon Gun Club held its first monthly shoot for 1897 at Dexter Park this afternoon. Seven members competed for the club's prizes, J Vagts and J. Herrmann tieing for first place with 6 kills each. Falcon Gun Club rules call for gun below the elbow, second barrel kills to count as a half.

J Vagts (25)	1111011—6	C Doscher (25)	2102101—4
J Herrmann (25)	1011111—6	H Van Staden (25)	0111020—3½
J Bobling (25)	1011111—5½	J Moller (27)	0112001—3½
J Meyer (28)	1111010—4		

Trap Around Buffalo.

AUDUBON GUN CLUB.

BUFFALO, N. Y., Jan. 18.—The regular weekly shoot of the Audubon Gun Club, of this city, was held at Audubon Park on Saturday. The attendance was poor compared to what usually greets these weekly gatherings, but the quality of the shooting was decidedly good. Nos. 3 and 4 were the club shoot and the Gold Dust powder events respectively. In respect to the latter event the Buffalo *Courier* has this to say in its issue of the 17th inst.: "As was expected, the special Gold Dust powder shoot was the event of the day, and it was very hotly contested. Although the prize was won by the donors, Burkhardt Brothers, they kindly allowed the second best men, of which there were five, to shoot for its possession. Among them was one who not very long ago won the beautiful W. & A. silver powder flask, and he vowed that he would win this one also. In the shoot-off, which was a miss-and-out affair, it took only four rounds to decide that the Gold Dust belonged to the same man who made good his vow, Mr. Leonard Bennett. President Reid made the presentation speech in a few well-chosen remarks for the occasion, after which Mr. Bennett, who had been anxious to see his prize, opened the package and found not powder for shooting purposes, but in its stead a well-known brand of washing powder. Everybody now has the laugh on Mr. Bennett, but he has threatened to get even with some one, particularly Georgie McArthur, whose fertile brain hatched the scheme. The Class A badge fell to the lot of Charles Burkhardt with a straight score. This makes his fourth claim. Edward Reinecke was again successful as last week and won the Class B badge for the second time. Alderman George Zoeller was again the winner in Class C."

Scores were as below:

Events:	1	2	3	4	5	6
Targets:	10	15	25	15	15	20
E C Burkhardt	8	14	24	15	14	18

MIDWINTER TOURNAMENT.

Jan. 16.—The first day of the Audubon Gun Club's first annual midwinter tournament opened most inauspiciously, a high wind blowing all day. But few local shooters put in an appearance and only one or two from out of town were on hand. L. V Beyer, of Rochester, N. Y., took part in twelve events and came out easily on top. The scores in the thirteen events shot during the day are given below in tabulated form:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
L Beyer	7	9	6	8	9	7	13	12	9	..	8	10	11

Nos. 1, 2, 3, 4, 5, 6, 9, 10 and 12, 10 targets each; Nos. 7, 8, 11 and 13, 15 targets each.

The Elliott-Gay Match.

LOUISVILLE, Ky., Jan. 16.—J. A. R. Elliott and J. D. Gay, the latter hailing from Pine Grove, Ky., shot a match to-day on the grounds of the Kentucky Gun Club, of this city. The conditions of the match were as follows: 100 live birds per man, $10) a side; Elliott to stand at 31yds. and to use a Winchester repeating shotgun; Gay to stand at 29yds.; winner to take the gate receipts. Elliott won by 2 birds with a score of 98 to 96.

The day was warm and pleasant, but there was no breeze, and the atmosphere was hazy. The prominence given to the match by the caliber of both shooters; and by the big scores that have lately been made by both men, brought out a large attendance of spectators. Mr. Irby Bennett, of the W. R. A. Co., looked after Elliott, the same office being performed for Mr. Gay by Mr H. J. Lyons. The referee was Mr. Geo C. Beck, of Indianapolis, Ind; official scorer, John Morton; trap-puller, Claude Kelley. The match commenced at 1:39 P. M. and finished at 3:40 P. M., occupying just one minute over two hours. The traps fell to the contestants as follows:

	No. 1.	No. 2.	No. 3.	No 4.	No. 5.	Total.
Elliott	12	18	22	24	24	100
Gay	31	13	21	21	14	100

Elliott shot a Winchester repeating shotgun, Winchester factory-loaded ammunition, Leader shells, 48grs. E. C., 1¼oz. No. 7; Gay shot a Parker gun, U. M. C. Smokeless shell, 3½drs. Hazard, 1¼oz. No. 7. Gay's shells were loaded by Emile Pragoff, of Louisville, Ky.

As will be seen from the score, Gay lost his 14th and 22d birds, both dead out of bounds. High runs were: Elliott, 44, 46; Gay, 13, 21, 21, 34. The detailed score given below tells the story of the match as to flight of bird, trap, etc.

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, FEBRUARY 6, 1897.

VOL. XLVIII.—No. 6. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

Many pleasures leave a sting behind them. Not so this fascinating pastime. It is as harmless as it is invigorating, and as healthful as it is harmless. There are many things for which I am grateful, but for few things more than for my passion for angling, and the reasonable leisure always vouchsafed me to gratify it. George Dawson.

RICH IN PROMISE.

THERE is rich promise of good things for FOREST AND STREAM readers in the weeks that are to follow. Here is a partial list of some of them:

The Flying-Fish Fleet.

A graphic and picturesque description of fishing for flying-fish beneath the tropic sun, off the island of Barbadoes in the Caribbean Sea. This will be given in our next issue, and in the same number will be found the conclusion of Mr. Hough's

Tramping and Camping in the Sandhills.

To discover this wild country close at hand for midwinter exploration was real genius; not less happy was the spirit to make exploration of it and to describe it for these columns. In the same number will be the first of two papers descriptive of

The Elkhorn,

the black bass stream frequented by the anglers of Frankfort, Ky. The writer is "Old Sam," of the Kingfishers; and his chapters deal both with the fishing which has made the Elkhorn famous for generations, and with the fishermen who have done their part in making it renowned.

In subsequent issues will be given, among others, the following:

The House by the Lake.

Some winter pictures of a boyhood home in the far-away woods of a Northern State. By Frederic Irland.

Canoeing in South America.

Adventures on the Parana River, one of the largest in the world. By J G. King.

Hunting on the Spanish Main.

A naturalist-sportsman on the line of the Nicaragua Canal. By J. F. Le Baron, late engineer in charge.

Mud Turtle.

A day in camp with Uncle Lisha, Sam Lovel, Joseph and Antoine. By Rowland E. Robinson. This is to be enjoyed best by those who have read in these columns or in book form Mr. Robinson's "Uncle Lisha's Shop," "Sam Lovel's Camp" and "Danvis Folks."

The Florida Everglades.

Describing a visit to a Seminole village on the occasion of the celebration of the Hunting Dance. By J. W. Stranahan.

A THRIFTY CONCERN.

THERE is one chapter of the history of the New Jersey non-resident game law system which should not go unrecorded. It has to do with a "game protective" association of thrifty individuals who worked their game covers for what was in them in a way that would have made a political henchman swell with admiration.

They applied the spoils system to game protection with a logical thoroughness that has rarely, if ever, been equaled. Quick to grasp the opportunity for exacting tribute from New York sportsmen afforded by the non-resident law, they imposed the customary fee for non-resident membership in their association; but this was only a formal preliminary. Game as known to the statute books was scarce in their territory, and they realized that few real sportsmen could be induced to contribute to their funds by purchasing membership. They had nothing to offer that would tempt such men. They knew, however, that New York, as every great city, has a large class of shooters to whom the game laws are a nuisance, and on this class the association resolved to prey. They let it be understood that non-resident gunners who joined their organization would be exempt from arrest for shooting song and insectivorous birds, a privilege, by the way, always enjoyed by their local members.

This inducement for a time worked satisfactorily for the spoils protective association, but after a while the novelty wore off, and their friends, the licensed lawbreakers from New York, ceased paying their assessments.

Confronted by this emergency, the association resolved on new tactics. There is nothing so characteristic of true genius as the ability to turn apparently disastrous events to personal profit, and this illustrious organization, instead of being cast down by their threatened loss of revenue, used it as a stepping-stone to new success.

They stopped issuing non-resident memberships, which insured exemption from arrest, and instead issued orders to their constables to "lay for" any and every non-resident shooter who killed robins or other birds in defiance of the insectivorous and song bird clause in the game laws.

This might have seemed like reform to persons ignorant of the real intention of the measure, but it was only another shrewd scheme of the spoils game protectors for exacting tribute. The law had long been so openly disregarded that shooters who came into the territory of the association had come to regard it as a dead letter. Consequently there was rich plunder for a time from the element whose sacrifice had been decided upon. These men were given free rein to shoot all day in company with members of the association, who openly disregarded the law, but at night the sheep were separated from the goats at the ferry to New York, and while one set of shooters were fleeced for large sums, the other set laughed in their sleeves and congratulated themselves on their shrewdness.

Naturally this state of affairs could not have continued forever, and it is interesting to speculate what new plans this admirable society might have devised for plucking their friends across the river, had not their charter been revoked by the repeal of the New Jersey non-resident laws.

Certain it is that, while they had it, they worked their franchise for all it was worth from a financial standpoint, and that it was generally understood that the association was not in business for its health.

SNAP SHOTS.

There is one passage in the report of the New York Fish Commission which will be read with decided satisfaction. It is the paragraph in which the Commissioners urge the repeal of Section 249 because it puts a premium upon crimes in sister States and is a menace to the game of New York. This vicious provision was incorporated in the law by trickery, and New York cannot permit it to remain as a part of her game code without injury to her own interest and her disgrace among other States affected by it. There is a bill now before the Legislature, introduced by Senator Sanger, for the repeal of the section. It should have the instant and unhesitating indorsement of the Legislature. We trust that every reader of this paragraph resident in New York may make it his business this week to do his part toward securing the repeal of this section by communicating with his representative at Albany.

"Mountain mutton" is a name often used for venison, when it is served out of season. "Albany beef" is a Hudson River name for sturgeon. Rabbits in Maryland are often called "Charles county pork" because of the large number of them there killed for market. In New York city restaurants the common quail-on-toast appears in the menu cards as "English quail *sur canapé*" or as "royal birds," to shield the illicit serving in close season or in what was the close season when there was one. In these times there is no particular reason why all game, no matter where killed, nor when, should not figure on bills of fare under its proper name; there is not the most remote probability that a restaurateur or hotel proprietor would ever find himself involved in trouble with a game protector. For instance, the Waldorf Hotel's supplies of ruffed grouse, shipped in hundred lots by a market hunter, of Smithville Flats, up in Chenango county, would never be interfered with, whether they appeared as New York partridges or as Dahomey pheasants.

In our game columns is reported the death of a Rhode Island fox hunter at the ripe old age of ninety-two. We have before now commented upon the relation of sports of the field to longevity. The annals of sportsmanship are filled with instances of sportsmen of ripe years who have maintained their strength, health and activity far beyond the allotted span; such men are found in every country. One of Mr. Gladstone's friends is a Mr. Stivens, now in his seventy-eighth year, who for sixty years has been collecting birds which he has preserved to the number of 1,800 specimens, and with every specimen a story, so that one might go far to find a richer fund of gun talk. In France last year a certain farmer named Hanin took out his seventieth annual shooting license. M. Hanin is in his eighty-eighth year and claims to have been a sportsman for a longer period than is indicated by the numbers of his licenses, for he went shooting long before such a thing as licenses were known in France. We have frequently had occasion to allude to the hearty old age of venerable sportsmen in our own country, notably those two companions who for so many decades have made their annual expeditions into the Maine woods. Many more years of field and stream to them all!

We commend to the guides of Maine our report of the Adirondack Guides' Association, whose annual banquet was held last week. In the presence of such an attendance of guests not less than in its own membership the Association makes a powerful appeal for general recognition and indorsement The purpose of the Adirondack organization is to secure precisely the ends sought by those promoters who would establish a license system in Maine. Both movements are indicative of the growing magnitude of the guiding interest. This going of men into the woods for fish and game involves an annual expenditure enormous in the aggregate for the services of helpers of various sorts; and the army of guides, packmen, axemen, boatmen and laborers, as Mr. Colvin has classified them, is growing with every year, so that before long we may expect it to equal in numbers, even if it shall not surpass, the European force of gamekeepers, gillies and beaters. Every movement undertaken by the guides to improve the *personnel* of their membership, to increase their efficiency and to add to the satisfaction of their patrons, will have the hearty indorsement and co-operation of those who owe to the woodsmen so much of their success and pleasure while in the wilderness. The time is none too soon to lay broad and deep the foundations for permanent systems for the control and improvement of the guide service in Maine, the Adirondacks, the St. Lawrence River and every other popular resort.

A correspondent complains that more and more narrowly with each recurring season he finds the lines drawn which bound the opportunity of the shooter who has not privileged access to posted fields. His complaint is well founded as to the main fact that the practice of preserving lands is growing. This is, however, not always and everywhere an unmixed evil. In many sections the trespass sign keeps off the shooting rowdy, yet works no hardship to the sportsman, who readily finds permission to shoot the grounds. Courtesy of bearing is an open sesame to fair fields where the truculent gunner finds his way barred. The same rules apply here as in other walks of life. Most men grant favors where favors are appreciated. And as for the curmudgeons who warn off gunners out of pure cantankerousness, they too have their place and use in the economy of nature; their very contrariness works to the ultimate benefit of the sportsman, for birds will fly across boundaries, and the overflow from Surlyman's farm will keep stocked the whole country round.

The Sportsman Tourist.

TIM, HIC JACET.—III.

Years roll on. Once in a while, as I sit by the camp-fire or dream amid more luxurious surroundings, come faint, sweet memories of my comrade, whom I have come to regard as an incident in my variegated life. I picture his hope crowned with success and I can see the cheerful fire in a New Jersey farmhouse.

A sweltering July day was drawing to a close. I was tired, thirsty, disheartened. My companions, two burros and a saddle horse, the latter noted for safety rather than for speed, were in the same mental and physical condition. I was among the Buckskin Mountains in northern Arizona, for the purpose of quietly investigating certain copper propositions in which I had been offered an interest. I had arrived at an age when I preferred solitude to company, and regarded life as a fake and this copper claim as the biggest fake in it. At the rate I had traveled I should have reached water by 3 o'clock. Now it was 5 o'clock and no sign of the precious fluid. No sign? Yes, there was. Old Jack forgot his weary bones and Jill her pack. They pricked up their ears and ambled down the trail, renewing their youth like the eagle. Bursting through the bushes, I saw Jacob's Lake.

It was useless to try to head those donkeys. Sultan wanted a drink even worse than they, their desire being in the positive, his in the comparative, and mine in the superlative degree. As soon as this want was supplied and my servants showed an inclination to return to duty, I spied on the further side of the pool a log cabin. Thither we proceeded. It was scrupulously neat, from the bed on the floor to the chunks of glistening ore that capped the topmost log. The sole occupant was a dog, toothless, half blind, and decrepit with the infirmities of age. A prospector's home in very deed! Here we could find shelter and food for man and beast. It was all we needed.

Where was the owner? There was a small dump on the hillside to the south. From somewhere near it came the sound of a pick upon the rocks. That solved the problem. I took the packs from the burros, unsaddled and hobbled Sultan, and started in the direction of the noise. The hole was not deep. In the light of the western sun every crevice seemed to sparkle. The worker did not see me. He was evidently old—bowed with age. His stroke was feeble, but each one told. His long gray hair kept silent rhythm with the swing of his arms. My shadow fell athwart him; he glanced up, laid aside his tool and said:

"Stranger, give me a hand outer har. I'm powerful weak."

"Why, Tim, can this be you?"

"Yaas! I'm Tim, but who be you?"

"Walt! Don't you remember Walt?"

"Walt! Walt who?"

"Why, Walt that was with you when the Apaches burned your ranch on the San Francisco."

"Oh! bless my soul, boy, why of course I know ye. My old eyes ain't ez good ez they wuz twenty year ago. An' so you're Walt! Waal, I've struck it at last."

I gave him the helping hand, and together we went to his cabin. He was not inclined to be talkative, but when the supper dishes were cleared away, and the pine logs burned brightly on the hearth, he essayed to speak. It was passing strange! That which he still anticipated I had won, and it had left me. I called myself young, but for me life was a memory. He was old, yet to him life was a glorious prospect.

"Walt, I've traveled a weary bit sence I seen ye. Couldn't save a thing at the ranch, so I tuck ter prospectin'. Footed it through Colorader an' Utah an' Arizony, but now I've got a claim that pays. See har!"

"He moved his bed, and lifting a trap door disclosed a cache made of an old packing box. There were specimens of ruby copper, horn silver, antimony and auriferous quartz, from which the precious metal could be picked with a pine sliver. Then, after a moment's hesitation, he closed the outer door and brought from the same hidden receptacle four tomato cans, each filled with shining flour and altogether worth enough to take him back to the States and provide for his declining years.

"Got this daown tew the river. Went daown Powell's trail an' struck a bar. Can't be worked only at low water, an' it's powerful hard work gittin' up an' daown, but thar's lots more thar—more'n in Wells, Fargo's bank. I'll give ye a p'inter afore ye go. Maybe ye'd like to hunt it up. Ye see, I've struck a good lead out har, an' I b'lieve it'll bring a-plenty. I'll give ye a quarter ef ye kin sell it. I won't go daown tew the river no more. What! ye're goin' tew look at the Copper Queen? This is a hull lot better. I'll go over with ye in two or three days ef ye kin content yerself har, shootin' deer an' partridges. Thar's piles on 'em. Then, bein' ez ye hevent no 'bjections, I'll travel back with yer ter Saliny, an' take the keers for hum. Guess Cynthy'll be powerful glad tew see me. Cynthy's a good gal."

The next morning bright and early our little camp was astir. Tim told me where to go, and gave all the necessary directions to avoid getting lost in this unmapped region, where every swale looks like its neighbor, and each tree is the exact counterpart of every other tree on the mountain side. As I was going after grouse, I took only a shotgun. The birds proved elusive. There were plenty of them, but they were high in the trees; not on the ground, as I had anticipated. They would lie close to some dead limb or hidden away among the long pine needles until I had passed. Then they would dart away with a deriding whir. In spite of their wariness I managed to secure a brace.

The charm of the day lay not in the hunting, but in the rambling. The fragrance and beauty of phlox and shy mountain lily were new to me, and when I reached the brink of some injutting chasm that yawned down to the Grand Cañon of the Colorado I could only sit and feast my eyes on color, immensity and distance. It was late in the afternoon when I returned. Tim hailed the grouse with an exultant whoop, and through the evening he was the very personification of happy old age. I had not time to put in a word. Story after story of work and adventure fell from his lips, and these were interspersed with sundry details of the domestic felicity that he and Cynthy were about to enjoy.

On the second morning, deer meat being on the bill of fare for dinner, I took the rifle. Not having far to go, Tim allowed me to sleep late. I had traveled perhaps half a mile when a muffled report startled me. Then I remembered that Tim was going to put in a shot about 10 o'clock. Presently a buck sprang up scarce ten rods away. He hesitated before he leaped. The hesitation cost him his life. After bleeding, I concluded that he was too heavy for me to pack to the cabin; so I drew and hung him, intending to bring up Jack after dinner.

It was hardly noon when I built the fire and put on the coffee pot. There was no sound from the mine. I called Tim; no answer. What was the matter? I climbed the hill and looked into the hole. There he lay, his legs buried in a mass of earth, a cruel rock on his breast. In an instant I was kneeling beside him. His heart beat. He was breathing. With superhuman strength I uncovered him and bore him out and down to his humble bed, and made him as comfortable as possible under the circumstances. It was seventy miles to the nearest settlement, and thrice that distance to a surgeon. Through the whole of the afternoon I sat by him, moistening his parched lips, binding his mangled limbs, and dressing that horrible wound in his side. At length, as the shadows grew long, he opened his eyes and recognized me. He made an effort to point beneath him to his treasures.

"Fur Cynthy," he said. I understood and nodded, for I could not speak. Longer and longer fell the time marks from the pines. The breathing had become fitful and labored. The sun was setting. Once more his eyes opened, but they were looking far beyond the mountains of Arizona.

"Cynthy!—Cynthy—love!—I've—come—home."

There was a rattling in his throat. The breathing grew fainter and fainter. The limbs stiffened. A long gasp; the muscles relaxed. I was alone. Tim had indeed gone home—to the land of eternal youth, the only country where his hopes could be realized, his dreams come true, where he and Cynthy should be never parted.

I lighted two candles and washed the blood-stained body. About his neck I found a silk cord and a locket in which was a tress of hair—faded now, but once as brown as the glittering chestnuts that fall from the frost-opened burrs on a New Jersey hillside. I put the relic back. It was sacred. Then I laid him out as decently as I could, moved the bed and took the treasures from their receptacle. Among them I found a pasteboard box containing letters, all postmarked Mendham and dating back to the summer of the Apache episode. Their predecessors must have been burned with the cabin.

With the first streak of dawn I tore up a portion of the cabin floor and made a rude box. Next I dug a grave in the soft ground by Jacob's Lake, and, after taking a wisp of the matted gray hair, I buried Tim. Upon his coffin I placed his rarest specimens. How they glistened in the first rays of the sun. They were his. No other eyes should ruthlessly pry into their secrets. Upon the long mound I placed a board with this inscription: "Tim ——, a native of New Jersey, died July 23, 1896." The spot will be respected. Once more I climbed the hill and staked off his claim and posted the necessary location notice, his name first, mine second. Then I left, not for the Copper Queen, but northward. In my saddle bags were the letters, the gold and the lock of Tim's hair.

Near the village of Mendham is an old red farmhouse. It is Christmas Eve. Amid the merry throng of young folks sits a silver-haired woman. She has spoken scarcely a word in four long months. She has sufficient money to be considered rich by her friends and neighbors, but she does not realize it. The laughter seems to disturb her. She rises to leave.

"Do stay, Aunt Cynthy, just for to-night." She does not notice the pleading of her little grandniece, the pet of the family. The little one, still entreating and unperceived, follows her to her desolate room. She sees the lonely woman take from her trunk a box and from the box a lock of gray hair, and, half sobbed, half whispered, as Aunt Cynthy kisses it, the bare walls echo the words:

"Dear Tim!"

Shoshone.

PODGERS'S COMMENTARIES.

San Francisco, Jan. 23.—In my commentaries of Dec. 20 I made mention of the troubles and tribulations of our shooting clubs in their fight against the poachers who have organized themselves under the title of "The Game Protective Association," a most farcical designation. It should read non-protective, inasmuch as they are the gentlemen who proclaim that every man has the right to shoot anywhere and everywhere he pleases, and, I might add, irrespective of seasons. Well, they have had to throw up the sponge at last. They have found it kicking against the pricks, and have withdrawn their arks from the outskirts of the clubs' grounds; couldn't stand the law and the clubs' breechloaders, and are going to have the Legislature pass laws to knock out the clubs' privileges, or failing in that are going to have the supervisors of the county pass an ordinance forbidding all shooting at any season, which is of course ridiculous. It is a clear victory for the clubs as it stands, and will continue to stand, at which every sportsman will rejoice.

I believe I mentioned also that there was rumor that an earthquake had destroyed Robinson Crusoe's Island, and that this was generally believed, but it turns out to have been given on the authority of the captain of a schooner sent from Valparaiso with a cargo of supplies for the colony on the island. The captain said he could not find the island, and it is not surprising, considering that he was drunk for three weeks, and finally found his way back to Valparaiso, and asserted that the island had disappeared, goats and all; and not a vestige remained. As a general thing, gentlemen in that condition see a great deal more than really exists, but in this case it was reversed, so your correspondent who is describing the Islands of the Pacific for the Forest and Stream can take up San Fernando in its course, as not one of the has beens, but as still in existence, to verify that good old tale of Robinson Crusoe's adventures. It is not an uncommon fact that gentlemen who have been out until the small hours have difficulty in finding the keyhole, but for a navigator not to be able to find a large island near the coast in a three weeks' search speaks loudly for the staying quality of South American mescal.

When I have charged ladies with devoting an entire day to the subject of dress, without a moment's interval, they have retaliated by saying that men can spend a whole evening discussing dogs and horses. I chuckle to myself that they never struck on fishing and shooting. I am reminded of it in perusing the endless discussions on those subjects in the Forest and Stream, although one would imagine that the subjects would have been exhausted in the years the paper has been published. Yet the discussion goes on with as much regularity as if just begun. It is wonderful, this flow of "wise saws and modern instances," apparently endless, and yet we who have had our experiences and are not yet satiated continue to read them with as much interest as if the subjects were new. Speaking of which, here am I, one of those unfortunates, "chained to business," who has to peg away at the desk when "the boys are knocking over the mallards and canvasbacks within an hour's ride of the city, and in two hours' distance whacking away at the steelheads (salmon) and bagging ten or fifteen in a day's fishing, almost from the steps of the hotel—10 and 15-pounders fresh from the sea, and such fighters! It was not so many years ago that I have shot many a canvasback from a pond a square or two from where the United States Mint now stands and a little beyond where Uncle Sam is spending a million on a post-office. I read daily of Sam Jones's and Bob Smith's return from the marshes, two hours from the city, grumbling at the scarcity of game, bagging only fifty brace of mallards and canvasbacks in a whole day. Poor fellows! and the newspapers talk about the passing of more stringent laws for the protection of game, on this evidence of its growing scarcity. Every Sunday there are probably from 500 to 1,000 ducks shot on these marshes, and yet we howl about there being no longer any game in the country.

I was reading in the Forest and Stream recently of an expedition of a couple of gentlemen in Greenland, who spent a week floundering through snow, mud and water, having to swim rivers, being nearly frozen to death as well as starving, and losing their way, and with not a feather or a hoof to show for it. Great Scott! thinks I to myself, can men be so demented, when in three or four days' riding in a palace car they can strike a country where deer will nearly run over them, and a climate where they can camp out eight months of the year without an umbrella? And as for fishing, what is the matter with the west coast of Florida or Catalina Island, just below us, where fish from 1lb. to 300lbs. can be caught off the wharf in front of the hotel, with a pretty girl either side of you, to bait your hooks (or hers) while fishing for *you*, in a matrimonial sense? If ever a demented community needed missionaries sent out to enlighten it, it is yours.

Speaking of fishing and fish stories, I am reminded that in rereading Mr. Prime's book, "I Go a-Fishing," which I picked up the other day, he says on page 267 that "one day off Block Island, in a boat with some other gentleman, I caught 300 bluefish in three hours." If he had said "*we*," I should not have laid the book down and figured up that it was just one and six-tenths fish a minute, for three hours in succession. It makes me feel small when I have often been four or five minutes landing a big bluefish in the boat, or a salmon in from half an hour to an hour.

Walking down Market street this morning, I stopped as usual to look into the gun shop display windows to see what was new, and was admiring some beautiful .12 and .20-bores, and wondering when the happy day was coming when I could afford to buy every new gun that came out, and add to my seldom used collection, some of which have not smelt powder for many moons. Just then along came a friend, one of these matter-of-fact fellows who consider shooting and fishing frivolous amusements, and said, "What are you looking at?" "The beautiful jewelry in this window." He peered into the window, saying, "I don't see any jewelry." "Don't you see those beautiful guns?" "Guns! You don't call those things jewelry, do you?" "Yes, I do, and I would like to be able to buy every one of them." "What for? You could not use all of them." "Perhaps not; but I would have them in a glass case to look at." "Oh, pooh! What nonsense. I would not give 10 cents for the entire lot."

I said to myself, "'Lives there a man with soul so dead,' who had no more appreciation of a beautiful gun?" My friend added that he had never shot a gun in his life. Just think of such a man going through the world, never catching a fish or shooting a bird! I never see a split-bamboo that I don't want it, although I have a dozen that I have never used, and many a month's house rent invested in guns.

In the earlier days, when times were better, I set out to collect every new thing in the gun line—repeaters, etc.—until the new inventions came along so fast that I had to throw up the sponge, and my den looked like an armory. And when one day I grumbled at my wife monopolizing my special closet, as all married men have experienced, and said, "Have you a thousand dresses that you can't leave me a chance to hang up a single coat?" she replied, "I will bet you a new dress against another gun that you have three guns to my one dress." I accepted the challenge, and, by George! I had to pungle for that new dress. I was not after any more bets, and meekly hung my coats on nails in odd corners and never said closet again—the common experience of any man who ever tackles a woman on her extravagance. In this instance it led me, out of curiosity, to take an inventory of my armory, with the result that I announced to my friends that I was keeping a gun store, and proceeded to sell off guns galore, until I had reduced my stock down to a baker's dozen, mollified my conscience, and increased my bank account. But I still hang on to my split-bamboos, stowed away in sly corners where they do not attract attention, and only take them out when the Madam is down town shopping. She might challenge me for another bet, on bamboos this time.

Podgers.

Sealing Guns in the National Park.

Guns carried through the Yellowstone National Park are sealed by the authorities in charge, when their bearers enter the Park, and are subject to inspection from time to time. The sealing is done by wrapping red tape about the hammer and trigger and sealing it with sealing wax.

CHICAGO AND THE WEST.

Tramping and Camping in the Sandhills.

CHICAGO, Ill., Jan. 16.—Last week I spoke of the proposed little trip of exploration through the sandhill country lying at the foot of Lake Michigan, that somewhat restricted but rather wildish wilderness which is the nearest approach to Chicago of uninhabited country. The trip in reality was interesting in reality as it seemed in anticipation, and much to my pleasure I was not obliged to make it alone. On the way down to the Calumet Heights Club house, which was to form the starting point and base of operations, I met my friend Mr. A. C. Patterson. At first he declared that business matters would prevent his going, but the nearer the time came for starting the more fidgety he became, and finally at 10 o'clock of the evening previous to the start he flung aside his civilized overcoat and civilized business fears and declared openly for the enterprise. For an hour therafter he was busy in constructing a pack sack, which he evolved ingeniously from a grain bag and an old pair of braces. Another hour was spent in getting together his blankets, old clothes, etc. By that time it was midnight and time for every one to go to bed at the club house, but we sat up a while and talked over the prospect of our winter walking trip until we had very little time left for sleep.

As soon as Mr. Patterson had expressed his determination to go we acquired a prospective third member of our party in the form of Dick Turtle, who happened to be at the club that evening. Dick also called for a grain bag and pair of suspenders, and began to pile in a heap near by the clothing and outfit he deemed necessary for the trip. He soon had enough stuff heaped upon the floor to load a hayrick, but yet could not see how he could dispense with a single article. As we laid aside one by one his articles of heavy clothing, his fur coat, his blanket-lined trousers, etc., etc., and explained to him how pleasant it was to sleep on a snowbank with nothing on but a pair of overalls, Dick's courage began to wane perceptibly, though he insisted stoutly that if he said he would do a thing he would certainly do it, and that his promise settled it once for all. Midnight saw him bound to walk through to Michigan City, but the morning found him with different views, and the last we saw of him he was curled up on the bed asleep. He bestowed a hurried morning anathema on Michigan City after a brief look out of his window at the gray and wintry dawn. The prospect was not altogether cheerful, one must admit, for the sandhill country in winter time is not the most inviting ground in all the world.

When Mr. Patterson had arrayed himself for the walk he presented an appearance not calculated to inspire confidence in the bosom of one chancing to meet him of a dark night. In stature Patti is above 6ft. and built like a hired man. About the chest he measures 4 or 5ft., and, without jesting, his "mobility," as the doctors call it, or the expansion measurement of his lungs, is a trifle over 6in.—a measurement that is simply phenomenal, as any physician will tell you. The accuracy of Patti's assertion that he could "swell up" 6in. about the chest was proved by measurements we made that night at the club house. Patti is a dark man, a son of Scotland probably somewhere in his ancestry, and he sports a black beard which would do credit to Lafitte or some other pirate king. As equipped for business Patti wore canvas and corduroy over wool and chamois, and surmounted his head with a peaked little hat, which he probably took away from some hobo or other and which had an unspeakable trampish look about it still. As he strode along, with a staff in his hand, a tin pot at his belt, an axe at his side and his little pack resting lightly somewhere on his broad back, he would have made a picture for an artist in search of the original gypsy king. He is so big and strong that he does not stoop forward when he carries a pack, but just stands up straight, with the pack dangling from his shoulders unnoticed. It may be seen that I had a good companion for a trip like this, and that the best of his attributes was the thoroughbred quality of actually leaving the wire when the word came to "go."

Patti carried in his meal bag pack a pair of light little blankets, an extra sweater, a loaf of bread, a vast beefsteak, some bacon and some salt and pepper. This does not sound as though it weighed much, but it is bigger than one thinks till he has carried it. In my own pack I had a pair of double blankets, a sweater, some eatables of about the same weight as Patti's, and also the little tent upon which we had staked our comfort for the winter camp. This tent was of my own design, and I modeled it somewhat upon the lines of Nessmuk's shanty tent which he describes in his book, "Woodcraft," though I could not quite agree with Nessmuk in some of the features suggested. Our tent, instead of being 4ft. wide, was over 6ft. wide in front, and about 4½ft. wide at the rear. It was 4ft. high in front and about 18in. in the rear. Nessmuk made a frame for his tent, building it neat and trim of nicely nailed boughs of exact length and equality. I did not figure to do this, for it was never my luck to find such nice sticks in the wood when I wanted them. I had little guy ropes of twine set on at the corners on my tent, for I could not take any interest in a proposition which commanded me to make a carpenter's frame and tack the tent over it with carpet tacks. This would be all right in the summer or when one had plenty of time, but it did not coincide with my own experience of camping in the winter. When it is cold and dark, and your fingers are stiff, and it is coming on night and you still have a back log and a bed to accumulate, one does not grow enthusiastic over the carpet tack idea, at least I don't. So we concluded to depend on a tent stretched a little more quickly and rudely. As to which more anon, as they say in the novels. The material of the tent was brown silesia, of which material they tell me ladies make linings for their gowns. It was very light, the whole tent not weighing over 3lbs.

So far we had had a very easy trip in getting up to the edge of our wilderness. The only difficulty had been experienced in getting out of Chicago. As I did not intend to come back to the club house after heading for Michigan City, I left my office already dressed for the woods. No one who has not tried that can know what it means. As I stepped out of the office door, clad in greasy overalls and short jumper, with a tin cup hanging at my belt, a shocking bad hat on top of my head, and an old pair of German socks, with rubbers, constituting my footwear, I realized all at once what a figure I must have made. There was no cab at the foot of the building, and I had to walk half a block to get one, and by the time I got into it there was a crowd around the cab window—one of those asinine city crowds that assemble to watch a safe go into a window, or a fallen horse get on its feet, or a gentleman get into his cab. One silly fellow stuck his head in the cab window and asked me if I was "the bicycle fellow that was going around the world." I just missed him. I told the next one that I was the man and that the cab was my bicycle, at which he looked vague. Anyhow I got away, perspiring and red, and not a little irritated. From this it may be seen how disreputable and undeserving of confidence Patti and I both looked when we pulled out from the hospitable club house. Patti had worn his store clothes down to the club, and, after his happy-go-lucky fashion, had not figured how he was going to get at them again after he got to Michigan City. As a matter of fact, he had to run the gauntlet of the crowds when he got off at Chicago, and then had to take train down to the club house again, some thirty miles; for we were about thirty miles away from the club house and sixty-five miles away from Chicago when we reached the end of our march.

We had a slow time getting away from the club in the morning of our start, but at last got ready. The club wagon was going down the beach a little way with Mr. Carlisle and Dr. Davis, two members of the club, and Patti and I concluded to ride along, and so take his big camera, which was too heavy to carry with us on the trip, but which could be sent back with the wagon after we had made some pictures among the hills. It was about noon when we reached a part of the country where we thought the scenery would be good for our purposes, and here we spent a couple of hours in tramping over the wild sandhills in search of good views. We discovered, within six miles of the club house, a lake over three miles long and some forty or fifty rods wide, one of the odd, winding, deep sloughs or seepage channels which in places mark this strange sandhill country. Still further toward the east is a smaller series of water holes, running along parallel to the lake among the hills, and offering good-looking duck grounds. Indeed these inland sloughs are at times great resting and feeding grounds of the mallards, which drop into the quiet and unvisited spots when the wind is high and when they are pounded off the neighboring marshes and lakes. We thought that Long Lake, as this main inland body is called, would make a great place for a small cottage, to be used as a shooting box for two or three members, on a plan somewhat like the cottages at the Calumet Club, such as those of Messrs. Marks, Wilde and Harlan, or Mr. Spalding, at all of which we were entertained by the gentlemen and ladies on the evening of our visit at the club. Patti and I romanced about the cabin we were going to build in there next summer, far from the haunts of man. In fact, a man dropped down into that country might as well be in the heart of the mountains, so far as the looks of things would go. I venture to say that a camper who goes into these sandhills at any season of the year will meet fewer people and see fewer signs of civilization than he will in the bulk of the Adirondack country or along the main traveled roads of Maine. If I wanted to lose myself I would as soon chance it here as in Wisconsin. I never did go into the upper woods of Wisconsin but that I saw somebody about every day, but Patti and I only saw two persons in our two days and a half of walking, and they were out on the lake beach. Half a mile back in the hills, and one might as well be a thousand miles from Chicago. It is a most surprising situation that of this Chicago wilderness.

In our photographic work we climbed hills probably over 200ft. high; bare, wind-swept dunes whose sandy faces were made of frozen compound, hard as iron and slippery as glass in spite of the sand. From such a point of vantage the view was a grand one. On one side would lie the big blue water of the lake, with its long, curling line of white breakers, extending as far as the eye could reach on either hand. Below stretched the falling slopes of sandhills of lesser size, rolling off in long white and black billows into the deep woods. All the earth was sand, but sand with some principle of life, for it supported a thin mat of vegetation. On some reaches the black pines were big and dense, now and then lining cañons and hillsides as rugged and gloomy as one would ask in the mountains. Again the sand would sweep in a wide sea of white, blinding to the eye and dropping gradually down to the lake level, for all the world like a big glacier. In spots the dunes had a sheer face up which no one could climb, and over their crests swept always a curling wreath of sand, sliddering down upon the further side and always building, so that always there might be tearing down. In some places the sand had swallowed up the short oak trees, burying them alive up to their necks. Again the sepulture had gone further, so far that death had come to relieve the suffering of the trees, from whose cold corpses the sand blast had stripped the vestments and even the limbs themselves. Up above the white, shifting, writhing surface, the straight dead stumps stood, devoid of a limb or worn half in two by the incessant current of erosion, the deadwood in places smooth and polished by the constant friction. One corner of the world we found thus, the very abomination of desolation, covered with the stumps of what had been the forest, which now stood up hopeless and pitiful. Here we paused, and at one tall spire of dead pine Patti sat down and gazed up meditatively. "I reckon this is the end of the world," said he, "and this is surely the North Pole they are always trying to find." So here we made a picture, showing this pole arising straight up out of the waste and cheerlessness. This view we named the "FOREST AND STREAM expedition in the act of discovering the North Pole." Few expeditions of any purpose have done more than that. If any future expeditions ever do discover the North Pole, methinks they will find tacked upon it a copy of FOREST AND STREAM, describing where the best walrus fishing may be found.

We found the forest very heavy in some parts of this upper part of our wilderness, most of the trees being pine, with a good sprinkling of oak and other hard wood. Cedars and junipers clung on to the high bluffs with precarious hold, such as their adventurous souls most love. Over and through all these many trees was the sighing and hissing of the wind, which makes the music of the outer air. Between one wooded slope and another there might be a stretch of a quarter of a mile, down in the bottom of which might lie a deep gully, asking a lot of slipping and sweating to explore. Yet further down and to one side perhaps an odd and deep little pocket in the earth might be scooped out, a little cuddy-hole of a place, where the wind never came, and in which one could only hear a faint and far-off talking, away up above him in the air. In such places we saw fallen logs and small wood, with good pines standing not far away. So we looked upon the land and saw that it was an ideal one for winter camping. We knew that we should have all the essentials for comfort, and though our friends guyed us and told us we would soon be back at the club house that night, we both knew that we would not be there, but far away in some sheltered little hollow back of a big fire, whose heat would be reflected into our open-faced camp, and where the pine boughs offered us a bed high above the frozen ground. Therefore we exulted, and ran up and down hills, and did a great many things which made us perspire and get hungry. I had not been hungry for a month before. Patti, I think, is always hungry, and that is how he came to grow so big.

They tell me that in the summer time the sandhills harbor all sorts of creeping things, including many lizards. I did not know that the lizard ever lived so far north. Yet I saw many cactus plants in this country, which also was a surprise. No one would naturally believe that the cactus was native to Illinois, yet it is. So is the lizard and the flea, both of which creatures one is fain to associate with Florida or some other seaboard sandy region. We did not see any fleas or lizards, nor indeed any other game of consequence, except one ruffed grouse, a big owl and a rabbit or two. The snow was scanty on the sandhills, so that we could not do much tracking, but we saw some skunk tracks, and a few tracks which were faint, but which we took to be fox tracks. We heard that a couple of foxes had been seen near the place where we made our pictures by some fishermen who live on the beach in a tiny sand-buried cabin. We could not find any sign of wildcats, though we had heard of these animals having been seen within the last five years, as well as a few wolves. From the tops of our tallest peaks we could see a wild panorama of hill and slough and marsh and stream, country which offered even at this late day of the century a cover suitable enough for any or all such game. We could at places get a view of several miles, and far as we could see we could discover no house or sign of human beings. Always the blue and white and gray of dune and forest and snow patch reached on and on, backed by the regularly rolling lake and covered by the sky, now grown gray.

As we stood at the top of one of the tallest dunes we heard faint in the distance the sound of wild geese, unmistakable note and one of always compelling interest. One of us honked in answer and soon drew the long line over us, honking and clamoring and dropping to the note. Then they spied us and sped on out over the lake, over which they began to settle down, in those wild, headlong, reckless gyrations by which geese show their exultation at finding rest, and their skill at dropping out of the air from half a mile of height. It was a curious and interesting sight to see their tumbling, until finally they were all down and hid in the tossing of the blue water. At right angles to the flight of the geese, up and down the beach, streamed always a long and solemn procession of gulls, great, gray, fearless fellows, breasting the wind steadily and with unvarying flight. These birds had abandoned the water and were flying directly over the tops of the first row of high sandhills back from the beach several hundred yards, this for some reason best known to themselves.

Our driver had left our team in a sheltered little valley where the sun was warm and the wind was not felt, and here we gathered for our lunch. We built a fire, made some coffee and had a pleasant little partnership meal. Then about 2:30 o'clock in the afternoon we packed the camera back in the wagon and said good-by to our companions who were to return to the club house. As they drove off up the iron beach they waved their hands to us, and then Patti and I turned off with our packs on our backs, really now on foot and hourly further from our base of supplies. We tried to think ourselves very bold men, bound on a very dangerous quest. Several of our friends of the usual practical turn of mind had asked us what we wanted to take such a fool trip for anyhow. Patti told them he was going because I had asked him to, and I told them I was going because I was naturally foolish anyhow. They all shook their heads very gravely, still not comprehending and pitying us very much. We had no gun with us except a six-shooter. We were not hunting or fishing. We were not going anywhere. There was no money in it. There was no great amount of comfort in it. Obviously it must be two very crazy men who would leave a good bed and a warm fire at such a time and go off into the woods for nothing. Yet Patti and I did not worry about this. We only walked and felt good, headed by the compass, northeast by north, for Michigan City, twenty-six miles away. Our starting point was exactly at the foot or the head of Lake Michigan, and our course was in a wide curve, around the toe of the lake and northeast up its further side from Chicago. We had heard that there was such a place as Michigan City, but had no reason to believe it more than a rumor so far as any evidence was concerned. We had heard that it was located on the lake, but how could we be sure of that unless we saw it actually so? We had heard that the sandhills were yet wilder further in, but how could we prove this unless we tried it? We had heard and seen that persons could camp out in winter and be comfortable, but how could we know that they could do this if they had along with them only what they could carry on their own backs? Obviously there were things enough to be seen and to be established. There were purposes enough for our trip. At least so it seemed to Patti and me as we humped it along over the sand in the gray, thick light of the fading winter afternoon. It grew colder and we grew hungrier, and the wind was keener and stronger, but we felt that we ought to go at least five miles further before going into camp that night, or else rest under the charge of being very inefficient explorers. So we hit off a gait of about four miles an hour, and gradually the masts of the wreck of the schooner on the beach at the club house grew fainter and its hull more indistinct. At length the sun grew dimmer and our watches said it was getting toward 4 o'clock. As our first camp was an experiment, we decided to hunt up a good place and go into camp. So we crossed the high ridge of sand lying next to the beach on which we had been walking, and headed into the sheltered and broken country in search of a place we might call home.

E. HOUGH.

[TO BE CONCLUDED.]

Natural History.

A COYOTE PARTNERSHIP.

The pronghorned antelope is the swiftest animal on the plains, and yet the coyotes catch a good many of them just by running them down. This sounds like a paradox, yet it is quite true, and is explained by the cunning of the wolves and the habits of the antelope.

A single coyote who undertook to run down a single antelope would get tired and hungry before he accomplished much, but when two or three coyotes are together it is quite a different thing. The coyotes do not all run after the antelope together. They take turns, and while one runs the others rest, and so at last they tire the antelope out.

If when it was started the antelope ran straight away, it would of course leave all the wolves behind, those that were resting even more than the one that was chasing it, but the antelope does not run straight away. Instead it runs in large circles, and this enables the wolves to take turns when chasing it.

When three or four prairie wolves decide that they want antelope meat for breakfast, one of them creeps as close as possible to the one they have selected, and then makes a rush for it, running as fast as he possibly can so as to push the antelope to his best speed and to tire it out. Meantime his companions spread out on either side of the runner, and get upon little hills or knolls so as to keep the chase in sight. They trot from point to point, and pretty soon, when the antelope turns and bigins to work back toward one of them, this one tries to get as nearly as possible in its path, and as it flies by the wolf dashes out at it and runs after it at the top of its speed, while the one that had been chasing the antelope stops running and trots off to some nearby hill, where, while the water drips off his lolling tongue, he watches the race and gets his breath again. After a little the antelope passes near another coyote, which in turn takes up the pursuit. And so the chase is kept up until the poor antelope is exhausted, when it is overtaken and pulled down by one or more of the hungry brutes. Of course the coyotes do not catch every antelope they start. Sometimes the game runs such a course that it does not pass near any of the waiting wolves, and only the one that starts it has any running to do. In such a case the pursuit is at once abandoned. Sometimes the antelope is so stout and strong that it tires out all its pursuers.

Yet they catch them more frequently than one would think, and it is not at all uncommon to see coyotes chasing antelope, although, of course, to see the whole race and its termination is very unusual. Often if a wolf running an antelope comes near to a man he gives up the chase and that particular antelope is saved. It is a common thing for a coyote to chase an old doe with her kids just after the little ones have begun to run about. At that time they are very swift for short distances, but have not the strength to stand a long chase. In such a case a mother will often stay behind her young, and will try to fight off the coyote, butting him with her head and striking him with her forefeet. He pays little attention to her, except to snap at her, and keeps on after the kids. Several times I have seen a mother antelope lead her little ones into the midst of a bed of cactus, where the wolf could not go without getting his feet full of thorns. If the bed is small the wolf will make ferocious dashes up to its border, trying to frighten the little ones so that they will run out on the other side and he can start after them again, but usually the mother has no trouble in holding them. I have several times killed young antelope whose legs had been bitten up by coyotes, but which had got away.

One hot day last summer a gang of section men were working in a cut in a railroad west of here, when suddenly a big buck antelope ran down one side of the cut, across the track, and up the other side. His sudden dash into their midst startled the men, and while they stood looking up where he had crossed a coyote suddenly plunged down the side of the cut, just as the antelope had done. The readiest of the section men threw a hammer at him, and the wolf turned and scrambled up the bank that he had just come down and was not seen again.

Two or three years ago I camped one afternoon near Rock Creek, and as there was very little feed we turned the horses loose at night to pick among the sage brush and grease wood. Early in the morning, before sunrise, while the man with me was getting breakfast, I started out to get the horses. They were nowhere to be seen, and I climbed to the top of the hill back of camp, from which, as it was the only high place anywhere about, I felt sure that I could see the missing animals. Just before I got to the top of the hill an old doe antelope suddenly came in view, closely followed by a coyote. Both of them seemed to be running as hard as they could, and both had their tongues hanging out as if they had come a long way. Suddenly, almost at the heels of the antelope—much closer to her than the other wolf—appeared a second coyote, which now took up the running, while the one that had been chasing her stopped and sat down and watched. The antelope ran quite a long distance, always bearing a little to the left, and now seeming to run more slowly than when I first saw her. As she kept turning, it was evident that she would either run around the hill on which I stood or would come back near it. At first I was so interested in watching her that I forgot to look at the wolf that had stopped near me. When I did so he was no longer at the place where he had stopped, but was trotting over a little ridge that ran down from the hill and watching the chase that was now so far off. He could easily have run across the cord of the arc and headed the antelope, but he knew too well what she would do to give himself that trouble. After a little, it was evident that the antelope would come back pretty near to the hill, but on the other side of it from where she had passed before, and the wolf which I had first seen chasing her trotted out 200 or 300yds. on to the prairie and sat down. The antelope was now coming back almost directly toward him, and I could see that there were two wolves behind her, one close at her heels and the other a good way further back. The first wolf now seemed quite excited. He no longer sat up, but crouched close to the ground, every few moments raising his head very slowly to take a look at the doe, and then lowering it again so that he would be out of sight. Sometimes he crawled on his belly a few feet further from me, evidently trying to put himself directly in the path of the antelope; and this he seemed to have succeeded in doing. As she drew near him I could see that she was staggering, she was so tired, and the wolf behind could at any moment have knocked her down if he had wanted to, but he seemed to be waiting for something. The wolf that was following him was now running faster and catching up.

When the antelope reached the place where the first wolf was lying hidden, he sprang up and in a jump or two caught her neck and threw her down. At the same moment the two wolves from behind came up, and for a moment there was a scuffle in which yellow and white and gray and waving tails were all mixed up, and then the three wolves were seen standing there, tearing away at their breakfast.

I had been so interested in watching this thing, which after all had not taken more than ten or fifteen minutes of time, that I had forgotten all about the horses. It only needed a moment's looking to see them a short distance down the stream, and before I had got to them and brought them back to camp I heard Bill's voice singing out for breakfast. I was so much interested in the intelligence shown by the coyotes that I do not think I felt the least sympathy for the antelope. Even if I had wanted to help her I could have done nothing, for she was so tired that the coyotes could easily have caught her after I had gone.

There are other wild creatures that catch the antelope occasionally. As I have said before, the golden eagles often kill them when they are quite young, although if any old ones are near they will fight the birds, keeping them from catching the young ones. Once in winter I saw an eagle attack two kids. They were feeding at a little distance from a large bunch of perhaps 1,000 antelope. At this time the young ones were seven or eight months old, and so quite large and strong. The eagle had been sitting somewhere on the hillside, and flew down over the kids to pounce on one of them. They immediately began to run to the herd, and when the eagle made a dart at them they both stopped, reared on their hindlegs, a good deal in the position of the unicorn that we sometimes see fighting for the crown, and struck at the bird with their forefeet. Perhaps he was not very hungry, but at all events this turned him and the kids ran on. He made two more swoops at them before they reached the herd, and each time they fought him off in the same way by rearing up and striking after him. Of course when they got in among the other antelope the eagle left them and flew away.

As I have elsewhere explained, the Indians, before they had horses or firearms, used to catch antelope in traps. These were built something on the same plan as their buffalo traps. The people built a long, straight fence, which almost came together at one end and was very far apart at the other. At the ends of the fence where they almost came together the Indians either built a corral or dug a deep pit, which they roofed over by slender poles, on which they put grass and dirt. Now, you have heard that the antelope is very inquisitive. If he sees anything that he does not understand or can't quite make out, he is very likely to go up closer to it, so as to see what this object really is. The Indians took advantage of this weakness of the antelope, and by means of it decoyed bunches of them into the space between the widely separated ends of these two fences. Other Indians were hidden behind the fence, and as soon as the herd got started down between these wings the Indians near the end of the fence ran out and got behind the antelope, which were then forced to run down toward the pit or the corral. If it was a pit, they broke through the roof in running over it, or they ran into the corral, where they were killed by the Indians, who were hidden near by.

Down in Utah and Colorado, southwest of here, I have seen in several places the remains of these fences and corrals. I do not know that the Indians hereabouts ever caught the antelope in pits, but men who have lived up North with the Blackfeet, the Bloods and the Piegans tell me that up there they used the pits instead of the corrals.

Geo. Bird Grinnell.

Brünnich's Murres and King Eider in Virginia.

Philadelphia, Pa., Jan. 25.—*Editor Forest and Stream:* I take great pleasure in notifying the ornithologists and others interested of the capture of Brünnich's murre (*Uria lomvia*), one on Dec. 17, 1896, and one on Dec. 19, 1896, at Cape Charles, Va., by A. L. Whitaker and Carmen Skidmore respectively; and on Jan. 2, 1897, of a specimen of king eider (*Somateria spectabilis*), by Joseph Fields, at Cape Charles, Va.

My brother shot the first Brünnich murre, and the king eider was taken by a friend of mine with whom I was duck shooting at Mr. Isaac Skidmore's, Northampton county, Va.

These specimens were exhibited at a meeting of the Delaware Valley Ornithological Club, Academy of Natural Sciences, Philadelphia.

I have the above specimens, and claim the latter to be the most southern recorded capture of the king eider.

Would it not be wise for our sportsmen who are duck shooters to have any strange or unknown specimen identified? Many valuable notes are lost by this oversight.

Wm. L. Whitaker.

Murres in Quincy Bay.

Boston, Mass., Jan. 25.—*Editor Forest and Stream:* Noticing that Brünnich's murre have been seen in large numbers in Cayuga Lake, I want to say that in Quincy Bay, within five miles of Boston, Mass., last December, a great many of these birds were seen, and some shot by different gunners.

Old gunners say that in thirty years' experience they have never seen these birds in the bay before. W. P. W.

White-winged Crossbill.

Thompsontown, Pa., Jan. 22.—*Editor Forest and Stream:* The accompanying bird rose from my barnyard with 200 or 300 English sparrows. Twenty-one birds fell before a charge of No. 12 shot, and the crossbill with the sparrows. Is it a true crossbill or a hybrid with sparrows? I should think the pugnacious foreigner would have driven the native away. Juniata.

[It is a young white-winged crossbill (*Loxia leucoptera*). His death shows what bad company may lead one to.]

New Orleans Audubon Monument.

Editor Forest and Stream:

In connection with the reproductions of Audubon's birds, which you are publishing let me call the attention of your readers to a very interesting sketch of Audubon's life by Mrs. Bradford, of New Orleans.

The book is very attractive in form, and sells for $1. The entire proceeds of its sale are to be given to the Audubon monument fund, for the purpose of erecting a monument to the great naturalist in Audubon Park, New Orleans. I inclose description of the book from the New Orleans *Times-Democrat:* "Mrs. Bradford's sketch of Audubon, daintily bound and illustrated, and printed in clear, attractive type, appears in time to rank among the charming gift books of the holiday season. Originally read before the Quarante Club, of this city, the sketch was received with warm interest; and Mrs. Bradford is now actuated by a public-spirited motive in giving her work a permanent form. The erection of a suitable monument to the great naturalist has long been one of her dreams, and it is her hope that the proceeds from the sale of the book may, as she modestly expresses it, 'prove the cornerstone' of this worthy enterprise. The author justly remarks: 'Our country is at last rapidly refuting the traditional charge of the ingratitude of republics to their noblest sons. * * * We of the far South must not be behindhand in this great movement. Undismayed by difficulties and discouragements, we must earnestly strive to do like honor to our illustrious dead, and ennoble and beautify our parks and public places with lasting memorials in bronze and marble—grand object lessons of their lives and deeds.' In a fluent and graceful style Mrs. Bradford relates the history of Audubon's life—that life 'more instructive than a sermon, more romantic than a romance'—showing excellent taste and judgment in the arrangement of her material. The author has had special opportunities to study her subject, as Audubon was a valued friend of her parents, and the home of her childhood contained many treasures in the shape of stuffed birds and portraits, the handiwork of the naturalist whom Louisiana proudly claims. His was a career crowded with incident from start to finish, and the varied episodes of his checkered fortunes are as graphically described as can only be done by a biographer who draws information from more sources than the mere printed page.

"The book in itself is well worth reading, and it receives a double value from the author's motive in giving it to the public. It is to be hoped that her aspiration may soon be realized. We trust the day is not far distant when among the grand old oaks, and near the mighty river he loved, patriotic hands will place a noble statue in bronze of the great naturalist of Louisiana, a familiar figure as he was in life, in hunter's dress, with dog and gun by his side."

Any of your readers who feel inclined to contribute $1 will be contributing to a very worthy object, and at the same time will receive an interesting little memento of Audubon. Alexander Maitland.

Blue Coat vs. Yellow Coat.

The greatest enjoyment of a camping trip to a lover of nature does not always arise from the large amount of game killed or the large number of fish secured—but from the little things that happen, which many people would call trivial, but to one who has formed the habit of observation are full of life and interest.

The freedom from care and worry, the hearty goodfellowship which exists, and the fact that the struggle for the Almighty Dollar is largely eliminated, are some of the factors that make a camping experience so enjoyable, as well as benefical.

I remember an interesting incident that happened while camping a few years ago. I had been out a good portion of the night before jack-hunting after deer, but had come in shortly after midnight without any success—and right here I would like to say about this method of hunting that while I have never fired at a deer when jack-hunting without killing it, my experience has been that the deer stands more chance of escaping than the hunter does of securing it, and especially is this true on bodies of water that have been much hunted in this way. However, I am perfectly willing to give up jack-hunting if they will "call off the dogs"—but I have wandered from my subject! Not feeling very ambitious, I strolled away from camp along the trail that led down the lake, and coming to a convenient log sat down to enjoy the solitude and stillness of the woods. I had left my gun at camp—a very foolish thing to do, especially in a country where big game abounds. Hearing a slight noise to my left, I moved along on the log so I could discover the cause of it, and there witnessed a very novel combat. The noise increased as I crept nearer. A big, burly fellow in a shining blue coat was having a great tussle with a smaller antagonist, a little yellow and brown chap, whose lithe, supple movements and bull dog tenacity made the fight less unequal than it seemed at first. After the fight had lasted a short time, it became evident that Blue Coat had had enough, and was now only too anxious to get away; but in spite of his utmost endeavors the little yellow fellow kept his grip and pushed the fight with the utmost fierceness. The big fellow was soon done for, and his efforts became weaker and weaker until they ceased altogether. Mr. Yellow Coat seemed none the worse for the battle, and though his adversary was nearly twice his size he picked him up and flew away with him to his nest in a not far distant bush.

The victor was a yellow hornet, and the vanquished blue bottle fly. W. Grant.

Bluebirds on Long Island in January.

Bay Ridge, Long Island, N. Y., Jan. 27.—I wish to advise you of what to me is the unusual presence of bluebirds (S. S.). Yesterday, the 26th, I heard the well-known note of this bird. At first I was inclined to be skeptical, but upon its repetition I investigated, and was surprised to discover a pair of them in a low dogwood, seemingly in good health and spirits. Last fall your various correspondents were lamenting the scarcity of these birds, while with us during late September they were unusually abundant, coming and going in fair-sized flocks until well on into October. I may mention that a red-headed woodpecker has wintered for three years in our vicinity, and from his loud chattering yesterday I infer he was as much surprised as myself over the bluebirds, for he followed them as they flew off at my approach. Wilmot Townsend.

Game Bag and Gun.

A WINTER CAMP ON WADLEIGH BROOK.

(*Continued from page 86.*)

Part II.—A Change of Base.

A WARM spell followed our hunt in the burnt lands, and from 20° below zero the thermometer rose to 50° above. Under the influence of the warm air the snow rapidly disappeared, and when freezing weather came again the hunting was very noisy. We had eaten up almost everything in camp and resolved upon a change of base. Accordingly, on Sunday afternoon, Nov. 29, we moved over to the Trout Brook Lumber Camp owned by Messrs. Dudley & Currins, and the following day Jock, the Doctor and myself went on to Sourdnahunk Lake for a few days' sojourn at McLain's camp.

Sourdnahunk.

Eight moose had been accounted for at Sourdnahunk Lake this season up to the time of our arrival, two of them having been killed only a few days before by the McLain's.

These were large bulls, one having a spread of horns of 55in., and the other 47in. They lay just where they had fallen within a few rods of each other, back on a hardwood ridge no great distance from Thissel Pond. One great bull had careened over backward when hit, but fortunately had not broken his horns.

McLain's camp, which has been but recently opened for sportsmen, is well built of small peeled spruce logs set vertically and battened with strips of bark. The roof is of spruce bark, which gives the camp a more picturesque effect than is common.

The McLain's, father and son, are successful trappers, and last year took 112 "saple," besides "black cat" or fisher, mink, fox and otter.

In one corner of the sitting room is a reminiscence of bear, in the shape of a heavy No. 5 Newhouse trap which has one jaw snapped in two and a spring missing as the result of tackling the wrong bear. The bear that wrecked that trap and got away must have been an unusually powerful animal. Near by is a shed moose horn, picked up by Joe Francis, that is abnormal in that it has a tine 4 or 5in. long starting from the back edge of the palm and running parallel with it.

At Sourdnahunk I saw a black cat in a tall stub, but though I tried to prevent its escape the big weasel succeeded in getting out of the tree before I could reach the base. It dropped so quickly that it seemed to go faster than the falling bark dislodged in the scramble.

Another day, while returning from a bog over toward Telos Lake after sunset, a buck deer sprang out of a fir thicket directly toward me. I was going along at a slashing gait at the time, making plenty of noise, and when the deer appeared he was within 30ft. on the jump. It took him but a second to wheel and disappear, and as my rifle sights were full of snow I did not get a shot. It is an open question whether the deer on hearing my approach thought it was another buck and wanted fight, or whether he got a baffling scent, and ran onto me when trying to escape.

The traveling was very noisy during our stay at Sourdnahunk, and though we saw plenty of sign we got no game.

Couldn't Break a Game Law if he Tried.

Despite the reports from Maine that partridges have been scarce this year, we saw an unusual number. I had loaded some light ammunition for this game, with 5grs. of black powder and the 85gr. S. & W. pistol bullet, and found the charge very accurate and satisfactory except for the fact that it was difficult to seat the ball in the shell without loading tools, as it was a trifle too large. On Dec. 1, as I was returning to camp, I saw six partridges budding in birch trees. They were all close together, and the chances seemed good for killing two with one shot. Accordingly I drew out the cartridge in my rifle barrel and attempted to substitute one of the light charges; but the shell jammed, and do what I would I could not get it in the barrel. I tried in succession half a dozen cartridges, and each one stuck when about two-thirds way into the barrel.

It was an extremely cold day, the thermometer being considerably below zero at the time; and the trouble was evidently due not only to the fact that the shells had been expanded by firing, but also to the contraction of the rifle barrel, as I proved afterward by inserting without difficulty all the cartridges when the barrel was warmed. I did not want to use a regular cartridge, as my stock of ammunition was very low, so I left the spot without killing any partridge.

Ten minutes later a spruce partridge flew up from under my feet into a low tree, and sat there stupidly regarding me.

I was still a little mad at losing the others, and I resolved to have this one for revenge, though I really did not believe he would be very good eating, being an old, bird; so I cut a sapling 10 or 12ft. in length and fastened at the end a noose made from an old moccasin string, and carefully dangled it in front where he could stick his head into it.

The partridge bobbed his head backward and forward and sideways in a self-important way, looking at the noose as if he were critically examining it over the top of a pair of spectacles, and finally stuck his head squarely into it. The same instant I yanked, but as luck would have it the partridge got too far into the loup, and before I could get my hands on him he had slipped through and escaped.

That night I related the incident, and was reminded that it was the 1st of December and that the partridge season was over—facts which had not occurred to me before.

Mr. Goodman, the scaler, who was sitting the other side of the stove, slapped his thigh and remarked:

"By George, I know now why it was I missed that partridge to-day when I threw my axe at him. I couldn't break a game law if I tried."

Geography.

None of the Maine maps give much detail regarding the Trout Brook country. The headwaters of streams which serve to indicate the watersheds are misplaced, while such lakes as Little Sourdnahunk, which is about three-quarters of a mile in diameter, and Thissel Pond, which measures

MAP OF THE WADLEIGH BROOK HUNTING REGION.

five-eighths of a mile in its greatest dimension, are not set down at all. None of the maps show the deep bay on the north side of Sourdnahunk Lake known as Caribou Cove, and on all I have seen the roads are not given as used at the present time. For instance, the approach to Sourdnahunk Lake at present is by the well-traveled tote road up Trout Brook, but this is not shown on the maps, while on the other hand the disused route from Webster and Telos lakes down to the lower end of Chesuncook still appears. Of course these tote roads are constantly changing, and it is a difficult matter to keep track from year to year of those which are passable for teams, but with regard to the natural features it is different, and it is surprising that better maps do not exist.

The rough map printed herewith is intended to show some of the features of interest to sportsmen not given elsewhere, and will serve to illustrate the narrative. The dotted squares are six miles across.

In a general way it may be said that the country lying south of Trout Brook and between that stream and the East Branch is a continuous mountain range that finally culminates in Katahdin, 5,250ft. in height. This is the only mountain region of any consequence in Maine, and its scenic attractions are noteworthy. From Grand Lake (Matagamon) and the west end of Sourdnahunk Lake the views are particularly impressive.

North of Trout Brook there are no mountains worthy of the name, and the country resembles other parts of the State, with characteristic bogs, low ridges, dead water streams and lakes.

Sourdnahunk Lake lies on a high plateau well up toward Katahdin. By right it should empty into East Branch waters, but instead it has taken upon itself the vastly more difficult task of discharging its waters into the West Branch of the Penobscot. Its outlet, Sourdnahunk Stream, has cut a passage through the southern enflanking mountains, and rushes down wild gorges in tumultuous fashion, falling hundreds of feet in a few miles. There is nothing like this stream in Maine, and nowhere can such scenes be witnessed as occur there in May, when Messrs. Dudley & Currins start their log drive. The stream at best is the personification of untamed fury, but add the thousands of great spruce logs that go tearing along with it, shooting down over falls like bolts from some great catapult, and disappearing in boiling chaldrons below or splintering on the adamant rocks that oppose their passage, and you have a picture of reckless passion that appalls the beholder.

The lumbermen have three dams with an aggregate head of 36ft. of water behind, and when a jam forms this great wall of water is sent hurling down upon it with a force for smashing and tearing that is absolutely resistless. Under ordinary conditions the water is let run at regular intervals for a few minutes at a time.

Besides their Trout Brook Camp Messrs. Dudley & Currins have two camps on Sourdnahunk Stream, but they have almost finished their operations in this country, and another year will no doubt move elsewhere.

In mentioning the natural features of this region, the burnt lands of Wadleigh Brook should have a prominent place. These lie mostly north and east of the brook from Burnt Mountain on the south almost to Blunder Pond on the north, and extend in a northeasterly direction pretty well over toward Second Lake. In some places they have been burned over half a dozen times, and are so open that one can see half a mile at a stretch; but as a rule the ground is grown up with small trees, maple and birch and poplar, tha teffectually prevent an extended outlook. These burnt lands are the natural summer home of moose and other game, but by December everything has moved into the surrounding green timber.

The First Caribou.

Early in December the caribou begin working down the mountains, and leaving their sprawling trails along the frozen streams and bogs of the Trout Brook country. They had been very abundant on Katahdin during the fall, feeding on the mosses above the timber line, and a lumberman named Rodgers, who has camps well up toward the summit, reported that he had seen as many as eighty in one herd.

Caribou are stupid, and their flesh is not highly regarded as food, and it is a noteworthy fact that they are despised by many of the native hunters, who sometimes shoot them down from pure wantonness, piling up their carcasses as long as the animals are in sight or till their ammunition is exhausted.

The morning of Dec. 3 Hoisington, Du Bois and Natey, who were again in camp on Wadleigh Brook, discussed their plans. Du Bois said: "Natey and I will go across Trout Brook and kill a deer," to which Hoisington responded: "Well, I guess I'll go up toward the burnt lands and get a caribou."

Strangely enough, both predictions were fulfilled to the letter. Du Bois got a large doe within a few hours after leaving camp, and in even less time Hoisington had killed his caribou.

The thermometer hung on a nearby tree registered 18° below zero at 7:30, when the hunters left camp. Thinking that Wadleigh Brook would be well frozen, Hoisington re-

HOISINGTON'S CARIBOU.

solved to go up on the ice. There were some thin places on the rapid stream, however, and soon after leaving camp he got his feet wet. He quickened his pace to start the circulation and prevent freezing, and the snow on the ice creaked so loudly in the frosty air that it seemed next to impossible to surprise any game. However, as he rounded a bend in the stream he saw a deer standing on the bank in plain sight looking at him, but before he could fire the deer had turned and plunged into the woods. This served as a warning to go more cautiously, and as subsequent events proved was a very lucky occurrence. Game was afoot that wintry morning, and, like the hunter, found that the brook afforded an easy means of travel.

When less than a mile from camp Hoisington suddenly saw the antlered head of a caribou regarding him from the concealment of the tall grass and bushes growing on a point above. The same instant the animal whirled around to run, but just as quickly the little smokeless powder gun spat out its veto, and down he went, shot through the spine just back of the shoulder blades. The caribou tried to rise, but a second shot, fired for safety, pierced his heart, and he was dead when the hunter reached the spot. The caribou was a bull with a very compact and pretty set of horns. The antlers were just ready to drop, and when he fell one was loosened and came off. After dressing him Hoisington returned to camp and later went out to drag him in on the ice. This time he had no rifle with him, and while sitting on the caribou's body resting he saw a big buck with five points to a side come out on the ice only a few rods away and paw and strut and dare anything to fight him. It was highly aggravating to take the old buck's "sass," but there was no help for it, and finally the buck got tired and went away.

Return to Wadleigh.

On the 3d of December Dr. Wright and myself started

back for our camp on Wadleigh Brook by a rather roundabout way. We crossed Little Sourdnahunk Lake on the ice, and by paced measurement made it three-quarters of a mile in diameter. The lake is oval in shape and beautifully situated among hardwood ridges. Half a mile further is Thissel Pond, an equally pretty sheet of water and only slightly smaller. East of both ponds and forming the apex of a triangle drawn from them lies a good caribou bog, which is perhaps a mile long, but so grown up with trees that no extended view can be had. This bog is in the Trout Brook watershed emptying into East Branch waters. Thissel Pond by its outlet flows into Webster Lake, and so on into the East Branch, while the waters of Little Sourdnahunk Lake eventually find their way into the West Branch of the Penobscot.

Additional interest attaches to this spot from the fact that a brook that takes its rise a short distance west flows into Telos Lake, formerly on the watershed of the St. John River, but now connected by canal with Webster Lake and the Penobscot.

Beyond Thissel Pond the descent is rapid almost all the way to Webster Lake. Thissel Brook, which we followed, is a tumbling trout stream with steep banks, wooded for long stretches with a beautiful growth of beech, maple, birch and other hardwoods. Along in the afternoon we came out on a bog which extends on both sides of the main stream for a mile or more, and which reaches back also along tributary streams from east and west. Here we jumped a large buck, who went bounding away over the brown bog grass in plain sight for some distance. Below the dam on Thissel Brook we ran across a moose track which had been made probably within an hour, but it was growing late and we had no time to spare following it.

About sunset we sighted Webster Lake through the trees and took a short cut across on the ice to the dam. Below the dam we found fairly good walking on the old tote road, but the snow was deeper than any we had previously encountered. A mile beyond the dam we sighted some old deserted lumber camps on a hill above the road, and thought at first they were Finch's camps, where we expected to spend the night, but we soon discovered our mistake.

For a mile further we plodded along in the darkness without any encouragement, but at the end of that distance we struck a recently traveled road and knew we must be near our destination. At this point the road crossed Webster Brook, an angry-looking rapid stream 60ft. in width, and we were uncertain on which side the camp lay.

We decided to try the south side first, and as luck would have it found the camp only a few hundred rods away. And never were weary travelers more glad of shelter. The Doctor's beard and eyebrows were covered with ice, our trousers frozen to board-like stiffness, and our bodies chilled by the arctic cold.

The Big Buck that didn't Get Away.

Next morning we got an early start. Finch's Halfway Camp is situated on the outlet to Hudson Pond, and a good road follows the brook up to the pond, a distance of about a mile. The pond is half a mile across and contains several rocky islands, on one of which Jock Darling saw a caribou last winter.

He tried to shoot it as it trotted away, but his Bullard refused to go off. How the caribou ever got on the island is a puzzle, as its sides are as steep as a church roof where they are not perpendicular.

It was our intention to cross from Hudson Pond directly to the burnt lands, which are no great distance off to the southeast, without going near the main Blunder Pond (Mr. Finch, who has lumbered in this neighborhood, informed us that there are at least three small ponds of this name), as the country immediately around the pond is said to be very thick and swampy. Accordingly we lay our course a little east of south along the side of a hardwood ridge where the walking was good. While traveling along this ridge we unexpectedly ran directly on to a large buck coming toward us. We opened fire, and each of us managed to get in a couple of shots before he disappeared. Subsequently we found that three of these shots had hit him, but unfortunately all had gone low. We followed up his trail a short distance, and noting but little blood decided to leave him alone for a little while and investigate an old moose trail that we happened on. This led us to a thick growth of balsam fir, where we found fresh sign of three other moose.

The moose had evidently gone into winter quarters here, for beds and signs of feeding were on all sides. There was one large bull among them, how large I hesitate to say; but he had refused to go between trees in places where one could almost have driven a team of horses through, and his track, where the snow had thawed out of it, looked like an elephant's.

The snow was crusty, and it was a practical impossibility to get up to a moose in such thick growth, so we reluctantly left the yard, hoping to come back the next day if the conditions should be more favorable.

Taking up the buck's trail, we followed very cautiously, and would have succeeded in getting a shot as he rose from the spot where he had lain down had it not been for an untoward incident, which set him off on the jump. Previous to this he had been going west and had carried us within hearing of the groaning ice on Blunder Pond, but now he started directly down wind in an easterly direction. Every step he took in this direction brought him somewhat nearer our camp on Wadleigh Brook; so after consultation we decided to follow him up, knowing that, as he had our wind, he would keep going as long as he could stand. And so we followed along, constantly hoping that he would shape his course more to the south, which would have suited us exactly. Instead, however, he veered if anything more to the north, and led us a long and weary chase. It was 9 when we first saw him, and not till 2 that afternoon did we get close enough for the *coup de grace*. Meanwhile he had adopted every tactic known to his tribe to throw us off his trail, passing through bands of other deer, and walking over every piece of bare ground he could find. Once he had succeeded in getting eight or ten caribou to walk all over his trail, so that in places it was completely obliterated, but it was easy work to follow it here compared to times when it passed over bare places where the ground was hard frozen or rocky.

Successful tracking is largely a matter of elimination, and at times the only way a trail can be followed is by considering all possible courses and striking out the less likely ones.

On our way to camp after sunset that night we jumped a moose on the edge of some green timber. Below us on the hillside we heard a thump, thump, that sounded like some one chopping, as he went off on a sharp trot. A moment later we came across the track, which proved that he was a big one.

It was three hours after dark when we reached camp, and we had gone through some vile holes to get there, but all was forgotten in the pleasnre of the reunion with the other members of the party, and the big fire and generous supper.

J. B. Burnham.

[To be concluded.]

NEEDLESS ACCIDENTS.

Ottawa, Canada.—*Editor Forest and Stream:* It is a pity that there is no means of legislating in the direction of protecting life and limb from eccentric shooters, who year after year add to the already long list of those who meet death by accident.

In the neighborhood from which I am writing three men have this season been shot dead at sight, and three others severely wounded by shooting companions. In five cases these unfortunate people were mistaken for deer, and in the sixth a hasty gentleman mistook his friend's game bag for a hare, and while literally puncturing the bag distributed the balance of the charge in various parts of his friend's body.

It is unhappily a fact that many of those who carry guns and visit woodland and swamp in pursuit of animals and birds know little of the use of the weapons they carry or of the appearance of what they are pursuing. They are, perhaps, also young and excitable, and have just reached that condition of nervous eagerness which makes the conclusion easy that anything stirring near is the game they are seeking. Hence it is that the tyro from the city goes bravely forth in pursuit of deer and later in the day maims or kills some relative or friend, and what might have been a pleasant outing is suddenly turned into a tragedy. Yet these oft-repeated "sad accidents" seem to convey no warning, for each succeeding season brings fresh records of the doings of these reckless shooters.

A man in the woods does not look like a deer, a hare, or a partridge; but a vivid imagination may regard him as being any of these, and then comes the possibly fatal shot. For my own part, I confess that a deer to me in the woods is a very distinctive object. When I see one I do not mistake it for my friend John Smith, or *vice versa;* and I have no fear that John will suddenly regard me as a buck, and tickle me in the back of the neck with his Winchester. John is cool, quick, keen-eyed, and a sportsman, and never pulls a trigger without good and sufficient reason.

Another awful man to meet is he who cares not in what direction his loaded gun is pointing. Sometimes it is carefully nursed in the hollow of his left arm, while the muzzle is uncomfortably close to the pit of your own stomach; the next moment he is behind you "at the trail," and quite liable to lodge the charge in the small of your back. I never stay long with this kind of shooter, and it is poor consolation to remember that whatever other damage he may do the creature rarely shoots himself.

The class of blundering idiots who "didn't know it was leaded" are unfortunately to be found everywhere, producing accidents which, while often fatal, are sometimes fantastic.

Take, for instance, the case of the man who blew into the muzzle of his pistol, at the same time placing a lighted match to the nipple. It was, of course, his last experiment, as was also that of the gentleman who put a blind shrapnel shell into his stove and waited for results. There is, too, the brother who snaps what he regards as an empty gun at his sister and so sends her to a premature death, and thus through scores of needless fatalities caused by people who ought never to be allowed to touch firearms is yearly told the story of criminal carelessness.

Rideau.

[To which it might be added: For further particulars see daily papers. Any day will do.]

CHICAGO AND THE WEST.

Death of Charles Kern.

Jan. 30.—One of the best known figures of Chicago sportsmanship passed away on Monday last, Jan. 25. After many months of suffering Mr. Charles Kern yielded to the disease which had been sapping his life forces and passed away quietly at his own home among his family and friends. Mr. Kern was twice the president of the Illinois State Sportsmen's Association, and was for many years president of the Audubon Gun Club, of Chicago, the old guard of Chicago sportsmanship, made up in good part of old-time trap-shooters. Mr. Kern was sixty-five years of age. He was a native of Bavaria and was eighteen years of age when he came to America. He entered early into politics, and was only twenty-one years of age when he ran for sheriff, being defeated in his campaign. He sought further offices, and in 1890 was elected County Treasurer of Cook county. He was a great secret society and association man, and had a wide circle of friends. He leaves a widow and two children, whose circumstances should be comfortable, as Mr. Kern was reputed to be of considerable means.

The Michigan Warden's Work.

The new Governor of Michigan, Mr. Pingree, has recently found occasion to criticise the work of the State Fish and Game Warden, Mr. Chase S. Osborn, of Sault Ste. Marie. While not resenting this sharply, Mr. Osborn finds occasion to make reply in the columns of the Detroit *Tribune*, as follows:

"'I spend half of my time in the field, the rest of the time directing the operations of the deputy wardens from my office.'

"During the twenty-three months Mr. Osborn has been game warden of Michigan he has investigated 1,800 reported violations at an average cost of $6 a case; that is, Mr. Osborn or his deputies have looked into this number of cases. Of the total number there have been 1,007 cases tried in court, out of which there were between 800 and 900 convictions. From fines and license fees the revenues of the office amounted to $27,000, while the expenses were only $10,500.

"'I claim,' says Mr. Osborn, 'that the work I have done has been more than the combined work of any four game wardens in the country, and it has been done only by hard, constant work.

"'As to the showing made by the revenues and the expenses, I am very proud of it. The first two years of my predecessor every case tried cost on an average of $27, while the average cost during his last two years was about $22. The average cost of each case during my term of office has been $10 40.'"

In Town and Out.

Mr. W. P. Mussey, of Chicago, who has for some days been in the East, New York city and elsewhere, is expected to return soon.

Mr. W. Fred Quimby, of the Empire Target Company, and universally known in the sporting goods trade, is in Chicago this week. Mr. Quimby has charge of the elegant and extensive exhibit of bicycles made by the Hunter Arms Co. at the Chicago cycle show this week. In this he is assisted by Mr. Alex H. Waud. The Hunter exhibit was the rounding up place of a great many sportsmen during the week.

Mr. George A. Mosher, of the Syracuse Arms Co., is in Chicago for a few days on a Western business trip. Mr. Mosher is looking well and as amiable as usual.

Mr. Louis Erhardt, of Louis Erhardt & Co, Atchison, Kans., is in Chicago this week with a large and comprehensive smile. Mr. Erhardt says he would have been glad to be at the San Antonio shoot, but is glad he missed the blizzard there. He is pleased with the temperature of Chicago, which was only 20° below zero this week.

E. Hough.

1206 Boyce Building, Chicago, Ill.

The New York Association.

Lyons, N. Y., Jan. 26.—*Editor Forest and Stream:* Dear Sir—It may be of interest generally that you publish the names of those who are to serve on the committees of the N. Y. State Association for the Protection of Fish and Game for the ensuing year. I therefore take pleasure in handing you the list of both the Law and Legislation Committee and the Auditing Committee as appointed.

Legislation and Law Committee—Robert B. Lawrence, chairman, 35 Wall street, New York city; Percy S. Lansdowne, 735 Mooney Building, Buffalo; C. B. Lapham, Canandaigua, N. Y.; George R. Peck, Auburn, N. Y.; W. E. Huston, Lockport, N. Y.

Auditing Committee—F. J. Amsden, Rochester, N. Y.; Aaron Mather, Honeoye Falls, N. Y.; Charles Curtis, Auburn, N. Y.

The Legislation and Law Committee will immediately take up the work of pushing the recommendations passed at the recent meeting of the Association, and which I believe were correctly published in last week's issue of your valuable journal.

We desire the hearty coöperation of all sportsmen throughout the State, whether members of the State Association or not, in urging prompt legislation along the lines set forth in the resolutions by the meeting at Syracuse. Never before in the history of the Association has there been so united a feeling as to what course of action should be pursued, and with earnest work on the part of all interested much good may be accomplished this winter. The Association strongly demands the abolishment of hounding for deer; the abolishment of netting and spearing in the inland waters of the State; the one open season for partridge, woodcock, rabbits and squirrels from Sept. 15 to Jan. 1; and makes a strong plea against local legislation; further than this we earnestly hope that we may secure the repeal of Section 249. I know the Forest and Stream will do all it can to aid us in the work, and trust that every sportsman in this State will take a personal interest, and that every member of the Legislature may be importuned and brought to see the necessity of right action. Do not leave the work for others. There is enough for us all to do if we would preserve the game in this State and further the replenishing of the many lakes and streams which have all but been depleted through the abuses of the past.

W. S. Gavitt, Pres.

Fowl in Hog Island Bay.
